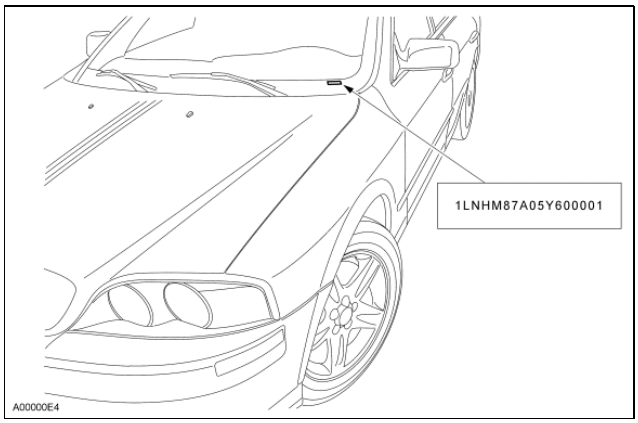
Identification Codes

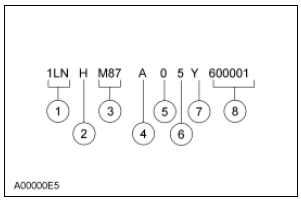
Printable View (398 KB)

Vehicle Identification Number

Vehicle Identification Number (VIN) Locator

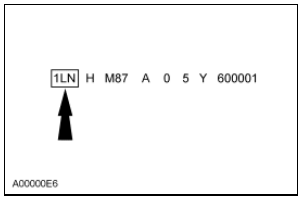


The vehicle identification number (VIN) is a 17-digit combination of letters and numbers. The VIN is stamped on a metal tab riveted on the instrument panel, top upper left of the dash. The VIN is also found on the vehicle certification (VC) label.



Item	Description
1	World manufacturer identifier
2	Vehicle restraint type
3	Vehicle line, series, body type
4	Engine type
5	Check digit
6	Model year
7	Assembly plant
8	Production sequence number

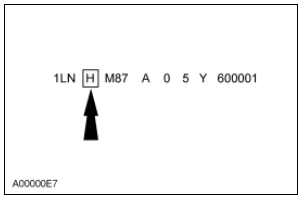
World Manufacturer Identifier



The first 3 vehicle identification number (VIN) positions are the world manufacturer identifier.

- 1LN Ford Motor Company Lincoln, USA, passenger car

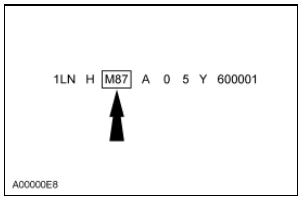
Vehicle Restraint Type



The fourth VIN position identifies the safety restraint system used.

- H Active safety belts (all positions) driver and front passenger air bags driver and front passenger side impact air bags

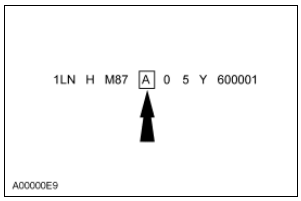
Line and Series



VIN positions 5 through 7 indicate the vehicle line and series.

- M86 Lincoln LS 6-cylinder, automatic
- M87 Lincoln LS 8-cylinder, automatic

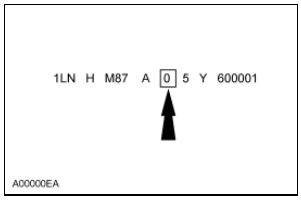
Engine Code



The eighth VIN position is the engine type (displacement and number of cylinders).

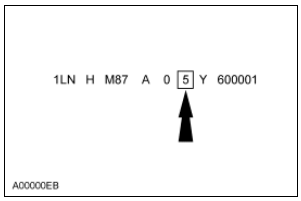
- A 3.9L, DOHC, EFI, 8 cylinder
- S 3.0L, DOHC, EFI, 6 cylinder

Check Digit



The ninth VIN position is a computer-generated check digit.

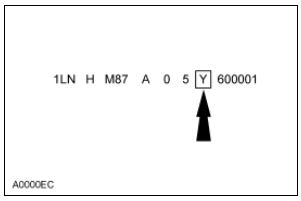
Model year



The tenth VIN position is the model year code.

- 5 2005

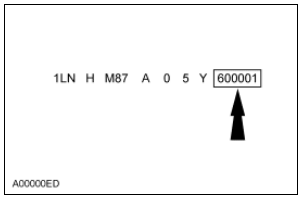
Assembly Plant



The eleventh VIN position is the assembly plant code.

- Y Wixom (Wixom, Michigan)

Build Sequence

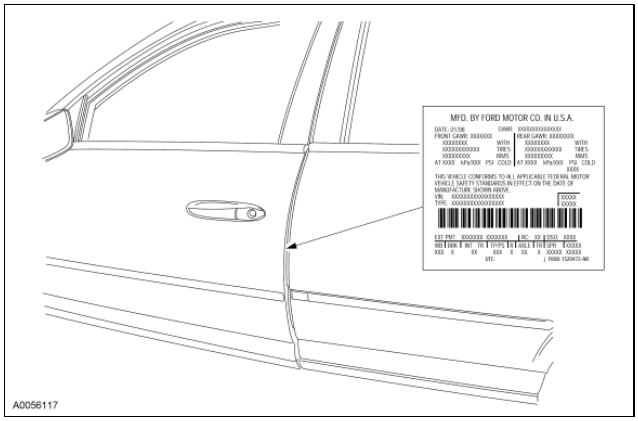


VIN positions 12 through 17 are an alphanumeric code for the vehicle build sequence. This is also the vehicle serial and warranty number.

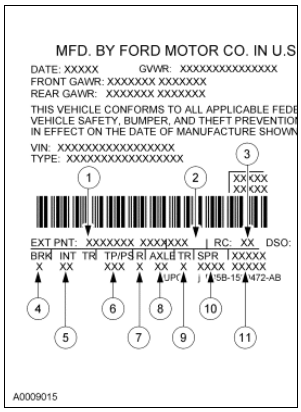
- Lincoln/Mercury 600001 through 999999

Vehicle Certification (VC) Codes

Vehicle Certification (VC) Label Locator

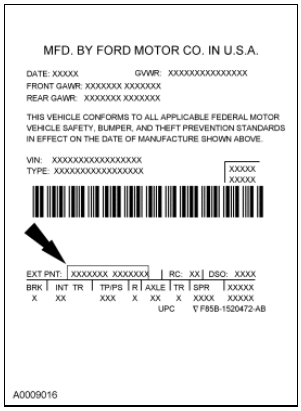


The VC label contains information on the manufacturer name, the month and year of manufacture, the certification statement and the VIN. This label also includes gross vehicle weight (GVW) information.



Item	Description
1	Exterior paint code
2	Region code
3	Domestic special order
4	Brake type code
5	Interior trim code
6	Tape/paint stripe code
7	Radio type code
8	Axle ratio code
9	Transmission code
10	Spring code
11	Powertrain calibration code

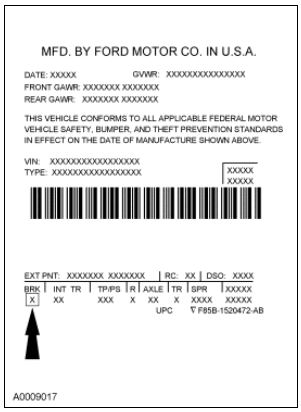
Exterior Paint



Exterior paint codes may be listed as a 2-part code. The first set of characters listed indicate the vehicle primary body color. The second set of characters listed (if applicable) indicate a 2-tone or accent body color. All codes are base coat/clear coat.

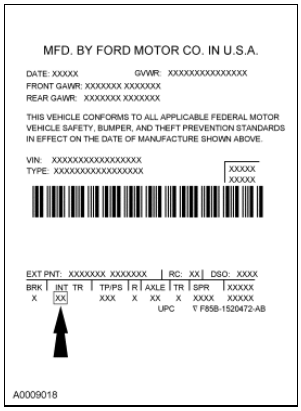
- DV Light Tundra/Titanium Green
- F6 Ceramic White (tri-coat)
- G2 Redfire
- G3 Pueblo Gold
- G4 Cashmere (tri-coat)
- JP Silver Birch Metallic
- KR Norsea Blue Pearl
- T2 Bronze
- T7 Charcoal Beige
- UA Ebony

Brake Type



- 3 Anti-spin Traction Control brake system
- 6 IVD brake system

Interior Trim



Interior trim codes are listed as a 2-part code. The first character identifies the interior trim type. The second character identifies the interior trim color.

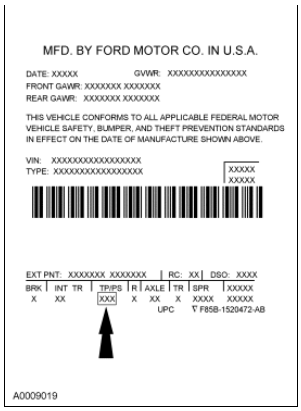
Interior Trim Type

- 4 G-Grain leather
- 6 Nudo leather

Interior Trim Color

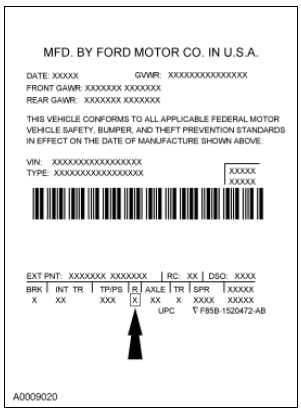
- C Camel
- S Dove II
- W Black Ink

Tape/Paint Stripe



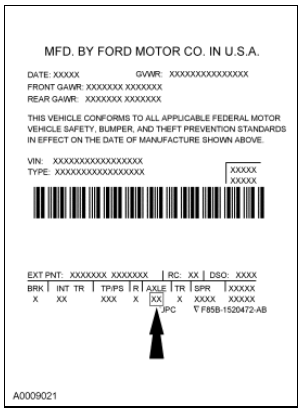
Tape and paint stripe codes do not apply.

Radio Code



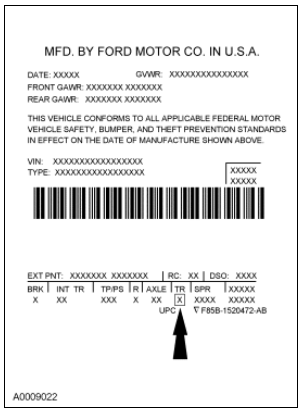
- 6 AM/FM stereo with cassette, compact disc (CD) player and clock
- 9 AM/FM stereo with compact disc (CD) player and navigation system
- X AM/FM stereo with compact disc (CD) changer (CDX6)

Axle Ratio Code



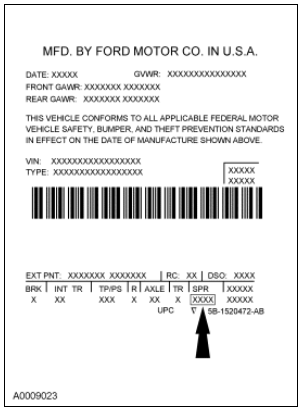
- 1 3.58 final drive ratio

Transmission Code



- A Five-speed automatic overdrive, 5R55S

Spring Code



Spring codes are listed as a 2-part code. The first set of characters listed identify the front springs. The second set of characters listed identify the rear springs.

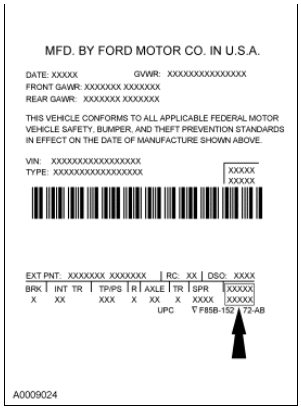
Front Springs

- Base part number 18B036

Rear Springs

- Base part number 18W002

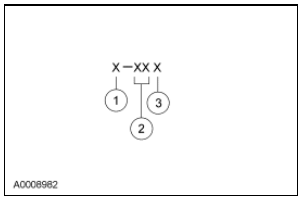
Powertrain Calibration Information



NOTE: Powertrain calibration information is limited to a maximum of 5 characters per line on the vehicle certification (VC) label. Because of this, calibration identification consisting of more that 5 characters will wrap to the second line on the VC label.

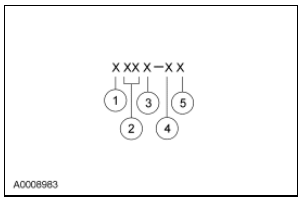
Powertrain calibration information is printed in the lower right corner of the VC label. Only base calibration information is printed. Revision levels will not appear, however, they can be found in On Line Automotive Service Information System (OASIS). For the current model year, Ford Motor Company is using 3 different protocols which describe powertrain base calibration. These protocols are designed to provide worldwide standardization for vehicle calibration. If the electronic calibration strategy was introduced in 1998 and carried into the current model year, Protocol 1 will be used. Refer to Protocol 1 below. If the electronic calibration strategy was introduced in 1999 and carried into the current model year, Protocol 2 will be used. Refer to Protocol 2 below. For electronic calibration strategy introduced in 2000 and beyond, Protocol 3 will be used. Refer to Protocol 3 below.

Protocol 1



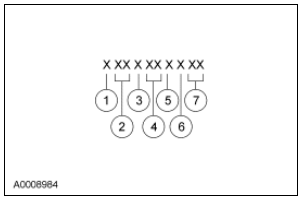
Item	Description
1	Model year (model year in which calibration strategy was first introduced)
2	Engine code
3	Engine revision level

Protocol 2



Item	Description
1	Model year (model year in which calibration strategy was first introduced)
2	Engine code
3	Transmission code
4	Emission standard (designates the specific country emission standard)
5	Design level (design level assigned to the engine)

Protocol 3



Item	Description
1	Model year (model year in which calibration strategy was first introduced)
2	Vehicle code
3	Transmission code
4	Unique calibration (designates different hardware to similar vehicles). Example: tires, drive ratios, etc.
5	Fleet code (describes fleet to which the vehicle belongs). Example: 6 - evaporative emissions
6	Certification region (lead region where multiple regions are included in one calibration). Example: A - U.S. federal
7	Revision level (will advance as revisions occur). Not printed on label

Protocol 3

The following offers a more detailed explanation of the coding strategy used in Protocol 3.

Model Year

- 2 2002
- 3 2003
- 4 2004
- 5 2005

Vehicle Line

- LQ Lincoln LS

Transmission

- 1 Automatic transmission

Unique Calibration

The Emissions/CAFE/CO2 Compliance Department is responsible for assigning these calibration numbers. Unique calibration identifications are assigned to cover similar vehicles to differentiate tires, drive configurations, final drive ratios and other calibration-significant factors.

These 2 characters are chosen by the analyst to provide identifiable information unique to each calibration. For example, using the number 2 to denote a 2-valve engine versus using the number 4 to denote a 4-valve engine, offers an easily identifiable difference.

Fleet Code

- 0 Certification (U.S. 4K, final sale in an export market)
- 1 HDGE/Dyno
- 2 Fast AMA, U.S.
- 3 ADP, U.S.
- 4 Not assigned
- 5 Not assigned
- 6 Evaporative emissions
- 7 MACCA
- 8 On-board diagnostics (OBD)
- 9 Not assigned

Certification Region

- 5 U.S. fifty states
- A U.S. federal, including altitude, may include Canada and/or Mexico
- B U.S. California, includes U.S. green states
- C Canada
- D China
- E European Community
- F Israel, South Korea
- G Gulf Cooperative Council (Bahrain, Kuwait, Oman, Qatar, Saudi Arabia, Jordan, Lebanon and UAE)
- J Japan
- K Korea
- L Malaysia
- M Mexico
- N New Zealand
- P Australia
- Q South America (Brazil)
- U South America (unleaded fuel regions)
- V Vietnam
- X Rest of world (ROW)
- Y Military
- Z Israel

Revision Level (not printed on label)

- 91-99 Hardware calibration levels.
- 01-04 Preliminary levels.
- 00 Job 1 production (initial calibration).
- 05-09 Pre-job 1 revisions to calibrations.
- 10-89 Post-job 1 revisions to calibrations.
- 0B Durability test level.

- BD On-board diagnostics (OBD) intermediate level (pre-05).

Jacking

Printable View (69 KB)

⚠ WARNING: Never run the engine with one wheel off the ground, such as when changing a tire. The wheel still on the ground could cause the vehicle to move.

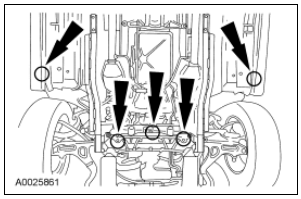
⚠ CAUTION: The jack (17080) provided with the vehicle is intended to be used in an emergency for changing a deflated tire. To avoid damage to the vehicle, never use the jack to lift the vehicle for any other purpose. Refer to the Owner Literature when using the jack supplied with the vehicle.

⚠ CAUTION: Under no circumstances should the vehicle ever be lifted by the front control arms, front I-braces, suspension arm brackets, rear stabilizer or differential housing. Severe damage to the vehicle could result.

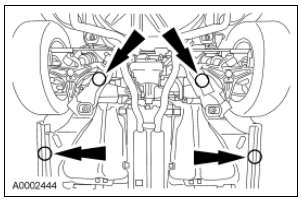
⚠ CAUTION: Do not attempt to use jack pressure on either the front bumper (17757) or the rear bumper (17906) of any vehicle. Damage to the bumper covers will occur.

Lift the vehicle using the following procedure.

Jacking Points



To lift the front or either side of the front end, position the floor jack or the hoist under the front frame lift points.



To lift the rear or either side of the rear end, position the floor jack or the hoist under the rear lift points.

Lifting Printable View (65 KB)

⚠ CAUTION: Do not allow the lift adapters to contact the steering linkage, suspension arms, front I-braces, stabilizer bar, or to compress the lower suspension arm stabilizer bar insulator (5493). Damage to the suspension, exhaust and steering linkage components may occur if care is not exercised when positioning the lift adapters prior to lifting the vehicle.

⚠ CAUTION: Never use the differential housing as a lift point. Damage to the differential housing and cover may occur.

⚠ CAUTION: Do not lift the vehicle on the rocker panel pinch flange except at the designated lift points or body damage may occur.

Lift the vehicle using the following procedure.

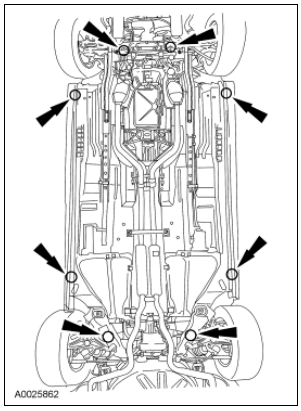
Lifting Points Drive-On Hoist

⚠ CAUTION: To prevent possible damage to the underbody, do not drive the vehicle onto the drive-on hoist without first checking for possible interference.

Check for interference between the upright flanges of the hoist rails and the underbody.

If an interference exists, modify the hoist flanges or build up the approach ramps as necessary to provide clearance.

Lifting Points Frame Contact Lift, Single-Post Lift, Two-Post Lift



⚠ CAUTION: Under no circumstances should the vehicle be lifted by the front control arms, front I-braces or rear control arms. Severe damage to the vehicle could result.

⚠ CAUTION: Do not position the lift pads under the No. 3 crossmember.

NOTE: Adapters maybe necessary to clear vehicle components to lift the vehicle safely. The adapters must be placed at the four designated contact points. Position the adapters so they are centered on the adapter contact area.

Lift the vehicle at the applicable lift points.

Maintenance Schedule Vehicles with Gasoline Engines Printable View (35 KB)

The maintenance schedule is designed to protect against major repairs resulting from neglect or inadequate maintenance and to prolong the life of the vehicle.

General Maintenance Information

NOTE: This is a generic maintenance schedule for all Ford, Lincoln and Mercury vehicles. There may be items listed that do not apply to all vehicles.

The Normal Schedule applies to operation of the vehicle under typical, everyday driving conditions. The maintenance frequency in this schedule typifies what the vast majority of vehicles will require. The listed services should be carried out at specified mileage intervals. There are, however, additional services required that only the noted vehicles require.

If the vehicle is operated in one or more of the following special operating conditions, those additional services will be required. The special operating conditions are:

- towing or carrying heavy loads.
- extensive idling and/or driving at low speeds for long distances.
- driving in dusty conditions.
- off-road operation.
- use of E85 fuel 50% of the time or greater (flex fuel vehicles only).

There are also exceptions to the Normal Operating Schedule which will require more frequent maintenance for some components. Those exceptions are:

- natural gas and propane vehicles fuel tank intervals.
- standard vehicle axle maintenance and lubrication.
- police and taxi vehicles maintenance and lubrication.
- engine oil and Premium Gold coolant time and mileage-based interval.

Special Operating Condition Requirements

When towing a trailer or using a camper or car-top carrier:

- Change engine oil and install a new oil filter every 4,800 km (3,000 miles) or 3 months.
- Change transfer case fluid every 96,000 km (60,000 miles).
- Change automatic transmission fluid, lubricate 4x2 wheel bearings, install new grease seals and adjust bearings every 48,000 km (30,000 miles). If equipped, change the in-line service installed transmission fluid filter.
- Change manual transmission fluid as required.
- Inspect and lubricate U-joints and halfshafts as required.

During extensive idling and/or low speed driving for long distances, as in heavy commercial use such as delivery, taxi, patrol car or livery:

- Change engine oil and install a new oil filter every 4,800 km (3,000 miles) or 3 months.

- Lube front lower control arm and steering linkage ball joints with zerk fittings (if equipped) every 4,800 km (3,000 miles) or 3 months.
- Inspect brake system and check battery (Patrol cars) every 8,000 km (5,000 miles).
- Install a new fuel filter every 24,000 km (15,000 miles).
- Change automatic transmission fluid, lubricate 4x2 wheel bearings, install new grease seals and adjust bearings every 48,000 km (30,000 miles). If equipped, change the in-line service installed transmission fluid filter.
- Install new spark plugs and change transfer case fluid every 96,000 km (60,000 miles).
- Install a new cabin air filter as required.

When operating in dusty conditions such as unpaved or dusty roads:

- Change engine oil and install a new oil filter every 4,800 km (3,000 miles) or 3 months.
- Install a new fuel filter every 24,000 km (15,000 miles).
- Change automatic transmission fluid, check air filter minder and install a new filter as required (Focus engine only) every 48,000 km (30,000 miles). If equipped, change the in-line service installed transmission fluid filter.
- Change transfer case fluid every 96,000 km (60,000 miles).
- Install a new engine air filter as required.
- Install a new cabin air filter as required.

When operating in off-road conditions:

- Change automatic transmission fluid every 48,000 km (30,000 miles). If equipped, change the in-line service installed transmission fluid filter.
- Change transfer case fluid every 96,000 km (60,000 miles).
- Install a new cabin air filter as required.
- Inspect and lubricate U-joints and halfshafts.
- Inspect and lubricate steering linkage ball joints with zerk fittings.

Use of E85 fuel 50% of the time or greater (flex fuel vehicles only):

- Change engine oil and install a new oil filter every 4,800 km (3,000 miles), 3 months or 200 hours of engine operation (whichever occurs first).

Checks and Services

Certain basic maintenance checks and inspections should be carried out at specified intervals. Any recognized adverse condition should be corrected as soon as possible.

Multi-Point Inspection

The following inspections are recommended at every service interval:

- Check and top off brake, coolant, manual and automatic transmission (if equipped with a fluid level indicator), power steering and window washer fluids.
- Inspect tires for wear and correct air pressure, including spare tire.
- Check exhaust system for leaks, damage, loose parts and foreign material.
- Check battery performance.
- Check operation of horn, exterior lamps, turn signals and hazard warning lights.
- Check radiator, coolers, heater and air conditioning hoses.
- Inspect windshield wiper spray and wiper operation.

- Check windshield for cracks, chips and pitting.
- Inspect for oil and fluid leaks.
- Inspect air cleaner filter.
- Inspect halfshaft dust boots.
- Check shocks, struts and other suspension components for leaks and damage.

In-Line, Service-Installed Transmission Fluid Filter

Some vehicles may be equipped with an in-line, service-installed transmission fluid filter. This filter is installed in the transmission fluid cooler return line. If equipped, install a new in-line filter during transmission fluid change intervals.

Maximum Oil Change Interval (Normal Schedule)

- 8,000 km (5,000 miles) or 6 months (whichever occurs first).

Maximum Oil Change Interval (Special Operating Conditions)

- 4,800 km (3,000 miles), 3 months or 200 hours of engine operation (whichever occurs first).

Monthly Checks

Check each of the following items every month:

- All interior and exterior lights.
- Tires for wear and correct air pressure, including spare tire.
- Engine oil fluid level.
- Windshield washer solvent fluid level.

Six Month Checks

Check each of the following items at least every 6 months:

- Lap/shoulder belts and seat latches for wear and function.
- External mounted spare tire is stowed correctly (tight to body).
- Power steering fluid level.
- Parking brake for correct operation.
- Safety warning lamps (brake, ABS, air bag, safety belt) for correct operation.
- Coolant system fluid level and correct strength.
- Battery connections. Clean if necessary.
- Clutch fluid level, if equipped.
- Windshield washer spray, wiper operation, clean all wiper blades.
- Lubricate all hinges, latches and outside locks. Inspect for correct operation.
- Lubricate door rubber weatherstrips. Inspect for excessive wear.
- Clean body and door drain holes. Inspect for clogs and obstructions.
- Lubricate upper and lower sliding door tracks, if equipped.
- Clean sliding door contact switches, if equipped.

Normal Schedule

NOTE: Rotate tires and inspect for wear at 5,000 miles, 15,000 miles and every 15,000 miles is required thereafter. At other 5,000-mile intervals, rotation is recommended for optimal life.

The following checks or procedures should be carried out for all cars, minivans, light trucks, sport utilities, vans, 4x4s, natural gas vehicles.

8,000 Km (5,000 Miles)

- Change engine oil and install a new oil filter.
- Rotate tires and inspect for wear.
- Multi-point inspection recommended.

16,000 Km (10,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Multi-point inspection recommended.

24,000 Km (15,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect steering linkage, suspension and ball joints (if equipped), halfshafts, driveshaft and U-joints.
- Rotate tires and inspect for wear.
- If equipped, install a new cabin air filter.
- Multi-point inspection recommended.

ADDITIONAL MAINTENANCE: For light trucks, sport utilities and vans:

- Inspect and lubricate the 4x2 ball joints.
- Inspect and lubricate the steering linkage if equipped with zerk fittings.

32,000 Km (20,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Multi-point inspection recommended.

40,000 Km (25,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Drain coalescent fuel filter bowl and install a new filter (NGV).
- Multi-point inspection recommended.

48,000 Km (30,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect exhaust system and heat shields.
- Inspect steering linkage, suspension and ball joints (if equipped), halfshafts, driveshaft and U-joints.
- Rotate tires and inspect for wear.
- Install a new engine air filter (not required for Focus).

- Install a new fuel filter.
- If equipped, install a new cabin air filter.
- Change automatic transmission/transaxle fluid on all vehicles equipped with 4F50N, 4R100, TorqShift and 4F27E. Inspect automatic transmission fluid level using dipstick on all other vehicles, if equipped. Change the in-line service installed transmission fluid filter, if equipped.
- If equipped, install new climate controlled seat filters (Navigator, Lincoln LS, Freestar, Monterey, Expedition and Aviator).
- Multi-point inspection recommended.

ADDITIONAL MAINTENANCE: For light trucks, sport utilities and vans:

- Inspect and lubricate the 4x2 ball joints.
- Inspect and lubricate the steering linkage if equipped with zerk fittings.
- Natural gas vehicles require checking the fuel tanks and installing a new fuel filter.

56,000 Km (35,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Multi-point inspection recommended.

64,000 Km (40,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Multi-point inspection recommended.

72,000 Km (45,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect automatic transmission fluid level using dipstick, if equipped.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect steering linkage, suspension and ball joints (if equipped), halfshafts, driveshaft and U-joints.
- Rotate tires and inspect for wear.
- If equipped, install a new cabin air filter.
- Multi-point inspection recommended.

ADDITIONAL MAINTENANCE: For light trucks, sport utilities and vans:

- Inspect and lubricate the 4x2 ball joints.
- Inspect and lubricate the steering linkage if equipped with zerk fittings.

80,000 Km (50,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Drain coalescent fuel filter bowl and install a new filter (NGV).
- Clean injectors (natural gas vehicles).
- Multi-point inspection recommended.

88,000 Km (55,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Multi-point inspection recommended.

96,000 Km (60,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect steering linkage, suspension and ball joints (if equipped), halfshafts, driveshaft and U-joints.
- Rotate tires and inspect for wear.
- Install a new engine air filter (not required for Focus).
- Install a new fuel filter.
- If equipped, install a new cabin air filter.
- Change automatic transmission/transaxle fluid on all vehicles equipped with 4F50N, 4R100, TorqShift and 4F27E. Inspect automatic transmission fluid level using dipstick on all other vehicles, if equipped. If equipped, change the in-line service installed transmission fluid filter.
- Change automatic transmission fluid on all vehicles equipped with a CVT transmission and install a new high-pressure case filter.
- Change manual transmission fluid, if equipped.
- If equipped, install new climate controlled seat filters (Navigator, Lincoln LS, Freestar, Monterey, Expedition and Aviator).
- Multi-point inspection recommended.

ADDITIONAL MAINTENANCE: For natural gas vehicles:

- Inspect fuel tanks.
- Drain coalescent fuel filter bowl.
- Install a new fuel filter.

104,000 Km (65,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Multi-point inspection recommended.

112,000 Km (70,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Multi-point inspection recommended.

120,000 Km (75,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect automatic transmission fluid level using dipstick.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect steering linkage, suspension and ball joints (if equipped), halfshafts, driveshaft and U-joints.
- Rotate tires and inspect for wear.
- Install a new cabin air filter.
- Drain coalescent fuel filter bowl and install a new filter (NGV).

- Multi-point inspection recommended.

ADDITIONAL MAINTENANCE: For light trucks, sport utilities and vans:

- Inspect and lubricate the 4x2 ball joints.
- Inspect and lubricate the steering linkage if equipped with zerk fittings.

128,000 Km (80,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Multi-point inspection recommended.

136,000 Km (85,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Multi-point inspection recommended.

144,000 Km (90,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect exhaust system and heat shields.
- Inspect steering linkage, suspension and ball joints (if equipped), halfshafts, driveshaft and U-joints.
- Rotate tires and inspect for wear.
- Install a new engine air filter.
- Install a new fuel filter.
- If equipped, install a new cabin air filter.
- Change automatic transmission/transaxle fluid on all vehicles equipped with 4F50N, 4R100, TorqShift and 4F27E. Inspect automatic transmission fluid level using dipstick on all other vehicles, if equipped. If equipped, change the in-line service installed transmission fluid filter.
- If equipped, install new climate controlled seat filters (Navigator, Lincoln LS, Freestar, Monterey, Expedition and Aviator).
- Multi-point inspection recommended.

ADDITIONAL MAINTENANCE: For light trucks, sport utilities and vans:

- Inspect and lubricate the 4x2 ball joints.
- Inspect and lubricate the steering linkage if equipped with zerk fittings.

ADDITIONAL MAINTENANCE: For natural gas vehicles:

- Inspect the fuel tanks.
- Drain the coalescent fuel filter bowl.
- Install a new fuel filter.

152,000 Km (95,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Multi-point inspection recommended.

160,000 Km (100,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect accessory drive belt(s).
- Rotate tires and inspect for wear.
- Install new spark plugs.
- Change Premium Gold coolant or change at 5 years, whichever comes first.
- Change rear axle fluid (F450-550).
- Install a new external PCV on all cars and light trucks under 6,000 pounds Gross Vehicle Weight (GVW), except 4.6L 3V engine.
- Drain coalescent fuel filter bowl and install a new filter (NGV).
- Clean injectors (NGV).
- Multi-point inspection recommended.

168,000 Km (105,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect automatic transmission fluid level if equipped with dipstick.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine coolant system and hoses.
- Lubricate 4x2 ball joints and steering linkage if equipped with zerk fittings.
- Inspect steering linkage, suspension and ball joints (if equipped), halfshafts, driveshaft and U-joints.
- Rotate tires and inspect for wear.
- If equipped, install a new cabin air filter.
- Multi-point inspection recommended.

176,000 Km (110,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Multi-point inspection recommended.

184,000 Km (115,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Multi-point inspection recommended.

192,000 Km (120,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect exhaust system and heat shields.
- Inspect steering linkage, suspension and ball joints (if equipped), halfshafts, driveshaft and U-joints.
- Rotate tires and inspect for wear.
- Install a new engine air filter (not required for Focus).
- Install a new fuel filter.
- If equipped, install a new cabin air filter.
- Install a new external PCV valve on all cars and light trucks over 6,000 lbs. Gross Vehicle Weight, except 5.4L 3V engine.
- Change automatic transmission/transaxle fluid on all vehicles equipped with 4F50N, 4R100,

TorqShift and 4F27E. Inspect automatic transmission fluid level using dipstick on all other vehicles, if equipped. If equipped, change the in-line service installed transmission fluid filter.
- Change automatic transmission fluid on all vehicles equipped with a CVT transmission and install a new high-pressure case filter.
- Change manual transmission fluid (trucks only), if equipped.
- If equipped, install new climate controlled seat filters (Navigator, Lincoln LS, Freestar, Monterey, Expedition and Aviator).
- Multi-point inspection recommended.

ADDITIONAL MAINTENANCE: For natural gas vehicles:

- Inspect the fuel tanks.
- Drain the coalescent fuel filter bowl.
- Install a new fuel filter.
- Install a new camshaft belt on the 4-cylinder engine (2.0L Escape).

200,000 Km (125,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Drain coalescent fuel filter bowl and install a new filter (NGV).
- Multi-point inspection recommended.

208,000 Km (130,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Multi-point inspection recommended.

216,000 Km (135,000 Miles)

- Change engine oil and install a new oil filter.
- If equipped, inspect automatic transmission fluid level with dipstick.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect steering linkage, suspension and ball joints (if equipped), halfshafts, driveshaft and U-joints.
- Rotate tires and inspect for wear.
- Install a new cabin air filter.
- Multi-point inspection recommended.

224,000 Km (140,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Multi-point inspection recommended.

232,000 Km (145,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Multi-point inspection recommended.

240,000 Km (150,000 Miles)

- Install new 4x2 front wheel bearings and seals (if new bearings and seals have not been installed in the last 100,000 miles).
- Change engine oil and install a new oil filter.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect exhaust system and heat shields.
- Inspect steering linkage, suspension and ball joints (if equipped), halfshafts, driveshaft and U-joints.
- Rotate tires and inspect for wear.
- Install a new engine air filter (not required on Focus).
- Install a new fuel filter.
- Lubricate 4x2 ball joints and steering linkage if equipped with zerk fittings.
- If equipped, install a new cabin air filter.
- Change Premium Gold coolant (See Exceptions To Normal Schedule and Mileage Base).
- Change automatic transmission/transaxle fluid and filter (filter not required on CD4-E and AWF21 transmissions).
- Change rear axle lubricant on all rear wheel (RWD) vehicles.
- Install a new accessory drive belt(s) (if a new belt has not been installed within the last 100,000 miles).
- If equipped, install new climate controlled seat filters (Navigator, Lincoln LS, Freestar, Monterey, Expedition and Aviator).
- Multi-point inspection recommended.

ADDITIONAL MAINTENANCE: For natural gas vehicles:

- Inspect the fuel tanks.
- Drain the coalescent fuel filter bowl.
- Install a new fuel filter.

Exceptions To Normal Schedule

Premium Gold Coolant

- Change Premium Gold coolant at 5 years or 160,000 km (100,000 miles) of the vehicle's life, whichever comes first.
- After the initial change, change coolant every 3 years or 80,000 km (50,000 miles) thereafter.

Natural Gas and Propane Vehicles

- Inspect NGV fuel tanks from the date of tank manufacture every 3 years.
- Inspect propane fuel tanks from vehicle build date every 5 years.
- Install new NGV fuel tanks from the date of tank manufacture every 15 years.

Normal Vehicle Axle Maintenance

Rear axles and power take off (PTO) units containing synthetic lubricant and light duty trucks equipped with Ford-design axles are lubricated for life. These lubricants are not to be checked or changed unless service is required, or if a leak is suspected, or the axle assembly has been submerged in water.

The axle and PTO fluid should be changed anytime they have been submerged in water. Non-synthetic rear axle lubricants should be replaced every 4,800 km (3,000 miles) or 3 months, whichever occurs first, during extended trailer tow operation above 21°C (70°F) ambient and wide open throttle for extended periods above 45 mph.

The 3,000 mile lube change interval may be waived if the axle was filled with 75W140 synthetic gear lubricant meeting Ford specification WSL-M2C192-A, part number F1TZ-19580-B or equivalent. Add 4 ounces of additive friction modifier C8AZ-19B546-A (EST-M2C118-A) or equivalent for complete refill of Traction-Lok® rear axles.

The axle lubricant should be changed anytime an axle has been submerged in water.

Police and Taxi Vehicle Axle Maintenance

Replace rear axle lubricant every 160,000 km (100,000 miles). Rear axle lubricant change may be waived if the axle was filled with 75W140 synthetic gear lubricant meeting Ford specification WSL-M2C192-A, part number FITZ-19580-B or equivalent. Add 4 ounces of additive friction modifier C8AZ-19B546-A (EST-M2C118-A) or equivalent for complete refill of Traction-Lok® rear axles.

The axle lubricant should be changed anytime an axle has been submerged in water.

E and F 450 and 550 Series Axle Maintenance

Replace rear axle lubricant every 100,000 miles under normal driving conditions on all E and F 450 and 550 series applications. For E and F 450 and 550 series vehicles operated at or near maximum Gross Vehicle Weights, the rear axle lubricant should be replaced every 50,000 miles.

In addition, the 50,000 mile schedule should be observed when the vehicles are operated under the Special Operating Conditions.

Noise, Vibration and Harshness (NVH)

Printable View (192 KB)

Noise is any undesirable sound, usually unpleasant in nature. Vibration is any motion, shaking or trembling, that can be felt or seen when an object moves back and forth or up and down. Harshness is a ride quality issue where the vehicle's response to the road transmits sharply to the customer. Harshness normally describes a firmer than usual response from the suspension system. Noise, vibration and harshness (NVH) is a term used to describe these conditions, which result in varying degrees of dissatisfaction. Although, a certain level of NVH caused by road and environmental conditions is normal. This section is designed to aid in the diagnosis, testing and repair of NVH concerns.

Acceptable Noise, Vibration and Harshness

All internal combustion engines and drivelines produce some noise and vibration; operating in a real world environment adds noise that is not subject to control. Vibration isolators, mufflers and dampers reduce these to acceptable levels. A driver who is unfamiliar with a vehicle can think that some sounds are abnormal when actually the sounds are normal for the vehicle type. For example, Traction-Lok® differentials produce a slight noise on slow turns after extended highway driving. This is acceptable and has no detrimental effect on the locking axle function. As a technician, it is very important to be familiar with vehicle features and know how they relate to NVH concerns and their diagnosis. If, for example, the vehicle has automatic overdrive it is important to test drive the vehicle both in and out of overdrive mode.

Diagnostic Theory

The shortest route to an accurate diagnosis results from:

- system knowledge, including comparison with a known good system.
- system history, including repair history and usage patterns.
- condition history, especially any relationship to repairs or sudden change.
- knowledge of possible sources.
- using a systematic diagnostic method that divides the system into related areas.

The diagnosis and correction of noise, vibration and harshness concerns requires:

- a road or system test to determine the exact nature of the concern.
- an analysis of the possible causes.
- testing to verify the cause.
- repairing any concerns found.
- a road test or system test to make sure the concern has been corrected or brought back to within an acceptable range.

Glossary of Terms

Acceleration-Light

An increase in speed at less than half throttle.

Acceleration-Medium

An increase in speed at half to nearly full throttle, such as 0-97 km/h (0-60 mph) in approximately 30 seconds.

Acceleration-Heavy

An increase in speed at one-half to full throttle, such as 0-97 km/h (0-60 mph) in approximately 20 seconds.

Ambient Temperature

The surrounding or prevailing temperature.

Amplitude

The quantity or amount of energy produced by a vibrating component (G force). An extreme vibration has a high amplitude. A mild vibration has a low amplitude.

Backlash

Gear teeth clearance.

Boom

Low frequency or low pitched noise often accompanied by a vibration. Also refer to Drumming.

Bound Up

An overstressed isolation (rubber) mount that transmits vibration/noise instead of absorbing it.

Brakes Applied

When the service brakes are applied with enough force to hold the vehicle against movement with the transmission in gear.

Buffet/Buffeting

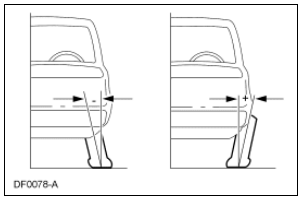
Strong noise fluctuations (less than 1000 Hz) caused by gusting winds. An example would be wind gusts against the side glass.

Buzz

A low-pitched sound like (200-5000 Hz) that from a bee. Often a metallic or hard plastic humming sound. Also describes a high frequency (200-800 Hz) vibration. Vibration feels similar to an electric razor.

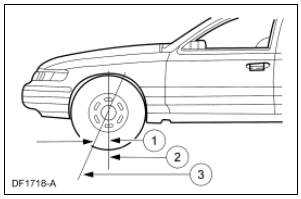
Camber

The angle of the wheel in relation to the true vertical as measured looking from the front of the vehicle. Camber is positive when the wheel angle is offset so that the top of the wheel is positioned away from the vehicle.



Caster

The angle of the steering knuckle in relation to the true vertical as measured looking from the side of the vehicle.



Item	Description
1	Positive caster
2	True vertical
3	Steering axis

Chatter

A pronounced series of rapidly repeating rattling or clicking sounds.

Chirp

A short-duration high-pitched noise associated with a slipping drive belt.

Chuckle

A repetitious low-pitched sound. A loud chuckle is usually described as a knock.

Click

A sharp, brief, non-resonant sound, similar to actuating a ball point pen.

Clonk

A hydraulic knocking sound. Sound occurs with air pockets in a hydraulic system. Also described as hammering.

Clunk/Driveline Clunk

A heavy or dull, short-duration, low-frequency sound. Occurs mostly on a vehicle that is accelerating or decelerating abruptly. Also described as a thunk.

Coast/Deceleration

Releasing the accelerator pedal at cruise, allowing the engine to reduce vehicle speed without applying the brakes.

Coast/Neutral Coast

Placing the transmission range selector in NEUTRAL (N) or depressing the clutch pedal while at cruise.

Constant Velocity (CV) Joint

A joint used to absorb vibrations caused by driving power being transmitted at an angle.

Controlled Rear Suspension Height

The height at which a designated vehicle element must be when driveline angle measurements are made.

Coupling Shaft

The shaft between the transfer case and the front drive axle or, in a 2-piece rear driveshaft, the front section.

CPS

Cycles per second. Same as hertz (Hz).

Cracks

A mid-frequency sound, related to squeak. Sound varies with temperature conditions.

Creak

A metallic squeak.

Cruise

Constant speed on level ground; neither accelerating nor decelerating.

Cycle

The process of a vibrating component going through a complete range of motion and returning to the starting point.

Decibel

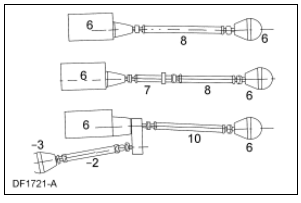
A unit of measurement, referring to sound pressure level, abbreviated dB.

Drive Engine Run-Up (DERU) Test

The operation of the engine through the normal rpm range with the vehicle standing still, the brakes applied and the transmission engaged. This test is used for noise and vibration checks.

Driveline Angles

The differences of alignment between the transmission output shaft, the driveshaft, and the rear axle pinion centerline.



Driveshaft

The shaft that transmits power to the rear axle input shaft (pinion shaft). In a 2-piece driveshaft, it is the rearmost shaft.

Drivetrain

All power transmitting components from the engine to the wheels; includes the clutch or torque converter, the transmission, the transfer case, the driveshaft, and the front or rear drive axle.

Drivetrain Damper

A weight attached to the engine, the transmission, the transfer case, or the axle. It is tuned by weight and placement to absorb vibration.

Drone

A low frequency (100-200 Hz) steady sound, like a freezer compressor. Also described as a moan.

Drumming

A cycling, low-frequency (20-100 Hz), rhythmic noise often accompanied by a sensation of pressure on the ear drums. Also described as a low rumble, boom, or rolling thunder.

Dynamic Balance

The equal distribution of weight on each side of the centerline, so that when the wheel and tire assembly spins, there is no tendency for the assembly to move from side-to-side (wobble). Dynamically unbalanced wheel and tire assemblies can cause wheel shimmy.

Engine Imbalance

A condition in which an engine's center mass is not concentric to the rotation center, causing excessive motion.

Engine Misfire

When combustion in one or more cylinders does not occur or occurs at the wrong time.

Engine Shake

An exaggerated engine movement or vibration that directly increases in frequency as the engine speed increases. It is caused by non-equal distribution of mass in the rotating or reciprocating components.

Flexible Coupling

A flexible joint.

Float

A drive mode on the dividing line between cruise and coast where the throttle setting matches the engine speed with the road speed.

Flutter

Mid to high (100-2000 Hz) intermittent sound due to air flow. Similar to a flag flapping in the wind.

Frequency

The rate at which a cycle occurs within a given time.

Gravelly Feel

A grinding or growl in a component, similar to the feel experienced when driving on gravel.

Grind

An abrasive sound, similar to using a grinding wheel, or rubbing sand paper against wood.

Hiss

Steady high frequency (200-800 Hz) noise. Vacuum leak sound.

Hoot

A steady low frequency tone (50-500 Hz), sounds like blowing over a long neck bottle.

Howl

A mid-range frequency (200-800 Hz) noise between drumming and whine. Also described as a hum.

Hum

Mid-frequency (200-800 Hz) steady sound, like a small fan motor. Also described as a howl.

Hz

Hertz; a frequency measured in cycles per second.

Imbalance

Out of balance; heavier on one side than the other. In a rotating component, imbalance often causes vibration.

Inboard

Toward the centerline of the vehicle.

Intensity

The physical quality of sound that relates to the strength of the vibration (measured in decibels). The higher the sound's amplitude, the higher the intensity and vice versa.

Isolate

To separate the influence of one component to another.

Knock

A heavy, loud, repetitious sound, like a knock on the door.

Moan

A constant, low-frequency (100-200 Hz) tone. Also described as a hum.

Neutral Engine Run-Up (NERU) Test

The operation of the engine through the normal rpm range with the vehicle standing still and the transmission disengaged. This test is used to identify engine related vibrations.

Neutralize/Normalize

To return to an unstressed position. Used to describe mounts. Refer to Bound Up.

Outboard

Away from the centerline of the vehicle.

Ping

A short duration, high-frequency sound, which has a slight echo.

Pinion Shaft

The input shaft in a driving axle that is usually a part of the smaller driving or input hypoid gear of a ring and pinion gearset.

Pitch

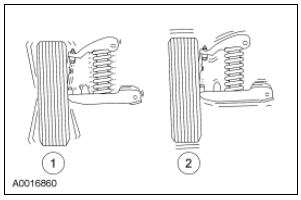
The physical quality of sound that relates to its frequency. Pitch increases as frequency increases and vice versa.

Pumping Feel

A slow, pulsing movement.

Radial/Lateral

Radial is in the plane of rotation; lateral is at 90 degrees to the plane of rotation.



Item	Description
1	Lateral runout
2	Radial runout

Rattle

A random and momentary or short duration noise.

Ring Gear

The large, circular, driven gear in a ring and pinion gearset.

Road Test

The operation of the vehicle under conditions intended to produce the concern under investigation.

Roughness

A medium-frequency vibration. A slightly higher frequency (20 to 50 Hz) than a shake. This type of vibration is usually related to drivetrain components.

Runout

Lateral runout means measuring the movement or "wobble" of a wheel or tire at the sidewall. Radial runout means measuring the out-of-round at the tread surface.

Rustling

Intermittent sound of varying frequency (100-2000 Hz), sounds similar to shuffling through leaves.

Shake

A low-frequency vibration (5-20 Hz), usually with visible component movement. Usually relates to tires, wheels, brake drums or brake discs if it is vehicle speed sensitive, or engine if it is engine speed sensitive. Also referred to as a shimmy or wobble.

Shimmy

An abnormal vibration or wobbling, felt as a side-to-side motion of the steering wheel in the driveshaft rotation. Also described as waddle.

Shudder

A low-frequency vibration that is felt through the steering wheel or seat during light brake application.

Slap

A resonance from flat surfaces, such as safety belt webbing or door trim panels.

Slip Yoke/Slip Spline

The driveshaft coupling that allows length changes to occur while the suspension articulates and while the driveshaft rotates.

Squeak

A high-pitched transient sound, similar to rubbing fingers against a clean window.

Squeal

A long-duration, high-pitched noise.

Static Balance

The equal distribution of weight around the wheel. Statically unbalanced wheel and tire assemblies can cause a bouncing action called wheel tramp. This condition will eventually cause uneven tire wear.

Tap

A light, rhythmic, or intermittent hammering sound, similar to tapping a pencil on a table edge.

Thump

A dull beat caused by 2 items striking together.

Tick

A rhythmic tap, similar to a clock noise.

Tip-In Moan

A light moaning noise heard during light vehicle acceleration, usually between 40-100 km/h (25-65 mph).

TIR

The acronym for total indicated runout is TIR.

Tire Deflection

The change in tire diameter in the area where the tire contacts the ground.

Tire Flat Spots

A condition commonly caused by letting the vehicle stand while the tires cool off. This condition can be corrected by driving the vehicle until the tires are warm. Also, irregular tire wear patterns in the tire tread resulting from wheel-locked skids.

Tire Force Vibration

A tire vibration caused by variations in the construction of the tire that is noticeable when the tire rotates against the pavement. This condition can be present on perfectly round tires because of variations in the inner tire construction. This condition can occur at wheel rotation frequency or twice rotation frequency.

Transient

A noise or vibration that is momentary, a short duration.

Two-Plane Balance

Radial and lateral balance.

Vibration

Any motion, shaking or trembling, that can be felt or seen when an object moves back and forth or up and down.

Whine

A constant, high-pitched noise. Also described as a screech.

Whistle

High-pitched noise (above 500 Hz) with a very narrow frequency band. Examples of whistle noises are a turbocharger or airflow around an antenna.

Wind Noise

Any noise caused by air movement in, out or around the vehicle.

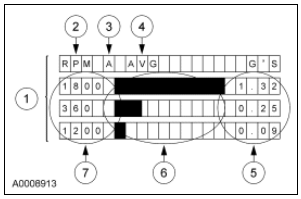
WOT

The acronym for wide open throttle is WOT.

Tools and Techniques

Electronic Vibration Analyzer (EVA)

The EVA is a hand-held electronic diagnostic tool which will assist in locating the source of unacceptable vibrations. The vibration sensor can be remotely mounted anywhere in the vehicle for testing purposes. The unit displays the 3 most common vibration frequencies and their corresponding amplitudes simultaneously. A bar graph provides a visual reference of the relative signal strength (amplitude) of each vibration being displayed and its relative G force. The keypad is arranged to make the EVA simple to program and use. Some of the functions include the ability to average readings as well as record, play back and freeze readings. The EVA has a strobe balancing function that can be used to detect imbalance on rotating components such as a driveshaft or engine accessories.



Item	Description
1	EVA screen
2	Frequency mode displayed in rpm or Hz
3	Active sensor input (A or B)
4	Current active mode
5	G force indicators or the strongest frequencies in descending strength of each vibration
6	Strength of each vibration
7	Frequency in rpm/Hz of each vibration

The EVA allows for a systematic collection of information that is necessary to accurately diagnose and repair NVH problems. For the best results, carry out the test as follows:

a. Test drive the vehicle with the vibration sensor inside the vehicle.
b. Place the sensor in the vehicle according to feel.

- If the condition is felt through the steering wheel, the source is most likely in the front of the vehicle.
- A vibration that is felt in the seat or floor only will most likely be found in the driveline, drive axle or rear wheels and tires.

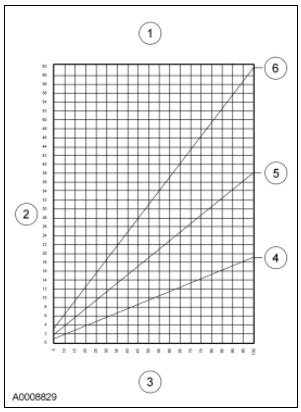
c. Record the readings. Also note when the condition begins, when it reaches maximum intensity, and if it tends to diminish above/below a certain speed.
   - Frequencies should be read in the "average" mode.
   - Frequencies have a range of plus or minus 2. A reading of 10 Hz can be displayed as an 8 Hz through 12 Hz.

d. Determine what the normal frequency is for the vehicle at a specified speed. Multiply the rear axle ratio by the Hz (1 Hz per every 5 mph). Example: A vehicle travelling 50 mph with a 3.08 rear axle ratio, the acceptable amount of Hz for the vehicle at that speed would be 10 (1 Hz per every 5 mph) x 3.08 (rear axle ratio) = 30.8 Hz.

e. Place the vibration sensor on or near the suspect area outside the vehicle.

f. Continue the road test, driving the vehicle at the speed the symptom occurs, and take another reading.

g. Compare the readings.
   - A match in frequency indicates the problem component or area.
   - An unmatched test could indicate the concern is caused by the engine, torque converter, or engine accessory. Use the EVA in the rpm mode and check if concern is rpm related.
   - Example: A vibration is felt in the seat. Place the sensor on the console. Record the readings. Place the vibration sensor on the rear axle. Compare the readings. If the frequencies are the same, the axle is the problem component. Also refer to the following chart as a reference to acceptable vibration and noise ranges for the specified components.



Item	Description
1	Acceptable vibration ranges for specified components
2	Hertz (Hz)
3	Miles per hour (mph)
4	First order tire (one disturbance for each revolution)
5	Second order tire (two disturbances for each revolution)
6	Driveline

Vibrate Software®

Vibrate Software® (Rotunda tool number 215-00003) is a diagnostic aid which will assist in pinpointing the source of unacceptable vibrations. The engine's crankshaft is the point of reference for vibration diagnosis. Every rotating component will have an angular velocity that is faster, slower, or the same as the engine's crankshaft. Vibrate Software® calculates the angular velocity of each component and graphically represents these velocities on a computer screen and on a printed vibration worksheet. The following steps outline how

Vibrate Software® helps diagnose a vibration concern:

- Enter the vehicle information. Vibrate will do all the calculations and display a graph showing tire, driveshaft and engine vibrations.
- Print a Vibration Worksheet graph. The printed graph is to be used during the road test.
- Road test the vehicle at the speed where the vibration is most noticeable. Record the vibration frequency (rpm) and the engine rpm on the worksheet graph. The point on the graph where the vibration frequency (rpm) reading and the engine rpm reading intersect indicates the specific component group causing the concern.
    - ♦ An EVA or equivalent tool capable of measuring vibration frequency and engine rpm will be needed.
- Provide pictures of diagnostic procedures to aid in testing components.

Combination EngineEAR/ChassisEAR

An electronic listening device used to quickly identify noise and the location under the chassis while the vehicle is being road tested. The ChassisEARs can identify the noise and location of damaged/worn wheel bearings, CV joints, brakes, springs, axle bearings or driveshaft carrier bearings.

EngineEAR Basic Unit

An electronic listening device used to detect even the faintest noises. The EngineEARs can detect the noise of damaged/worn bearings in generators, water pumps, A/C compressors and power steering pumps. They are also used to identify noisy lifters, exhaust manifold leaks, chipped gear teeth and for detecting wind noise. The EngineEAR has a sensing tip, amplifier, and headphones. The directional sensing tip is used to listen to the various components. Point the sensing tip at the suspect component and adjust the volume with the amplifier. Placing the tip in direct contact with a component will reveal structure-borne noise and vibrations, generated by or passing through, the component. Various volume levels can reveal different sounds.

Ultrasonic Leak Detector

The Ultrasonic Leak Detector is used to detect wind noises caused by leaks and gaps in areas where there is weather-stripping or other sealing material. It is also used to identify A/C leaks, vacuum leaks and evaporative emission noises. The Ultrasonic Leak Detector includes a multi-directional transmitter (operating in the ultrasonic range) and a hand-held detector. The transmitter is placed inside the vehicle. On the outside of the vehicle, the hand-held detector is used to sweep the area of the suspected leak. As the source of the leak is approached, a beeping sound is produced which increases in both speed and frequency.

Squeak and Rattle Repair Kit

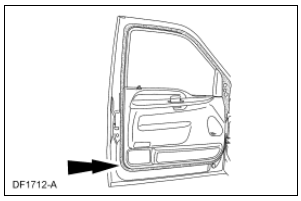
The squeak and rattle repair kit (Rotunda tool number 164-R4900) contains lubricants and self-adhesive materials that can be used to eliminate interior and exterior squeaks and rattles. The kit consists of the following materials:

- PVC (soft foam) tape
- Urethane (hard foam) tape
- Flocked (black fuzzy) tape
- UHMW (frosted) tape
- Squeak and rattle oil tube
- Squeak and rattle grease tube

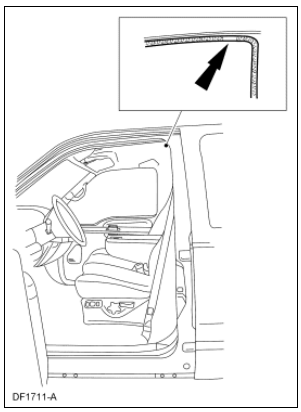
Tracing Powder

Tracing powder is used to check both the uniformity of contact and the tension of a seal against its sealing surface. These tests are usually done when a suspected air leak/noise appears to originate from the seal area or

during the alignment and adjustment of a component to a weatherstrip. Tracing powder can be ordered from Crest Industries as ATR Leak Trace. Carry out the tracing powder test as follows:



a. Clean the weatherstrip.
b. Spray the tracing powder on the mating surface only.
c. Close the door completely. Do not slam the door.
d. Open the door. An imprint is made where the weatherstrip contacted the mating surface seal. Gaps or a faint imprint will show where there is poor contact with the weatherstrip.



Index Card

Place an index card or a piece of paper between the weatherstrip and the sealing surface, then close the door. Slowly withdraw the index card or paper after the door is closed and check the amount of pressure on the weatherstrip. There should be a medium amount of resistance as it is withdrawn. Continue around the entire seal area. If there is little or no resistance, this indicates insufficient contact to form a good seal. At these points, the door, the glass, or the weatherstrip is out of alignment.

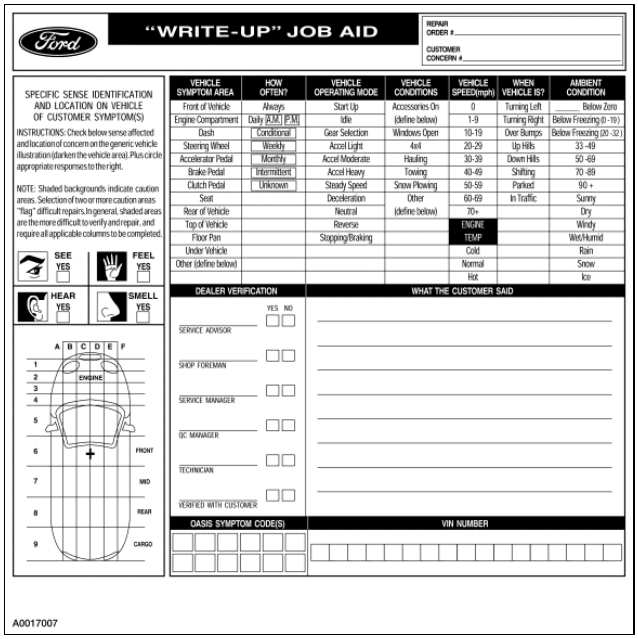
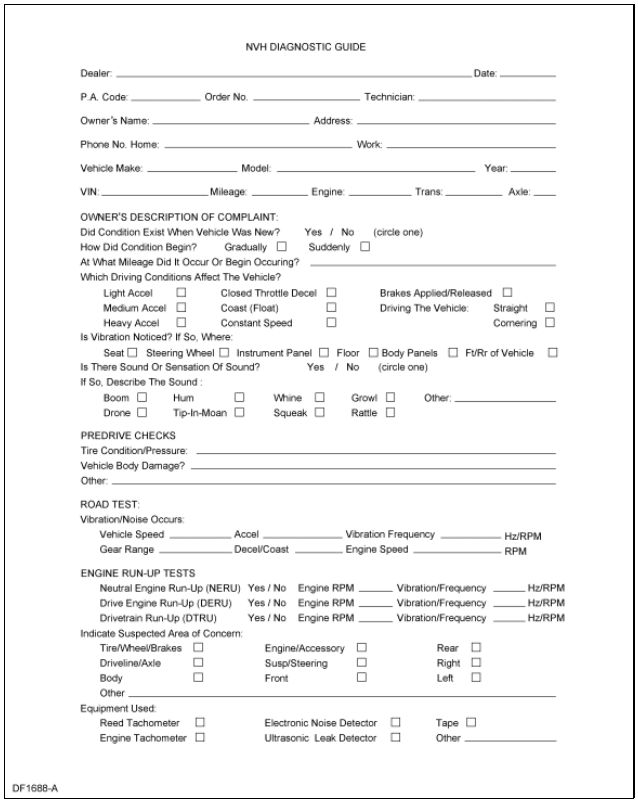
To assist the service advisor and the technician, a Write-up Job Aid and an NVH Diagnostic Guide are included with this material. The Write-up Job Aid serves as a place to record all important symptom information. The NVH Diagnostic Guide serves as a place to record information reported on the Write-up Job Aid as well as data from the testing to be carried out.

To begin a successful diagnosis, fill out the NVH Diagnostic Guide, record the reported findings, then proceed to each of the numbered process steps to complete the diagnosis.





NVH DIAGNOSTIC GUIDE

Dealer: _____ Date: _____

A0008914

1: Customer Interview

The diagnostic process starts with the customer interview. The service advisor must obtain as much information as possible about the problem and take a test drive with the customer. There are many ways a customer will describe NVH concerns and this will help minimize confusion arising from descriptive language differences. It is important that the concern is correctly interpreted and the customer descriptions are

recorded. During the interview, ask the following questions:

- When was it first noticed?
- Did it appear suddenly or gradually?
- Did any abnormal occurrence coincide with or proceed its appearance?

Use the information gained from the customer to accurately begin the diagnostic process.

2: Pre-Drive Check

It is important to do a pre-drive check before road testing the vehicle. A pre-drive check verifies that the vehicle is relatively safe to drive and eliminates any obvious faults on the vehicle.

The pre-drive check consists of a brief visual inspection. During this brief inspection, take note of anything that will compromise safety during the road test and make those repairs/adjustments before taking the vehicle on the road.

3: Preparing for the Road Test

Observe the following when preparing for the road test:

- Review the information recorded on the NVH Diagnostic Guide. It is important to know the specific concern the customer has with the vehicle.
- Do not be misled by the reported location of the noise/vibration. The cause can actually be some distance away.
- Remember that the vibrating source component (originator) may only generate a small vibration. This small vibration can in turn cause a larger vibration/noise to emanate from another receiving component (reactor), due to contact with other components (transfer path).
- Conduct the road test on a quiet street where it is safe to duplicate the vibration/noise. The ideal testing route is an open, low-traffic area where it is possible to operate the vehicle at the speed in which the condition occurs.
- If possible, lower the radio antenna in order to minimize turbulence. Identify anything that could potentially make noise or be a source of wind noise. Inspect the vehicle for add-on items that create vibration/noise. Turn off the radio and the heating and cooling system blower.
- The engine speed is an important factor in arriving at a final conclusion. Therefore, connect an accurate tachometer to the engine, even if the vehicle has a tachometer. Use a tachometer that has clearly defined increments of less than 50 rpm. This ensures an exact engine speed reading.

4: Verify the Customer Concern

Verify the customer concern by carrying out a road test, an engine run-up test, or both.

The decision to carry out a road test, an engine run-up test, or both depends on the type of NVH concern. A road test may be necessary if the symptom relates to the suspension system or is sensitive to torque. A drive engine run-up (DERU) or a neutral engine run-up (NERU) test identifies noises and vibrations relating to engine and drivetrain rpm. Remember, a condition will not always be identifiable by carrying out these tests, however, they will eliminate many possibilities if carried out correctly.

5: Road Test

NOTE: It may be necessary to have the customer ride along or drive the vehicle to point out the concern. During the road test, take into consideration the customer's driving habits and the driving conditions. The customer's concern just may be an acceptable operating condition for that vehicle.

The following is a brief overview of each test in the order in which it appears. A review of this information helps to quickly identify the most appropriate process necessary to make a successful diagnosis. After reviewing this information, select and carry out the appropriate test(s), proceeding to the next step of this process.

- The Slow Acceleration Test is normally the first test to carry out when identifying an NVH concern, especially when a road test with the customer is not possible.
- The Heavy Acceleration Test helps to determine if the concern is torque-related.
- The Neutral Coast Down Speed Test helps to determine if the concern is vehicle speed-related.
- The Downshift Speed Test helps to determine if the concern is engine speed-related.
- The Steering Input Test helps to determine how the wheel bearings and other suspension components contribute to a vehicle speed-related concern.
- The Brake Test helps to identify vibrations or noise that are brake related.
- The Road Test Over Bumps helps isolate a noise that occurs when driving over a rough or bumpy surface.
- The Engine Run-Up Tests consist of the Neutral Run-Up Test and the Engine Load Test. These tests help to determine if the concern is engine speed-related.
- The Neutral Run-Up Test is used as a follow-up test to the Downshift Speed Test when the concern occurs at idle.
- The Engine Load Test helps to identify vibration/noise sensitive to engine load or torque. It also helps to reproduce engine speed-related concerns that cannot be duplicated when carrying out the Neutral Run-Up Test or the Neutral Coast Down Test.
- The Engine Accessory Test helps to locate faulty belts and accessories that cause engine speed-related concerns.
- The Vehicle Cold Soak Procedure helps to identify concerns occurring during initial start-up and when an extended time lapse occurs between vehicle usage.

Slow Acceleration Test

To carry out this test, proceed as follows:

- Slowly accelerate to the speed where the reported concern occurs. Note the vehicle speed, the engine rpm and, if possible, determine the vibration frequency.
- Attempt to identify from what part of the vehicle the concern is coming.
- Attempt to identify the source of the concern.
- Proceed as necessary.

Heavy Acceleration Test

To carry out this test, proceed as follows:

- Accelerate hard from 0-64 km/h (0-40 mph).
- Decelerate in a lower gear.
- The concern is torque related if duplicated while carrying out this test.
- Proceed as necessary.

Neutral Coast Down Speed Test

To carry out this test, proceed as follows:

- Drive at a higher rate of speed than where the concern occurred when carrying out the Slow Acceleration Test.
- Place the transmission in NEUTRAL and coast down past the speed where the concern occurs.
- The concern is vehicle speed-related if duplicated while carrying out this test. This eliminates the engine and the torque converter as sources.
- If the concern was not duplicated while carrying out this test, carry out the Downshift Speed Test to verify if the concern is engine speed related.
- Proceed as necessary.

Downshift Speed Test

To carry out this test, proceed as follows:

- Shift into a lower gear than the gear used when carrying out the Slow Acceleration Test.
- Drive at the engine rpm where the concern occurs.
- The concern is engine speed related if duplicated while carrying out this test. This eliminates the tires, wheels, brakes and the suspension components as sources.
- If necessary, repeat this test using other gears and NEUTRAL to verify the results.
- Proceed as necessary.

Steering Input Test

To carry out this test, proceed as follows:

- Drive at the speed where the concern occurs, while making sweeping turns in both directions.
- If the concern goes away or gets worse, the wheel bearings, hubs, U-joints (contained in the axles of 4WD applications), and tire tread wear are all possible sources.
- Proceed as necessary.

Brake Test

To carry out this test, proceed as follows:

- Warm the brakes by slowing the vehicle a few times from 80 32 km/h (50 20 mph) using light braking applications. At highway speeds of 89 97 km/h (50 60 mph), apply the brake using a light pedal force.
- Accelerate to 89 97 km/h (55 60 mph).
- Lightly apply the brakes and slow the vehicle to 30 km/h (20 mph).
- A brake vibration noise can be felt in the steering wheel, seat or brake pedal. A brake noise can be heard upon brake application and diminish when the brake is released.

Road Test Over Bumps

To carry out this test, proceed as follows:

- Drive the vehicle over a bump or rough surface one wheel at a time to determine if the noise is coming from the front or the back and the left or the right side of the vehicle.
- Proceed as necessary.

Neutral Engine Run-Up (NERU) Test

To carry out this test, proceed as follows:

- Install a tachometer.

- Increase the engine rpm up from an idle to approximately 4000 rpm while in PARK on front wheel drive vehicles with automatic transmissions, or NEUTRAL for all other vehicles. Note the engine rpm and, if possible, determine the vibration frequency.
- Attempt to identify what part of the vehicle the concern is coming from.
- Attempt to identify the source of the concern.
- Proceed as necessary.

Drive Engine Run-Up (DERU) Load Test

To carry out this test, proceed as follows:

- **⚠ WARNING: Block the front and rear wheels, and apply the parking brake and the service brake, or injury to personnel can result.**

  ⚠ CAUTION: Do not carry out the Engine Load Test for more than 5 seconds or damage to the transmission or transaxle can result.

  Block the front and rear wheels.
- Apply the parking brake and the service brake.
- Install a tachometer.
- Shift the transmission into DRIVE, and increase and decrease the engine rpm between an idle to approximately 2000 rpm. Note the engine rpm and, if possible, determine the vibration frequency.
- Repeat the test in REVERSE.
- If the vibration/noise is duplicated when carrying out this test, inspect the engine and transmission or transaxle mounts.
- If the concern is definitely engine speed-related, carry out the Engine Accessory Test to narrow down the source.
- Proceed as necessary.

Engine Accessory Test

To carry out this test, proceed as follows:

- **⚠ WARNING: Block the front and rear wheels, and apply the parking brake and the service brake, or injury to personnel can result.**

  ⚠ CAUTION: Limit engine running time to one minute or less with belts removed or serious engine damage will result.

  NOTE: A serpentine drive belt decreases the usefulness of this test. In these cases, use a vibration analyzer, such as the vibration analyzer (VA), to pinpoint accessory vibrations. An electronic listening device, such as an EngineEAR, will also help to identify noises from specific accessories.

  Remove the accessory drive belts.
- Increase the engine rpm to where the concern occurs.
- If the vibration/noise is duplicated when carrying out this test, the belts and accessories are not sources.
- If the vibration/noise was not duplicated when carrying out this test, install each accessory belt, one at a time, to locate the source.

Vehicle Cold Soak Procedure

To carry out this procedure, proceed as follows:

- Test preparations include matching customer conditions (if known). If not known, document the test conditions: gear selection and engine rpm. Monitor the vibration/noise duration with a watch for up to 3 minutes.
- Park the vehicle where testing will occur. The vehicle must remain at or below the concern temperature (if known) for 6-8 hours.
- Before starting the engine, conduct a visual inspection under the hood.
- Turn the key on, but do not start the engine. Listen for the fuel pump, anti-lock brake system (ABS) and air suspension system noises.
- Start the engine.
- ⚠ **CAUTION: Never probe moving parts.**

  Isolate the vibration/noise by carefully listening. Move around the vehicle while listening to find the general location of the vibration/noise. Then, search for a more precise location by using a stethoscope or EngineEAR.
- Refer to Idle Noise/Vibration in the Symptom Chart to assist with the diagnosis.

6: Check OASIS/TSBs/Repair History

After verifying the customer concern, check for OASIS reports, TSBs and the vehicle repair history for related concerns. If information relating to a diagnosis/repair is found, carry out the procedure(s) specified in that information.

If no information is available from these sources, carry out the vehicle preliminary inspection to eliminate any obvious faults.

7: Diagnostic Procedure

Qualifying the concern by the particular sensation present can help narrow down the concern. Always use the "symptom" to "system" to "component" to "cause" diagnosis technique. This diagnostic method divides the problem into related areas to correct the customer concern.

- Verify the "symptom".
- Determine which "system(s)" can cause the "symptom".
  - ♦ If a vibration concern is vehicle speed related, the tire and wheel rpm/frequency or driveshaft frequency should be calculated.
  - ♦ If a vibration concern is engine speed related, the engine, engine accessory or engine firing frequencies should be calculated.
- After determining the "system", use the diagnostic tools to identify the worn or damaged "components".
- After identifying the "components", try to find the "cause" of the failure.

Once the concern is narrowed down to a symptom/condition, proceed to NVH Condition and Symptom Categories.

NVH Condition and Symptom Categories

A good diagnostic process is a logical sequence of steps that lead to the identification of a causal system. Use the condition and symptom categories as follows:

- Identify the operating condition that the vehicle is exhibiting.
- Match the operating condition to the symptom.

- Verify the symptom.
- Identify which category or system could cause the symptom.
- Refer to the diagnostic symptom chart that is referred to.

Operating Condition Vehicle is Not Moving

1. Static operation
    - Noise occurs during component/system functioning. GO to Symptom Chart .
2. While cranking
    - Grinding or whine, differential ring gear or starter motor pinion noise. GO to Symptom Chart .
    - Rattle. Exhaust hanger, exhaust heat shield or A/C line noise. GO to Symptom Chart .
    - Vibration. Acceptable condition.
3. At idle
    - Idle noise. GO to Symptom Chart .
    - Idle vibration or shake. GO to Symptom Chart .
4. During gear selection
    - Vehicle parked on a steep incline. Acceptable noise.
    - Vehicle parked on a flat surface. GO to Symptom Chart .

Operating Condition Vehicle is Moving

1. Depends more on how the vehicle is operated:
    1. Speed related
        - Related to vehicle speed
            - Pitch increases with vehicle speed. GO to Symptom Chart .
            - Noise occurs at specific vehicle speed. A high-pitched noise (whine). GO to Symptom Chart .
            - Loudness proportional to vehicle speed. Low-frequency noise at high speeds, noise and loudness increase with speed. GO to Symptom Chart .
            - A low-pitched noise (drumming). GO to Symptom Chart .
            - Vibration occurs at a particular speed (mph) regardless of acceleration or deceleration. GO to Symptom Chart .
            - Noise varies with wind/vehicle speed and direction. GO to Symptom Chart .
        - Related to engine speed
            - Noise varies with engine rpm. GO to Symptom Chart .
            - Vibration occurs at a particular speed (mph) regardless of engine speed (rpm).
    2. Acceleration
        - Wide open throttle (WOT)
            - Engine induced contact between components. Inspect and repair as necessary.
            - Noise is continuous throughout WOT. Exhaust system or engine ground out. GO to Symptom Chart .
        - Light/moderate acceleration
            - Tip-in moan. Engine/exhaust noise. GO to Symptom Chart .
            - Knock-type noise. GO to Symptom Chart .
            - Driveline shudder. GO to Symptom Chart .
            - Engine vibration. GO to Symptom Chart .
    3. Turning noise. GO to Symptom Chart
    4. Braking

- Clicking sound is signaling ABS is active. Acceptable ABS sound.
- A continuous grinding/squeal. GO to Symptom Chart .
- Brake vibration/shudder. GO to Symptom Chart .

5. Shifting
   - Noise or vibration condition related to the transmission (automatic). GO to Symptom Chart .
6. Cruising speeds
   - Accelerator pedal vibration. GO to Symptom Chart .
   - Driveline vibration. GO to Symptom Chart .
   - A shimmy or shake. GO to Symptom Chart .
7. Driving at low/medium speeds
   - A wobble or shudder. GO to Symptom Chart .

2. Depends more on where the vehicle is operated:
   1. Bump/pothole, rough road or smooth road. GO to Symptom Chart
      - Noise is random or intermittent occurring from road irregularities. GO to Symptom Chart .
      - Noise or vibration changes from one road surface to another. Normal sound changes.
      - Noise or vibration associated with a hard/firm ride. GO to Symptom Chart .

Symptom Charts

Symptom Chart	Air Leak and Wind Noise
Symptom Chart	Brake Noise/Vibration
Symptom Chart	Driveline Noise/Vibration
Symptom Chart	Engine Noise/Vibration
Symptom Chart	Idle Noise/Vibration
Symptom Chart	Squeak and Rattle
Symptom Chart	Steering Noise/Vibration
Symptom Chart	Suspension Noise/Vibration
Symptom Chart	Tire Noise/Vibration
Symptom Chart	Transmission (Automatic) Noise/Vibration

Pinpoint Tests

The pinpoint tests are a step-by-step diagnostic process designed to determine the cause of a condition. It may not always be necessary to follow a pinpoint test to its conclusion. Carry out only the steps necessary to correct the condition. Then, test the system for normal operation. Sometimes, it is necessary to remove various vehicle components to gain access to the component requiring testing. For additional information, refer to the appropriate section for removal and installation procedures. Reinstall all components after verifying system operation is normal.

PINPOINT TEST A: BRAKE VIBRATION/SHUDDER

Test Step	Result / Action to Take
A1 ROAD TEST THE VEHICLE LIGHT BRAKING	
• Check that the wheel and tires are correct for the vehicle. Inspect the tires for abnormal wear patterns. • Road test the vehicle. Warm the brakes by slowing the vehicle a few times from 80-32 km/h (50 to 20 mph) using light braking applications. At highway speeds of 89-97 km/h (55-60 mph), apply the brake using a light pedal force. • **Is there a vibration/shudder felt in the steering wheel, seat or brake pedal?**	**Yes** GO to A4 . **No** GO to A2 .
A2 ROAD TEST THE VEHICLE MODERATE TO HEAVY BRAKING	
• Road test the vehicle. At highway speeds of 89-97 km/h (55-60 mph), apply the brake using a moderate to heavy pedal force. • **Is there a vibration/shudder?**	**Yes** For vehicles with ABS, GO to A3 . For vehicles with standard brakes, GO to A4 . **No** Vehicle is OK. VERIFY condition with customer. TEST the vehicle for normal operation.
A3 NORMAL ACTUATION OF THE ABS SYSTEM DIAGNOSIS	
• During moderate to heavy braking, noise from the hydraulic control unit (HCU) and pulsation in the brake pedal can be observed. Pedal pulsation coupled with noise during heavy braking or on loose gravel, bumps, wet or snowy surfaces is acceptable and indicates correct functioning of the ABS system. Pedal pulsation or steering wheel nibble (frequency is proportioned to the vehicle speed) indicates a concern with a brake or suspension component. • **Is the vibration/shudder vehicle speed sensitive?**	**Yes** GO to A5 . **No** The brake system is operating correctly.
A4 APPLICATION OF THE PARKING BRAKE	
• **NOTE:** Begin at the front of the vehicle unless the vibration or shudder has been isolated to the rear. • This test is not applicable to vehicles with drum-in-hat type parking brakes. For vehicles with drum-in-hat parking brakes, proceed to the next test. For all other vehicles, apply the parking brake to identify if the problem is in the front or rear brake. At highway speeds of 89-97 km/h (55-60 mph), lightly apply the parking brake until the vehicle slows down. Release the parking brake immediately after the test. • **Is there a vibration/shudder?**	**Yes** GO to A8 . **No** GO to A5 .
A5 CHECK THE FRONT WHEEL BEARINGS	

• Check the front wheel bearings. Refer to Wheel Bearing Check in this section. • **Are the wheel bearings OK?**	**Yes** GO to A6 . **No** INSPECT the wheel bearings. ADJUST or REPAIR as necessary. TEST the system for normal operation.
A6 CHECK THE FRONT SUSPENSION	
• Check the front suspension for: ♦ Broken or loose bolts. ♦ Damaged springs. ♦ Worn or damaged upper and lower control arm bushings. ♦ Loose or rough front bearings. ♦ Uneven tire wear. • **Are all the suspension components in satisfactory condition?**	**Yes** GO to A7 . **No** REPAIR or INSTALL new components as necessary. TEST the system for normal operation.
A7 RESURFACE THE FRONT BRAKE DISCS	
• ⚠ **CAUTION: Do not use a bench lathe to machine brake discs.** • **NOTE:** Follow the manufacturer's instructions to machine the brake discs. After machining, make sure the brake disc meets the thickness specification. • Resurface the front brake discs or drums. Refer to Section 206-00 . Road test the vehicle. • **Is the vibration/shudder present?**	**Yes** GO to A8 . **No** Vehicle is OK.
A8 CHECK THE REAR SUSPENSION	
• Check the rear suspension for: ♦ Broken or loose bolts. ♦ Damaged or worn springs or spring bushings. ♦ Worn or damaged upper and lower control arm bushings. ♦ Worn or damaged trailing arms. ♦ Loose or rough rear bearings. ♦ Uneven tire wear. • **Are all the suspension components in satisfactory condition?**	**Yes** GO to A9 . **No** REPAIR or INSTALL new components as necessary. TEST the system for normal operation.
A9 RESURFACE THE REAR BRAKE DISC OR DRUM	
• ⚠ **CAUTION: Do not use a bench lathe to machine brake discs.** • **NOTE:** Follow the manufacturer's instructions to machine the brake discs. After machining, make sure the brake disc meets the thickness specification. • Resurface the front brake discs. Refer to Section 206-00 . Road test the vehicle. • **Is the vibration/shudder present?**	**Yes** CHECK the front suspension for wear or damage. RESURFACE the front brake discs. TEST the system for normal operation. **No** Vehicle is OK.

PINPOINT TEST B: ENGINE TICKING NOISE

Test Step	Result / Action to Take
B1 CHECK FOR TICKING NOISE AT THE FUEL RAIL	
• Disconnect the first fuel line clip. • **Is the ticking noise gone?**	**Yes** CHECK for TSB for applicable vehicle. REPAIR as necessary. TEST the system for normal operation. **No** GO to B2 .
B2 CHECK FOR TICKING NOISE AT THE FUEL INJECTOR	
• Using an EngineEAR, listen at the fuel injectors by placing a probe on each injector. To isolate the faulty injector, disconnect the injector electrical connector and listen for the noise. • **Is the fuel injector the source of the ticking noise?**	**Yes** INSTALL a new fuel injector. REFER to Section 303-04B . TEST the system for normal operation. **No** GO to B3 .
B3 CHECK THE BELT TENSIONER FOR TICKING NOISE	
• Inspect the accessory drive. Check for the belt tensioner bottoming at end of travel or not at end of stroke. • Using an EngineEAR, listen at the belt tensioner. • **Is the belt tensioner the source of the noise?**	**Yes** INSTALL a new belt tensioner. TEST the system for normal operation. **No** GO to B4 .
B4 CHECK THE WATER PUMP FOR TICKING NOISE	
• Using an EngineEAR, listen at the water pump for ticking noise. • **Is the water pump the source of the noise?**	**Yes** INSTALL a new water pump. REFER to Section 303-03 . TEST the system for normal operation. **No** GO to B5 .
B5 CHECK FOR AN OBSTRUCTION OF THE COOLING FAN	
• Inspect the cooling fan for obstructions. • Check the cooling fan and shroud for wear or damage. • **Was there an obstruction or does the cooling fan show signs of damage?**	**Yes** REPAIR or INSTALL a new cooling fan. REFER to Section 303-03 . TEST the system for normal operation. **No** GO to B6 .
B6 CHECK THE OIL PUMP FOR TICKING NOISE	
• Check the oil pump using EngineEARs and probe at the oil filter adapter to verify the oil pump as a source.	**Yes** INSTALL a new oil pump. REFER to Section 303-01A (3.0L [4.V]) or

• **Is the oil pump the source of the noise?**	Section 303-01B (3.9L). TEST the system for normal operation. **No** GO to B7 .
B7 CHECK VALVE LIFTERS OR LASH ADJUSTERS FOR CORRECT OPERATION	
• Check valve lifter/lash adjuster for correct operation, using EngineEARs. • **Are the valve lifters/lash adjusters operating correctly?**	**Yes** VERIFY customer concern. CONDUCT a diagnosis of other suspect components. **No** INSTALL a new valve lifter/lash adjuster(s). TEST the system for normal operation.

PINPOINT TEST C: ACCESSORY DRIVE BEARING HOOT

Test Step	Result / Action to Take
C1 CHECK THE ACCESSORY DRIVE IDLER AND TENSIONER PULLEY BEARINGS	
• Carry out the Vehicle Cold Soak Procedure in this section. • Key in START position. • Place an EngineEAR probe directly on the pulley center post or bolt to verify which bearing is making the noise. • Key in OFF position. • **Is either bearing making the noise?**	**Yes** INSTALL a new pulley/idler. CARRY OUT the Vehicle Cold Soak Procedure and TEST the system for normal operation. **No** CONDUCT a diagnosis on other suspect accessory drive components.

PINPOINT TEST D: POWER STEERING MOAN

Test Step	Result / Action to Take
D1 CHECK THE POWER STEERING SYSTEM	
• Carry out the Vehicle Cold Soak Procedure in this section. • Key in START position. • Turn the steering wheel while the noise is occurring and listen for changes in sound pitch or loudness. • Key in OFF position. • **Does the sound pitch or loudness change while turning the steering wheel?**	**Yes** GO to D2 . **No** CONDUCT a diagnosis on other suspect accessory drive components.
D2 VERIFY THE SOURCE	
• Key in START position.	**Yes** VERIFY that the supply tube to the pump is

• Place an EngineEAR probe near the power steering pump/reservoir while the noise is occurring. While an assistant turns the steering wheel, listen for changes in sound pitch or loudness. • Key in OFF position. • **Does the sound pitch or loudness change while turning the steering wheel?**	unobstructed. CHECK the fluid condition and level. DRAIN the fluid and REFILL. REFER to Section 211-00 . CARRY OUT the Vehicle Cold Soak Procedure and TEST the system for normal operation. **No** Normal system operation.

PINPOINT TEST E: ENGINE DRIVEN COOLING FAN MOAN

Test Step	Result / Action to Take
E1 CHECK THE ENGINE DRIVEN COOLING FAN AFTER A COLD SOAK	
• Carry out the Vehicle Cold Soak Procedure in this section. • Key in START position. • Assess the airflow. • Raise the engine speed to 1500 rpm while listening for the moan to increase in proportion to the airflow. • Key in OFF position. • **Does the moan increase in proportion to the airflow?**	**Yes** TEST the fan for normal operation. If the fan tests normal, GO to E2 . Otherwise, REPAIR as necessary. **No** Normal system operation.
E2 CHECK THE ENGINE DRIVEN COOLING FAN AT NORMAL OPERATING TEMPERATURE	
• Key in START position. • Run the engine to normal operating temperature while listening for the moan to stop. • Key in OFF position. • **Does the moan stop?**	**Yes** Normal clutch operation. **No** INSTALL a new fan clutch. TEST the system for normal operation.

PINPOINT TEST F: DRUMMING NOISE

Test Step	Result / Action to Take
F1 CHECK THE EXHAUST SYSTEM	
• Key in START position. • Increase the engine rpm until the noise is the loudest. Note the engine rpm. • Key in OFF position. • Add approximately 9 kg (20 lb) of weight to the exhaust system. First place the weight at the tail pipe and test, then place it at the front pipe.	**Yes** CARRY OUT Exhaust System Neutralizing in this section. TEST the system for normal operation. **No** GO to F2 .

 DF1768-A • Key in START position. • Increase the engine rpm and listen for the drumming noise. Note the engine rpm if the noise occurs. • Key in OFF position. • Using a vibration analyzer (VA), determine the amount of vibration that occurs with the drumming noise. • **Is the noise/vibration reduced or eliminated, or does the noise/vibration occur at a different rpm?**	
F2 POWERTRAIN/DRIVETRAIN MOUNT NEUTRALIZING	
• Carry out Powertrain/Drivetrain Mount Neutralizing in this section. Test the system for normal operation. • **Is the noise reduced or eliminated?**	**Yes** Vehicle OK. TEST the system for normal operation. **No** CONDUCT diagnosis of other suspect components.

PINPOINT TEST G: ENGINE TICKING, KNOCKING OR CONTINUOUS RATTLE

Test Step	Result / Action to Take
G1 CHECK FOR NOISE AT THE VALVE COVERS AND THE FRONT COVERS (OHC ENGINES)	
• Carry out the Vehicle Cold Soak Procedure in this section. • Key in START position. • **NOTE:** For a short-duration ticking noise, multiple engine starts may be necessary. • Using an EngineEAR, listen closely at the valve covers and the front covers (OHC engines) by placing the probe near the surface of the valve cover and then on the surface front cover. • Key in OFF position. • **Is the noise source apparent?**	**Yes** REMOVE the appropriate cover and INSPECT for loose, worn/broken components. REPAIR as necessary. TEST the system for normal operation. **No** GO to G2 .
G2 CHECK FOR NOISE AT THE CYLINDER BLOCK	
• Key in START position. • Using an EngineEAR, listen closely at the cylinder block by placing a probe on or near each freeze plug. • Key in OFF position. • **Is the noise source apparent?**	**Yes** REPAIR or INSTALL new components as necessary. **No** GO to G3 .
G3 CHECK FOR NOISE WHILE DISCONNECTING EACH FUEL INJECTOR ELECTRICAL CONNECTOR, ONE AT A TIME	
• Key in START position.	**Yes** INSTALL a new fuel injector. REFER to Section 303-04B . TEST

• Disconnect each fuel injector electrical connector, one at a time, to decrease piston force and listen for the noise. • Key in OFF position. • **Is the noise reduced or eliminated?**	the system for normal operation. **No** INSPECT accessory drive or the transmission as a possible source.

PINPOINT TEST H: FRONT SUSPENSION NOISE

Test Step	Result / Action to Take
H1 ROAD TEST THE VEHICLE	
• Test drive the vehicle. • **NOTE:** An assistant will be needed for this road test. • During the road test, drive the vehicle over a rough road. Using ChassisEARs, determine from which area/component the noise is originating. • **Is there a squeak, creak or rattle noise?**	**Yes** GO to H2 . **No** The suspension system is OK. CONDUCT a diagnosis on other suspect systems.
H2 INSPECT THE STEERING SYSTEM	
• ⚠ **WARNING: The electrical power to the air suspension system must be shut off prior to hoisting, jacking or towing an air suspension vehicle. This can be accomplished by turning off the air suspension switch. Failure to do so can result in unexpected inflation or deflation of the air springs, which can result in shifting of the vehicle during these operations.** • Raise and support the vehicle. • Check the steering system for wear or damage. Carry out a steering linkage test. Refer to Section 211-00 . • Inspect the tire wear pattern. Refer to Tire Wear Chart in Tire Wear Patterns and Frequency Calculations in this section. • **Are the steering components worn or damaged?**	**Yes** REPAIR the steering system. INSTALL new components as necessary. TEST the system for normal operation. **No** GO to H3 .
H3 FRONT SHOCK ABSORBER/STRUT CHECK	
• Check the front shock absorbers/strut mounts for loose bolts or nuts. • Check the front shock absorbers/struts for wear or damage. Carry out a "bounce test". • **Are the front shock absorbers/struts loose or damaged?**	**Yes** TIGHTEN to specifications if loose. INSTALL new front shock absorbers/struts if damaged. TEST the system for normal operation. **No** GO to H4 .
H4 CHECK THE FRONT SPRINGS	
• Check the front spring and front spring mounts/brackets for wear or damage. • **Are the front springs or spring mounts/brackets worn or damaged?**	**Yes** REPAIR or INSTALL new components as necessary. TEST the system for normal operation. **No** GO to H5 .

H5 CHECK THE CONTROL ARMS/RADIUS ARMS	
• Inspect the control arm bushings for wear or damage. • Inspect for twisted or bent control arms/radius arms. • **Are the control arms/radius arms damaged or worn?**	**Yes** REPAIR or INSTALL new components as necessary. TEST the system for normal operation. **No** GO to H6 .
H6 CHECK THE STABILIZER BAR/TRACK BAR	
• Check the stabilizer bar/track bar bushings and links for damage or wear. • Check the stabilizer bar/track bar for damage. • Check for loose or damaged stabilizer bar isolators or brackets. • **Are the stabilizer bar/track bar components loose, worn or damaged?**	**Yes** REPAIR or INSTALL new components as necessary. TEST the system for normal operation. **No** Suspension system OK. CONDUCT diagnosis on other suspect systems.

PINPOINT TEST I: REAR SUSPENSION NOISE

Test Step	Result / Action to Take
I1 ROAD TEST THE VEHICLE	
• Test drive the vehicle. • **NOTE:** An assistant will be needed for this road test. • During the road test, drive the vehicle over a rough road. Using ChassisEARs, determine from which area/component the noise is originating. • **Is there a squeak, creak or rattle noise?**	**Yes** GO to I2 . **No** The suspension system is OK. CONDUCT a diagnosis on other suspect systems.
I2 REAR SHOCK ABSORBER/STRUT CHECK	
• ⚠ **WARNING: The electrical power to the air suspension system must be shut off prior to hoisting, jacking or towing an air suspension vehicle. This can be accomplished by turning off the air suspension switch. Failure to do so can result in unexpected inflation or deflation of the air springs, which can result in shifting of the vehicle during these operations.** • Raise and support the vehicle. • Check the rear shock absorber/strut mounts for loose bolts or nuts. • Check the rear shock absorbers/struts for damage. Carry out a shock absorber check. • **Are the rear shock absorbers/struts loose or damaged?**	**Yes** TIGHTEN to specifications if loose. INSTALL new rear shock absorbers/struts if damaged. TEST the system for normal operation. **No** GO to I3 .
I3 CHECK THE REAR SPRINGS	
• Check the rear springs and rear spring mounts/brackets for wear or damage.	**Yes** REPAIR or INSTALL new components as necessary.

• **Are the rear springs or spring mounts/brackets worn or damaged?**	TEST the system for normal operation. **No** GO to I4 .
I4 CHECK THE CONTROL ARMS/TRAILING ARMS	
• Inspect the control arm/trailing arm bushings for wear or damage. Check for loose control arm/trailing arm bolts. • Inspect for twisted or bent control arms/trailing arms. • **Are the control arms/trailing arms loose, damaged or worn?**	**Yes** REPAIR or INSTALL new components as necessary. TEST the system for normal operation. **No** GO to I5 .
I5 CHECK THE STABILIZER BAR/TRACK BAR	
• Check the stabilizer bar/track bar bushings and links for damage or wear. • Check the stabilizer bar/track bar for damage. • Check for loose or damaged stabilizer bar isolators or brackets. • **Are the stabilizer bar/track bar components loose, worn or damaged?**	**Yes** REPAIR or INSTALL new components as necessary. Test the system for normal operation. **No** Suspension system OK. CONDUCT diagnosis on other suspect systems.

PINPOINT TEST J: WHEEL AND TIRE

Test Step	Result / Action to Take
J1 ROAD TEST THE VEHICLE	
• **NOTE:** Wheel or tire vibrations felt in the steering wheel are most likely related to the front wheel or tire. Vibration felt through the seat are most likely related to the rear wheel or tire. This may not always be true, but it can help to isolate the problem to the front or rear of the vehicle. • Test drive the vehicle at different speed ranges. • During the road test, if the vibration can be eliminated by placing the vehicle in NEUTRAL or is affected by the speed of the engine, the cause is not the wheels or tires. • **Is there a vibration and noise?**	**Yes** GO to J2 . **No** The wheel and tires are OK. CONDUCT a diagnosis on other suspect systems.
J2 CHECK THE FRONT WHEEL BEARINGS	
• Check the front wheel bearings. Refer to Wheel Bearing Check in this section. • **Are the wheel bearings OK?**	**Yes** GO to J3 . **No** INSPECT the wheel bearings. ADJUST or REPAIR as necessary. TEST the system for normal operation.

J3 INSPECT THE TIRES	
• Check the tires for missing weights. • Check the wheels for damage. • Inspect the tire wear pattern. Refer to the Tire Wear Patterns chart in this section. • **Do the tires have an abnormal wear pattern?**	**Yes** CORRECT the condition that caused the abnormal wear. INSTALL new tire(s). TEST the system for normal operation. **No** GO to J4 .
J4 TIRE ROTATION DIAGNOSIS	
• Spin the tires slowly and watch for signs of lateral runout. DF1713-A • Spin the tires slowly and watch for signs of radial runout. DF1714-A • **Are there signs of visual runout?**	**Yes** GO to J5 . **No** CHECK the wheel and tire balance. CORRECT as necessary. TEST the system for normal operation.
J5 RADIAL RUNOUT CHECK ON THE TIRE	
NOTE: The tires may be exhibiting permanent flat spotting. If the tires are diagnosed with permanent flat spotting, install new tires in pairs as necessary. Install tires of the same type and size. • Measure the radial runout of the wheel and tire assembly. A typical specification for total radial runout is 1.14 mm (0.04 in).  DF1715-A • **Is the radial runout within specifications?**	**Yes** GO to J8 . **No** GO to J6 .
J6 RADIAL RUNOUT CHECK ON THE WHEEL	
• Measure the radial runout of the wheel. A typical specification for total radial runout is 1.14 mm (0.04 in). • **Is the radial runout within specifications?**	**Yes** INSTALL a new tire. TEST the system for normal operation. **No**

	GO to J7 .
J7 CHECK THE HUB/BRAKE DISC OR DRUM PILOT RUNOUT OR BOLT CIRCLE RUNOUT	
• Measure the pilot or bolt circle runout. A typical specification for radial runout is: ♦ Pilot runout less than 0.15 mm (0.006 inch). ♦ Bolt circle runout less than 0.38 mm (0.015 inch). • **Is the radial runout within specifications?**	**Yes** INSTALL a new wheel. TEST the system for normal operation. **No** REPAIR or INSTALL new components as necessary. REFER to Section 204-01 for front suspension or Section 204-02 for rear suspension.
J8 LATERAL RUNOUT CHECK ON THE TIRE	
• Measure the lateral runout of the wheel and tire assembly. A typical specification for total lateral runout is 1.14 mm (0.04 in).  • **Is the lateral runout within specifications?**	**Yes** Wheel and tires OK. CONDUCT diagnosis on other suspect systems. **No** GO to J9 .
J9 LATERAL RUNOUT CHECK ON THE WHEEL	
• Measure the lateral runout of the wheel. A typical specification for total radial runout is 1.14 mm (0.04 in). • **Is the lateral runout within specifications?**	**Yes** INSTALL a new tire. TEST the system for normal operation. **No** GO to J10 .
J10 CHECK THE FLANGE FACE LATERAL RUNOUT	
• Measure the flange face lateral runout. A typical specification for lateral runout is: ♦ Hub/brake disc less than 0.13 mm (0.005 inch). ♦ Axle shaft less than 0.25 mm (0.010 inch). • **Is the lateral runout within specifications?**	**Yes** INSTALL a new wheel. TEST the system for normal operation. **No** REPAIR or INSTALL new components as necessary. REFER to Section 204-01 for front suspension or Section 204-02 for rear suspension.

PINPOINT TEST K: HIGH SPEED SHAKE OR SHIMMY

Test Step	Result / Action to Take
K1 CHECK FOR FRONT WHEEL BEARING ROUGHNESS	
• Chock the rear wheels. • Raise and support the front end of the vehicle so that the front wheel and tire assemblies can spin. • Spin the front tires by hand. Refer to Wheel Bearing Check in this section. • **Do the wheel bearings feel rough?**	**Yes** INSPECT the wheel bearings. REPAIR as necessary. TEST the system for normal operation. **No** GO to K2 .
K2 CHECK THE END PLAY OF THE FRONT WHEEL BEARINGS	
• Check the end play of the front wheel bearings. Refer to Section 204-00 . • **Is the end play OK?**	**Yes** GO to K3 . **No** ADJUST or REPAIR as necessary. TEST the system for normal operation.
K3 MEASURE THE LATERAL RUNOUT AND THE RADIAL RUNOUT OF THE FRONT WHEELS ON THE VEHICLE	
• Measure the lateral runout and the radial runout of the front wheels on the vehicle. Go To Pinpoint Test J . • **Are the measurements within specifications?**	**Yes** GO to K4 . **No** INSTALL new wheels as necessary and BALANCE the assembly. TEST the system for normal operation.
K4 MEASURE THE LATERAL RUNOUT OF THE FRONT TIRES ON THE VEHICLE	
• Measure the lateral runout of the front tires on the vehicle. Go To Pinpoint Test J . • **Is the runout within specifications?**	**Yes** GO to K5 . **No** INSTALL new tires as necessary and BALANCE the assembly. TEST the system for normal operation.
K5 MEASURE THE RADIAL RUNOUT OF THE FRONT TIRES ON THE VEHICLE	
• Measure the radial runout of the front tires on the vehicle. Go To Pinpoint Test J . • **Is the runout within specifications?**	**Yes** BALANCE the front wheel and tire assemblies. If any tire cannot be balanced, INSTALL a new tire. TEST the system for normal operation. **No** GO to K6 .
K6 MATCH MOUNT THE TIRE AND WHEEL ASSEMBLY	

• Mark the high runout location on the tire and also on the wheel. Break the assembly down and rotate the tire 180 degrees (halfway around) on the wheel. Inflate the tire and measure the radial runout. • **Is the runout within specifications?**	**Yes** BALANCE the assembly. TEST the system for normal operation. **No** If the high spot is not within 101.6 mm (4 inches) of the first high spot on the tire, GO to K7 .
K7 MEASURE THE WHEEL FLANGE RUNOUT	
• Dismount the tire and mount the wheel on a wheel balancer. Measure the runout on both wheel flanges. Refer to Section 204-04 .  DG0199-A • **Is the runout within specifications?**	**Yes** LOCATE and MARK the low spot on the wheel. INSTALL the tire, matching the high spot on the tire with the low spot on the wheel. BALANCE the assembly. TEST the system for normal operation. If the condition persists,GO to K8 . **No** INSTALL a new wheel. CHECK the runout on the new wheel. If the new wheel is within limits, LOCATE and MARK the low spot. INSTALL the tire, matching the high spot on the tire with the low spot on the wheel. BALANCE the assembly. TEST the system for normal operation. If the condition persists, GO to K8 .
K8 CHECK FOR VIBRATION FROM THE FRONT OF THE VEHICLE	
⚠ **WARNING: If only one drive wheel is allowed to rotate, speed must be limited to 55 km/h (34 mph) using the speedometer reading, since actual wheel speed will be twice that indicated on the speedometer. Exceeding a speed of 55 km/h (34 mph) or allowing the drive wheel to hang unsupported can result in tire disintegration or differential failure, which can cause serious personal injury and extensive vehicle damage.** • Spin the front wheel and tire assemblies with a wheel balancer while the vehicle is raised on a hoist. Feel for vibration in the front fender or while seated in the vehicle. • **Is the vibration present?**	**Yes** SUBSTITUTE known good wheel and tire assemblies as necessary. TEST the system for normal operation. **No** GO to K9 .
K9 CHECK FOR VIBRATION FROM THE REAR OF THE VEHICLE	
⚠ **WARNING: If only one drive wheel is allowed to rotate, speed must be limited to 55 km/h (34 mph) using the speedometer reading, since actual wheel speed will be twice that indicated on the speedometer. Exceeding a speed of 55 km/h (34 mph) or allowing the drive wheel to hang unsupported can result in tire disintegration or**	**Yes** GO to K10 . **No** TEST the system for normal operation.

differential failure, which can cause serious personal injury and extensive vehicle damage. • Chock the front wheels. • Raise and support the rear end of the vehicle so that the rear wheel and tire assemblies can spin. • Engage the drivetrain and carefully accelerate the drive wheels while checking for vibration. • **Is the vibration present?**	
K10 CHECK THE DRIVETRAIN	
⚠ **WARNING: If only one drive wheel is allowed to rotate, speed must be limited to 55 km/h (34 mph) using the speedometer reading, since actual wheel speed will be twice that indicated on the speedometer. Exceeding a speed of 55 km/h (34 mph) or allowing the drive wheel to hang unsupported can result in tire disintegration or differential failure, which can cause serious personal injury and extensive vehicle damage.** • Remove the rear wheel and tire assemblies. Refer to Section 204-04 . • Secure the brake drums (if so equipped), by installing wheel hub bolt nuts, reversed. • Carefully accelerate the drivetrain while checking for vibration. • **Is the vibration present?**	**Yes** CHECK/TEST the drivetrain and driveline components. TEST the system for normal operation. **No** SUBSTITUTE known good wheel and tire assemblies as necessary. TEST the system for normal operation.

Component Tests

Idle Air Control (IAC) Valve

1. Open the hood.

2. **NOTE:** Key symptom is elevated idle speed while noise is occurring.

   NOTE: "Snapping" the throttle can induce the noise.

   Verify the condition by operating the vehicle for a short time.

3. Inspect the IAC valve. If physical evidence of contamination exists, install a new IAC valve.

4. While the noise is occurring, either place an EngineEAR probe near the IAC valve and the inlet tube, or create a 6.35 mm (0.25 in)-12.7 mm (0.50 in) air gap between the inlet tube and the clean air tube. If the IAC valve is making the noise, install a new IAC valve.

5. Test the vehicle for normal operation.

Steering Gear Grunt/Shudder Test

1. Start and run the vehicle to operating temperature.

2. Set engine idle speed to 1200 rpm.

3. ⚠ **CAUTION: Do not hold the steering wheel against the stops for more than three to five seconds at a time. Damage to the power steering pump will occur.**

   Rotate the steering wheel to the RH stop, then turn the steering wheel 90 degrees back from that position. Turn the steering wheel slowly in a 15 degrees to 30 degrees arc.

4. Turn the steering wheel another 90 degrees. Turn the steering wheel slowly in a 15 degrees to 30 degrees arc.

5. Repeat the test with power steering fluid at different temperatures.

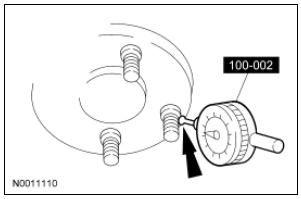
6. If a light grunt is heard or a low (50-200 Hz) shudder is present, this is a normal steering system condition.

7. If a loud grunt is heard or a strong shudder is felt, fill and purge the power steering system.

Wheel Hub Bolt Circle Runout

NOTE: The brake discs must be removed to carry out all runout measurements.

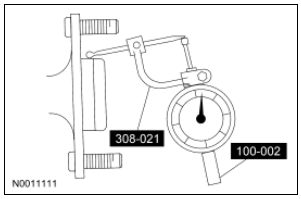
1. Position the special tool on the wheel hub bolt, as close to the hub face as possible. Zero the indicator to allow the pointer to deflect either way.



2. Rotate the hub until the next bolt is contacted. Record the measurement and continue until each bolt is checked. The difference between the maximum and minimum contact readings will be the total wheel hub bolt circle runout. The runout must not exceed 0.38 mm (0.015 in).

Pilot Runout

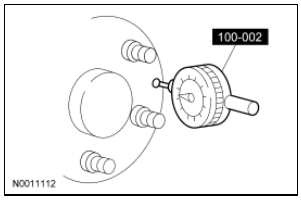
1. Position the special tools on the pilot, as close to the hub as possible. Zero the indicator to allow the pointer to deflect either way.



2. Rotate the hub 1 full turn and note the maximum and minimum readings. The difference between the maximum and minimum readings will be the total pilot runout. Pilot runout must not exceed 0.15 mm (0.006 in).

Wheel Hub Runout

1. Position the special tool on the wheel hub, as close to the outer edge as possible. Zero the indicator to allow the pointer to deflect either way.



2. Rotate the hub 1 full turn and note the maximum and minimum readings. The difference between the maximum and minimum readings will be the total wheel hub runout. The runout must not exceed 0.127 mm (0.005 in).

Tire Wear Patterns and Frequency Calculations

Tire Wear Chart

TIRE WEAR	CONDITION	POSSIBLE CAUSES
	•Rapid wear at both shoulders.	•Tires underinflated. •Worn suspension components. •Excessive cornering speeds. •Lack of rotation.
	•Rapid wear at the center.	•Tires overinflated. •Lack of rotation. •Excessive toe on drive wheels. •Heavy acceleration on drive wheels.
	•Wear at one shoulder.	•Toe adjustment out of specification. •Camber out of specification. •Damaged strut. •Damaged lower control arm.
	•Feather edges.	•Toe adjustment out of specification. •Damaged or worn tie rods. •Damaged spindle or knuckle.
	•Bald spots or cupping.	•Unbalanced wheel. •Excessive radial runout. •Worn strut or shock absorber.
	•Tire scalloped.	•Toe adjustment out of specification. •Camber out of specification. •Worn or damaged suspension components.
	•Wear pattern - FWD vehicles.	•Excessive toe on non-drive wheels. •Lack of rotation.
	•Wear pattern - FWD vehicles. Edge of thread blocks worn.	•Excessive toe on non-drive wheels. •Lack of rotation.

DF1717-A

Wheel and tire NVH concerns are directly related to vehicle speed and are not generally affected by acceleration, coasting or decelerating. Also, out-of-balance wheel and tires can vibrate at more than one speed. A vibration that is affected by the engine rpm, or is eliminated by placing the transmission in NEUTRAL is not related to the tire and wheel. As a general rule, tire and wheel vibrations felt in the steering wheel are related to the front tire and wheel assemblies. Vibrations felt in the seat or floor are related to the rear tire and wheel assemblies. This can initially isolate a concern to the front or rear.

Careful attention must be paid to the tire and wheels. There are several symptoms that can be caused by damaged or worn tire and wheels. Carry out a careful visual inspection of the tires and wheel assemblies. Spin the tires slowly and watch for signs of lateral or radial runout. Refer to the tire wear chart to determine the tire wear conditions and actions.

For a vibration concern, use the vehicle speed to determine tire/wheel frequency and rpm. Calculate tire and wheel rpm and frequency by carrying out and following:

- Measure the diameter of the tire.
- Record the speed at which the vibration occurs.

- Obtain the corresponding tire and wheel rpm and frequency from the Tire Speed and Frequency Chart.
    - ♦ If the vehicle speed is not listed, divide the vehicle speed at which the vibration occurs by 16 km/h (10 mph). Multiply that number by 16 km/h (10 mph) tire rpm listed for that tire diameter in the chart. Then divide that number by 60. For example: a 40 mph vibration with 835 mm (33 in) tires. 40÷10 = 4. Multiply 4 by 105 = 420 rpm. Divide 420 rpm by 60 seconds = 7 Hz at 40 mph.

Tire Speed and Frequency Chart

Tire Diameter	**Tire RPM/Hz**	**Tire RPM/Hz**	**Tire RPM/Hz**	**Tire RPM/Hz**
mm (inch)	@ 16 km/h (10 mph)	@ 80 km/h (50 mph)	@ 97 km/h (60 mph)	@ 113 km/h (70 mph)
483 (19)	182	910/15	1092/18	1274/21
508 (20)	173	865/14	1038/17	1211/20

Powertrain/Drivetrain Mount Neutralizing

Printable View (10 KB)

⚠ WARNING: The electrical power to the air suspension system must be shut off prior to hoisting, jacking or towing an air suspension vehicle. This can be accomplished by turning off the air suspension switch. Failure to do so can result in unexpected inflation or deflation of the air springs, which can result in shifting of the vehicle during these operations.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Loosen, but do not remove, the powertrain/drivetrain mount fasteners.
3. Lower the vehicle.
4. **⚠ CAUTION: Do not twist or strain the powertrain/drivetrain mounts.**

   Move the vehicle in forward and reverse 0.6-1.2 meters (2-4 ft).
5. Raise the vehicle.
6. Tighten the powertrain/drivetrain mount fasteners.
7. Lower the vehicle.
8. Test the system for normal operation.

Exhaust System Neutralizing

Printable View (10 KB)

⚠ WARNING: Exhaust gases contain carbon monoxide, which is harmful to health and potentially lethal. Repair exhaust system leaks immediately. Never operate the engine in an enclosed area.

⚠ WARNING: Exhaust system components are hot.

NOTE: Neutralize the exhaust system to relieve strain on mounts which can be sufficiently bound up to transmit vibration as if grounded.

1. **⚠ WARNING: The electrical power to the air suspension system must be shut off prior to hoisting, jacking or towing an air suspension vehicle. This can be accomplished by turning off the air suspension switch. Failure to do so can result in unexpected inflation or deflation of the air springs, which can result in shifting of the vehicle during these operations.**

   ⚠ CAUTION: Make sure the system is warmed up to normal operating temperature, as thermal expansion can be the cause of a strain problem.

   With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Loosen all exhaust hanger attachments and reposition the hangers until they hang free and straight.

3. Loosen all exhaust flange joints.

4. Place a stand to support the muffler parallel to the vehicle frame with the muffler pipe bracket free of stress.

5. Tighten the muffler connection.

6. Tighten all the exhaust hanger clamps and flanges (tighten the exhaust manifold flange joint last).
   - Verify there is adequate clearance to prevent grounding at any point in the system. Make sure that the catalytic converter and heat shield do not contact the frame rails.
   - After neutralization, the rubber in the exhaust hangers should show some flexibility when movement is applied to the exhaust system.
   - With the exhaust system installed securely and cooled, the rear hanger should be angled forward.

7. Lower the vehicle.

8. Test the exhaust system for normal operation.

Wheel Bearing Check

Printable View (83 KB)

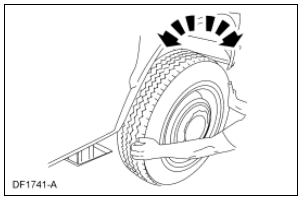
1. **WARNING: The electrical power to the air suspension system must be shut off prior to hoisting, jacking or towing an air suspension vehicle. This can be accomplished by turning off the air suspension switch. Failure to do so can result in unexpected inflation or deflation of the air springs, which can result in shifting of the vehicle during these operations.**

   Raise the vehicle until the front tires are off the floor.

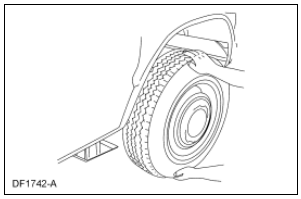
   - Make sure the wheels are in a straight forward position.

2. **NOTE:** Make sure the wheel rotates freely and that the brake pads are retraced sufficiently to allow free movement of the tire and wheel assembly.

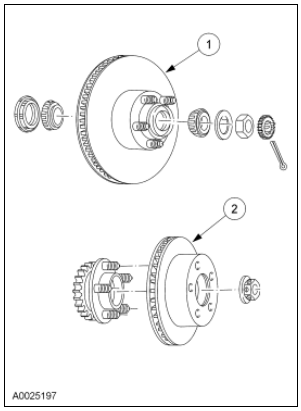
   Spin the tire by hand to check the wheel bearings for roughness.



3. Grip each front tire at the top and bottom and move the wheel inward and outward while lifting the weight of the tire off the front wheel bearing.



4. If the tire and wheel (hub) is loose on the spindle, does not rotate freely, or has a rough feeling when spun, carry out one of the following:
   1. On vehicles with inner and outer bearings, inspect the bearings and cups for wear or damage. Adjust or install new bearings and cups as necessary.
   2. On vehicles with one sealed bearing, install a new wheel hub.



Printable View (8 KB)

General Specifications

Item	Specification
Lubricants	
Silicone Lubricant (Spray) XL-6	ESR-M13P4-A
Adhesives	
Trim and Weatherstrip Adhesive TA-14	
Sealers	
Silicone Gasket and Sealant TA-30	WSE-M4G323-A4
Liquid Butyl Sealer TA-18	ESB-M4G162-A

Body

Printable View (7 KB)

The uni-body structure is a monocoque, lightweight, all-steel material with removable hood, front fenders, doors and luggage compartment lid.

Insulation

Printable View (7 KB)

Insulation is comprised of urethane, poly-vinyl chloride (PVC), and recycled felt. Insulation is installed under the roof panel, over the front and rear floor areas, above and below the instrument panel, in the B-pillar and C-pillar sections and on the cowl sides.

Body Sealer Types And Applications

Printable View (9 KB)

Liquid Butyl Sealer

Liquid butyl sealer does not run, is fast drying, remains semi-elastic and is used for seam sealing on the floor pan, wheelhouse, door openings and drip rails

Caulking Cord

Caulking cord is a heavy-bodied, plastic base with a filler (commonly known as perma-gum) and is used on spot welds and between the surfaces not sealed with a gasket.

Trim and Weatherstrip Adhesive

Trim and weatherstrip adhesive is a quick-drying, strong adhesive designed to hold weatherstripping onto all body panels and surrounding metal.

Silicone Lubricant

Silicone lubricant is used to keep the weatherstripping pliable and soft. It should be applied to the weatherstrip at every lubrication period, which will make the door easier to close and it will also retard weatherstrip squeaks and wear. It also helps to retain door window alignment by reducing friction between the glass frame and the rubber weatherstrip. Silicone lubricant should not be used prior to painting.

Body System

Printable View (14 KB)

Material

Item	Specification
Silicone Gasket and Sealant TA-30	WSE-M4G323-A4

Inspection and Verification

Leaks

NOTE: Damaged, wet or dusty trim panels will reveal the location of most leaks.

1. Remove any trim or carpet in the general area of the leak.
2. Road test or water test the vehicle.
3. Inspect for a dust pattern around the area in question. Inspect for water paths near and above the area in question.
4. Some leaks can be located by placing a bright light under the vehicle, removing any necessary trim or carpet, and inspecting the interior of the body at joints and weld lines.

Noise

Wind noise, rattles and their sources are detected by driving the vehicle at highway speeds. The vehicle should be driven in four different directions with all of the windows closed, the audio unit off, the blower motor off, and all of the ventilation ducts open.

Most wind noise leaks will occur at the door and window seals or at the sheet metal joints in the door or the door opening.

Symptom Chart

Symptom Chart

Torque Specifications

Description	Nm	lb-ft	lb-in
Windshield wiper pivot arm nuts	25		18
Front fender bolts	9	80	
Radiator grille opening panel bolts	11		9
Headlamp assembly bolts	6	53	

Front End Body Panels

Printable View (7 KB)

Front End Body Panels

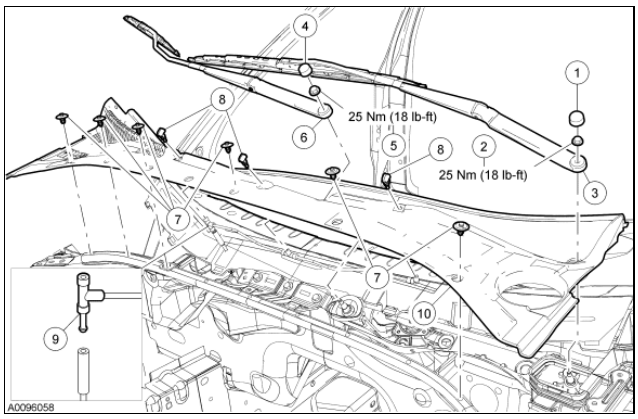
The grille opening reinforcement:

- is bolted to the fenders and bumper beam.
- retains the headlamp assemblies and bumper cover.

The cowl vent screen is a 2-piece component. The right side of the cowl vent screen may be removed without the removal of the windshield wiper pivot arm.

Cowl Panel Grille

Printable View (176 KB)



Item	Part Number	Description
1	17D515	Windshield wiper pivot arm nut cover
2		Windshield wiper pivot arm nut
3	17527	Windshield wiper pivot arm
4	17D515	Windshield wiper pivot arm nut cover
5		Windshield wiper pivot arm nut
6	17526	Windshield wiper pivot arm
7	W705956	Pin-type retainers (6 required)
8	54018A14-A	Windshield washer jets
9	17K605-A	Windshield washer hose
10	018A14	Cowl panel grille

Removal

1. Remove the 2 covers, 2 nuts, and the 2 windshield wiper pivot arms.

2. Remove the 6 pin-type retainers and separate the cowl panel grille.
   - Lift up on the cowel panel grille to release the clips.

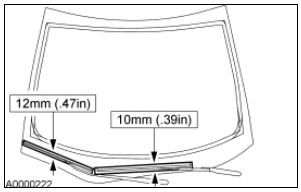
Installation

1. **NOTE:** Use the lower rearward clips as locators prior to installation, working from the center of the vehicle outward.

   Position the cowel panel grille and install the 6 pin-type retainers.

2. **NOTE:** Do not tighten the wiper pivot arm nuts until the windshield wiper pivot arms are properly adjusted to specification.

   Install the 2 windshield wiper and pivot arms onto the pivot shafts, install the 2 nuts, and align the blade to the heated wiper park/windshield wire lines on the windshield glass within the specification.



3. Cycle the windshield wiper motor to park the windshield wiper pivot arm shafts.

4. Tighten the 2 windshield wiper pivot arm nuts.
    - Tighten to 25 Nm (18 lb-ft) and install the 2 wiper pivot arm nut covers.

Fender Splash Shield

Printable View (7 KB)

Removal and Installation

1. Remove the 3 pin-type retainers and the front fender front splash shield.
2. Remove the front fender rear splash shield screw.
3. Remove the 3 pin-type retainers and the front fender rear splash shield.
4. To install, reverse the removal procedure.

Fender

Printable View (10 KB)

Removal and Installation

1. Remove the front and rear fender splash shields. For additional information, refer to Fender Splash Shield in this section.

2. Remove the bumper cover. For additional information, refer to Section 501-19 .

3. Remove the 2 front pin-type retainers and position the front rocker moulding aside.

4. Remove the 4 pin-type retainers and the radiator upper sight shield.

5. Remove the 3 bolts and the headlamp assembly.
   - Disconnect the electrical connector.
     - ♦ To Install, tighten to 6 Nm (53 lb-in).
     - ♦ If necessary, adjust the headlamp. For additional information, refer to Section 417-01 .

6. Remove the 2 radiator grille opening panel bolts.
   - To install, tighten to 11 Nm (8 lb-in).

7. Disengage the wiring harness locator.

8. **NOTE:** Support the hood using a prop rod.

   Disengage the lower hood assist strut.

9. Remove the hood assist strut ball stud.
   - To install, tighten to 16 Nm (12 lb-ft)

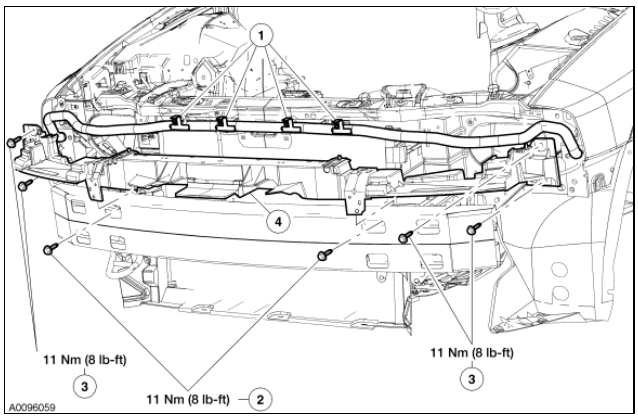
10. Remove the 2 lower front fender bolts.
    - To install, tighten to 9 Nm (80 lb-in).

11. Remove the 3 upper front fender bolts, the and remove the fender.
    - To install, tighten to 9 Nm (80 lb-in).

12. To install, reverse the removal procedure.
    - Adjust the fender as needed.

Radiator Grille Opening Panel

Printable View (150 KB)



Item	Part Number	Description
1	N801169-S	Wiring harness locators
2	N802781	Radiator grille opening panel bolts (2 required)
3	388930	Radiator grille opening panel bolts (4 required)
4	16034/16035	Radiator grille opening panel

Removal and Installation

1. Remove the front bumper cover. For additional information, refer to Section 501-19 .

2. Remove the 4 pin-type retainers and the radiator upper sight shield.

3. Remove the 6 bolts and the headlamp assemblies.
   - Disconnect the electrical connectors.
     - ♦ To install, tighten to 6 Nm (53 lb-in).
     - ♦ If necessary, adjust the headlamps. For additional information, refer to Section 417-01 .

4. Release the wiring harness fasteners and position the wiring harnesses rearward.

5. Release the ambient air temperature sensor.

6. Remove the 6 bolts, the brackets, and the radiator grille opening panel.
   - To install, tighten to 11 Nm (8 lb-ft).

7. To install, reverse the removal procedure.

Door Alignment Printable View (9 KB)

Front and Rear Door

1. Loosen the door latch striker bolts.

Front Door Horizontal and Vertical Adjustment

2. Loosen the front door hinge-to-door bolts.
3. Adjust the front door.
4. Tighten the front door hinge-to-door bolts.
   - Tighten to 30 Nm (22 lb-ft)

Front Door Fore and Aft Adjustment

5. Remove the fender splash shield. For additional information, refer to Section 501-02 .
6. Remove the fender insulator panel.
7. Loosen the door hinge-to-body bolts.
8. Adjust the front door.
9. Tighten the front door hinge-to-body bolts.
   - Tighten to 30 Nm (22 lb-ft)

Rear Door Horizontal and Vertical Adjustment

10. Loosen the rear door hinge-to-door bolts.
11. Adjust the rear door.
12. Tighten the rear door hinge-to-door bolts.
    - Tighten to 30 Nm (22 lb-ft)

Rear Door Fore and Aft Adjustment

13. Loosen the rear door hinge-to-body bolts.
14. Adjust the rear door.
15. Tighten the rear door hinge-to-body bolts.
    - Tighten to 30 Nm (22 lb-ft)

Front and Rear Door

16. Tighten the door latch striker bolts.
    - Tighten to 40 Nm (30 lb-ft)

Door Striker Adjustment

Printable View (7 KB)

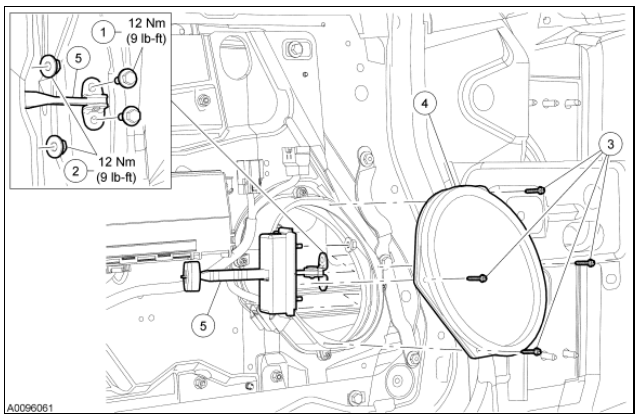
1. Loosen the door latch striker plate bolts.

2. Adjust the door latch striker plate as necessary.

3. Tighten the door latch striker plate bolts.
   - Tighten to 25 Nm (18 lb-ft).

Door Check Arm

Printable View (149 KB)



Item	Part Number	Description
1	W707426-S900	Door check arm screws (2 required)
2	W704723-S301	Door check arm nuts (2 required)
3		Speaker screws (4 required)
4		Speaker
5	23553	Door check arm

Removal and Installation

1. Remove the door trim panel. For additional information, refer to Section 501-05 .

2. ⚠ **CAUTION: Do not close the door after removal of the check arm screws.**

   Remove the 2 door check arm screws.

   - To install, tighten to 12 Nm (9 lb-ft)

3. Remove the 4 screws and the speaker.
   - Disconnect the electrical connector.

4. Remove the nuts and the door check arm.
   - To install, tighten to 12 Nm (9 lb-ft)

Torque Specifications

Description	Nm	lb-ft
Front seat safety belt nut	40	30
Rear safety belt anchor bolt	40	30

Interior Trim

Printable View (8 KB)

Interior Trim

The interior trim consists of:

- door trim panels
- headliner
- package tray
- rear quarter trim panels
- sun visors
- tether anchor covers
- upper quarter trim panel
- scuff plates
- A-pillar trim panels
- A-pillar lower trim panels

Interior Trim

The interior trim panels provide insulation from noise and exterior temperatures. They cover the interior of the vehicle sheet metal, covering the many modules, latches, handles, cables and wiring. They also provide a mounting location for the window control and door lock switches.

B-Pillar Trim Panel

Printable View (34 KB)

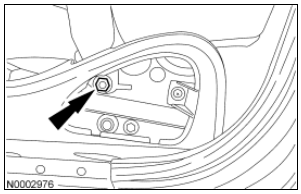
Removal and Installation

NOTE: If the supplemental restraint system (side air curtains) has deployed, check the B-pillar trim panel for damage.

1. Pull back the weatherstrip surrounding the B-pillar trim.

2. Remove the front seat safety belt cover.

3. Remove the front seat safety belt nut.
   - To install, tighten to 40 Nm (30 lb-ft).



4. Remove the upper and lower B-pillar trims.

5. **NOTE:** Position the shoulder safety belt height adjuster at its highest setting before installing the upper B-pillar trim.

   To install, reverse the removal procedure.

   - Check the restraint system for correct operation.

6. To install, reverse the removal procedure.

Rear Quarter Trim Panel

Printable View (28 KB)

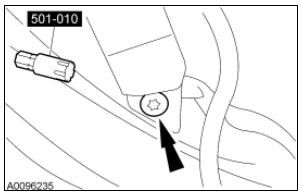
Special Tool(s)

 ST1181-A	Safety Belt Bolt Bit 501-010 (T77L-2100-A)

Removal and Installation

1. Remove the rear seat bolster. For additional information, refer to Section Section 501-10 .

2. Using the special tool, remove the rear safety belt anchor bolt.
   - To install, tighten to 40 Nm (30 lb-ft).



3. **NOTE:** Position the weatherstrip over the rear quarter trim panel.

   Remove the rear quarter trim panel.

4. To install, reverse the removal procedure.
   - Check the restraint system for correct operation.

Parcel Shelf

Printable View (47 KB)

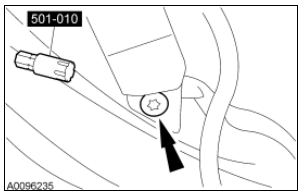
Special Tool(s)

 ST1181-A	Torx Bit, Safety Belt Bolt 501-010 (T77L-2100A)

Removal and Installation

1. Remove the rear seat bolsters. For additional information, refer to Section 501-10 .

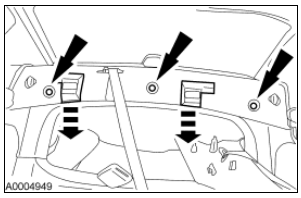
2. Using the special tool, remove the 2 rear safety belt anchor bolts.
   - To install, tighten to 40 Nm (30 lb-ft).



3. Position the weatherstrips aside, and remove the 2 rear quarter trim panels.

4. Remove the rear center safety belt cover.

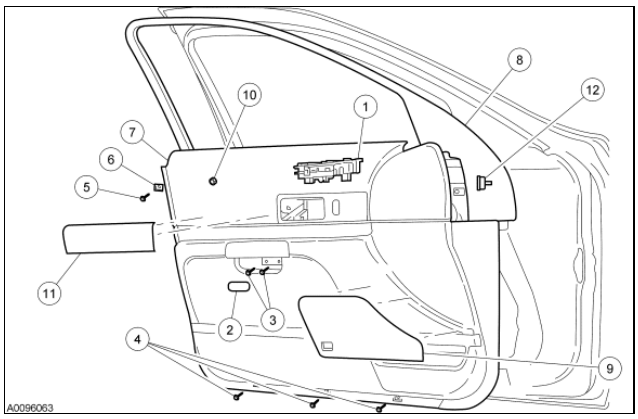
5. Remove the 3 pin-type retainers, pull down the rear seat latch covers and remove the package tray trim panel.



6. To install, reverse the removal procedure.

Front Door Trim Panel

Printable View (83 KB)



Item	Part Number	Description

10		Door trim panel applique nuts
11	238A70/238A71	Door trim panel applique
12	W708599-S	Door trim panel pin-type retainers (9 required)

Removal and Installation

1. Disconnect the battery. For additional information, refer to Section 414-01 .

2. Remove the window regulator control switch panel.
   - Disconnect the electrical connectors.

3. **NOTE:** From the top of the cover on center, use a suitable tool, insert 2-3 mm and rotate to disengage the snap feature.

   Remove the door trim panel handle cover and remove the 2 screws.

4. Remove the 3 screws and remove the trim panel.

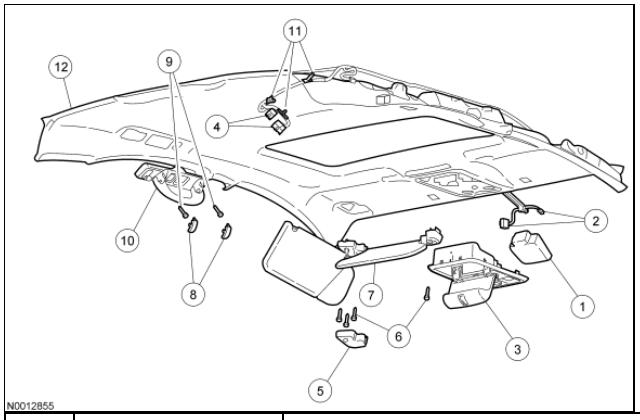
5. To install, reverse the removal procedure.

Headliner

Printable View (110 KB)

Material

Item	Specification
Headliner Adhesive TA-13	WSS-M2G355-B



Item	Part Number	Description
1	3W43-17D550	Rain sensor cover
2	23942	Interior mirror and rain sensor module electrical connectors
3	23A742	Overhead console
4	56914-5424	Headliner electrical connector
5	N806555-S424	Sun visor screw cover
6	W504246-S424	Sun visor screws (8 required)
7	239A04	Sun visor
8	23942/23943	Passenger assist handle screw covers (8 required)
9	20890/20891	Passenger assist handle screws (8 required)
10	601B48/601B49	Passenger assist handles
11	238A70/238A71	Headliner wiring harness locators
12	W708599-S	Headliner

Removal

1. Remove driver and passenger front seats. For additional information, refer to Section 501-10 .
2. Disconnect the interior rear view mirror electrical connector.
3. If equipped, remove the rain sensor cover and disconnect the electrical connector.
4. Remove the 6 screws and the sun visors.
   - Disconnect the electrical connectors.
5. Remove the 2 screws and the sun visor clips.

6. If equipped, remove the 3 passenger assist handles.
    - Position the 6 end caps aside.
    - Remove the 6 screws.
    - If equipped, disconnect the electrical connector.

7. Remove the 2 A-pillar trim panels.

8. Position the upper portion of the door weatherstrip seals aside.

9. Position the 2 upper B-pillar trim panels aside.

10. Position the 2 quarter trim panels aside.

11. **NOTE:** For vehicles without a roof opening panel, use a plastic scraper to detach the headliner from the roof.

    Release the map lamp clips and lower the headliner.

12. Disconnect the electrical connectors.

13. Remove the headliner from the left rear door opening.

Installation

Installing a new headliner

1. ⚠ **CAUTION: Folding the headliner will result in damage to the headliner.**

    Carefully position the headliner in the vehicle.

2. **NOTE:** Adhesive is required for vehicles without a roof opening panel.

    Apply headliner adhesive in a triangular pattern to the center of the headliner.

3. Connect the electrical connectors.

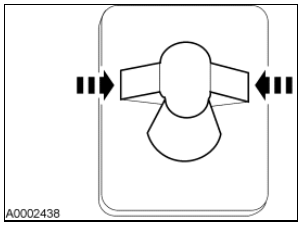
4. Install the headliner.
    - Press the headliner against the roof to make sure the adhesive contacts both surfaces.

Installing an existing headliner

5. ⚠ **CAUTION: Folding the headliner will result in damage to the headliner.**

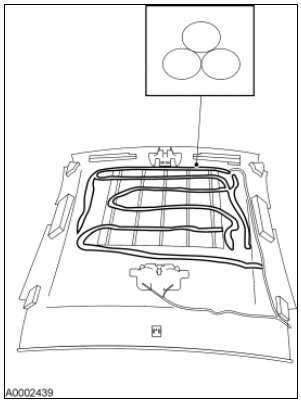
    Carefully position the headliner in the vehicle.

6. Bend the tabs of the rear locator back into their original position.



7. **NOTE:** Adhesive is required for vehicles without a roof opening panel.

   Apply headliner adhesive in a triangular pattern to the center of the headliner.



8. Connect the electrical connectors.

9. Install the headliner.
   - Press the headliner against the roof to make sure the adhesive contacts both surfaces.

New or existing headliner

10. Install the quarter trim panels.

11. Install the 2 upper B-pillar trim panels.

12. Install the 2 A-pillar trim panels.

13. Position the sun visor clips and install the 2 screws.

14. Connect the electrical connectors, position the sun visors, and install the 6 screws.

15. If equipped, position the 4 assist handles and install the 8 screws.
    - If equipped, connect the electrical connector.
    - Install the 8 end caps.

16. Install the door weatherstrips.

17. Connect the rain sensor electrical connector and install the cover.

18. Connect the interior rear view mirror electrical connector.

19. Install driver and passenger front seats. For additional information, refer to Section 501-10 .

Exterior Trim

Printable View (7 KB)

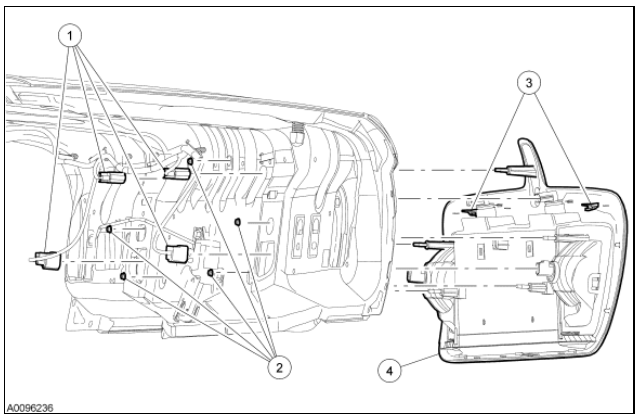
Exterior trim

The exterior trim consists of the following components:

- license plate housing
- front door moulding
- rear door moulding
- rocker panel moulding

License Plate Housing

Printable View (118 KB)



Item	Part Number	Description
1	03598	Electrical connectors
2	13208	License plate housing nuts (5 required)
3	20709	Retaining tabs
4	02345	License plate housing

Removal and Installation

1. Remove the pin-type retainers and the luggage compartment lid trim panel.

2. Disconnect the license plate lamp electrical connectors.

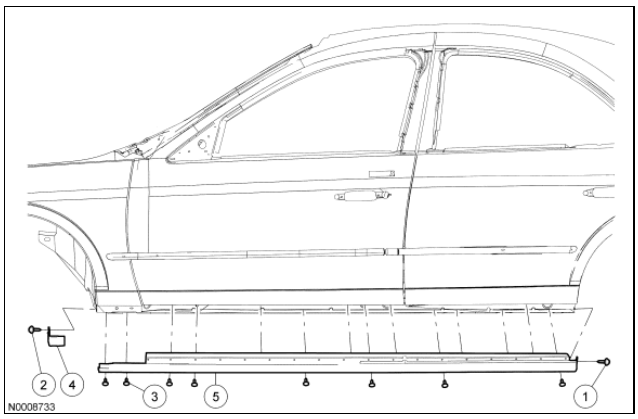
3. Disconnect the reversing lamp electrical connectors.

4. Remove the 5 license plate housing nuts and release the 2 retaining tabs.
   - Remove the license plate housing.

5. To install, reverse the removal procedure.
   - Transfer components as necessary.

Rocker Panel Moulding

Printable View (67 KB)



Item	Part Number	Description
1		Rocker panel moulding screw
2		Rocker panel moulding screw
3		Pin-type retainers (8 required)
4		Rocker panel moulding end cap
5	10154/10155	Rocker panel moulding (2 required)

Removal and Installation

1. Remove the 2 rocker molding screws.

2. Remove the rocker moulding end cap.

3. Remove the 8 pin-type retainers and the rocker moulding.

4. To install, reverse the removal procedure.
   - Discard the retaining cups and install new cups during installation.

Rear View Mirrors

Printable View (7 KB)

The rear view mirrors consist of the following components:

- heated exterior mirrors (with memory, if equipped)
- exterior mirror control switch
- auto-dimming interior rear view mirror

Rear View Mirrors

Printable View (436 KB)

Refer to Wiring Diagrams Cell 124 for schematic and connector information.

Refer to Wiring Diagrams Cell 125 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Principles Of Operation

The exterior mirrors are electrically controlled by the exterior mirror control switch for both vertical and horizontal movement. The exterior mirror control switch is hardwired to the driver door module (DDM). When the LH exterior mirror is selected, adjustment is carried out by moving the control switch to the desired position. The DDM receives the adjustment command from the exterior mirror control switch and supplies voltage and ground to the appropriate LH exterior mirror motor to adjust the LH exterior mirror. The RH exterior mirror is controlled by the front electronic module (FEM). When the DDM receives an adjustment command for the RH exterior mirror from the exterior mirror control switch, the DDM interprets the command and sends the adjustment command over the standard corporate protocol (SCP) communication network to the FEM. The FEM interprets the command and supplies voltage and ground to the appropriate RH exterior mirror motor to adjust the RH exterior mirror.

Memory (if equipped)

The memory mirror function recalls the preferred positioning of the exterior mirrors. Memory is activated by the door-mounted switches, the remote keyless entry (RKE) transmitter or the RKE keypad. The DDM and FEM constantly track the exterior mirror position using the potentiometers in the exterior mirror assembly. The positions remain in memory as long as the module retains power. When a memory position is recalled by the operator, the DDM and the FEM power the exterior mirror motors simultaneously and monitor the potentiometer circuits. When the stored memory position is reached, the DDM and FEM remove power from the motors. If the exterior mirror control switch is operated during a memory recall, the modules stop the recall and respond to the exterior mirror control switch command.

Heated Exterior Mirrors

The heated mirror function provides electric heating to both the LH and RH exterior mirrors, which raises the temperature of the glass to clear frost and condensation. The heated exterior mirrors are activated when the heated rear window is in operation, and automatically shut off after 15 minutes. The heated mirror power is supplied by the heated rear window relay through a separate battery junction box (BJB) fuse that isolates the heated mirrors from the heated rear window in the event of a concern with one of the systems.

Auto-Dimming Rear View Mirrors

This feature reduces glare caused by headlamps reflecting in the interior rear view mirror or LH exterior mirror. There are 2 integral sensors to control the dimming function. This feature is switched off by pressing the MODE switch on the interior rear view mirror to the OFF position. The auto-dimming interior rear view mirror defaults to the normal setting when the transmission is placed in REVERSE. The rear electronic module (REM) receives a reverse input from the PCM over the SCP communication link, then supplies a power signal to the interior mirror, causing the mirrors to cancel any dimming function. When the transmission is moved out of REVERSE, the auto-dimming mirrors return to normal operation and resume any interrupted dimming function.

If the REM does not receive the reverse input from the PCM, a communication diagnostic trouble code (DTC) is logged. As a default, the REM supplies power to the dimming circuit to prevent the automatic dimming function from operating until the communication is restored.

The transmission reverse information has a time delay before the message is sent by the PCM to the REM. This delay allows for the transmission selector to be moved through REVERSE without canceling the dimming operation.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Exterior mirror(s) • Interior auto-dimming rear view mirror	• Battery junction box (BJB) fuses: ♦ 5 (10A) ♦ 9 (5A) ♦ 20 (30A) • Central junction box (CJB) fuses: ♦ 7 (5A) ♦ 12 (5A) • Switched system power (SSP) relays 1 and 2 • Exterior mirror control switch • Exterior mirrors • Interior auto-dimming mirror • Rear electronic module (REM) • Front electronic module (FEM) • Circuitry

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel. Select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
    - check that the program card is correctly installed.
    - check the connections to the vehicle.
    - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
    - SCP or ISO circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
    - No response/not equipped for FEM, refer to Section 419-10 .
    - No response/not equipped for REM, refer to Section 419-10 .
    - No response/not equipped for driver door module (DDM), refer to Section 419-10 .
    - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the FEM, REM and the DDM.

7. If the DTCs retrieved are related to the concern, go to the Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index, Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index, or Driver Door Module (DDM) Diagnostic Trouble Code (DTC) Index.

8. If the DTCs retrieved are not found in the following Front Electronic Module (FEM), Rear Electronic Module (REM) or Driver Door Module (DDM) Diagnostic Trouble Code (DTC) Indexes, refer to the Front Electronic Module (FEM), Rear Electronic Module (REM) or Driver Door Module (DDM) Diagnostic Trouble Code (DTC) Indexes in Section 419-10 .

9. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	FEM	CLEAR the DTC. REPEAT the self-test. If DTC B1342 is retrieved again, INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation.
B1676	Battery Pack Voltage Out of Range	FEM	REFER to Section 414-00 .
B2312	Mirror Passenger Horizontal Feedback Potentiometer Circuit Failure	FEM	Go To Pinpoint Test E .
B2316	Mirror Passenger Vertical Feedback Potentiometer Circuit Failure	FEM	Go To Pinpoint Test E .
B2477	Module Configuration Failure	FEM	REFER to Section 418-01 .

Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	REM	CLEAR the DTCs. REPEAT the self-test. If DTC B1342 is retrieved again, INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation.
B1676	Battery Pack Voltage Out of Range	REM	REFER to Section 414-00 .
B2477	Module Configuration Failure	REM	REFER to Section 418-01 .

Driver Door Module (DDM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	DDM	CLEAR the DTCs. REPEAT the self-test. If DTC B1342 is retrieved again, INSTALL a new DDM. REFER to Section 419-10 . TEST the system for normal operation.
B1530	Memory Set Switch Circuit Short to Ground	DDM	Go To Pinpoint Test D .
B1534	Memory 1 Switch Circuit Short to Ground	DDM	Go To Pinpoint Test D .
B1538	Memory 2 Switch Circuit Short to Ground	DDM	Go To Pinpoint Test D .
B1676	Battery Pack Voltage Out of Range	DDM	REFER to Section 414-00 .
B2320	Mirror Driver Horizontal Feedback Potentiometer Circuit Failure	DDM	Go To Pinpoint Test E .
B2324	Mirror Driver Vertical Feedback Potentiometer Circuit Failure	DDM	Go To Pinpoint Test E .
B2336	Mirror Switch Assembly Circuit Failure	DDM	Go To Pinpoint Test A .
B2477	Module Configuration Failure	DDM	REFER to Section 418-01 .

NOTE: When diagnosing a relay, check that all systems for that relay are inoperative. Refer to Section 417-01 .

Relay	Fuse	Controlled System(s)
SSP1	BJB Fuse 27 (30A)	• Driver power door lock (FEM) • LH high beam headlamps (FEM) • RH front park/turn/side marker lamps (FEM) • RH low beam headlamp • Driver exterior mirror

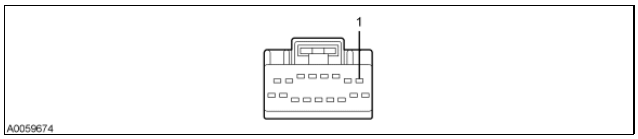
Symptom Chart

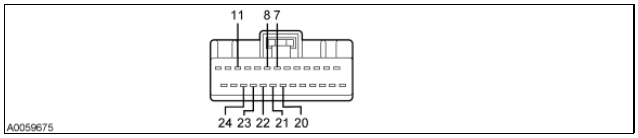
Symptom Chart
Connector Circuit Reference

Front Electronic Module (FEM) C201a



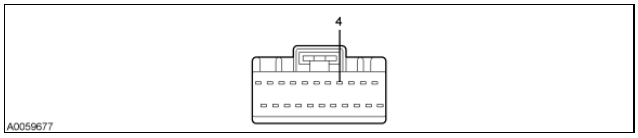
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	29S-DK21 (OG/WH) VPWR (vehicle power) from SSP2 relay	10 volts or greater between the FEM and ground (key ON). Less than 5 ohms between the FEM and the BJB, and greater than 10,000 ohms between the FEM and ground (key OFF).

Front Electronic Module (FEM) C201e



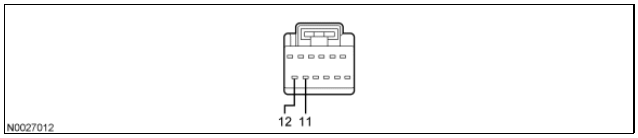
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
7	8-AD19 (WH/RD) left/right signal position for passenger exterior mirror	5 ohms or less between the FEM and the passenger exterior mirror connectors (both disconnected). 10,000 ohms or greater between circuit 8-AD19 (WH/RD) and ground.
8	7-AD19 (YE/RD) VREF to passenger exterior mirror position sensors	5 ohms or less between the FEM and the passenger exterior mirror connectors (both disconnected). 10,000 ohms or greater between circuit 7-AD19 (YE/RD) and ground.
11	10-AD19 (GY/RD) up/down signal position for passenger exterior mirror	5 ohms or less between the FEM and the passenger exterior mirror connectors (both disconnected). 10,000 ohms or greater between circuit 10-AD19 (GY/RD) and ground.
20	34-AD11 (BU/OG) voltage or ground to passenger exterior mirror up/down motor	10 volts or greater with motor in one direction and 0 volts with motor in opposite direction. 5 ohms or less between the FEM and the passenger exterior mirror, 10,000 ohms or greater between circuit 34-AD11 (BU/OG) and ground.
21	35-AD11 (VT/WH) ground or voltage to passenger exterior mirror up/down motor	0 volts with motor in one direction and 10 volts or greater with motor in opposite direction. 5 ohms or less between the FEM and the passenger exterior mirror, 10,000 ohms or greater between circuit 35-AD11 (VT/WH) and ground.
22	9-AD19 (BN/RD) signal return for passenger exterior mirror position sensors	5 ohms or less between connectors (both disconnected). 10,000 ohms or greater between circuit 9-AD19 (BN/RD) and ground.
23	32-AD10 (WH/BK) voltage or ground for passenger exterior mirror left/right motor	10 volts or greater with motor in one direction and 0 volts with motor in opposite direction. 5 ohms or less between the FEM and the passenger exterior mirror, 10,000 ohms or greater between circuit 32-AD10 (WH/BK) and ground.
24	33-AD10 (YE/BK) ground or voltage for passenger exterior mirror left/right motor	0 volts with motor in one direction and 10 volts or greater with motor in opposite direction. 5 ohms or less between the FEM and the passenger exterior mirror, 10,000 ohms or greater between circuit 33-AD10 (YE/BK) and ground.

Rear Electronic Module (REM) C420b



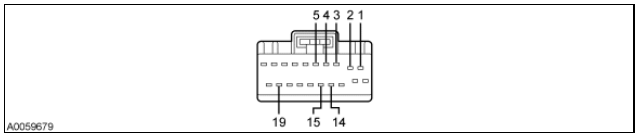
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
4	8-AD15 (WH/BU) auto-dimming mirror sensor signal	5 ohms or less between the auto-dimming mirror and the REM connectors (both disconnected). 10,000 ohms or greater between circuit 8-AD15 (WH/BU) and ground.

Driver Door Module (DDM) C501a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
11	29-AJ8 (OG) VPWR	10 volts or greater with key ON.
12	29S-AJ86 (OG/BU) VPWR	10 volts or greater with the key ON.

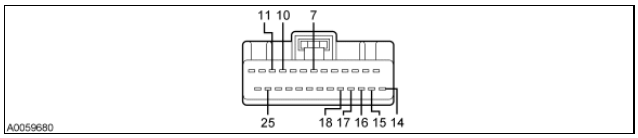
Driver Door Module (DDM) C501c



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	32-AD7 (WH/RD) voltage or ground for left exterior mirror left/right motor	10 volts or greater with the motor in one direction and 0 volts with the motor in opposite direction. 5 ohms or less between the DDM and the driver exterior mirror, 10,000 ohms or greater between circuit 32-AD7 (WH/RD) and ground.
2	33-AD7 (YE/RD) ground or voltage for left exterior mirror left/right motor	0 volts with the motor in one direction and 10 volts or greater with the motor in opposite direction. 5 ohms or less between the DDM and the driver exterior mirror, 10,000 ohms or greater between circuit 33-AD7 (YE/RD) and ground.
3	34-AD8 (BU/WH) voltage or ground for left exterior mirror up/down motor	10 volts or greater with the motor in one direction and 0 volts with the motor in opposite direction. 5 ohms or less between the DDM and the driver exterior mirror, 10,000 ohms or greater between circuit 34-AD8 (BU/WH) and ground.

4	35-AD8 (VT) ground or voltage for left exterior mirror up/down motor	0 volts with the motor in one direction and 10 volts or greater with the motor in opposite direction. 5 ohms or less between the DDM and the driver exterior mirror, 10,000 ohms or greater between circuit 35-AD8 (VT) and ground.
5	7-AD18 (YE/BK) VREF to left exterior mirror position sensors	5 ohms or less between connectors (both disconnected). 5 ohms or less between the DDM and the driver exterior mirror. 10,000 ohms or greater between circuit 7-AD18 (YE/BK) and ground.
14	8-AD18 (WH/BK) left/right sensor signal from left exterior mirror	5 ohms or less between connectors (both disconnected). 5 ohms or less between the DDM and the driver exterior mirror. 10,000 ohms or greater between circuit 8-AD18 (WH/BK) and ground.
15	10-AD18 (GY/BK) up/down sensor signal from left exterior mirror	5 ohms or less between connectors (both disconnected). 5 ohms or less between the DDM and the driver exterior mirror. 10,000 ohms or greater between circuit 10-AD18 (GY/BK) and ground.
19	9-AD18 (BN/YE) left/right and up/down position sensors signal return from left exterior mirror	5 ohms or less between connectors (both disconnected). 5 ohms or less between the DDM and the driver exterior mirror. 10,000 ohms or greater between circuit 9-AD18 (BN/YE) and ground.

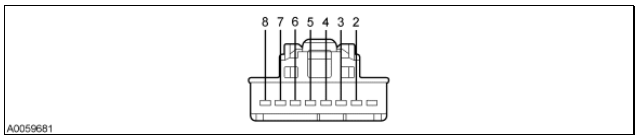
Driver Door Module (DDM) C501d



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
7	7S-AH27 (YE) LED voltage for memory set switch	5 ohms or less between connectors (both disconnected). 10,000 ohms or greater between circuit 7S-AH27 (YE) and ground.
10	8-AH31 (WH/RD) input from memory set switch set 1	5 ohms or less between connectors (both disconnected). 10,000 ohms or greater between circuit 8-AH31 (WH/RD) and ground.
11	8-AH32 (WH/BU) input from memory set switch set 2	5 ohms or less between connectors (both disconnected). 10,000 ohms or greater between circuit 8-AH32 (WH/BU) and ground.
14	34-AD29 (BU/OG) right exterior mirror up/down command input	5 ohms or less between the DDM and the exterior mirror control switch connectors (both disconnected). 10,000 ohms or greater between circuit 34-AD29 (BU/OG) and ground.
15	32-AD30 (WH/BK) right exterior mirror left/right command input	5 ohms or less between the DDM and the exterior mirror control switch connectors (both disconnected). 10,000 ohms or greater between circuit 32-AD30 (WH/BK) and ground.
16	34-AD31 (BU/WH) left exterior mirror Up/Down command input	5 ohms or less between the DDM and the exterior mirror control switch connectors (both disconnected). 10,000

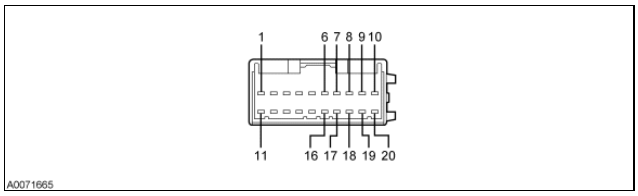
		ohms or greater between circuit 34-AD31 (BU/WH) and ground.
17	32-AD32 (WH/RD) left exterior mirror left/right command input	5 ohms or less between the DDM and the exterior mirror control switch connectors (both disconnected). 10,000 ohms or greater between circuit 32-AD32 (WH/RD) and ground.
18	33-AD12 (YE) exterior mirror switch common	5 ohms or less between the DDM and the exterior mirror control switch connectors (both disconnected). 10,000 ohms or greater between circuit 33-AD12 (YE) and ground.
25	8-AH27 (WH) input from memory set switch set 3	5 ohms or less between connectors (both disconnected), 10,000 ohms or greater between circuit 8-AH27 (WH) and ground.

Memory Set Switch C503



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	31-AH27A (BK/YE) ground for memory set switch	5 ohms or less to ground.
3	8-AH32 (WH/BU) memory set switch set 2	5 ohms or less between connectors (both disconnected).
4	8-AH27 (WH) memory set switch set 3	5 ohms or less between connectors (both disconnected).
5	31-AH27 (BK) ground for memory set switch	5 ohms or greater between connectors (both disconnected).
7	8-AH31 (WH/RD) memory set switch set 1	5 ohms or less between connector and ground.
8	7S-AH27 (YE) LED voltage for memory set switch	5 ohms or less between connectors (both disconnected).

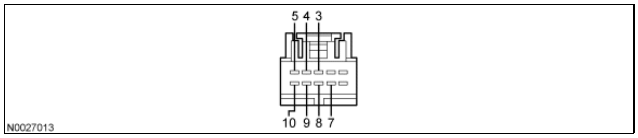
LH Exterior Mirror C520



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	7-AD15 (YE/BU) EC mirror (+)	5 ohms or less between connectors (both disconnected).

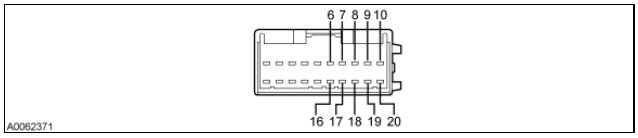
6	29-HB35 (OG/BK) VBATT to left exterior mirror heater grid	10 volts or greater with heated rear window ON.
7	7-AD18 (YE/BK) VREF to left exterior mirror position sensors	5 ohms or less between connectors (both disconnected).
8	10-AD18 (GY/BK) left exterior mirror up/down position sensor signal	5 ohms or less between connectors (both disconnected).
9	9-AD18 (BN/YE) left/right and up/down position sensors signal return from left exterior mirror	5 ohms or less between connectors (both disconnected).
10	8-AD18 (WH/BK) left exterior mirror left/right position sensor signal	5 ohms or less between connectors (both disconnected).
11	9-AD15 (BN/BU) EC mirror (-)	5 ohms or less between connectors (both disconnected).
16	31-HB35 (BK/GN) left exterior mirror heated grid ground	5 ohms or less to ground.
17	34-AD8 (BU/WH) voltage or ground for left exterior mirror up/down motor	10 volts or greater with motor in one direction and 0 volts when in the opposite direction.
18	35-AD8 (VT) ground or voltage for left exterior mirror up/down motor	0 volts with motor in one direction and 10 volts or greater in opposite direction.
19	33-AD7 (YE/RD) ground or voltage for left exterior mirror left/right motor	0 volts with motor in one direction and 10 volts or greater in opposite direction.
20	32-AD7 (WH/RD) voltage or ground for left exterior mirror left/right motor	10 volts or greater with motor in one direction and 0 volts in opposite direction.

Exterior Mirror Control Switch C527



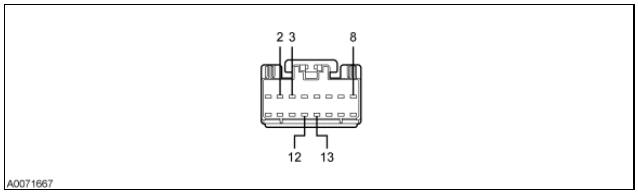
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	31-AD12 (BK/YE) exterior mirror switch ground	5 ohms or less to ground.
4	34-AD31 (BU/WH) left mirror sense for up/down command	5 ohms or less between connectors (both disconnected).
5	32-AD30 (WH/BK) right mirror sense for left/right command	5 ohms or less between connectors (both disconnected).
7	33-AD12 (YE) mirror common	5 ohms or less between connectors (both disconnected).
8	34-AD29 (BU/OG) right mirror sense for up/down command	5 ohms or less between connectors (both disconnected).
9	32-AD32 (WH/RD) left mirror sense for left/right command	5 ohms or less between connectors (both disconnected).
10	29-AD12 (OG/YE) Exterior mirror switch voltage	10 volts or greater at all times.

RH Exterior Mirror C601



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
6	29-HB36 (OG/GN) VBATT to left exterior mirror heater grid	10 volts or greater with heated rear window ON.
7	7-AD19 (YE/RD) VREF to left exterior mirror position sensors	5 ohms or less between connectors (both disconnected).
8	10-AD19 (GY/RD) left exterior mirror up/down position sensor signal	5 ohms or less between connectors (both disconnected).
9	9-AD19 (BN/RD) left/right and up/down position sensors signal return from left exterior mirror	5 ohms or less between connectors (both disconnected).
10	8-AD19 (WH/RD) left exterior mirror left/right position sensor signal	5 ohms or less between connectors (both disconnected).
16	31-HB36 (BK/RD) right exterior mirror heated grid ground	5 ohms or less to ground.
17	34-AD11 (BU/OG) voltage or ground for left exterior mirror up/down motor	10 volts or greater with motor in one direction and 0 volts when in the opposite direction.
18	35-AD11 (VT/WH) ground or voltage for left exterior mirror up/down motor	0 volts with motor in one direction and 10 volts or greater in the opposite direction.
19	33-AD10 (YE/BK) ground or voltage for left exterior mirror left/right motor	0 volts with motor in one direction and 10 volts or greater in the opposite direction.
20	32-AD10 (WH/BK) voltage or ground for left exterior mirror left/right motor	10 volts or greater with motor in one direction and 0 volts in the opposite direction.

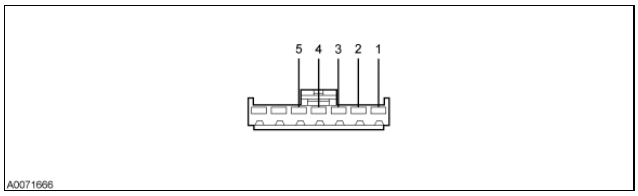
Auto-Dimming Mirror C911 (with Navigation)



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	31-AD15 (BK/OG) ground	5 ohms or less to ground.
3	8-AD15 (WH/BU) signal from REM	10 volts or greater with key ON and the transmission in REVERSE.
8	9-AD15 (BN/BU) EC mirror (-)	5 ohms or less between connectors (both disconnected).
12	7-AD15 (YE/BU) EC mirror (+)	5 ohms or less between connectors (both disconnected).
13	75-AD15 (YE/BU) VBATT to	10 volts or greater with key ON.

	mirror	

Auto-Dimming Mirror C9012 (without Navigation)



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	75-AD15 (YE/BU) VBATT to mirror	10 volts or greater with key ON.
2	31-AD15 (BK/OG) ground	5 ohms or less to ground.
3	8-AD15 (WH/BU) signal from REM	10 volts or greater with key ON and the transmission in REVERSE.
4	7-AD15 (YE/BU) EC mirror (+)	5 ohms or less between connectors (both disconnected).
5	9-AD15 (BN/BU) EC mirror (-)	5 ohms or less between connectors (both disconnected).

Pinpoint Test A: The Mirrors Are Inoperative

Normal Operation

The drivers door module (DDM) receives voltage from the central junction box (CJB) through circuit 29-AJ80 (OG), and circuit 29S-AJ86 (OG/BU). The exterior mirror control switch receives voltage from the CJB through circuit 29-AD12 (OG/YE) and ground from circuit 31-AD12 (BK/YE). The exterior mirror control switch sends input to the DDM for the LH exterior mirror by switching voltage and ground to circuits 32-AD32 (WH/RD), 34-AD31 (BU/WH) and 33-AD12 (YE) and for the RH exterior mirror by switching voltage and ground to circuits 32-AD30 (WH/BK), 34-AD29 (BU/OG) and 33-AD12 (YE). The DDM then sends the appropriate voltage and ground for the LH exterior mirror motor up/down circuits 34-AD8 (BU/WH), 35-AD8 (VT) and left/right circuits 32-AD7 (WH/RD) and 33-AD7 (YE/RD). The DDM sends a message to the front electronic module (FEM) over the SCP communication link for the FEM to send the appropriate voltage and ground for the RH exterior mirror motor up/down circuits 34-AD11 (BU/OG), 35-AD11 (VT/WH) and left/right circuits 32-AD10 (WH/BK), 33-AD10 (YE/BK).

Possible Causes

- circuit 29-AD12 (OG/YE) open
- circuit 29-AJ80 (OG) open
- circuit 29S-AJ86 (OG/BU) open
- circuit 33-AD12 (YE) open or short to ground
- circuit 31-AD12 (BK/YE) open
- exterior mirror control switch
- exterior mirrors
- DDM

PINPOINT TEST A: THE MIRRORS ARE INOPERATIVE

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>A1 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCs) FROM BOTH THE CONTINUOUS AND ON-DEMAND DDM SELF-TESTS</td><td></td></tr>

No
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.</td></tr>
<tr><td>A3 CHECK CIRCUIT 29-AD12 (OG/YE) FOR VOLTAGE</td><td></td></tr>
<tr><td>• Key in OFF position.
• Disconnect: Exterior Rear View Mirror Switch C527.
• Measure the voltage between the exterior rear view mirror switch C527-10, circuit 29-AD12 (OG/YE), harness side and ground.
 • Is the voltage greater than 10 volts?</td><td>Yes
GO to A4 .

No
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.</td></tr>
<tr><td>A4 CHECK CIRCUIT 31-AD12 (BK/YE) FOR AN OPEN</td><td></td></tr>
</table>

• Key in OFF position. • Measure the resistance between the exterior mirror control switch C527-3, circuit 31-AD12 (BK/YE), harness side and ground.  A0059686 • **Is the resistance less than 5 ohms?**	**Yes** GO to A5 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
A5 CHECK CIRCUIT 33-AD12 (YE) FOR AN OPEN OR A SHORT TO GROUND	
• Measure the resistance between the DDM C501d-18, circuit 33-AD12 (YE), harness side and the exterior mirror control switch C527-7, circuit 33-AD12 (YE), harness side; and between the DDM C501d-18, circuit 33-AD12 (YE), harness side and ground.  N0027010 • **Is the resistance less than 5 ohms between the DDM and the exterior mirror control switch, and greater than 10,000 ohms between the DDM and ground?**	**Yes** GO to A6 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
A6 CHECK THE EXTERIOR MIRROR CONTROL SWITCH	
• Carry out the exterior mirror control switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Did the exterior mirror control switch pass the component test?**	**Yes** GO to A7 . **No** INSTALL a new exterior mirror control switch. REFER to Exterior Mirror Control Switch in this section. CLEAR the DTCs. REPEAT the self-test.
A7 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all DDM connectors and make sure they seat correctly.
• Operate the system and verify if the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 418-00 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs.

	REPEAT the self-test.

Pinpoint Test B: A Single Mirror Is Inoperative

Normal Operation

The exterior mirror control switch receives voltage from circuit 29-AD12 (OG/YE) and ground from circuit 31-AD12 (BK/YE). The exterior mirror control switch sends input to the driver door module (DDM) for the LH exterior mirror by switching voltage and ground to circuits 32-AD32 (WH/RD), 34-AD31 (BU/WH) and 33-AD12 (YE) and for the RH exterior mirror by switching voltage and ground to circuits 32-AD30 (WH/BK), 34-AD29 (BU/OG) and 33-AD12 (YE). The DDM then sends the appropriate voltage and ground for the LH exterior mirror motor up/down circuits 34-AD8 (BU/WH), 35-AD8 (VT) and left/right circuits 32-AD7 (WH/RD) and 33-AD7 (YE/RD). The DDM sends a message to the front electronic module (FEM) over the standard corporate protocol (SCP) communication link for the FEM to send the appropriate voltage and ground for the RH exterior mirror motor up/down circuits 34-AD11 (BU/OG), 35-AD11 (VT/WH) and left/right circuits 32-AD10 (WH/BK), 33-AD10 (YE/BK).

Possible Causes

- circuit 32-AD7 (WH/RD) open
- circuit 32-AD10 (WH/BK) open
- circuit 32-AD30 (WH/BK) open
- circuit 32-AD32 (WH/RD) open
- circuit 33-AD7 (YE/RD) open
- circuit 33-AD10 (YE/BK) open
- circuit 33-AD12 (YE) open
- circuit 34-AD8 (BU/WH) open
- circuit 34-AD11 (BU/OG) open
- circuit 34-AD29 (BU/OG) open
- circuit 34-AD31 (BU/WH) open
- circuit 35-AD8 (VT) open
- 35-AD11 (VT/WH) open
- exterior mirror control switch
- exterior mirror motor
- DDM
- FEM

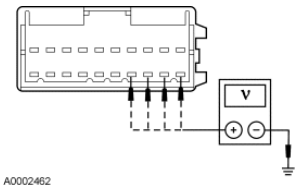
PINPOINT TEST B: A SINGLE MIRROR IS INOPERATIVE

Test Step	Result / Action to Take
B1 CHECK THE DRIVER DOOR MODULE (DDM) DTCS	
• Check the recorded results from the DDM self-test. • **Are any DTCs present?**	**Yes** For DTC B2336, GO to B30 . For DTC B2320 or B2324, GO to B20 . For all other DDM DTCs, REFER to Section 419-10 to continue diagnosis. **No** GO to B2 .
B2 CHECK THE FRONT ELECTRONIC MODULE (FEM) DTCS	

• Check the recorded results from the FEM self-test. • **Are any DTCs recorded?**	**Yes** For DTC B2312 or B2316, GO to B5 . For all other FEM DTCs, REFER to Section 419-10 to continue diagnosis. **No** GO to B3 .
B3 CHECK THE EXTERIOR MIRROR CONTROL PIDS	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Monitor PIDs. • Monitor the DDM PIDs MIRH_SW, MIRV_SW and MIR_SEL, while operating the exterior mirror control switch in each direction. • **Do the DDM PID values agree with the exterior mirror control switch positions?**	**Yes** GO to B4 . **No** GO to B18 .
B4 IDENTIFY THE INOPERATIVE MIRROR	
• Operate the LH and RH exterior mirrors. • **Is the RH exterior mirror inoperative?**	**Yes** GO to B5 . **No** GO to B20 .
B5 CHECK CENTRAL JUNCTION BOX (CJB) FUSE 30 (5A) FOR VOLTAGE	
• Disconnect: CJB Fuse 30 (5A). • Measure the voltage between the CJB fuse 30 (5A) input side, circuit 29S-DK21 (OG/WH), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to B6 . **No** REPAIR circuit 29S-DK21 (OG/WH). CLEAR the DTCs. REPEAT the self-test.
B6 CHECK CIRCUIT 29S-DK21 (OG/WH) FOR AN OPEN	
• Connect: CJB Fuse 30 (5A). • Key in OFF position. • Disconnect: FEM C201a. • Key in ON position. • Measure the voltage between the FEM C201a-1, circuit 29S-DK21 (OG/WH), harness side and ground.	**Yes** GO to B7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

 A0002461 • **Is the voltage greater than 10 volts?**	
B7 CHECK THE RH EXTERIOR MIRROR ACTIVE COMMAND	
• Key in OFF position. • Connect: FEM C201a. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Active Commands. • Select FEM active command POWER MIRROR CONTROL. • Trigger the FEM active commands PR UP, PR DOWN, PR LEFT and PR RIGHT ON and OFF. • **Does the RH exterior mirror function correctly?**	**Yes** GO to B14 . **No** GO to B8 .
B8 CHECK FOR VOLTAGE AT THE RH EXTERIOR MIRROR MOTOR	
• Key in OFF position. • Disconnect: RH Exterior Mirror C601. • Key in ON position. • Using the following table, measure the voltage between the RH exterior mirror C601 pins, harness side and ground. **C601 Pin** / **Circuit** 17 — 34-AD11 (BU/OG) 18 — 35-AD11 (VT/WH) 19 — 33-AD10 (YE/BK) 20 — 32-AD10 (WH/BK)  A0002462 • **Is any voltage present?**	**Yes** GO to B12 . **No** GO to B9 .
B9 CHECK FOR RESISTANCE AT THE RH EXTERIOR MIRROR	

• Key in OFF position. • Using the following table, measure the resistance between the RH exterior mirror C601 pins, harness side and ground. **C601 Pin** / **Circuit** 17 — 34-AD11 (BU/OG) 18 — 35-AD11 (VT/WH) 19 — 33-AD10 (YE/BK) 20 — 32-AD10 (WH/BK)  A0002463 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to B10 . **No** GO to B13 .
B10 CHECK FOR AN OPEN AT THE RH EXTERIOR MIRROR ASSEMBLY	
• Key in ON position. • Using the following table, measure the voltage between the RH exterior mirror C601 pins, harness side and ground, while moving the exterior mirror control to the listed positions. **C601 Pin** / **Circuit** / **Mirror Position** 17 — 34-AD11 (BU/OG) — UP 18 — 35-AD11 (VT/WH) — DOWN 19 — 33-AD10 (YE/BK) — RIGHT 20 — 32-AD10 (WH/BK) — LEFT	**Yes** CHECK the exterior mirror jumper harness for open or short circuits, and damaged or pushed out pins. If the jumper harness is OK, INSTALL a new exterior mirror motor. REFER to Exterior Mirror Motor in this section. Clear the DTCs. REPEAT the self test. If the jumper harness is OK, INSTALL a new exterior mirror. REFER to Exterior Mirror in this section. Clear the DTCs. REPEAT the self test. **No** GO to B11 .

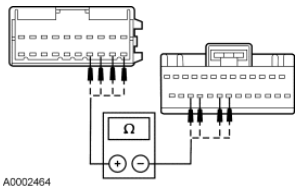


- **Are the voltages greater than 10 volts for the positions listed?**

B11 CHECK CIRCUITS 33-AD10 (YE/BK), 32-AD10 (WH/BK), 35-AD11 (VT/WH) AND 34-AD11 (BU/OG) FOR AN OPEN

- Key in OFF position.
- Disconnect: FEM 201e.
- Key in ON position.
- Using the following table, measure the resistance between the FEM C201e pins, harness side and the RH exterior mirror C601 pins, harness side.

C601 Pin	Circuit	FEM C201e Pin
17	34-AD11 (BU/OG)	20
18	35-AD11 (VT/WH)	21
19	33-AD10 (YE/BK)	24
20	32-AD10 (WH/BK)	23



- **Are the resistances less than 5 ohms?**

Yes
GO to B32 .

No
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

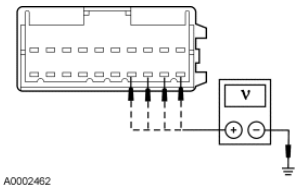
B12 CHECK CIRCUITS 33-AD10(YE/BK), 32-AD10 (WH/BK), 35-AD11 (VT/WH) AND 34-AD11 (BU/OG) FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: FEM C201e.
- Key in ON position.
- Using the following table, measure the voltage between the RH exterior mirror C601 pins, harness side and ground.

Yes
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

No
GO to B32 .

C601 Pin	Circuit
17	34-AD11 (BU/OG)
18	35-AD11 (VT/WH)
19	33-AD10 (YE/BK)
20	32-AD10 (WH/BK)

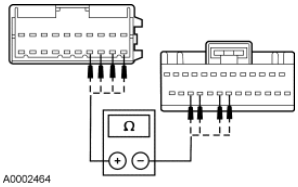


- **Is any voltage present?**

B13 CHECK CIRCUITS 33-AD10(YE/BK), 32-AD10 (WH/BK), 35-AD11 (VT/WH) AND 34-AD11 (BU/OG) FOR CONTINUITY

- Disconnect: FEM C201e.
- Using the following table, measure the resistance between the FEM C201e pins, harness side and RH exterior mirror C601 pins, harness side.

RH Exterior Mirror Pin	Circuit	FEM C201e Pin
17	34-AD11 (BU/OG)	20
18	35-AD11 (VT/WH)	21
19	33-AD10 (YE/BK)	24
20	32-AD10 (WH/BK)	23



- **Are the resistances less than 5 ohms?**

Yes
GO to B32 .

No
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

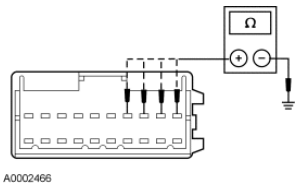
B14 CHECK THE FEM FOR THE CORRECT OUTPUTS

- Key in ON position.

Yes
GO to B32 .

• Enter the following diagnostic mode on the diagnostic tool: Monitor PIDs. • Trigger the FEM active commands PR UP, PR DOWN, PR LEFT and PR RIGHT ON and OFF, while monitoring the FEM PIDs MIRH_SW and MIRV_SW. • **Do the FEM PID values agree with the RH exterior mirror commanded positions?**	**No** GO to B15 .
B15 CHECK CIRCUITS 8-AD19 (WH/RD), 7-AD19 YE/RD), 9-AD19 (BN/RD), 10-AD19 (GY/RD) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: RH Exterior Mirror C601. • Key in ON position. • Using the following table, measure the voltage between the RH exterior mirror C601 pins, harness side and ground. **C601 Pin** / **Circuit** 7 / 7-AD19 (YE/RD) 8 / 10-AD19 (GY/RD) 9 / 9-AD19 (BN/RD) 10 / 8-AD19 (WH/RD)  A0002465 • **Is any voltage present?**	**Yes** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test. **No** GO to B16 .
B16 CHECK CIRCUITS 8-AD19 (WH/RD), 7-AD19 (YE/RD), 9-AD19 (BN/RD) AND 10-AD19 (GY/RD) FOR A SHORT TO GROUND	
• Key in OFF position. • Using the following table, measure the resistance between the RH exterior mirror C601 pins, harness side and ground. **C601 Pin** / **Circuit** 7 / 7-AD19 (YE/RD)	**Yes** GO to B17 . **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

8	10-AD19 (GY/RD)
9	9-AD19 (BN/RD)
10	8-AD19 (WH/RD)

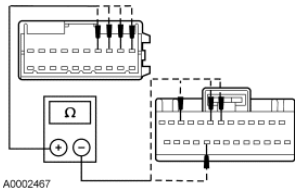


- **Are the resistances greater than 10,000 ohms?**

B17 CHECK CIRCUITS 8-AD19 (WH/RD), 7-AD19 (YE/RD), 9-AD19 (BN/RD) AND 10-AD19 (GY/RD) FOR AN OPEN

- Disconnect: FEM C201e.
- Using the following table, measure the resistance between the RH exterior mirror C601 pins, harness side and the FEM C201e pins, harness side.

RH Exterior Mirror Pin	Circuit	FEM C201e Pin
7	7-AD19 (YE/RD)	8
8	10-AD19 (GY/RD)	11
9	9-AD19 (BN/RD)	22
10	8-AD19 (WH/RD)	7



- **Are the resistances less than 5 ohms?**

Yes
CHECK the exterior mirror jumper harness for open or short circuts, and damaged or pushed out pins. If the jumper harness is OK, INSTALL a new exterior mirror motor. REFER to Exterior Mirror Motor in this section. Clear the DTCs. REPEAT the self test. If the jumper harness is OK, INSTALL a new exterior mirror. REFER to Exterior Mirror in this section. Clear the DTCs. REPEAT the self test.

No
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

B18 CHECK THE EXTERIOR MIRROR CONTROL SWITCH

- Carry out the exterior mirror control switch component test.

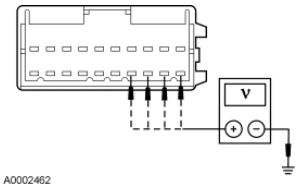
Yes
GO to B19 .

No
INSTALL a new exterior mirror control switch.

Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Does the exterior mirror control switch pass the component test?**	REFER to Exterior Mirror Control Switch in this section. CLEAR the DTCs. REPEAT the self-test.
B19 CHECK THE EXTERIOR MIRROR CONTROL SWITCH CIRCUITS FOR AN OPEN	
• Key in OFF position. • Disconnect: Exterior Mirror Control Switch C527. • Disconnect: DDM C501d. • Using the following table, measure the resistance between the following exterior mirror control switch C527 pins, harness side and the DDM C501d pins, harness side. **Exterior Mirror Control Switch Pins** / **Circuit** / **DDM Pins** 4 / 34-AD31 (BU/WH) / 16 5 / 32-AD30 (WH/BK) / 15 8 / 34-AD29 (BU/OG) / 14 9 / 32-AD32 (WH/RD) / 17  • **Are the resistances less than 5 ohms?**	**Yes** GO to B33 . **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.
B20 CHECK CJB FUSE 22 (10A) FOR VOLTAGE	
• Key in ON position. • Disconnect: CJB Fuse 22 (10A). • Measure the voltage between the CJB fuse 22 (10A) input side and ground.	**Yes** GO to B21 . **No** REPAIR the power source to CJB Fuse 22 (10A). CLEAR the DTCs. REPEAT the self-test.

 A0059693 • **Is the voltage greater than 10 volts?**	
B21 CHECK CIRCUIT 29S-AJ86 (OG/BU) FOR AN OPEN	
• Key in OFF position. • Connect: CJB Fuse 22 (10A). • Disconnect: DDM C501a. • Key in ON position. • Measure the voltage between the DDM C501a-12, circuit 29S-AJ86 (OG/BU), harness side and ground.  A0002471 • **Is the voltage greater than 10 volts?**	**Yes** GO to B22 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B22 CHECK THE LH EXTERIOR MIRROR ACTIVE COMMANDS	
• Key in OFF position. • Connect: DDM C501a. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Active Commands. • Select DDM active command menu POWER MIRROR CONTROL. • Trigger the DDM active command DR UP, DR DOWN, DR LEFT and DR RIGHT. • **Does the driver exterior mirror operate correctly?**	**Yes** GO to B27 . **No** GO to B23 .
B23 CHECK FOR VOLTAGE AT THE LH MIRROR MOTORS	
• Key in OFF position. • Disconnect: LH Exterior Mirror C520. • Key in ON position. • Using the following table, measure the voltage between the LH exterior mirror C520 pins, harness side and ground. **C520 Pin** | **Circuit**	**Yes** GO to B31 . **No** GO to B24 .

17	34-AD8 (BU/WH)
18	35-AD8 (VT)
19	33-AD7 (YE/RD)
20	32-AD7 (WH/RD)

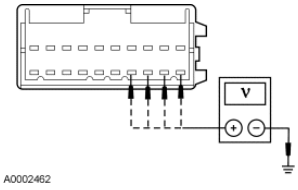


- **Is any voltage present?**

B24 CHECK FOR OPENS AT THE LH MIRROR ASSEMBLY

- Using the following table, measure the voltage between the LH exterior mirror C520 pins, harness side and ground, while moving the exterior mirror control switch through the listed positions.

C520 Pin	Circuit	Mirror Position
17	34-AD8 (BU/WH)	UP
18	35-AD8 (VT)	DOWN
19	33-AD7 (YE/RD)	RIGHT
20	32-AD7 (WH/RD)	LEFT



- **Are the voltages greater than 10 volts?**

Yes
CHECK the exterior mirror jumper harness for open or short circuts, and damaged or pushed out pins. If the jumper harness is OK, INSTALL a new exterior mirror motor. REFER to Exterior Mirror Motor in this section. Clear the DTCs. REPEAT the self test. If the jumper harness is OK, INSTALL a new exterior mirror. REFER to Exterior Mirror in this section. Clear the DTCs. REPEAT the self test.

No
GO to B25 .

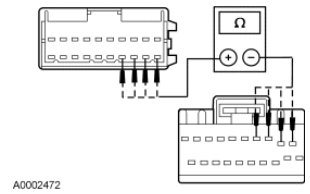
B25 CHECK FOR RESISTANCE AT THE LH EXTERIOR MIRROR

- Key in OFF position.
- Disconnect: DDM C501c.
- Using the following table, measure the resistance between the LH exterior mirror C520 pins, harness side and the DDM C501c pins, harness side.

Yes
GO to B26 .

No
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

LH Exterior Mirror Pin	Circuit	DDM Pin
17	34-AD8 (BU/WH)	3
18	35-AD8 (VT)	4
19	33-AD7 (YE/RD)	2
20	32-AD7 (WH/RD)	1

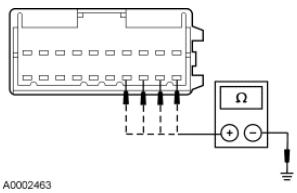


- **Are the resistances less than 5 ohms?**

B26 CHECK CIRCUITS 32-AD7 (WH/RD), 33-AD7 (YE/RD), 34-AD8 (BU/WH) AND 35-AD8 (VT) FOR A SHORT TO GROUND

- Using the following table, measure the resistance between the LH exterior mirror C520 pins, harness side and ground.

C520 Pin	Circuit
17	34-AD8 (BU/WH)
18	35-AD8 (VT)
19	33-AD7 (YE/RD)
20	32-AD7 (WH/RD)



- **Are the resistances greater than 10,000 ohms?**

Yes
GO to B33 .

No
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

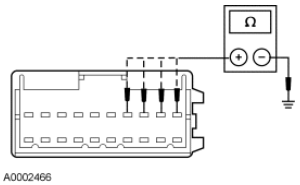
B27 CHECK THE DDM FOR THE CORRECT OUTPUTS

- Enter the following diagnostic mode on the diagnostic tool: Active Commands.

Yes
GO to B33 .

• Select the DDM active command menu POWER MIRROR CONTROL. • Trigger the DDM active command DR UP, DR DOWN, DR LEFT and DR RIGHT; ON and OFF while monitoring the DDM PIDs MIRH_SW and MIRV_SW. • **Do the PID values agree with the LH exterior mirror commanded positions?**	**No** GO to B28 .
B28 CHECK CIRCUITS 8-AD18 (WH/BK), 7-AD18 (YE/BK), 9-AD18 (BN/YE) AND 10-AD18 (GY/BK) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: LH Exterior Mirror C520. • Disconnect: DDM C501c. • Key in ON position. • Using the following table, measure the voltage between the LH exterior mirror C520 pins, harness side and ground. **C520 Pin** / **Circuit** 7 / 7-AD18 (YE/BK) 8 / 10-AD18 (GY/BK) 9 / 9-AD18 (BN/YE) 10 / 8-AD18 (WH/BK)  A0002465 • **Is any voltage present?**	**Yes** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test. **No** GO to B29 .
B29 CHECK CIRCUITS 8-AD18 (WH/BK), 7-AD18 (YE/BK), 9-AD18 (BN/YE) AND 10-AD18 (GY/BK) FOR A SHORT TO GROUND	
• Key in OFF position. • Using the following table, measure the resistance between the LH exterior mirror C520 pins, harness side and ground. **C520 Pin** / **Circuit**	**Yes** GO to B30 . **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

7	7-AD18 (YE/BK)
8	10-AD18 (GY/BK)
9	9-AD18 (BN/YE)
10	8-AD18 (WH/BK)

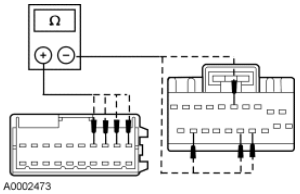


- **Are the resistances greater than 10,000 ohms?**

B30 CHECK CIRCUITS 8-AD18 (WH/BK), 7-AD18 (YE/BK), 9-AD18 (BN/YE) AND 10-AD18 (GY/BK) FOR AN OPEN

- Key in OFF position.
- Disconnect: LH Exterior Mirror C520.
- Disconnect: DDM C501c.
- Using the following table, measure the resistance between the LH exterior mirror C520 pins, harness side and the DDM C501c pins, harness side.

LH Exterior Mirror Pin	Circuit	DDM Pin
7	7-AD18 (YE/BK)	5
8	10-AD18 (GY/BK)	15
9	9-AD18 (BN/YE)	19
10	8-AD18 (WH/BK)	14



- **Are the resistances less than 5 ohms?**

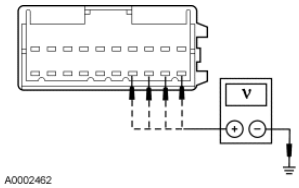
Yes
CHECK the exterior mirror jumper harness for open or short circuts, and damaged or pushed out pins. If the jumper harness is OK, INSTALL a new exterior mirror motor. REFER to Exterior Mirror Motor in this section. Clear the DTCs. REPEAT the self test. If the jumper harness is OK, INSTALL a new exterior mirror. REFER to Exterior Mirror in this section. Clear the DTCs. REPEAT the self test.

No
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

B31 CHECK FOR VOLTAGE AT THE LH EXTERIOR MIRROR ASSEMBLY

<table>
<tr><td>
• Key in OFF position.
• Disconnect: DDM C501c.
• Key in ON position.
• Using the following table, measure the voltage between the LH exterior mirror C520 pins, harness side and ground.

<table>
<tr><th>C520 Pin</th><th>Circuit</th></tr>
<tr><td>17</td><td>34-AD8 (BU/WH)</td></tr>
<tr><td>18</td><td>35-AD8 (VT)</td></tr>
<tr><td>19</td><td>33-AD7 (YE/RD)</td></tr>
<tr><td>20</td><td>32-AD7 (WH/RD)</td></tr>
</table>

A0002462
• Is any voltage present?
</td><td>
Yes
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

No
GO to B33 .
</td></tr>
<tr><td>B32 CHECK FOR CORRECT FEM OPERATION</td><td></td></tr>
<tr><td>
• Disconnect all the FEM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the FEM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• Is the concern still present?
</td><td>
Yes
INSTALL a new FEM. REFER to Section 419-10 . REPEAT the self-test.

No
The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.
</td></tr>
<tr><td>B33 CHECK FOR CORRECT DDM OPERATION</td><td></td></tr>
<tr><td>
• Disconnect all the DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• Is the concern still present?
</td><td>
Yes
INSTALL a new DDM. REFER to Section 419-10 . REPEAT the self-test.

No
The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.
</td></tr>
</table>

Pinpoint Test C: The Auto-Dimming Mirror Does Not Operate Correctly

Normal Operation

The auto-dimming mirror receives voltage from circuit 75-AD15 (YE/BU) and ground from circuit 31-AD15 (BK/OG). When the transmission is in REVERSE, the digital transmission range (TR) sensor signals the powertrain control module (PCM) the transmission range. The PCM sends a signal to the rear electronic module (REM) over the standard corporate protocol (SCP) communication link, at which time the REM sends a voltage through circuit 8-AD15 (WH/BU) to the auto-dimming interior mirror, which turns the dimming feature off. Then the auto-dimming interior mirror sends a voltage through circuit 7AD-15 (YE/BU) to the LH exterior mirror, which turns the dimming feature off.

Possible Causes

- circuit 75-AD15 (YE/BU) open
- circuit 31-AD15 (BK/OG) open
- circuit 8-AD15 (WH/BU) open, short to ground or power
- auto-dimming interior mirror
- LH auto-dimming exterior mirror
- REM

PINPOINT TEST C: THE AUTO-DIMMING MIRROR DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
C1 CHECK FOR REM DTCS	
• Check the recorded results from the REM self-test. • **Are any DTCs present?**	**Yes** REFER to the Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index. **No** GO to C2 .
C2 CHECK POWER TO CJB FUSE 12 (5A)	
• Disconnect: CJB Fuse 12 (5A). • Key in ON position. • Measure the voltage between the CJB fuse 12 (5A) input terminal and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to C3 . **No** REPAIR the power supply to the fuse. CLEAR the DTCs. REPEAT the self-test.
C3 IDENTIFY THE INOPERATIVE AUTO-DIMMING MIRROR	
• Activate the auto-dimming mirrors. • **Is the interior auto-dimming mirror functioning correctly?**	**Yes** GO to C4 . **No** GO to C7 .
C4 CHECK THE INTERIOR MIRROR OUTPUT TO THE LH EXTERIOR MIRROR	

• Disconnect: LH Exterior Mirror C520. • Key in ON position. • ⚠ **CAUTION: Make sure the engine is not running. The ignition switch should be in the ON position with the engine off.** • Engage the parking brake and shift the transmission to the REVERSE position. • Measure the voltage between the LH exterior mirror C520-1, circuit 7-AD15 (YE/BU), harness side and the LH exterior mirror C520-11, circuit 9-AD (BN/BU), harness side.  A0072110 • **Is the voltage approximately 1.2 volts?**	**Yes** INSTALL a new LH exterior mirror. REFER to Exterior Mirror in this section. **No** GO to C5 .
C5 CHECK CIRCUIT 7-AD15 (YE/BU) FOR AN OPEN	
• Key in OFF position. • Disconnect: Interior Rear View Mirror C9012 (without navigation), Interior Rear View Mirror C911 (with navigation). • Measure the resistance between the LH exterior mirror C520-1, circuit 7-AD15 (YE/BU), harness side and the interior rear view mirror C9012-4 (without navigation), C911-12 (with navigation), circuit 7-AD15 (YE/BU), harness side.  A0072111 • **Is the resistance less than 5 ohms?**	**Yes** GO to C6 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C6 CHECK CIRCUIT 9-AD15 (BN/BU) FOR AN OPEN	
• Measure the resistance between the LH exterior mirror C520-11 circuit 9-AD15 (BN/BU), harness side and the interior rear view mirror C9012-5 (without navigation), C911-8 (with navigation), circuit 9-AD15 (BN/BU), harness side.  A0072112 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new interior rear view mirror. REFER to Interior Rear View Mirror in this section. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

C7 CHECK CIRCUIT 75-AD15 (YE/BU) FOR AN OPEN	
• Key in OFF position. • Connect: CJB Fuse 12 (5A). • Disconnect: Auto-Dimming Interior Mirror C911 (with navigation), C9012 (without navigation). • Key in ON position. • Measure the voltage between the auto-dimming interior mirror C9012-1 (without navigation), C911-13 (with navigation), circuit 75-AD15 (YE/BU), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to C8 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C8 CHECK CIRCUIT 31-AD15 (BK/OG) FOR AN OPEN	
• Measure the resistance between the auto-dimming interior mirror C9012-2 (without navigation), C911-2 (with navigation), circuit 31-AD15 (BK/OG), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to C9 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C9 CHECK THE REM OUTPUT	
• Key in ON position. • ⚠ **CAUTION: Make sure the engine is not running. The ignition switch should be in the RUN position with the engine OFF.** • Engage the parking brake and shift the transmission to the REVERSE position. • Measure the voltage between the auto-dimming interior mirror C9012-3 (without navigation), C911-3 (with navigation), circuit 8-AD15 (WH/BU), harness side and ground.	**Yes** GO to C12 . **No** GO to C10 .

 A0058682 • **Is the voltage greater than 10 volts?**	
C10 CHECK CIRCUIT 8-AD15 (WH/BU) FOR AN OPEN	
• Select PARK. • Key in OFF position. • Disconnect: REM C420b. • Measure the resistance between the auto-dimming interior mirror C9012-3 (without navigation), C911-3 (with navigation), circuit 8-AD15 (WH/BU), harness side and the REM C420b-4, circuit 8-AD15 (WH/BU), harness side.  A0058683 • **Is the resistance less than 5 ohms?**	**Yes** GO to C11 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C11 CHECK CIRCUIT 8-AD15 (WH/BU) FOR A SHORT TO GROUND	
• Measure the resistance between the REM C420b-4, circuit 8-AD15 (WH/BU), harness side and ground.  A0002478 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to C14 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C12 CHECK FOR THE CORRECT OUTPUT TO THE MIRROR	
• Select PARK. • Measure the voltage between the auto-dimming interior mirror C9012-3 (without navigation), C911-3 (with navigation), circuit 8-AD15 (WH/BU), harness side and ground.	**Yes** GO to C13 . **No** INSTALL a new auto-dimming interior mirror. REFER to Interior Rear View Mirror in this section. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. If the auto-dimming feature continues to function incorrectly, GO to C14 .

 A0058682 • **Is the voltage greater than 10 volts?**	
C13 CHECK CIRCUIT 8-AD15 (WH/BU) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: REM C420b. • Key in ON position. • Measure the voltage between the REM C420b-4, circuit 8-AD15 (WH/BU), harness side and ground.  A0002479 • **Is voltage present?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. **No** GO to C14 .
C14 CHECK FOR CORRECT REM OPERATION	

• Disconnect all the REM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the REM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new REM. REFER to Section 419-10 . REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test D: The Memory Mirror Is Inoperative

Normal Operation

The driver door module (DDM) sends voltage reference (VREF) to the memory set switch on circuits 8-AH32 (WH/BU), 8-AH31 (WH/RD) and 8-AH27 (WH). When memory set switch button 1 or 2 is pressed (within 5 seconds of pressing memory set button 3), the VREF on the circuits to the pressed buttons are grounded, providing inputs to the DDM. Once the DDM receives the inputs from memory set button 3; then 1 (or 2), the DDM saves the current mirror settings using the inputs from the exterior mirror position sensors. When the DDM receives an input from the memory set switch button 1, circuit 8-AH31 (WH/RD) or button 2, circuit 8-AH32 (WH/BU) the DDM adjusts the driver mirror accordingly and sends a signal to the front electronic module (FEM) over the SCP communication link to adjust the passenger mirror as per the memory set switch button.

The DDM receives inputs on the position of the LH exterior mirror from circuits 8-AD18 (WH/BK), 7-AD18 (YE/BK), 10-AD18 (GY/BK) and 9-AD18 (BN/YE) while the FEM receives inputs on the RH exterior mirror from circuits 8-AD19 (WH/RD), 7-AD19 (YE/RD), 10-AD19 (GY/RD) and 9-AD19 (BN/RD).

Possible Causes

- circuit 31-AH27 (BK) open
- circuit 8-AH32 (WH/BU) open or short to ground
- circuit 8-AH31 (WH/RD) open or short to ground
- circuit 8-AH27 (WH) open or short to ground
- DDM
- memory set switch

PINPOINT TEST D: THE MEMORY MIRROR IS INOPERATIVE

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>D1 CHECK FOR DDM DTCS</td><td></td></tr>
<tr><td>• Check the recorded DDM results from the DDM self-test.
• Is DTC B1534, B1538 or B1530 present?</td><td>Yes
GO to D2 .

No
GO to D4 .</td></tr>
<tr><td>D2 CHECK THE MEMORY SET SWITCH CIRCUITS AND DDM FOR A SHORT TO GROUND</td><td></td></tr>
<tr><td>• Disconnect: Memory Set Switch C503.
• Using the following table, measure the resistance between the memory set switch C503 pins, harness side and ground.

<table><tr><th>C503 Pin</th><th>Circuit</th></tr><tr><td>3</td><td>8-AH32 (WH/BU)</td></tr><tr><td>4</td><td>8-AH27 (WH)</td></tr><tr><td>7</td><td>8-AH31 (WH/RD)</td></tr></table>

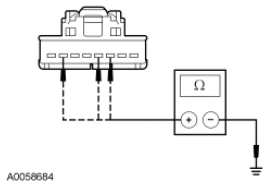
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.</td></tr>
</table>

C503 Pin	Circuit
3	8-AH32 (WH/BU)
4	8-AH27 (WH)
7	8-AH31 (WH/RD)



- **Are the resistances greater than 10,000 ohms?**

D4 CHECK THE MEMORY SET SWITCH USING DDM PIDS

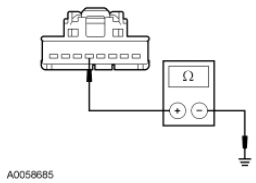
- Enter the following diagnostic mode on the diagnostic tool: Monitor PIDs.
- Monitor the DDM PIDs MEMS_SW, MEM1_SW and MEM2_SW, while actuating the memory set switch buttons.
- **Do the DDM PID values agree with the memory set switch positions?**

Yes
GO to D8 .

No
GO to D5 .

D5 CHECK CIRCUIT 31-AH27 (BK) FOR AN OPEN

- Disconnect: Memory Set Switch C503.
- Measure the resistance between the memory set switch C503-5, circuit 31-AH27 (BK), harness side and ground.



- **Is the resistance less than 5 ohms?**

Yes
GO to D6 .

No
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

D6 CHECK FOR AN OPEN CIRCUIT BETWEEN THE DDM AND THE MEMORY SET SWITCH

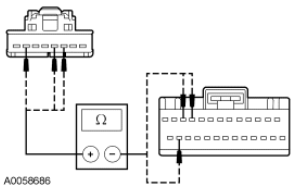
- Disconnect: DDM C501d.
- Using the following table, measure the resistance between the memory set switch C503 pins, harness side and the DDM C501d pins, harness side.

DDM Pin	Circuit	Memory Set Switch Pin
10	8-AH31 (WH/RD)	7

Yes
GO to D7 .

No
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

11	8-AH32 (WH/BU)	3
25	8-AH27 (WH)	4

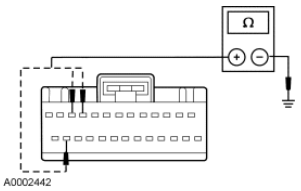


- **Are the resistances less than 5 ohms?**

D7 CHECK THE MEMORY SET SWITCH FOR AN OPEN

- Connect: Memory Set Switch C503.
- Using the following table, measure the resistance between the DDM C501d pins, harness side and ground, while activating the indicated memory set switch button.

DDM Pin	Circuit	Memory Set Switch Button
10	8-AH31 (WH/RD)	MEMORY 1
11	8-AH32 (WH/BU)	MEMORY 2
25	8-AH27 (WH)	SET



- **Is the resistance less than 5 ohms when each button is pressed?**

Yes
GO to D8 .

No
INSTALL a new memory set switch. CLEAR the DTCs. REPEAT the self-test.

D8 CHECK FOR CORRECT DDM OPERATION

- Disconnect all the DDM connectors.
- Check for:
  - corrosion
  - pushed-out pins
- Connect all the DDM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

Yes
INSTALL a new DDM. REFER to Section 419-10 . REPEAT the self-test.

No
The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test E: The Memory Mirror Is Inoperative Memory Set Switch LED

Normal Operation

The driver door module (DDM) sends vehicle power (VPWR) to the memory set switch LED on circuit 7S-AH27 (YE) whenever the SET or memory buttons 1 or 2 are pressed. The memory set switch LED is grounded at all times by circuit 31-AH27 (BK). When the DDM sends VPWR to the memory set switch LED, it illuminates.

Possible Causes

- circuits 7S-AH27 (YE) open, short to ground or voltage
- memory set switch
- DDM

PINPOINT TEST E: THE MEMORY MIRROR IS INOPERATIVE MEMORY SET SWITCH LED

Test Step	Result / Action to Take
E1 CHECK THE MEMORY SET SWITCH LED	
• Operate the memory set switch. • **Is the memory set switch LED always on?**	**Yes** GO to E6 . **No** GO to E2 .
E2 CHECK CIRCUIT 7S-AH27 (YE) FOR RESISTANCE	
• Disconnect: DDM C501d. • Measure the resistance between the driver door module (DDM) C501d-7, circuit 7S-AH27 (YE), harness side and ground.  A0002483 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to E4 . **No** GO to E3 .
E3 CHECK CIRCUIT 7S-AH27 (YE) FOR A SHORT TO GROUND	
• Disconnect: Memory Set Switch C503. • Measure the resistance between the DDM C501d-7, circuit 7S-AH27 (YE), harness side and ground.	**Yes** INSTALL a new memory set switch. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

 A0002483 • **Is the resistance greater than 10,000 ohms?**	
E4 CHECK THE DDM	
• Connect a fused (5A) jumper wire between the DDM C501d-7, circuit 7S-AH27 (YE), harness side and battery voltage.  A0058687 • **Does the memory set switch LED illuminate?**	**Yes** GO to E8 . **No** GO to E5 .
E5 CHECK CIRCUIT 7S-AH27 (YE) FOR AN OPEN	
• Disconnect: Memory Set Switch C503. • Measure the resistance between the memory set switch C503-8, circuit 7S-AH27 (YE), harness side and DDM C501d-7, circuit 7S-AH27 (YE), harness side.  A0058688 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new memory set switch. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
E6 CHECK THE DDM FOR AN INTERNAL SHORT TO VOLTAGE	
• Disconnect: DDM C501d. • **Did the memory set switch LED turn OFF?**	**Yes** GO to E8 . **No** GO to E7 .
E7 CHECK CIRCUIT 7S-AH27 (YE) FOR A SHORT TO VOLTAGE	
• Disconnect: Memory Set Switch C503. • Measure the voltage between the memory set switch C503-8, circuit 7S-AH27 (YE), harness side and ground.	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. **No** INSTALL a new memory set switch. CLEAR the DTCs. REPEAT the self-test.

 A0058689 • **Is voltage present?**	
E8 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all the DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 419-10 . REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test F: The Heated Exterior Mirror(s) Does Not Defrost

Normal Operation

With the engine running and the heated rear window ON, the heated exterior mirrors receive voltage from the heated rear window relay through circuit 15S-DA13 (GN/YE) to circuit 15S-DC1 (GN/YE) through battery junction box (BJB) fuse 9 (5A) to circuit 29S-HB1 (OG/YE) to 29-HB35 (OG/BK) (Left) or 29-HB36 (OG/GN) (Right). The heated exterior mirrors are grounded through circuit 31-HB35 (BK/GN) (Left) and 31-HB36 (BK/RD) (Right).

Possible Causes

- circuit 15S-DA13 (GN/YE) open
- circuit 15S-DC1 (GN/YE) open
- circuit 29-HB35 (OG/BK) open
- circuit 29-HB36 (OG/GN) open
- circuit 29S-HB1 (OG/YE) open
- circuit 31-HB35 (BK/GN) open
- circuit 31-HB36 (BK/RD) open
- heated exterior mirror(s)

PINPOINT TEST F: THE HEATED EXTERIOR MIRROR DOES NOT DEFROST

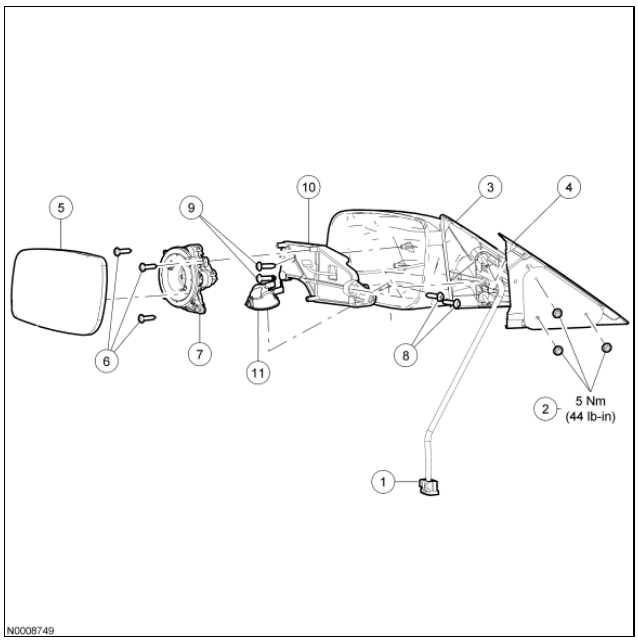
Test Step	Result / Action to Take
F1 CHECK THE HEATED REAR WINDOW OPERATION	
• Select PARK. • Key in START position. • Press the heated rear window switch to ON. • **Does the heated rear window defrost or warm up?**	**Yes** GO to F2 . **No** REFER to Section 501-11 to diagnose the heated rear window system.
F2 CHECK THE HEATED FUNCTION OF THE EXTERIOR MIRRORS	

• Check the heated function of the exterior mirrors. • **Is the heated function of both exterior mirrors inoperative?**	**Yes** GO to F3 . **No** For the driver exterior mirror, GO to F4 . For the passenger exterior mirror, GO to F6 .
F3 CHECK CIRCUIT 15S-DC1 (GN/YE) FOR VOLTAGE	
• Key in OFF position. • Disconnect: BJB Fuse 9 (5A). • Key in START position. • Press the heated rear window switch to ON. • Measure the voltage between the BJB fuse 9 (5A) input pin, circuit 15S-DC1 (GN/YE), and ground.  A0002487 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR circuit 29S-HB1 (OG/YE). TEST the system for normal operation. **No** REPAIR circuit 15S-DC1 (GN/YE). TEST the system for normal operation.
F4 CHECK CIRCUIT 29S-HB1 (OG/YE) FOR AN OPEN	
• Key in OFF position. • Disconnect: BJB Fuse 9 (5A). • Disconnect: Driver Exterior Mirror C520. • Measure the resistance between the driver exterior mirror C520-6, circuit 29-HB35 (OG/BK), harness side and the BJB fuse 9 (5A) output terminal, circuit 29S-HB1 (OG/YE).  A0002488 • **Is the resistance less than 5 ohms?**	**Yes** GO to F5 . **No** REPAIR circuit 29-HB35 (OG/BK). TEST the system for normal operation.
F5 CHECK CIRCUIT 31-HB35 (BK/GN) FOR AN OPEN	

• Measure the resistance between the driver exterior mirror C520-16, circuit 31-HB35 (BK/GN), harness side and ground.  A0002489 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new driver exterior mirror. REFER to Exterior Mirror in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
F6 CHECK CIRCUIT 29-HB36 (OG/GN) FOR AN OPEN	
• Key in OFF position. • Disconnect: BJB Fuse 9 (5A). • Disconnect: Passenger Exterior Mirror C601. • Measure the resistance between the passenger exterior mirror C601-6, circuit 29-HB36 (OG/GN), harness side and the BJB fuse 9 (5A) output terminal, circuit 29S-HB1 (OG/YE).  A0002488 • **Is the resistance less than 5 ohms?**	**Yes** GO to F7 . **No** REPAIR circuit 29-HB36 (OG/GN). TEST the system for normal operation.
F7 CHECK CIRCUIT 31-HB36 (BK/RD) FOR AN OPEN	
• Measure the resistance between the passenger exterior mirror C601-16, circuit 31-HB36 (BK/RD), harness side and ground.  A0002489 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new passenger exterior mirror. REFER Exterior Mirror in this section. TEST the system for normal operation. **No** REPAIR circuit 31-HB36 (BK/RD). TEST the system for normal operation.

Exterior Mirrors Exploded View

Printable View (69 KB)



Item	Part Number	Description
1		Electrical connector (part of 17682/17683)
2		Exterior mirror nuts (3 required)
3	17682/17683	Exterior mirror housing
4		Gasket (part of 17682/17683)
5	17682/17683	Exterior mirror glass
6		Exterior mirror motor screws (part of 17682/17683) (3 required)

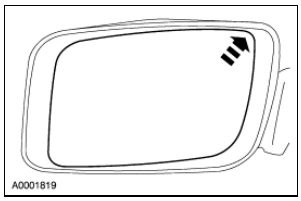
1. For additional information, refer to the procedures in this section.

Exterior Mirror Glass

Printable View (19 KB)

Removal and Installation

1. Push in the upper inboard area of the exterior mirror glass to access the mirror release tab.



2. **NOTE:** The mirror release tab is accessed from the lower out board corner.

   Release the tab from the mirror motor, pull outward until the exterior mirror glass is released.

   - If equipped, disconnect the heated mirror electrical connectors.

3. ⚠ **WARNING: Place a shop towel between the exterior mirror glass and the hand to avoid personal injury in the instance of glass breakage. Failure to follow this instruction may result in personal injury.**

   To install, reverse the removal procedure.

Exterior Mirror Motor

Printable View (7 KB)

Removal and Installation

1. Remove the exterior mirror glass. For additional information, refer to Exterior Mirror Glass in this section.
2. Remove the 3 exterior mirror motor screws.
3. Disconnect the exterior mirror motor electrical connector.
4. Remove the exterior mirror motor.
5. To install, reverse the removal procedure.

Exterior Mirror

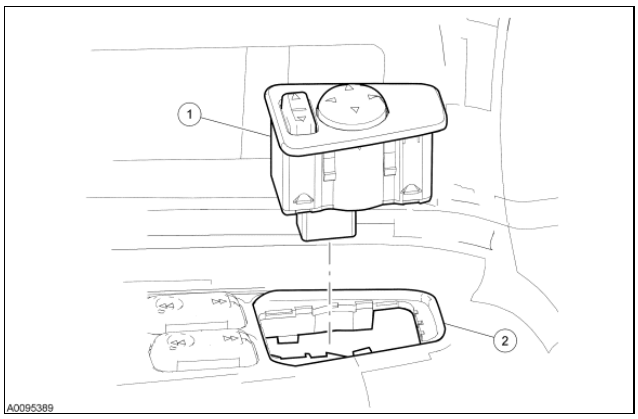
Printable View (7 KB)

Removal and Installation

1. Remove the front door trim panel. For additional information, refer to Section 501-05 .
2. Disconnect the exterior mirror electrical connector.
3. Remove the 3 nuts and the exterior mirror.
   - To install, tighten to 5 Nm (44 lb-in)
4. To install, reverse the removal procedure.

Exterior Mirror Control Switch

Printable View (50 KB)



Item	Part Number	Description
1	17B676	Exterior mirror control switch
2		Door trim panel switch bezel

Removal and Installation

1. Lift up on the front of the door trim panel switch bezel and press the retaining tabs to remove the exterior mirror control switch.
2. Disconnect the exterior mirror control switch electrical connector.
3. To install, reverse the removal procedure.

Interior Rear View Mirror

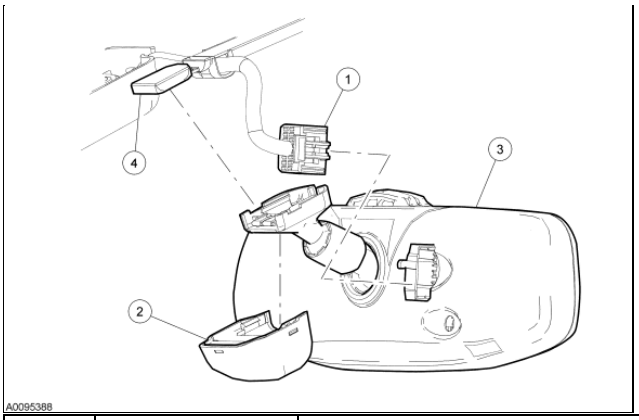
Special Tool(s)

ST1793-A	Installer, Rear View Mirror 501-025 (T94P-17700-AH)

Material

Item	Specification
Rear View Mirror Adhesive TA-17	



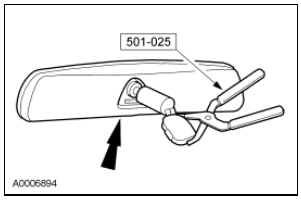
Item	Part Number	Description
1	14A464	Interior rear view mirror electrical connector
2		Interior rear view mirror cover (part of 17E678)
3	17E678	Interior rear view mirror
4	17684	Interior rear view mirror button

Removal

1. Disconnect the interior rear view mirror electrical connector.
2. Remove the interior rear view mirror cover.
3. Place the interior rear view mirror in the full DOWN position. Pull upward until released.

Installation

1. Place the interior rear view mirror on the windshield bracket. Using the special tool, press the mirror in place until fully seated.



2. Install the interior rear view mirror cover.

3. Connect the interior rear view mirror electrical connector.

Seats

Printable View (11 KB)

Front Seats

The front seats have the following features:

- Driver memory (optional)
- Power lumbar (optional)
- Manual lumbar
- Horizontal, vertical front and rear tilt adjustments (driver)
- Horizontal, vertical front tilt adjustment (passenger)
- Power recline
- Climate controlled (optional)

Adjustment of the seat may be accomplished with the seat control switch located on the side of the seat.

Rear Seats

The rear seat has the following features:

- Fold-down seat backrest
- Removable cushion retained by 2 latches located at the front of the cushion
- Two rear bolsters on each side of the rear seat backrest
- Heated (optional)

Fold down the rear seat backrest by releasing the 2 levers in the luggage compartment.

Power Seat Recliner

The power recliner tilts the seat backrest rearward or forward and is controlled by the seat control switch.

The power recliner cannot be repaired separately. If the power recliner needs to be repaired, a new front seat backrest frame must be installed.

Power Lumbar Support

The seat has an electro-mechanical front seat backrest pad adjuster. The lumbar switch adjustment is on the side of the seat.

Manual Lumbar Support

The manual front seat backrest lumbar is adjusted by a knob mounted on the front of the seat cushion.

Memory Seat

This system allows automatic positioning of the driver seat, outside rearview mirrors and power adjusted tilt/telescope steering column, to 2 programmable positions.

The memory seat control is located on the driver door.

Climate Controlled Seats

The climate controlled seat system is able to heat and cool the front seats. Each climate controlled front seat is controlled by a switch on the dual automatic temperature control unit (DATC). Perforated Nudo leather is the only material available for the heated/cooled seats.

Seat Side Air Bag or Seat Side Thorax Air Bag

Driver and passenger seat side air bags or seat side thorax air bag are attached to the seat backrest frame. For diagnostic information or if the seat side air bag or seat side thorax air bag has been deployed, refer to Section 501-20B .

The front seat backrest trim covers cannot be repaired. If the front seat backrest covers need to be repaired, a new cover must be installed. Cleaning the front seat backrest cover is permissible.

If a seat side air bag or seat side thorax air bag deployment took place, a new seat back pad, trim cover and side air bag module must be installed. Install a new seat backrest frame if necessary.

Driver Seat Module

The driver seat module is attached to the driver seat track. For additional information, refer to Section 419-10 for removal and installation procedures.

ST2507-A	Diagnostic Tool, Restraint System (2 required) 501-097

Restraint System Diagnostic Tool Warning

⚠ WARNING: The Restraint System Diagnostic Tools are for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

Principles of Operation

Driver Power Seat

The driver power seat motors are hardwired to the driver seat control switch. The circuits are normally at ground through the seat control switch. The individual circuit is switched to power when the specific adjustment position is selected.

Driver Power Seat Memory

NOTE: The memory power seat track may stall when operating at 0°C (32°F) or below. Once the vehicle's interior temperature rises above 0°C (32°F), normal operation should return.

The driver power seat is controlled by the driver seat module (DSM). The DSM does not need to be configured, however the driver seat does need to be calibrated when the DSM is installed. The driver seat

control switch provides voltage to the DSM when activated. The NEUTRAL position of each driver seat control switch position is a ground state through the seat control switch contacts. A voltage input causes the DSM to power the appropriate motor until the input is removed. Ground is the normal state of the motor circuits through the DSM and is not switched to control the motors. The DSM internally switches the appropriate line from ground to power to adjust the motors.

As the seat is adjusted, the DSM constantly monitors the motor position sensors to record the current seat position. The DSM will remove power from the motor upon termination of the seat control switch input or if the DSM does not see movement from the motor by monitoring the position sensor. The DSM must be calibrated to the seat track it is controlling. For additional information, refer to Seat Calibration. Once the DSM is calibrated to the seat track, it will only allow movement within the calibrated range.

Seat Calibration

The DSM is calibrated using a diagnostic tool. The calibration procedure automatically powers the driver power seat through its full range of motion and records the FULL STOP positions by monitoring the motor position sensors. Once the FULL STOP positions or range of the seat have been recorded, the DSM will only operate within the calibrated range. Any input attempting to drive the seat beyond the calibrated range will be ignored. This calibration is used for all seat control functions including manual switch control and memory recall positioning. During the seat calibration, the DSM may identify a function that is inoperative, such as a position sensor not changing. If the DSM identifies a concern that has a related diagnostic trouble code (DTC), the DSM will set the related DTC at the end of the validation procedure.

The calibration procedure powers the seat track adjustments to the end of their travel, which is determined by the DSM sensing a change of state in the motor position sensors. If there is a concern with the seat track or motor position sensor that limits the travel, the DSM will interpret the stopping point as the end of travel and store the position. The DSM is not able to determine if the seat has moved to its FULL TRAVEL position. It is only capable of monitoring and storing the amount of travel seen by the position sensor changing states.

For additional information on carrying out the power seat calibration procedure, refer to the diagnostic tool operating manual.

Memory Seat

Memory seat positioning can be recalled with the memory switches on the driver door panel or a programmed remote keyless entry transmitter. In either case, the DSM receives a memory recall 1 or 2 command from the driver door module (DDM) over the SCP communication network. The memory recall switches are a hardwired input to the DDM. The DDM also receives the remote keyless entry transmitter signals. Once a valid memory recall command is received from the DDM, the DSM moves the driver seat to the position stored in memory by powering the appropriate motors and monitoring the motor position sensors until the position is reached.

This system allows automatic positioning of the driver seat to 2 programmable positions.

- To program position 1, move the driver seat to the desired position using the seat control switch. Depress the set button. Within 5 seconds, depress button 1.
- To program position 2, repeat the previous procedure using the set button and button 2.
- To recall position 1, depress button 1. To recall position 2, depress button 2.

A position can only be recalled when the transmission selector is in PARK or NEUTRAL. A position may be programmed at any time.

Easy Exit/Easy Entry

The easy exit function moves the seat backwards about 2 inches when the ignition key is removed from the ignition switch. The DSM receives a key out command over the SCP communication network and powers the driver seat rearward. This function will not operate if the seat is less than the travel distance to the end of the track, or the function has been deactivated at the message center driver personality settings. The DSM will also cancel this operation if a valid input command is received, such as the seat control switch or memory recall request.

The DSM will record the current seat position before powering the seat for an easy exit function. This recorded position will be used to return the seat to this position on the easy entry operation. During easy entry operation, the seat is returned to the position previous to the easy exit operation. Easy entry operation will be cancelled if a valid input command is received by the DSM.

Passenger Power Seat

The passenger power seat motors are hardwired to the passenger seat control switch. The circuits are normally at ground through the seat control switch. The individual circuit is switched to power when the specific adjustment position is selected.

Climate Controlled Seat System

Both the driver and front passenger seat has an independent climate controlled seat system installed. A climate controlled seat module mounted to the bottom of the seat cushion electronically controls the climate controlled seat system (CCSM). The climate controlled seat system receives power from both the battery power and vehicle run circuits. The vehicle must have ignition ON and the dual automatic temperature control unit (DATC) module switch set to HEAT or COOL 1, 2, 3 or AUTO for the climate controlled seat system to activate.

AUTO mode is achieved by pressing the HEAT and COOL settings simultaneously. The center LED will be illuminated when the CCSM is in AUTO mode.

Cabin air is drawn through the seat fan motor and distributed to each of the thermo-electric device (TED) modules located in the seat cushion and backrest. The TEDs then heat or cool the air. The air is then directed into the foam pad B-surface. Channels in the A-surface of the foam pad are used to distribute the air along the surface of the seat.

Once the system is activated, the climate controlled seat module uses a set of flexible algorithms to control the heating/cooling modes, and the fan motor speed based on the climate controlled seat switch settings. These algorithms are designed to protect the user from potentially harmful prolonged exposure to climate extremes.

The TED uses a "Peltier" circuit of P-type and N-type semiconductors connected in series using copper electrical conductors. The semiconductors are sandwiched between 2 insulating ceramic plates. When current is applied to the TED, one side releases energy as heat, while the opposite side absorbs energy and gets cold. By reversing the current flow, the hot and cold sides reverse.

The temperature differences between the individual HEAT and COOL settings is minimal. For example, it is difficult to distinguish between LOW COOL and MEDIUM COOL settings. Monitoring the seat temperature at different HEAT or COOL settings should not be done as it is ineffective in confirming climate controlled seat system operation.

Heating Characteristics

NOTE: The presence of overtemp faults (DTCs B2729 and B2730) can be induced by incorrect operation of the climate controlled seat system after an initial HEAT setting has been attained. If a HEAT setting is repeatedly turned OFF and ON in an attempt to increase the seat temperature, an overtemp condition can

result and the DTC(s) will be set.

- The climate controlled seat system draws approximately 7.5 amps until reaching the set point, and then the system draws approximately 2 amps to maintain the climate setting.
- In HEAT mode, the TED can add up to 40-60°C (72-108°F) to the ambient air temperature entering the system.
- There are 3 manual settings based on the position of the climate controlled seat switch on the DATC module. Position 1 is the LOW setting and position 3 is the HIGH setting.
- There are 5 AUTO HEAT settings. The AUTO HEAT setting is determined by the temperature setting of the DATC module when the CCSM is in AUTO HEAT mode.
- In the LOW setting, the climate controlled seat module is set to maintain TED temperature at 37°C (99°F).
- In the HIGH setting, the climate controlled seat module is set to maintain TED temperature at 65°C (149°F).
- If the temperature at 1 of the TEDs rises above 85°C (185°F) in the HEAT mode or 70°C (149°F) in the COOL mode for more than 4 seconds, the CCSM will record an overtemp DTC, remove power from the TEDs and go into BLOWER ONLY mode in an attempt to cool down the TEDs. If the TEDs temperature has not dropped to 80°C (176°F) in the HEAT mode or 65°C (140°F) in the COOL mode after 30 seconds, the CCSM will shut down and remain off until the ignition is cycled. Also if the CCSM detects an overtemp twice during the same ignition cycle, it will also shut down.
- In HEAT mode, there is no linear correlation between the (DATC) module, the seat fan motor speed and the TED supply voltage. The CCSM will independently vary the fan speed and the TED supply voltage in order to reach and maintain the temperature determined by the (DATC) module setting.

Cooling Characteristics

- The climate controlled seat system draws approximately 7 amps until reaching the set point, and then the system draws approximately 2 amps to maintain the temperature setting.
- In the COOL mode, the TED can remove up to 8-10°C (14-18°F) from the ambient air temperature entering the system.
- There are 3 manual settings based on the position of the climate controlled seat switch on the DATC module. Position 1 is the LOW setting and position 3 is the HIGH setting.
- If the temperature at one of the TEDs falls below 18°C (64°F), the climate controlled seat module will shut down the TEDs. If the temperature continues to drop below 12°C (54°F), the climate controlled seat module will shut down the fan motor.
- In COOL mode, there is a correlation between the DATC module, the seat fan motor speed and the TED supply voltage. Fan supply voltage is used in the following equation (seat fan motor supply voltage/0.74 x ignition voltage) to determine the fan duty cycle. For additional information, refer to the following chart.

Climate Controlled Seat Switch Setting [a]	Seat Fan Motor Supply Voltage	Thermo- Electric Device Supply Duty Cycle
0	Off	Off
MANUAL 1 or AUTO 1	8.7 volts	0%
AUTO Mode 2	9 volts	32%
MANUAL 2 or AUTO 3	9.1 volts	45%
AUTO Mode 4	9.1 volts	45%
MANUAL 3 or AUTO 5	9.5 volts	100%

[a] Auto settings are determined by the temperature settings of the DATC module and cannot be manually selected.

The climate controlled seat system is deactivated by one of the following actions:

- Setting the DATC module setting to manual OFF.
- Turning the vehicle off.

Rear Heated Seats

The left and right rear heated seats share a common battery and ignition feed. A separate shared ground source supplies the heated seat switches. When the heated seat switch is pressed with the ignition switch in RUN, a momentary ground signal is sent to the heated seat module. The heated seat module then supplies power to the heating element circuit. The cushion element and seat backrest element are wired in series and powered by the same output. The heated seat module will also provide voltage to the separate indicator circuit at the heated seat switch to indicate an ON state. The heated seat module will remain on until the heated seat switch is pressed and a momentary ground signal is received, or until 10 minutes expire. If the ignition source is removed from the module, the heated seat module will enter an OFF state and will not return to ON until the switch is once again pressed with the ignition switch in RUN. The heated seat module is designed to heat the seat to 37.5°C (99.5°F) and maintain the temperature until timed-out or switched off. This temperature is maintained by the heated seat module monitoring the temperature sensor located in the seat cushion element, and adjusting the current flow to the heating elements.

Inspection and Verification

1. Verify the customer concern by operating the system.

2. Visually inspect for obvious signs of mechanical or electrical damage.

   Visual Inspection Chart

Mechanical	Electrical
• Front seat track motors • Front seat track binding or obstructed • Front seat backrest power recline • Lumbar motor • Climate controlled seat ducts	• Fuse(s) • Seat control switch • Memory set switch • Lumbar seat control switch • Seat fan motor. • Climate controlled seat module. • Climate controlled seat switch.

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the concern remains after the inspection, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel. Then select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - Check that the program card is correctly installed.
   - Check the connections to the vehicle.
   - Check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool manual.

6. Carry out the DATA LINK DIAGNOSTICS test. If the diagnostic tool responds with:
   - SCP+, SCP- or UBP circuit fault; ALL ECUS NO RESP/NOT EQUIP, refer to Section 418-00 .
   - NO RESP/NOT EQUIP for DSM, Go To Pinpoint Test A .
   - NO RESP/NOT EQUIP for DDM, Go To Pinpoint Test B .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the DSM and the DDM.

7. If the DTCs are retrieved go to the DSM Diagnostic Trouble Code (DTC) Index or the Climate Controlled Seat Module Diagnostic Trouble Code (DTC) Index.

8. If the DDM DTCs retrieved are related to the concern, go to the DDM Diagnostic Trouble Code (DTC) Index.

9. If no DTCs are retrieved, GO to Symptom Chart .

DSM Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Faulted	DSM	REPEAT the DSM self-test. If DTC B1342 is retrieved again, INSTALL a new DSM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.

B1342	ECU Is Faulted	CCSM	INSTALL a new CCSM.
B1358	Ignition Switch or Blower Electronics Circuit Short to Ground	CCSM	Go To Pinpoint Test U .
B2477	Module Configuration	CCSM	CONFIGURE the CCSM. CLEAR the DTC. If the DTC does not clear, CONFIGURE the CCSM once again. CLEAR the DTC. If the DTC does

	Error		not clear, INSTALL a new CCSM.
B2486	Climate Controlled Seat Module Voltage Out of Range	CCSM	Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . DISCONNECT driver seat side air bag C316 or passenger seat side air bag C314 of the affected seat and CONNECT restraint system diagnostic tool 418-133 or 501-097 to the seat side air bag module body harness connector. CONNECT the battery ground cable. CHECK circuit 20-HC21 (PK/BK) (driver) or circuit 20-HC22 (PK/YE) passenger for a fault and REPAIR as needed. If okay, REFER to Section 414-00 . Once the repair is complete, DISCONNECT the restraint system diagnostic tool from the seat side air bag module body harness connector and CONNECT the seat side air bag module connector of the affected seat. REPOWER the SRS. REFER to Section 501-20B .
B2488 [a]	Thumb-Wheel Switch Voltage Out of Range High	CCSM	**NOTE:** Make sure CCSM C3031b (driver) or CCSM C3036b (passenger) pins 7 and 15 are open (no connect). If circuits are present at either pin location, repair the wiring concern. CONFIGURE the CCSM. CLEAR the DTC. If the DTC does not clear, CONFIGURE the CCSM once again. CLEAR the DTC. If the DTC does not clear, INSTALL a new CCSM.
B2521	Tach Circuit Failure	CCSM	Go To Pinpoint Test U .
B2729	Cushion Over-Temp Detected	CCSM	For driver CCSM, Go To Pinpoint Test V . For passenger CCSM, Go To Pinpoint Test W .
B2730	Back Over-Temp Detected	CCSM	For driver CCSM, Go To Pinpoint Test V . For passenger CCSM, Go To Pinpoint Test W .
B2731	Differential Temperature Fault	CCSM	For driver CCSM, Go To Pinpoint Test V . For passenger CCSM, Go To Pinpoint Test W .
B2792 [b]	Heat Switch Short to Ground	CCSM	**NOTE:** Make sure CCSM C3031b (driver) or CCSM C3036b (passenger) pin 6 are open (no connect). If circuits are present at either pin location, repair the wiring concern. CONFIGURE the CCSM. CLEAR the DTC. If the DTC does not clear, CONFIGURE the CCSM once again. CLEAR the DTC. If the DTC does not clear, INSTALL a new CCSM.
B2793 [b]	Cool Switch Short to Ground	CCSM	**NOTE:** Make sure CCSM C3031b (driver) or CCSM C3036b (passenger) pin 16 is open (no connect). If circuit is present at either pin location, repair the wiring concern. For driver CCSM, Go To Pinpoint Test V . For passenger CCSM, Go To Pinpoint Test W .
U2362	UBP Invalid Data Node ID	CCSM	REFER to Section 418-00 .

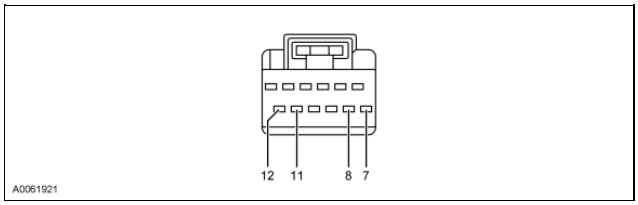
[a] The presence of this DTC indicates the module is not configured correctly.

Symptom Chart

Symptom Chart

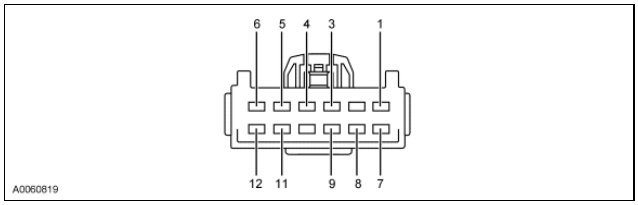
Connector Circuit Reference

Driver Door Module (DDM) C501a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
7	CKT 91-AJ80 (BN/BU) Ground	Continuity to ground, less than 5 ohms.
8	CKT 31-AJ80B (BK/OG) Ground	Continuity to ground, less than 5 ohms.
11	CKT 29-AJ80 (OG) Battery voltage from central junction box (CJB)	Greater than 10 volts at all times.
12	CKT 29S-AJ86 (OG/BU) Battery voltage from rear CJB	Greater than 10 volts with switch on.

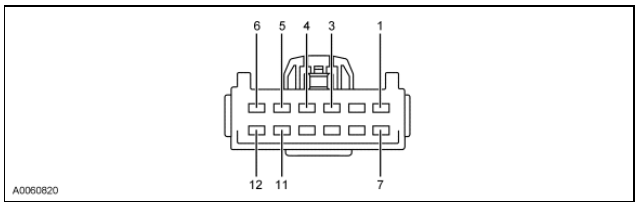
Driver Power Seat Control Switch C360



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 31-AH2 (BK) Ground	Continuity to power seat switch, less than 5 ohms.
3	CKT 32-AH37 (WH/GN) Forward output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in forward.
4	CKT 33-AH38 (YE/BK) Front down output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in front down.
5	CKT 32-AH38 (WH/BK) Front up output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected.

		Greater than 10 volts when connected and switch is in front up.
6	CKT 30-AH35 (RD) Battery voltage from rear CJB	Greater than 10 volts at all times.
7	CKT 33-AH36 (YE/RD) Rearward recline output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in rearward recline.
8	CKT 32-AH41 (WH/VT) Rear up output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in rear up.
9	CKT 33-AH41 (YE/VT) Rear down output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in rear down.
11	CKT 33-AH37 (YE/GN) Rearward output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in rearward.
12	CKT 32-AH36 (WH/RD) Forward recline output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in forward recline.

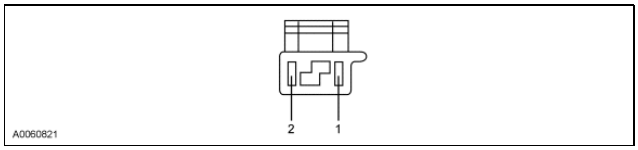
Passenger Power Seat Control Switch C330



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 31-AH42 (BK) Ground	Continuity to power seat switch, less than 5 ohms.
3	CKT 32-AH44 (WH/GN) Forward output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in

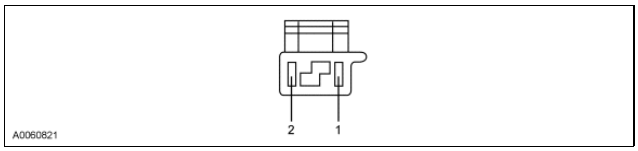
		forward.
4	32-AH34 (WH/BK) Front up output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in front up.
5	CKT 33-AH34 (YE/BK) Front down output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in front down.
6	CKT 30-AH42 (RD) Battery voltage from rear CJB	Greater than 10 volts at all times.
7	CKT 33-AH43 (YE/RD) Forward recline output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in forward recline.
11	CKT 33-AH44 (YE/GN) Rearward output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in rearward.
12	CKT 32-AH43 (WH/RD) Rearward recline output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in rearward recline.

Driver Power Seat Motor C382



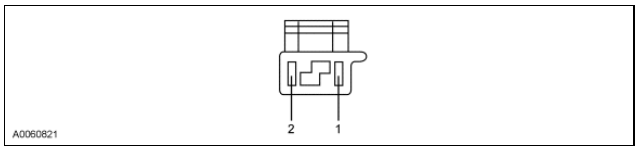
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 32-AH38 (WH/BK) Front up input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in front up, less than 5 ohms to ground when switch is in front down.
2	CKT 33-AH38 (YE/BK) Front down input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in front down, less than 5 ohms to ground when switch is in front up.

Driver Power Seat Motor C362



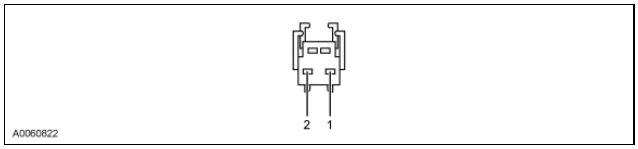
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 33-AH37 (YE/GN) Rearward input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in rearward, less than 5 ohms to ground when switch is in forward.
2	CKT 32-AH37 (WH/GN) Forward input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in forward, less than 5 ohms to ground when switch is in rearward.

Driver Power Seat Motor C363



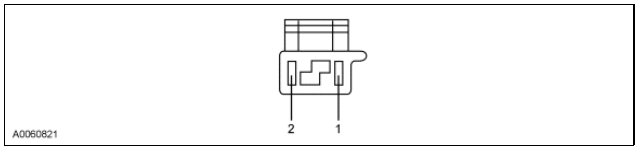
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 33-AH41 (YE/VT) Rear down input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in rear down, less than 5 ohms to ground when switch is in rear up.
2	CKT 32-AH41 (WH/VT) Rear up input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in rear up, less than 5 ohms to ground when switch is in rear down.

Driver Power Recline Seat Motor C368



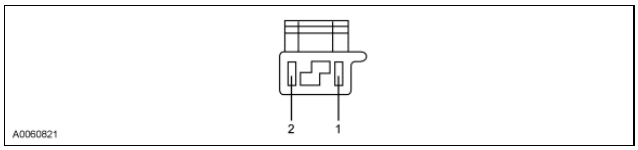
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	32-AH36 (WH/RD) Forward recline input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in forward recline, less than 5 ohms to ground when switch is in rearward recline.
2	CKT 33-AH36 (YE/RD) Rearward recline input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in rearward recline, less than 5 ohms to ground when switch is in forward recline.

Passenger Power Seat Motor C332



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 33-AH44 (YE/GN) Rearward input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in rearward, less than 5 ohms to ground when switch is in forward.
2	CKT 32-AH44 (WH/GN) Forward input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in forward, less than 5 ohms to ground when switch is in rearward.

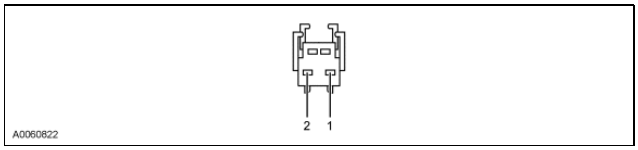
Passenger Power Seat Motor C333



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 32-AH34 (WH/BK) Front up input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in front up, less than 5 ohms to ground when switch is in front down.

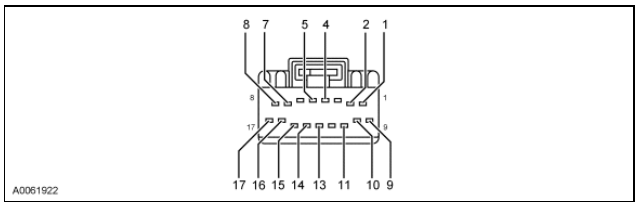
2	CKT 33-AH34 (YE/BK) Front down input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in front down, less than 5 ohms to ground when switch is in front up.

Passenger Power Recline Seat Motor C338



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 32-AH43 (WH/RD) Rearward recline input circuit from power seat switch to power recline motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in rearward recline, less than 5 ohms to ground when switch is in forward recline.
2	CKT 33-AH43 (YE/RD) Forward recline input circuit from power seat switch to power recline motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in forward recline, less than 5 ohms to ground when switch is in rearward recline.

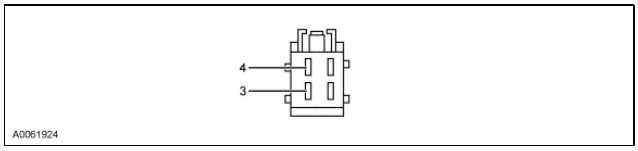
Driver Memory Seat Module C341a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 33-AH37 (YE/GN) Rearward output circuit from DSM to power seat motor	Less than 5 ohms to the power seat motor and less than 5 ohms to ground when disconnected. Greater than 10 volts when connected and the switch is in rearward.
2	CKT 32-AH36 (WH/RD) Rearward recliner output circuit from DSM to power seat motor	Less than 5 ohms to the power seat motor and less than 5 ohms to ground when disconnected. Greater than 10 volts when connected and the switch is in rearward.
4	CKT 8-AH26 (WH/RD) Horizontal sense signal circuit from power seat memory position sensor to DSM	Continuity to DSM, less than 5 ohms. Voltage varies based on seat position when connected.

5	CKT 8-AH24 (WH/BK) Front sense signal circuit from power seat memory position sensor to DSM	Continuity to DSM, less than 5 ohms. Voltage varies based on seat position when connected.
7	CKT 33-AH38 (YE/BK) Front down output circuit from DSM to power seat motor	Less than 5 ohms to the power seat motor and less than 5 ohms to ground when disconnected. Greater than 10 volts when connected and the switch is in front down.
8	CKT 33-AH41 (YE/VT) Rear down output circuit from DSM to power seat motor	Less than 5 ohms to the power seat motor and less than 5 ohms to ground when disconnected. Greater than 10 volts when connected and the switch is in rear down.
9	CKT 33-AH36 (YE/RD) Forward recliner output circuit from DSM to power seat motor	Less than 5 ohms to the power seat motor and less than 5 ohms to ground when disconnected. Greater than 10 volts when connected and the switch is in forward.
10	CKT 32-AH37 (WH/GN) Forward output circuit from DSM to power seat motor	Less than 5 ohms to the power seat motor and less than 5 ohms to ground when disconnected. Greater than 10 volts when connected and the switch is in forward.
11	CKT 9-AH80 (BN/WH) Driver seat sensor common circuit to power seat motor sensors	Continuity to DSM, less than 5 ohms.
13	CKT 8-AH30 (WH/BU) Recliner position sensor circuit to power seat recliner motor sensor from DSM	Continuity to DSM, less than 5 ohms.
14	CKT 8-AH25 (WH/GN) Rear position sensor circuit to power seat motor sensor from DSM	Continuity to DSM, less than 5 ohms.
15	CKT 7-AH80 (YE/VT) Feed circuit to power seat memory position sensor to DSM	Continuity to DSM, less than 5 ohms.
16	CKT 32-AH41 (WH/VT) Rear motor up output circuit from DSM to power seat motor	Less than 5 ohms to the seat control switch and less than 5 ohms to ground when disconnected. Greater than 10 volts when connected and the switch is in rear up.
17	CKT 32-AH38 (WH/BK) Front up output circuit from DSM to power seat motor	Less than 5 ohms to the power seat motor and less than 5 ohms to ground when disconnected. Greater than 10 volts when connected and the switch is in front up.

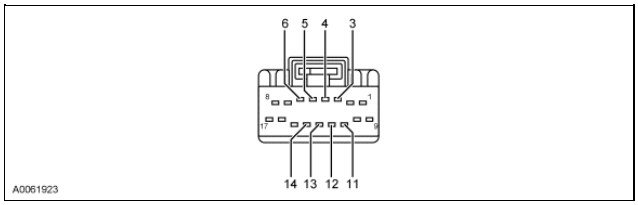
Driver Memory Seat Module C341b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement

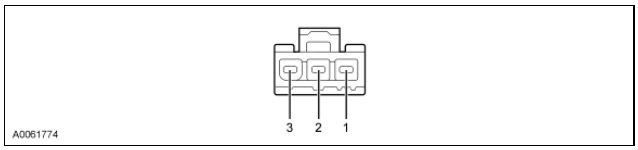
3	CKT 31-AH80 (BK) Ground	Continuity to ground, less than 5 ohms.
4	CKT 30-AH80 (RD) Battery voltage from CJB	Greater than 10 volts at all times.

Driver Memory Seat Module C341c



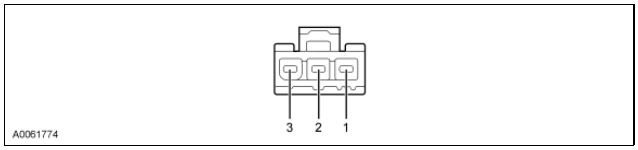
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	CKT 10-AH83 (GY/OG) Rearward input circuit from power seat switch to DSM	Less than 5 ohms to the DSM. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in rearward, less than 5 ohms to ground when switch is in forward.
4	CKT 10-AH82 (GY/RD) Rearward recliner input circuit from power seat switch to DSM	Less than 5 ohms to the DSM. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in rearward, less than 5 ohms to ground when switch is in forward.
5	CKT 8-AH84 (WH/BK) Front down input circuit from power seat switch to DSM	Less than 5 ohms to the DSM. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in front down, less than 5 ohms to ground when switch is in front up.
6	CKT 10-AH85 (GY/WH) Rear down input circuit from power seat switch to DSM	Less than 5 ohms to the DSM. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in rear down, less than 5 ohms to ground when switch is in rear up.
11	CKT 8-AH83 (WH/GN) Forward input circuit from power seat switch to DSM	Less than 5 ohms to the DSM. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in forward, less than 5 ohms to ground when switch is in rearward.
12	CKT 8-AH82 (WH/RD) Forward recliner input circuit from power seat switch to DSM	Less than 5 ohms to the DSM. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in forward, less than 5 ohms to ground when switch is in rearward.
13	CKT 10-AH84 (GY/BK) Front up input circuit from power seat switch to DSM	Less than 5 ohms to the DSM. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in front up, less than 5 ohms to ground when switch is in front down.
14	CKT 8-AH85 (WH/VT) Rear up input circuit from power seat switch to DSM	Less than 5 ohms to the DSM. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in rear up, less than 5 ohms to ground when switch is in rear down.

Driver Memory Front Height Power Seat Motor Position Sensor C383



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 9-AH24 (BN/YE) Return sensor common circuit from seat position sensors to DSM	Continuity to DSM, less than 5 ohms.
2	CKT 8-AH24 (WH/BK) Front vertical signal circuit to DSM	Continuity to DSM, less than 5 ohms. Voltage varies based on seat position when connected.
3	CKT 7-AH24 (YE/BK) Voltage reference (feed) to seat position sensors to DSM	Approximately 4.5 volts at all times.

Driver Memory Forward/Rearward Power Seat Motor Position Sensor C372



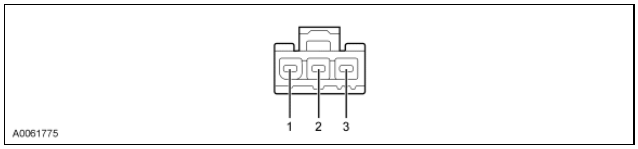
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 7-AH26 (YE/RD) Voltage reference (feed) to seat position sensors to DSM	Approximately 4.5 volts at all times.
2	CKT 8-AH26 (WH/BK) Horizontal signal circuit to DSM	Continuity to DSM, less than 5 ohms. Voltage varies based on seat position when connected.
3	CKT 9-AH26 (BN/RD) Return sensor common circuit from seat position sensors to DSM	Continuity to DSM, less than 5 ohms.

Driver Memory Rear Height Power Seat Motor Position Sensor C373

	Circuit Designation/Description	Normal Condition/Measurement

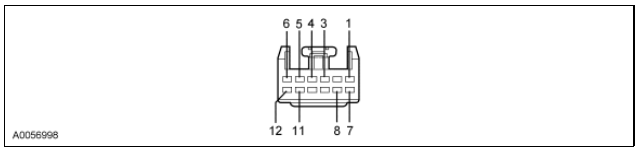
Pin Number(s)		
1	CKT 7-AH25 (YE/GN) Voltage reference (feed) to seat position sensors to DSM	Approximately 4.5 volts at all times.
2	CKT 8-AH25 (WH/GN) Rear vertical signal circuit to DSM	Continuity to DSM, less than 5 ohms. Voltage varies based on seat position when connected.
3	CKT 9-AH25 (BN/GN) Return sensor common circuit from seat position sensors to DSM	Continuity to DSM, less than 5 ohms.

Driver Memory Power Recline Motor Position Sensor C376



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 7-AH30 (YE/BU) Voltage reference (feed) to seat position sensors to DSM	Approximately 4.5 volts at all times.
2	CKT 8-AH30 (WH/BU) Recliner signal circuit to DSM	Continuity to DSM, less than 5 ohms. Voltage varies based on seat position when connected.
3	CKT 9-AH30 (BN/BU) Return sensor common circuit from seat position sensors to DSM	Continuity to DSM, less than 5 ohms.

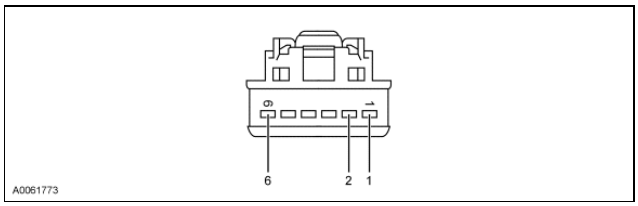
Driver/Passenger Rear Heated Seat Module C3162/C3163



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 31-HC21 (BK/GN) Ground	Continuity to ground, less than 5 ohms.
3	CKT 9-HC23 (BN/YE) Heated seat cushion temperature sensor return	Continuity to seat cushion heater, less than 5 ohms.
4	CKT 8-HC23 (WH/BK) Heated seat cushion temperature sensor feed	Continuity to seat cushion heater, less than 5 ohms.
5	CKT 20-HC21 (PK/BK) Ignition voltage from fuse box	Greater than 10 volts when ignition is ON.

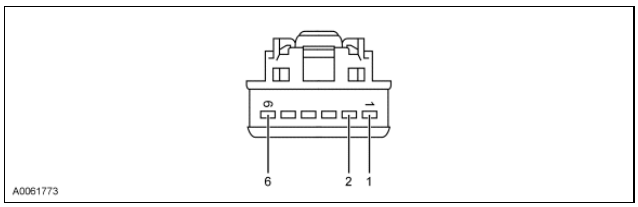
6	CKT 20S-HC17 (PK) Heated seat cushion element feed	Continuity to seat cushion heater, less than 5 ohms.
7	CKT 31S-HC16 (BK/BU) Heated seat cushion element return	Continuity from backrest element to heated seat module, less than 5 ohms.
8	CKT 8-HC21 (WH/GN) High input circuit from heated seat switch to heated seat module	Continuity from heated seat switch, less than 5 ohms.
11	CKT 10-HC21 (GY/OG) Low input circuit from heated seat switch to heated seat module	Continuity from heated seat switch, less than 5 ohms.
12	CKT 30-HC21 (RD/GN) Battery voltage from fuse box	Greater than 10 volts at all times.

Left Rear Heated Seat Switch C722



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 31-HC15 (BK/YE) Ground	Continuity to ground, less than 5 ohms.
2	CKT 8-HC21 (WH/GN) High output circuit from heated seat switch to heated seat module	Continuity to heated seat module, less than 5 ohms.
6	CKT 10-HC21 (GY/OG) Low output circuit from heated seat switch to heated seat module	Continuity to heated seat module, less than 5 ohms.

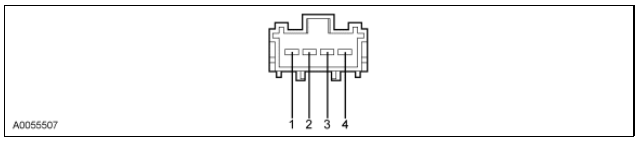
Right Rear Heated Seat Switch C822



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 31-HC18 (BK/GN) Ground	Continuity to ground, less than 5 ohms.
2	CKT 8-HC21A (WH/GN) High output circuit from heated seat switch to heated seat module	Continuity to heated seat module, less than 5 ohms.
6		

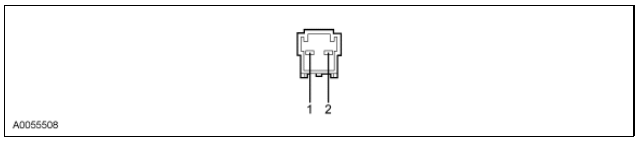
	CKT 10-HC21A (GY/OG) Low output circuit from heated seat switch to heated seat module	Continuity to heated seat module, less than 5 ohms.

Left/Right Rear Heated Seat Cushion Element C3167/C3169



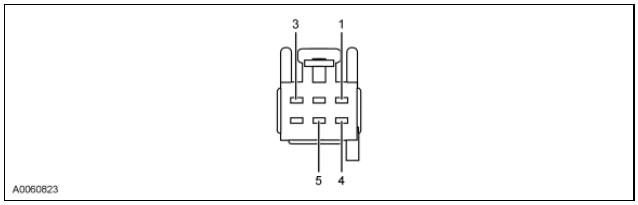
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 20S-HC17 (PK) Heated seat cushion element feed	Continuity from heated seat module, less than 5 ohms.
2	CKT 8-HC23 (WH/BK) Heated seat cushion sensor feed	Continuity from heated seat module, less than 5 ohms.
3	CKT 9-HC23 (BN/YE) Heated seat cushion sensor return	Continuity to heated seat module, less than 5 ohms.
4	CKT 20S-HC16 (PK/BU) Heated seat backrest element feed	Continuity from cushion element to backrest element, less than 5 ohms.

Left/Right Rear Heated Seat Backrest Element C3168/C3170



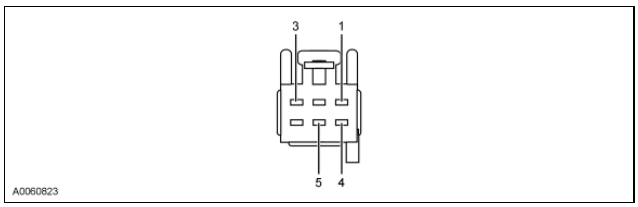
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 20S-HC16 (PK/BU) Heated seat backrest element feed	Continuity from cushion element to backrest element, less than 5 ohms.
2	CKT 31S-HC16 (BK/BU) Heated seat cushion element return	Continuity from backrest element to heated seat module, less than 5 ohms.

Driver Power Lumbar Switch C361



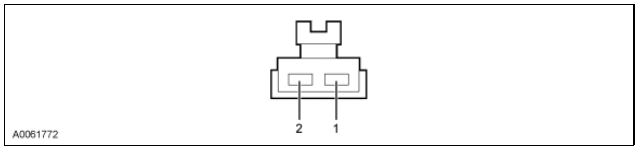
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 32-AH39 (WH/BU) Inflate output circuit from lumbar seat switch to power lumbar motor	Less than 5 ohms to the lumbar motor. Greater than 10,000 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in inflate.
3	CKT 31-AH40 (BK/GN) Ground	Continuity to lumbar seat switch, less than 5 ohms.
4	CKT 33-AH39 (YE/BU) Deflate output circuit from lumbar seat switch to power lumbar motor	Less than 5 ohms to the lumbar motor. Greater than 10,000 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in deflate.
5	CKT 30-AH40 (RD/GN) Battery voltage from rear PDB	Greater than 10 volts at all times.

Passenger Power Lumbar Switch C331



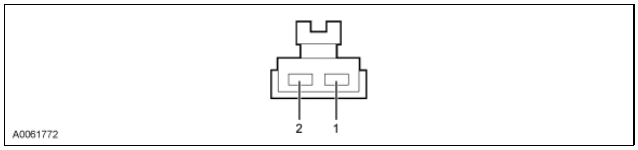
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 32-AH45 (WH/BU) Inflate output circuit from lumbar seat switch to power lumbar motor	Less than 5 ohms to the lumbar motor. Greater than 10,000 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in inflate.
3	CKT 31-AH46 (BK) Ground	Continuity to lumbar seat switch, less than 5 ohms.
4	CKT 33-AH45 (YE/BU) Deflate output circuit from lumbar seat switch to power lumbar motor	Less than 5 ohms to the lumbar motor. Greater than 10,000 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in deflate.
5	CKT 30-AH46 (RD) Battery voltage from rear PDB	Greater than 10 volts at all times.

Driver Power Lumbar Motor C366



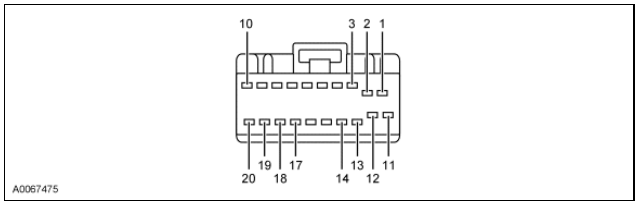
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 33-AH39 (YE/BU) Deflate input circuit to power lumbar motor from power lumbar seat switch	Less than 5 ohms to the lumbar control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in deflate, less than 5 ohms to ground when switch is in inflate.
2	CKT 32-AH39 (WH/BU) Inflate input circuit to power lumbar motor from power lumbar seat switch	Less than 5 ohms to the lumbar control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in inflate, less than 5 ohms to ground when switch is in deflate.

Passenger Power Lumbar Motor C336



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 33-AH45 (YE/BU) Deflate input circuit to power lumbar motor from power lumbar seat switch	Less than 5 ohms to the lumbar control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in deflate, less than 5 ohms to ground when switch is in inflate.
2	CKT 32-AH45 (WH/BU) Inflate input circuit to power lumbar motor from power lumbar seat switch	Less than 5 ohms to the lumbar control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when switch is in inflate, less than 5 ohms to ground when switch is in deflate.

Driver Climate Controlled Seat Module (CCSM) C3031b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 20S-HC17 (PK) Climate controlled seat cushion temperature sensor feed	Continuity to seat cushion thermal electric device (TED), less than 5 ohms.
2	CKT 31S-HC17 (BK/OG) Climate controlled seat cushion temperature sensor return	Continuity to seat cushion TED, less than 5 ohms.
3	CKT 31S-FA18 (BK/RD) Climate controlled seat fan control voltage return	Continuity to seat fan motor, less than 5 ohms.
10	CKT 20S-FA18 (PK/OG) Climate controlled seat fan, signal	Continuity to seat fan motor, less than 5 ohms.
11	CKT 20S-HC16 (PK/BU) Climate controlled seat backrest temperature sensor feed	Continuity to seat backrest TED, less than 5 ohms.
12	CKT 31S-HC16 (BK/BU) Climate controlled seat backrest temperature sensor return	Continuity to seat backrest TED, less than 5 ohms.
13	CKT 8-FA18 (WH/BK) Climate controlled seat fan voltage signal	Continuity to CCSM from climate controlled seat fan, less than 5 ohms.
14	CKT 10-FA18 (GY/BK) Climate controlled seat fan tachometer circuit	Continuity to CCSM from climate controlled seat fan, less than 5 ohms.
17	CKT 9-HC23 (BN/YE) Climate controlled seat cushion return signal	Continuity to CCSM from cushion TED, less than 5 ohms.
18	CKT 8-HC23 (WH/BK) Climate controlled seat cushion sensor signal	Continuity to CCSM from cushion TED, less than 5 ohms.

Pinpoint Test A: No Communication With The Driver Seat Module (DSM)

Normal Operation

The DSM is powered by battery voltage from circuit 29-AH80 (OG/WH) and 30-AH80 (RD) and is supplied ground on circuit 31-AH80 (BK) and 91-AH80 (BN/WH).

Possible Causes

No communication with the driver seat module can be caused by:

- fuse(s).
- wiring, terminals or connectors.
- a faulty DSM.

PINPOINT TEST A: NO COMMUNICATION WITH THE DRIVER SEAT MODULE (DSM)

Test Step	Result / Action to Take
A1 CHECK NGS TESTER COMMUNICATION TO THE DDM	
• Using the results from the DATA LINK DIAGNOSTICS test, check for communication to the DDM. • **Does the diagnostic tool communicate with the DDM?**	**Yes** GO to A2 . **No** Go To Pinpoint Test B .
A2 CHECK CIRCUITS 29-AH80 (OG/WH) AND 30-AH80 (RD) FOR VOLTAGE	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.** Refer to Section 501-20B . **NOTE:** The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental	**Yes** GO to A3 . **No** REPAIR the circuit in question. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT

restraint system (SRS) fault. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag Module C316. • Connect: Restraint System Diagnostic Tool 418-133 or 501-097 to Driver Seat Side Air Bag Module C316. • Connect: Battery Ground Cable. • ⚠ **WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.** • Disconnect: DSM C341b. • Disconnect: DSM C341c. • Measure the voltage between DSM C341c-10, circuit 29-AH80 (OG/WH), harness side and ground; and between DSM C341b-4, circuit 30-AH80 (RD), harness side and ground.  • **Are the voltages greater than 10 volts?**	driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
A3 CHECK CIRCUIT 31-AH80 (BK) AND 91-AH80 (BN/WH) FOR AN OPEN	
• Measure the resistance between the DSM C341b-3, circuit 31-AH80 (BK), harness side and ground; and between DSM C341c-2, circuit 91-AH80 (BN/WH), harness side and ground.  • **Are the resistances less than 5 ohms?**	**Yes** REFER to Section 418-00 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

Pinpoint Test B: No Communication With The Driver Door Module (DDM)

Normal Operation

The DDM is powered by battery voltage from circuits 29-AJ80 (OG) and ignition voltage circuit 29S-AJ86 (OG/BU) and is supplied ground on circuits 91-AJ80 (BN/BU) and 31-AJ80B (BK/OG).

Possible Causes

No communication with driver door module can be caused by:

- fuse(s).
- wiring, terminals or connectors.
- a faulty DDM.

PINPOINT TEST B: NO COMMUNICATION WITH THE DRIVER DOOR MODULE (DDM)

Test Step	Result / Action to Take
B1 CHECK CIRCUITS 29-AJ80 (OG) AND 29S-AJ86 (OG/BU) FOR VOLTAGE	
• Key in OFF position. • Disconnect: DDM C501a. • Key in ON position. • Measure the voltage between DDM C501a-11, circuit 29-AJ80 (OG), harness side and ground; and between DDM C501a-12, circuit 29S-AJ86 (OG/BU), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to B2 . **No** REPAIR the circuit in question. Test the system for normal operation.
B2 CHECK CIRCUITS 31-AJ80B (BK/OG) AND 91-AJ80 (BN/BU) FOR OPENS	
• Key in OFF position. • Measure the resistance between DDM C501a-7, circuit 91-AJ80 (BN/BU), harness side and ground; and between DDM C501a-8, circuit 31-AJ80B (BK/OG), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** REFER to Section 418-00 . **No** REPAIR the circuit(s) in question. Test the system for normal operation.

Pinpoint Test C: The Power Seat Is Inoperative Driver

Normal Operation

The power seat switch is powered by battery voltage to driver seat control switch circuit 30-AH35 (RD/YE) and is supplied ground on driver circuit 31-AH35 (BK/YE).

Possible Causes

An inoperative driver power seat can be caused by:

- a fuse.
- wiring, terminals or connectors.
- a faulty power seat switch.
- a faulty power seat motor.

PINPOINT TEST C: THE POWER SEAT IS INOPERATIVE DRIVER

Test Step	Result / Action to Take
C1 CHECK CIRCUIT 30-AH35 (RD/YE) FOR VOLTAGE	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.** Refer to Section 501-20B . **NOTE:** The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag Module C316. • Connect: Restraint System Diagnostic Tool 418-133 or 501-097 to Driver Seat Side Air Bag Module C316. • Connect: Battery Ground Cable. • ⚠ **WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.** • Disconnect: Driver Seat Control Switch C360. • Measure the voltage between driver seat control switch C360-6, circuit 30-AH35 (RD/YE), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to C2 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
C2 CHECK CIRCUIT 31-AH35 (BK/YE) FOR AN OPEN	

• Measure the resistance between driver seat control switch C360-1, circuit 31-AH35 (BK/YE), harness side and ground.  A0003056 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new driver seat control switch. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

Pinpoint Test D: The Power Seat Is Inoperative Passenger

Normal Operation

The power seat switch is powered by battery voltage to passenger seat control switch circuit 30-AH42 (RD) and is supplied ground on passenger circuits 31-AH42 (BK).

Possible Causes

An inoperative passenger power seat can be caused by:

- a fuse.
- wiring, terminals or connectors.
- a faulty power seat switch.
- a faulty power seat motor.

PINPOINT TEST D: THE POWER SEAT IS INOPERATIVE PASSENGER

Test Step	Result / Action to Take
D1 CHECK FOR POWER TO THE PASSENGER SEAT CONTROL SWITCH	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.** Refer to Section	**Yes** GO to D2 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system

501-20B . **NOTE:** The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C314. • Connect: Restraint System Diagnostic Tool 418-133 or 501-097 to Passenger Seat Side Air Bag Module C314. • Connect: Battery Ground Cable. • ⚠ **WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.** • Disconnect: Passenger Seat Control Switch C330. • Measure the voltage between passenger seat control switch C330-6, circuit 30-AH42 (RD), harness side and ground.  • **Is the voltage greater than 10 volts?**	diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
D2 CHECK CIRCUIT 31-AH42 (BK) FOR AN OPEN	
• Measure the resistance between passenger seat control switch C330-1, circuit 31-AH42 (BK), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new passenger seat control switch. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the

	supplemental restraint system (SRS). REFER to Section 501-20B .

Pinpoint Test E: The Power Seat Moves But Is Noisy

Normal Operation

The power seat should move quietly during operation. Some noise is acceptable.

Possible Causes

A noisy power seat can be caused by:

- a misaligned seat track.
- a faulty seat track component.
- an object obstructing seat movement.

PINPOINT TEST E: THE POWER SEAT MOVES BUT IS NOISY

Test Step	Result / Action to Take
E1 CHECK THE TRACK ALIGNMENT	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.** **NOTE:** If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.** Refer to Section 501-20B . **NOTE:** The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag Module C316 or Passenger Seat Side Air Bag Module C314. • Connect: Restraint System Diagnostic Tool 418-133 or 501-097 to Driver Seat Side Air Bag Module C316 or Passenger Seat Side Air Bag Module C314. • Connect: Battery Ground Cable. • ⚠ **WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.** • Key in OFF position. • Check the alignment of the track to the floor and the track to the seat. • **Is the track out of alignment?**	**Yes** ALIGN the track to the seat and the floor. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** INSTALL a new seat track part. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

Pinpoint Test F: The Power Seat Moves But Is Loose

Normal Operation

The power seat movement should be smooth and the seat cushion should not rock during or after operation.

Possible Causes

A loose power seat can be caused by:

- loose fastening hardware.
- a faulty seat track component.

PINPOINT TEST F: THE POWER SEAT MOVES BUT IS LOOSE

Test Step	Result / Action to Take
F1 CHECK THE FASTENING HARDWARE	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.** Refer to Section 501-20B . **NOTE:** The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag Module C316 or Passenger Seat Side Air Bag Module C314. • Connect: Restraint System Diagnostic Tool 418-133 or 501-097 to Driver Seat Side Air Bag Module C316 or Passenger Seat Side Air Bag Module C314. • Connect: Battery Ground Cable. • ⚠ **WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.** • Key in OFF position. • **Is the fastening hardware loose?**	**Yes** TIGHTEN all fastening hardware to specification. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** IDENTIFY the cause and INSTALL a new seat track component. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

Pinpoint Test G: The Power Seat Does Not Make Full Travel

Normal Operation

The driver power seat should travel fully horizontal (forward/rearward) and vertical (front up/down and rear up/down). The passenger power seat should travel fully horizontal (forward/rearward) and vertical (front up/down).

Possible Causes

A power seat that does not make full travel can be caused by:

- an obstruction.
- a faulty seat track component.

PINPOINT TEST G: THE POWER SEAT DOES NOT MAKE FULL TRAVEL

Test Step	Result / Action to Take
G1 CHECK FOR OBSTRUCTION IN THE SEAT TRACK	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.** Refer to Section 501-20B . **NOTE:** The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag Module C316 or Passenger Seat Side Air Bag Module C314. • Connect: Restraint System Diagnostic Tool 418-133 or 501-097 to Driver Seat Side Air Bag Module C316 or Passenger Seat Side Air Bag Module C314. • Connect: Battery Ground Cable. • ⚠ **WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.** • Key in OFF position. • Remove the affected seat. Refer to Front Seat in this section. • **Are there any obstructions in the track?**	**Yes** REMOVE the obstruction(s) and GREASE the track(s). TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** IDENTIFY the cause and INSTALL a new seat track component. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

Pinpoint Test H: The Power Seat Does Not Move Horizontally/Vertically Driver

Normal Operation

The power seat switch is powered by battery voltage on driver circuit 30-AH35 (RD/YE) and is supplied ground on circuit 31-AH35 (BK/YE). When pressed, the power seat switch supplies that voltage and ground to a power seat track motor to move the seat. When pressed in the opposite direction, the power seat switch reverses the polarity to that same power seat track motor, which moves the seat in the opposite direction. There are 3 power seat track motors that combine to move the seat cushion horizontally (forward/reverse) and vertically (front up/down and rear up/down). The power recliner cannot be repaired separately. If the power recliner needs to be repaired, an entirely new front seat backrest frame must be installed.

Possible Causes

A driver power seat that does not move horizontally and/or vertically can be caused by:

- wiring, terminals or connectors.
- a faulty seat control switch.
- a faulty seat track motor.
- a faulty backrest recline motor (part of backrest frame assembly).

PINPOINT TEST H: THE POWER SEAT DOES NOT MOVE HORIZONTALLY/VERTICALLY DRIVER

Test Step	Result / Action to Take
H1 CHECK HORIZONTAL DIRECTION MOTOR FOR CORRECT OPERATION	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.** Refer to Section 501-20B . **NOTE:** The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag Module C316. • Connect: Restraint System Diagnostic Tool 418-133 or 501-097 to Driver Seat Side Air Bag Module C316. • Connect: Battery Ground Cable. • ⚠ **WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.**	**Yes** GO to H2 . **No** GO to H3 .

• Operate the driver power seat forward and rearward. • **Will the seat move horizontally?**	
H2 CHECK BACKREST MOTOR FOR CORRECT OPERATION	
• Operate the driver power seat backrest up and down. • **Will the seat backrest move up and down?**	**Yes** GO to H6 . **No** GO to H13 .
H3 CHECK THE VOLTAGE TO THE DRIVER SEAT FORWARD/REVERSE MOTOR	
• Disconnect: Driver Seat Forward/Reverse Motor C362. • Measure the voltage between driver seat forward/reverse motor C362-2, circuit 32-AH37 (WH/GN), harness side and C362-1, circuit 33-AH37 (YE/GN), harness side, while pushing the driver seat control switch forward and rearward.  A0003068 • **Is the voltage greater than 10 volts when the switch is pushed FORWARD, greater than -10 volts when the switch is pushed REARWARD, and 0 volts when the switch is in a REST position?**	**Yes** INSTALL a new driver seat forward/reverse motor. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to H4 .
H4 CHECK CIRCUIT 32-AH37 (WH/GN) FOR AN OPEN AND SHORT TO GROUND	
• Disconnect: Driver Seat Forward/Reverse Motor C362. • Measure the resistance between driver seat control switch C360-3, circuit 32-AH37 (WH/GN), harness side and driver seat forward/reverse motor C362-2, circuit 32-AH37 (WH/GN), harness side; and between driver seat control switch C360-3, circuit 32-AH37 (WH/GN), harness side and ground.  A0061916 • **Is the resistance less than 5 ohms between the driver seat forward/reverse motor and the driver seat control switch, and greater than 10,000 ohms between the driver seat control switch and ground?**	**Yes** GO to H5 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
H5 CHECK CIRCUIT 33-AH37 (YE/GN) FOR AN OPEN AND SHORT TO GROUND	

• Measure the resistance between driver seat control switch C360-11, circuit 33-AH37 (YE/GN), harness side and driver seat forward/reverse motor C362-1, circuit 33-AH37 (YE/GN), harness side; and between driver seat control switch C360-11, circuit 33-AH37 (YE/GN), harness side and ground.  • **Is the resistance less than 5 ohms between the driver seat forward/reverse motor and the driver seat control switch, and greater than 10,000 ohms between the driver seat control switch and ground?**	**Yes** INSTALL a new driver seat control switch. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
H6 DETERMINE SEAT TILTING FAILURE	
• Determine seat tilting failure. • **Can the seat be tilted FORWARD or BACKWARD?**	**Yes** If only forward tilting operates, GO to H7 . If only rear tilting operates, GO to H10 . **No** INSTALL a new driver seat control switch. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
H7 CHECK THE VOLTAGE TO THE DRIVER SEAT REAR HEIGHT MOTOR	
• Disconnect: Driver Seat Rear Height Motor C363. • Measure the voltage between driver seat rear height motor C363-2, circuit 32-AH41 (WH/VT), harness side and C363-1, circuit 33-AH41 (YE/VT), harness side, while depressing the rear tilt switch up and down.	**Yes** INSTALL a new driver seat rear height motor. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side

 A0003068 • **Is the voltage greater than +10 volts when the rear tilt switch is pressed DOWN, greater than -10 volts when the rear tilt switch is pressed UP and 0 volts when the switch is in the REST position?**	air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to H8 .
H8 CHECK CIRCUIT 32-AH41 (WH/VT) FOR OPEN AND SHORT TO GROUND	
• Disconnect: Driver Seat Control Switch C360. • Measure the resistance between driver seat control switch C360-8, circuit 32-AH41 (WH/VT), harness side and driver seat rear height motor C363-2, circuit 32-AH41 (WH/VT), harness side; and between driver seat control switch C360-8, circuit 32-AH41 (WH/VT), harness side and ground.  A0005701 • **Is the resistance less than 5 ohms between the driver seat rear height motor and the driver seat control switch, and greater than 10,000 ohms between the driver seat control switch and ground?**	**Yes** GO to H9 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
H9 CHECK CIRCUIT 33-AH41 (YE/VT) FOR OPEN AND SHORT TO GROUND	
• Measure the resistance between driver seat control switch C360-9, circuit 33-AH41 (YE/VT), harness side and driver seat rear height motor C363-1, circuit 33-AH41 (YE/VT), harness side; and between driver seat control switch C360-9, circuit 33-AH41 (YE/VT), harness side and ground.  A0005700 • **Is the resistance less than 5 ohms between the driver seat rear height motor and the driver seat control switch, and greater than 10,000 ohms between the driver seat control switch and ground?**	**Yes** INSTALL a new driver seat control switch. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316.

	CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
H10 CHECK THE VOLTAGE TO DRIVER SEAT FRONT HEIGHT MOTOR	
• Disconnect: Driver Seat Front Height Motor C382. • Measure the voltage between driver seat front height motor C382-2, circuit 33-AH38 (YE/BK), harness side and C382-1, circuit 32-AH38 (WH/BK), while pushing the rear tilting switch up and down.  A0003068 • **Is the voltage greater than +10 volts when the front tilt switch is pressed DOWN, greater than -10 volts when the front tilt switch is pressed UP and 0 volts when the switch is in the REST position?**	**Yes** INSTALL a new driver seat front height motor. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to H11 .
H11 CHECK CIRCUIT 32-AH38 (WH/BK) FOR OPEN AND SHORT TO GROUND	
• Disconnect: Driver Seat Control Switch C360. • Measure the resistance between driver seat control switch C360-5, circuit 32-AH38 (WH/BK), harness side and driver seat front height motor C382-1, circuit 32-AH38 (WH/BK), harness side; and between driver seat control switch C360-5, circuit 32-AH38 (WH/BK), harness side and ground.  A0005702 • **Is the resistance less than 5 ohms between the driver seat front height motor and the driver seat control switch, and greater than 10,000 ohms between the driver seat control switch and ground?**	**Yes** GO to H12 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
H12 CHECK CIRCUIT 33-AH38 (YE/BK) FOR OPEN	
• Measure the resistance between driver seat control switch C360-4, circuit 33-AH38 (YE/BK) harness side, and driver seat front height motor C382-2, circuit 33-AH38 (YE/BK), harness side; and between driver seat control switch C360-4, circuit 33-AH38 (YE/BK), harness side and ground.	**Yes** INSTALL a new driver seat control switch. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side

 A0005703 • **Is the resistance less than 5 ohms between the driver seat front height motor and the driver seat control switch, and greater than 10,000 ohms between the driver seat control switch and ground?**	air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
H13 CHECK THE VOLTAGE TO DRIVER SEAT BACKREST MOTOR	
• Disconnect: Driver Seat Backrest Motor C368. • Measure the voltage between driver seat backrest motor C368-1, circuit 32-AH36 (WH/RD), harness side and C363-2, circuit 33-AH36 (YE/RD), while pushing the backrest switch forward and rearward.  A0005706 • **Is the voltage greater than 10 volts when the switch is pushed FORWARD, greater than -10 volts when the switch is pushed REARWARD, and 0 volts when the switch is in a REST position?**	**Yes** INSTALL a new driver seat backrest motor. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to H14 .
H14 CHECK CIRCUIT 32-AH36 (WH/RD) FOR OPEN AND SHORT TO GROUND	
• Disconnect: Driver Seat Control Switch C360. • Measure the resistance between driver seat control switch C360-12, circuit 32-AH36 (WH/RD), harness side and driver seat backrest motor C368-1, circuit 32-AH36 (WH/RD), harness side; and between driver seat control switch C360-12, circuit 32-AH36 (WH/RD), harness side and ground.  A0005704	**Yes** GO to H15 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

• **Is the resistance less than 5 ohms between the driver seat backrest motor and the driver seat control switch, and greater than 10,000 ohms between the driver seat control switch and ground?**	
H15 CHECK CIRCUIT 33-AH36 (YE/RD) FOR OPEN	
• Measure the resistance between driver seat control switch C360-7, circuit 33-AH36 (YE/RD) harness side, and driver seat backrest motor C368-2, circuit 33-AH36 (YE/RD), harness side; and between driver seat control switch C360-7, circuit 33-AH36 (YE/RD), harness side and ground.  • **Is the resistance less than 5 ohms between the driver seat backrest motor and the driver seat control switch, and greater than 10,000 ohms between the seat control switch and ground?**	**Yes** INSTALL a new driver seat control switch. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

Pinpoint Test I: The Memory Seat Does Not Move Horizontally/Vertically Driver

Normal Operation

The power seat switch is powered by battery voltage to driver seat control switch circuit 29-AH35 (OG/YE) and is supplied ground on driver circuit 91-AH35 (BN). When pressed, the power seat switch supplies the voltage and ground to the driver seat module (DSM). The DSM then supplies voltage and ground to the appropriate power seat track motor based on the inputs received from the seat control switch. When pressed in the opposite direction, the power seat switch reverses the polarity to the DSM, which moves the seat in the opposite direction. There are 3 power seat track motors that combine to move the seat horizontally (forward/reverse) and vertically (front up/down and rear up/down). The power recliner cannot be repaired separately. If the power recliner needs to be repaired, an entirely new front seat backrest frame must be installed.

Possible Causes

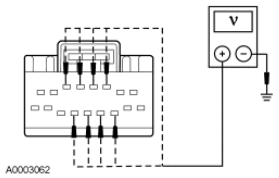
A memory seat that does not move horizontally/vertically can be caused by:

- a fuse.
- wiring, terminals or connectors.
- a faulty memory set switch.
- a faulty power seat track motor position sensor.
- a faulty DSM.

PINPOINT TEST I: THE MEMORY SEAT DOES NOT MOVE HORIZONTALLY/VERTICALLY DRIVER

Test Step	Result / Action to Take
I1 RETRIEVE THE RECORDED DSM DTCs FROM BOTH CONTINUOUS AND ON-DEMAND SELF TESTS	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.** **NOTE:** If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.** Refer to Section 501-20B . **NOTE:** The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag Module C316. • Connect: Restraint System Diagnostic Tool 418-133 or 501-097 to Driver Seat Side Air Bag Module C316. • Connect: Battery Ground Cable. • ⚠ **WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.** • Use the results recorded from the DSM continuous and on-demand self tests. • **Are any DSM DTCs recorded?**	**Yes** If DTC B1703, B1707, B1711, B1715, B1719, B1723, B1727 or B1731 was retrieved, GO to I2 . If any combination of DTC B1757, B1761, B1765, B1769, B2146, B2149, B2152, or B2155 are retrieved, GO to I4 . If only a combination of DTC B2146, B2149, B2152 or B2155 are retrieved, GO to I43 . **No** GO to I45 .
I2 CHECK FOR A SHORT TO BATTERY	
• Disconnect: DSM C341c. • Key in ON position. • Using the following table, measure the voltage between DSM C341c pins, harness side and ground. **DSM C341c Pin** / **Circuit** 3 / 10-AH83 (GY/OG) 4 / 10-AH82 (GY/RD) 5 / 8-AH84 (WH/BK) 6 / 10-AH85 (GY/WH) 11 / 8-AH83 (WH/GN) 12 / 8-AH82 (WH/RD)	**Yes** GO to I3 . **No** CLEAR the DSM DTCs. REPEAT the DSM self-test. If DTC B1703, B1707, B1711, B1715, B1719, B1723, B1727 or B1731 is retrieved, INSTALL a new DSM. REFER to Section 419-10 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side

13	10-AH84 (GY/BK)
14	8-AH85 (WH/VT)



- **Are any of the voltages greater than 10 volts?**

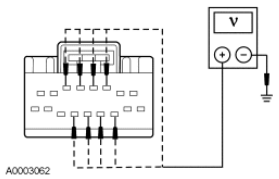
air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

If any other DTCs are retrieved, refer to the DSM Diagnostic Trouble Code (DTC) Index.

I3 CHECK THE DRIVER SEAT CONTROL SWITCH FOR A SHORT TO BATTERY

- Key in OFF position.
- Disconnect: Driver Seat Control Switch C360.
- Key in ON position.
- Using the following table, measure the voltage between DSM C341c pins, harness side and ground.

DSM C341c Pin	Circuit
3	10-AH83 (GY/OG)
4	10-AH82 (GY/RD)
5	8-AH84 (WH/BK)
6	10-AH85 (GY/WH)
11	8-AH83 (WH/GN)
12	8-AH82 (WH/RD)
13	10-AH84 (GY/BK)
14	8-AH85 (WH/VT)



- **Are any of the voltages greater than 10 volts?**

Yes
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the DSM self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

No
INSTALL a new driver seat control switch. CLEAR the DTCs. REPEAT the DSM self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

I4 CHECK FOR MULTIPLE DSM DTCs

- Use the results recorded from the DSM continuous and on-demand self tests.
- **Are the DSM DTCs B1757, B1761 and B1765 all retrieved?**

Yes
GO to I5 .

No
GO to I10 .

I5 CHECK THE HORIZONTAL POSITION SENSOR COMMON RETURN

• Key in OFF position. • Disconnect: Horizontal Position Sensor C372. • Measure the resistance between horizontal position sensor C372-3, circuit 9-AH26 (BN/RD), harness side and ground.  A0003063 • **Is the resistance less than 180 ohms?**	**Yes** GO to I7 . **No** GO to I6 .
I6 CHECK CIRCUIT 9-AH26 (BN/RD) FOR AN OPEN	
• Disconnect: DSM C341a. • Measure the resistance between horizontal position sensor C372-3, circuit 9-AH26 (BN/RD), harness side and DSM C341a-11, circuit 9-AH80 (BN/WH), harness side.  A0003064 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new DSM. REFER to Section 419-10 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I7 CHECK THE POSITION SENSOR COMMON FEED	
• Measure the voltage between horizontal position sensor C372-1, circuit 7-AH26 (YE/RD), harness side and ground.  A0003065 • **Is the voltage greater than 10 volts?**	**Yes** GO to I10 . **No** GO to I8 .

I8 CHECK CIRCUIT 7-AH26 (YE/RD) FOR A SHORT TO GROUND	
• Disconnect: DSM C341a. • Measure the resistance between horizontal position sensor C372-1, circuit 7-AH26 (YE/RD), harness side and ground.  A0003066 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I9 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I9 CHECK CIRCUIT 7-AH26 (YE/RD) OR 7-AH80 (YE/VT) FOR AN OPEN	
• Measure the resistance between horizontal position sensor C372-1, circuit 7-AH26 (YE/RD), harness side and DSM C341a-15, circuit 7-AH80 (YE/VT), harness side.  A0003067 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new DSM. REFER to Section 419-10 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I10 CHECK FOR SINGLE DTCs	
• Key in OFF position. • Use the recorded results from the DSM self-test. • **Was DTC B1757, B1761, B1765 or B1769 retrieved?**	**Yes** For DTC B1757 GO to I11 . For DTC B1761 GO to I19 .

	For DTC B1765 GO to I27 . For DTC B1769 GO to I35 . **No** GO to I43 .
I11 CHECK VOLTAGE TO THE DRIVER SEAT REAR HEIGHT MOTOR	
• Disconnect: Driver Seat Rear Height Motor C363. • Measure the voltage between driver seat rear height motor C363-1, circuit 33-AH41 (YE/VT), harness side and driver seat rear height motor C363-2, circuit 32-AH41 (WH/VT), harness side.  A0003068 • Operate the driver seat control switch to the REAR UP and REAR DOWN position. • **Is the voltage greater than 10 volts in both directions?**	**Yes** GO to I15 . **No** GO to I12 .
I12 CHECK THE DSM DRIVER SIDE REAR HEIGHT MOTOR CONTROL	
• Measure the voltage between driver seat rear height motor C363-1, circuit 33-AH41 (YE/VT), harness side and ground while operating the driver seat control switch to the REAR DOWN position; and between driver seat rear height motor C363-2, circuit 32-AH41 (WH/VT), harness side and ground while operating the driver seat control switch to the REAR UP position.  A0003069 • **Is the voltage greater than 10 volts in both directions?**	**Yes** INSTALL a new DSM. REFER to Section 419-10 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to I13 .
I13 CHECK CIRCUIT 33-AH41 (YE/VT) AND 32-AH41 (WH/VT) FOR A SHORT TO GROUND	

• Disconnect: DSM C341a. • Measure the resistance between driver seat rear height motor C363-1, circuit 33-AH41 (YE/VT), harness side and ground; and between driver seat rear height motor C363-2, circuit 32-AH41 (WH/VT), harness side and ground.  A0003070 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to I14 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I14 CHECK CIRCUIT 33-AH41 (YE/VT) AND 32-AH41 (WH/VT) FOR AN OPEN	
• Measure the resistance between driver seat rear height motor C363-1, circuit 33-AH41 (YE/VT), harness side and DSM C341a-8, circuit 33-AH41 (YE/VT), harness side; and between driver seat rear height motor C363-2, circuit 32-AH41 (WH/VT), harness side and DSM C341a-16, circuit 32-AH41 (WH/VT), harness side.  A0003071 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new DSM. REFER to Section 419-10 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the DSM self-test. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I15 CHECK CIRCUIT 9-AH25 (BN/GN) FOR AN OPEN	
• Disconnect: Rear Height Motor Position Sensor C373. • Measure the resistance between rear height motor position sensor C373-3, circuit 9-AH25 (BN/GN), harness side and ground.	**Yes** GO to I16 . **No** REPAIR the circuit. CLEAR the

 A0003063 • **Is the resistance less than 5 ohms?**	DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I16 CHECK CIRCUIT 7-AH25 (YE/GN) FOR AN OPEN	
• Measure the voltage between rear height motor position sensor C373-1, circuit 7-AH25 (YE/GN), harness side and ground.  A0003065 • **Is the voltage approximately 5 volts?**	**Yes** GO to I17 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I17 CHECK CIRCUIT 8-AH25 (WH/GN) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: DSM C341a. • Measure the resistance between rear height motor position sensor C373-2, circuit 8-AH25 (WH/GN), harness side and ground.  A0003072 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I18 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I18 CHECK CIRCUIT 8-AH25 (WH/GN) FOR AN OPEN	
• Measure the resistance between rear height motor position sensor C373-2, circuit 8-AH25 (WH/GN), harness side and DSM C341a-14, circuit 8-AH25 (WH/GN), harness side.	**Yes** INSTALL a new seat track. CALIBRATE the driver seat. REFER to Principles of Operation. REPEAT the DSM self-test. If DTC B1757 is retrieved, INSTALL a new DSM. REFER to Section 419-10 . CALIBRATE the driver seat. REFER to Principles of

 A0003073 • **Is the resistance less than 5 ohms?**	Operation. CLEAR the DTCs. REPEAT the self- test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I19 CHECK THE DRIVER SEAT FRONT HEIGHT MOTOR SUPPLY	
• Disconnect: Driver Seat Front Height Motor C382. • Measure the voltage between driver seat front height motor C382-2, circuit 33-AH38 (YE/BK), harness side and driver seat front height motor C382-1, circuit 32-AH38 (WH/BK), harness side.  A0003068 • Operate the driver seat control switch to the FRONT UP and FRONT DOWN position. • **Is the voltage greater than 10 volts in both directions?**	**Yes** GO to I23 . **No** GO to I20 .
I20 CHECK THE DSM DRIVER SEAT FRONT HEIGHT MOTOR CONTROL	
• Measure the voltage between driver seat front height motor C382-2, circuit 33-AH38 (YE/BK), harness side and ground while operating the driver seat control switch to the FRONT DOWN position; and between driver seat front height motor C382-1, circuit 32-AH38 (WH/BK), harness side and ground, while operating the driver seat control switch to the FRONT UP position.	**Yes** INSTALL a new DSM. REFER to Section 419-10 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground

 A0003069 • **Is the voltage greater than 10 volts in both directions?**	cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to I21 .
I21 CHECK CIRCUIT 33-AH38 (YE/BK) AND 32-AH38 (WH/BK) FOR A SHORT TO GROUND	
• Disconnect: DSM C341a. • Measure the resistance between driver seat front height motor C382-2, circuit 33-AH38 (YE/BK), harness side and ground; and between driver seat front height motor C382-1, circuit 32-AH38 (WH/BK), harness side and ground.  A0003070 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to I22 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I22 CHECK CIRCUIT 33-AH38 (YE/BK) AND 32-AH38 (WH/BK) FOR AN OPEN	
• Measure the resistance between driver seat front height motor C382-2, circuit 33-AH38 (YE/BK), harness side and DSM C341a-7, circuit 33-AH38 (YE/BK), harness side; and between driver seat front height motor C382-1, circuit 32-AH38 (WH/BK), harness side and DSM C341a-17, circuit 32-AH38 (WH/BK), harness side.  A0003074 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new DSM. REFER to Section 419-10 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver

	seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I23 CHECK CIRCUIT 9-AH24 (BN/YE) FOR AN OPEN	
• Disconnect: Front Height Motor Position Sensor C383. • Measure the resistance between front height motor position sensor C383-1, circuit 9-AH24 (BN/YE), harness side and ground.  A0003066 • **Is the resistance less than 5 ohms?**	**Yes** GO to I24 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I24 CHECK CIRCUIT 7-AH24 (YE/BK) FOR AN OPEN	
• Measure the voltage between front height motor position sensor C383-3, circuit 7-AH24 (YE/BK), harness side and ground.  A0003075 • **Is the voltage approximately 5 volts?**	**Yes** GO to I25 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I25 CHECK CIRCUIT 8-AH24 (WH/BK) FOR A SHORT TO GROUND	
• Disconnect: DSM C341a. • Measure the resistance between front height motor position sensor C383-2, circuit 8-AH24 (WH/BK), harness side and ground.  A0003072 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I26 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system

	(SRS). REFER to Section 501-20B .
I26 CHECK CIRCUIT 8-AH24 (WH/BK) FOR AN OPEN	
• Measure the resistance between front height motor position sensor C383-2, circuit 8-AH24 (WH/BK), harness side and DSM C341a-5, circuit 8-AH24 (WH/BK), harness side.  A0003076 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new seat track. CALIBRATE the driver seat. REFER to Principles of Operation. REPEAT the self-test. If DTC B1761 is retrieved, INSTALL a new DSM. REFER to Section 419-10 . CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I27 CHECK THE VOLTAGE TO THE DRIVER SEAT FORWARD/REARWARD MOTOR	
• Disconnect: Driver Seat Forward/Rearward Motor C362. • Measure the voltage between driver side forward/rearward motor C362-1, circuit 33-AH37 (YE/GN), harness side and driver side forward/rearward motor C362-2, circuit 32-AH37 (WH/GN), harness side.  A0003068 • Operate the driver seat control switch to the FORWARD and REARWARD position. • **Is the voltage greater than 10 volts in both directions?**	**Yes** GO to I31 . **No** GO to I28 .

I28 CHECK THE DSM FORWARD/REARWARD MOTOR CONTROL	
• Measure the voltage between driver side forward/rearward motor C362-1, circuit 33-AH37 (YE/GN), harness side and ground while operating the driver seat control switch to the REARWARD position; and between driver side forward/rearward motor C362-2, circuit 32-AH37 (WH/GN), harness side and ground while operating the driver seat control switch to the FORWARD position.  A0003069 • **Is the voltage greater than 10 volts in both directions?**	**Yes** INSTALL a new DSM. REFER to Section 419-10 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to I29 .
I29 CHECK CIRCUIT 33-AH37 (WH/GN) AND 32-AH37 (YE/GN) FOR A SHORT TO GROUND	
• Disconnect: DSM C341. • Measure the resistance between driver side forward/rearward motor C362-1, circuit 33-AH37 (YE/GN), harness side and ground; and between driver side forward/rearward motor C362-2, circuit 32-AH37 (WH/GN), harness side and ground.  A0003070 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to I30 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I30 CHECK CIRCUIT 33-AH37 (YE/GN) AND 32-AH37 (WH/GN) FOR AN OPEN	
• Measure the resistance between driver side forward/rearward motor C362-1, circuit 33-AH37 (YE/GN), harness side and DSM C341a-1, circuit 33-AH37 (YE/GN), harness side; and between driver side forward/rearward motor C362-2, circuit 32-AH37 (WH/GN), harness side and DSM C341a-10, circuit 32-AH9 (WH/GN), harness side.	**Yes** INSTALL a new DSM. REFER to Section 419-10 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag

 A0003077 • **Are the resistances less than 5 ohms?**	module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I31 CHECK CIRCUIT 9-AH26 (BN/RD) FOR AN OPEN	
• Disconnect: Forward/Rearward Motor Position Sensor C372. • Measure the resistance between FORWARD/REARWARD motor position sensor C372-3, circuit 9-AH26 (BN/RD), harness side and ground.  A0003063 • **Is the resistance less than 5 ohms?**	**Yes** GO to I32 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I32 CHECK CIRCUIT 7-AH26 (YE/RD) FOR AN OPEN	
• Measure the voltage between FORWARD/REARWARD motor position sensor C372-1, circuit 7-AH26 (YE/RD), harness side and ground.  A0003065 • **Is the voltage approximately 5 volts?**	**Yes** GO to I33 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the DSM self-test. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I33 CHECK CIRCUIT 8-AH26 (WH/RD) FOR A SHORT TO GROUND	

• Disconnect: DSM C341a. • Measure the resistance between FORWARD/REARWARD motor position sensor C372-2, circuit 8-AH26 (WH/RD), harness side and ground.  A0003072 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I34 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I34 CHECK CIRCUIT 8-AH26 (WH/RD) FOR AN OPEN	
• Measure the resistance between FORWARD/REARWARD motor position sensor C372-2, circuit 8-AH26 (WH/RD), harness side and DSM C341a-4, circuit 8-AH26 (WH/RD), harness side.  A0003078 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new seat track. CALIBRATE the driver seat. REFER to Principles of Operation. REPEAT the DSM self-test. If DTC B1765 is retrieved, INSTALL a new DSM. REFER to Section 419-10 . CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I35 CHECK THE DRIVER SEAT BACKREST MOTOR SUPPLY	

• Disconnect: Driver Seat Backrest Motor C368. • Measure the voltage between driver seat backrest motor C368-2, circuit 33-AH36 (YE/RD), harness side and driver seat backrest motor C368-1, circuit 32-AH36 (WH/RD), harness side, while operating the driver seat control switch to the RECLINE FORWARD and RECLINE REARWARD position.  A0003079 • **Is the voltage greater than 10 volts in both directions?**	**Yes** GO to I39 . **No** GO to I36 .
I36 CHECK THE DSM BACKREST MOTOR CONTROL	
• Measure the voltage between driver seat backrest motor C368-2, circuit 33-AH36 (YE/RD), harness side and ground while operating the driver seat control switch to the BACKREST FORWARD position; and between driver seat backrest motor C368-1, circuit 32-AH36 (WH/RD), harness side and ground while operating the driver seat control switch to the BACKREST REARWARD position.  A0003080 • **Is the voltage greater than 10 volts in both directions?**	**Yes** INSTALL a new DSM. REFER to Section 419-10 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to I37 .
I37 CHECK CIRCUIT 33-AH36 (YE/RD) AND 32-AH36 (WH/RD) FOR A SHORT TO GROUND	
• Disconnect: DSM C341a. • Measure the resistance between driver seat backrest motor C368-2, circuit 33-AH36 (YE/RD), harness side and ground; and between driver seat backrest motor C368-1, circuit 32-AH34 (WH/RD), harness side and ground.  A0003081 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to I38 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

I38 CHECK CIRCUIT 33-AH36 (YE/RD) AND 32-AH36 (WH/RD) FOR AN OPEN	
• Measure the resistance between driver seat backrest motor C368-2, circuit 33-AH36 (YE/RD), harness side and DSM C341a-9, circuit 33-AH36 (YE/RD), harness side; and between driver seat backrest motor C368-1, circuit 32-AH36 (WH/RD), harness side and DSM C341a-2, circuit 32-AH36 (WH/RD), harness side.  A0003082 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new DSM. REFER to Section 419-10 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I39 CHECK CIRCUIT 9-AH30 (BN/BU) FOR AN OPEN	
• Disconnect: Backrest Motor Position Sensor C376. • Measure the resistance between backrest motor position sensor C376-3, circuit 9-AH30 (BN/BU), harness side and ground.  A0003066 • **Is the resistance less than 5 ohms?**	**Yes** GO to I40 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I40 CHECK CIRCUIT 7-AH30 (YE/BU) FOR AN OPEN	
• Measure the voltage between backrest motor position sensor C376-1, circuit 7-AH30 (YE/BU), harness side and ground.	**Yes** GO to I41 . **No** REPAIR the circuit. CLEAR the

 A0003075 • **Is the voltage approximately 5 volts?**	DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I41 CHECK CIRCUIT 8-AH30 (WH/BU) FOR A SHORT TO GROUND	
• Disconnect: DSM C341a. • Measure the resistance between backrest motor position sensor C376-2, circuit 8-AH30 (WH/BU), harness side and ground.  A0003072 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I42 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I42 CHECK CIRCUIT 8-AH30 (WH/BU) FOR AN OPEN	
• Measure the resistance between backrest motor position sensor C376-2, circuit 8-AH30 (WH/BU), harness side and DSM C341a-13, circuit 8-AH30 (WH/BU), harness side.  A0003083 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new seat backrest frame assembly. CALIBRATE the driver seat. REFER to Principles of Operation. REPEAT the DSM self-test. If DTC B1769 is retrieved, INSTALL a new DSM. REFER to Section 419-10 . CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

	DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
I43 CHECK FOR HESITATION OR JOGGING	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Clear all DSM DTCs. • Enter the following diagnostic mode on the diagnostic tool: Clear all DSM DTCs. • Enter the following diagnostic mode on the diagnostic tool: Operate the driver seat control switch through all positions while monitoring DSM PIDs SFNT_MT, SREARMT, SFWD_MT and SRCL_MT, and watching seat movement. • **Did the driver seat stop or hesitate, or did any of the DSM PIDs read inconsistently?**	**Yes** INSTALL a new seat track. CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to I44 .
I44 CHECK FOR AN INTERMITTENT CONCERN	
• Enter the following diagnostic mode on the diagnostic tool: Clear all DSM DTCs. • Operate the driver power seat. Wiggle the harness and connectors. Inspect for any visual concerns. • Enter the following diagnostic mode on the diagnostic tool: DSM Self-Test. • **Were any DTCs retrieved?**	**Yes** If DTC B2146, B2149, B2152 or B2155 is retrieved, INSTALL a new seat track. CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the

<table>

DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

Pinpoint Test J: The Power Seat Does Not Move Horizontally/Vertically Passenger

Normal Operation

The power seat switch is powered by battery voltage on circuit 30-AH42 (RD) and is supplied ground on circuit 31-AH42 (BK). When pressed, the power seat switch supplies that voltage and ground to a power seat track motor to move the seat. When pressed in the opposite direction, the power seat switch reverses the polarity to that same power seat track motor, which moves the seat in the opposite direction. There are 2 power seat track motors that combine to move the seat horizontally (forward/reverse) and vertically (front up/down).

Possible Causes

A power seat that does not move horizontally and/or vertically can be caused by:

- wiring, terminals or connectors.

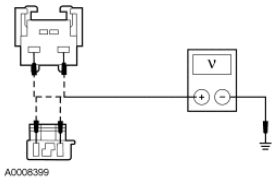
- a faulty seat control switch.
- a faulty seat track motor.

PINPOINT TEST J: THE POWER SEAT DOES NOT MOVE HORIZONTALLY/VERTICALLY PASSENGER

Test Step	Result / Action to Take
J1 CHECK THE PASSENGER SEAT MOTOR OPERATION	
WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. **NOTE:** If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.** Refer to Section 501-20B . **NOTE:** The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C314. • Connect: Restraint System Diagnostic Tool 418-133 or 501-097 to Passenger Seat Side Air Bag Module C314. • Connect: Battery Ground Cable. • **WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.** • Disconnect the passenger seat motor connector in question: (forward/rearward motor C332, seat height motor C333, or seat backrest motor C338). • Using the following table, measure the voltage between the inoperative passenger seat motor connector, harness side and ground, while moving the seat control switch in the indicated direction: **Yes** INSTALL a new passenger seat track or the backrest frame assembly. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to J2 .

Motor Connector	Pin	Circuit	Direction of Control Switch
Forward/ Reverse Motor C332	2	32-AH44 (WH/GN)	Forward
Forward/ Reverse Motor C332	1	33-AH44 (YE/GN)	Reverse

Height Motor C333	1	32-AH34 (WH/BK)	Up
Height Motor C333	2	33-AH34 (YE/BK)	Down
Backrest Motor C338	1	32-AH43 (WH/RD)	Tilt Up
Backrest Motor C338	2	33-AH43 (YE/RD)	Tilt Down

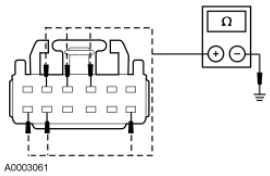


- **Are the voltages greater than 10 volts in the inoperative directions?**

J2 CHECK THE PASSENGER SEAT MOTOR CIRCUITS FOR A SHORT TO GROUND

- Disconnect: Passenger Seat Control Switch C330.
- Using the following table, measure the resistance between passenger seat control switch C330 pins, harness side and ground:

Pin	Circuit	Inoperative Motor
12	32-AH43 (WH/RD)	Backrest
7	33-AH43 (YE/RD)	Backrest
4	32-AH34 (WH/BK)	Height
5	33-AH34 (YE/BK)	Height
3	32-AH44 (WH/GN)	Forward/ Rearward
11	33-AH44 (YE/GN)	Forward/ Rearward



- **Are the resistances greater than 10,000 ohms?**

Yes
GO to J3 .

No
REPAIR the circuit in question. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

J3 CHECK FOR AN OPEN CIRCUIT

<table>
<tr>
<td>
• Key in OFF position.
• Measure the resistance between the passenger seat control switch C330 pins, harness side and the inoperative motor connector, harness side:

Pinpoint Test K: The Memory Seat Is Inoperative

Normal Operation

The power seat switch is powered by battery voltage to driver seat control switch circuit 29-AH35 (OG/YE) and is supplied ground on driver circuit 91-AH35 (BN). When pressed, the power seat switch supplies the voltage and ground to the driver seat module (DSM). The DSM then supplies voltage and ground to the appropriate power seat track motor based on the inputs received from the seat control switch. When pressed in the opposite direction, the power seat switch reverses the polarity to the DSM, which moves the seat in the opposite direction. There are 3 power seat track motors that combine to move the seat horizontally (forward/reverse) and vertically (front up/down and rear up/down).

Each power seat track motor includes a position sensor, which is a potentiometer. The DSM supplies a shared reference voltage and ground to each position sensor. This enables the position sensor to send a variable voltage back to the DSM to indicate the position of the power seat track motor. The DSM uses this information to return the seat to a stored preprogrammed position when pressing the memory set switch or a remote transmitter. Refer to Principles of Operation in this section and the Owner's Literature for additional information on programming the DSM for storing memory seat and adjustable pedal positions.

Possible Causes

An inoperative memory seat can be caused by:

- a fuse.
- wiring, terminals or connectors.

- a faulty seat control switch.
- a faulty power seat track motor.
- a faulty DSM.

PINPOINT TEST K: THE MEMORY SEAT IS INOPERATIVE

Test Step	Result / Action to Take
K1 CHECK THE MEMORY MIRROR OPERATION	
⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. **NOTE:** If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.** Refer to Section 501-20B . **NOTE:** The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Carry out a memory recall for the exterior rear view mirrors. • **Did the memory mirrors operate correctly?**	**Yes** GO to K2 . **No** REFER to Section 501-09 .
K2 CHECK THE DTCS FROM THE DSM	
• Use the recorded results from DSM self-test. • **Was DSM DTC B1342 retrieved?**	**Yes** CLEAR the DSM DTCs. REPEAT the DSM self-test. If DTC B1342 is retrieved, INSTALL a new DSM. REFER to Section 419-10 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to K3 .
K3 CHECK THE POWER SEAT CALIBRATION	
• Enter the following diagnostic mode on the diagnostic tool: CLEAR DSM DTCs.	**Yes** REFER to the DSM Diagnostic Trouble Code (DTC) Index.

• Calibrate the driver seat. Refer to Seat Calibration in Principles of Operation. • **Were any DSM DTCs retrieved from calibration?**	**No** GO to K4 .
K4 CHECK THE MEMORY RECALL OPERATION	
• Set a new memory seat position for driver 1 and driver 2. • Activate the memory recall for driver position 1 and driver position 2 from the memory set switch. • **Do the memory recall functions operate correctly?**	**Yes** The driver power seat is operating correctly. REVERIFY symptom. **No** INSTALL a new DSM. REFER to Section 419-10 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. GO to K5 .
K5 CHECK THE MEMORY RECALL OPERATION	
• Set a new memory seat position for driver 1 and driver 2. • Activate the memory recall for driver position 1 and driver position 2 from the memory set switch. • **Do the memory recall functions operate correctly?**	**Yes** The driver power seat is operating correctly. REVERIFY symptom. **No** CHECK the DDM for any memory function related DTCs. REPAIR as necessary. REFER to the DDM Diagnostic Trouble Code (DTC) Index. CHECK for any DSM DTCs. REPAIR as necessary. REFER to the DSM Diagnostic Trouble Code (DTC) Index. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

Pinpoint Test L: The Left Rear Heated Seat Is Inoperative

Normal Operation

The left rear heated seat module is powered by battery voltage on circuit 30-HC21 (RD/GN) and by ignition voltage circuit 20-HC21D (PK/BK), and is supplied ground on circuit 31-HC21 (BK). The heated seat switch has a high and low setting depending on selection. The heated seat switch uses the ground on circuit 31-HC15 (BK/YE) to provide a ground input to the heated seat module on circuit 8-HC21 (WH/GN) (high setting) or 10-HC21 (GY/OG) (low setting). The heated seat module supplies voltage to the heated seat elements in the seat cushion and the seat back.

Possible Causes

An inoperative heated seat can be caused by:

- wiring, terminals or connectors.

- a faulty heated seat switch.
- a faulty heated seat module.
- a faulty heated seat element.
- a faulty heated seat temperature sensor.

PINPOINT TEST L: THE LEFT REAR HEATED SEAT IS INOPERATIVE

Test Step	Result / Action to Take
L1 CHECK THE HEATED SEAT SWITCH INPUT TO THE HEATED SEAT MODULE	
• Key in OFF position. • Disconnect: Left Rear Heated Seat Module C3162. • Measure the resistance between left rear heated seat module C3162-8, circuit 8-HC21 (WH/GN), harness side and ground and between C3162-11, circuit 10-HC21 (GY/OG), harness side and ground while pressing the heated seat switch.  A0049205 • **Are the resistances less than 50 ohms when the heated seat switch is pressed and greater than 10,000 ohms when the heated seat switch is not pressed?**	**Yes** GO to L3 . **No** GO to L2 .
L2 CHECK HEATED SEAT SWITCH GROUND CIRCUIT 31-HC15 (BK/YE)	
• Disconnect: Left Rear Heated Seat Switch C722. • Measure the resistance between left rear heated seat switch C722-1, circuit 31-HC15 (BK/YE), harness side and ground.  A0061877 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new heated seat switch. TEST the system for normal operation. **No** REPAIR circuit 31-HC15 (BK/YE). TEST the system for normal operation.
L3 CHECK CIRCUIT 30-HC21 (RD/GN) FOR VOLTAGE TO THE HEATED SEAT MODULE	
• Measure the voltage between left rear heated seat module C3162-12, circuit 30-HC21 (RD/GN), harness side and ground.	**Yes** GO to L4 . **No** REPAIR circuit 30-HC21 (RD/GN). TEST the system for normal operation.

 A0042223 • **Is the voltage greater than 10 volts?**	
L4 CHECK CIRCUIT 20-HC21D (PK/BK) FOR VOLTAGE TO THE HEATED SEAT MODULE	
• Key in ON position. • Measure the voltage between left rear heated seat module C3162-5, circuit 20-HC21D (PK/BK), harness side and ground.  A0042224 • **Is the voltage greater than 10 volts?**	**Yes** GO to L5 . **No** REPAIR circuit 20-HC21D (PK/BK). TEST the system for normal operation.
L5 CHECK HEATED SEAT MODULE GROUND CIRCUIT 31-HC15 (BK/YE)	
• Key in OFF position. • Measure the resistance between left rear heated seat module C3162-1, circuit 31-HC15 (BK/YE), harness side and ground.  A0042225 • **Is the resistance less than 5 ohms?**	**Yes** GO to L6 . **No** REPAIR circuit 31-HC15 (BK/YE). TEST the system for normal operation.
L6 CHECK THE SEAT CUSHION HEATER AND THE SEAT BACK HEATER CIRCUITS	
• Measure the resistance between left rear heated seat module C3162-6, circuit 20-HC17 (PK), harness side and C3162-7, circuit 31S-HC16 (BK/BU), harness side; and between left rear heated seat module C3162-6, circuit 20-HC17 (PK), harness side and ground.  A0050062 • **Is the resistance greater than 1.6 ohms and less than 10 ohms between C3162-6 and C3162-7 and greater than 10,000 ohms**	**Yes** GO to L7 . **No** GO to L12 .

between C3162-6 and ground?	
L7 CHECK THE SEAT CUSHION HEATER AND THE SEAT BACK HEATER CIRCUITS FOR A SHORT TO VOLTAGE	
• Key in ON position. • Measure the voltage between left rear heated seat module C3162-6, circuit 20-HC17 (PK), harness side and ground and between C3162-7, circuit 31S-HC16 (BK/BU), harness side and ground.  A0050063 • **Is voltage present on either circuit?**	**Yes** REPAIR the circuit 20-HC17 (PK), 31S-HC16 (BK/BU) or 20S-HC16 (PK/BU). TEST the system for normal operation. **No** GO to L8 .
L8 CHECK THE HEATED SEAT TEMPERATURE SENSOR AND CIRCUITS FOR A SHORT TO VOLTAGE	
• Measure the voltage between left rear heated seat module C3162-3, circuit 9-HC23 (BN/YE), harness side and ground and between C3162-4, circuit 8-HC23 (WH/BK), harness side and ground.  A0050064 • **Is voltage present on either circuit?**	**Yes** REPAIR the affected circuit. TEST the system for normal operation. **No** GO to L9 .
L9 CHECK THE HEATED SEAT TEMPERATURE SENSOR AND CIRCUITS	
• Key in OFF position. • Measure the resistance between left rear heated seat module C3162-3, circuit 9-HC23 (BN/YE), harness side and C3162-4, circuit 8-HC23 (WH/BK), harness side; and between left rear heated seat module C3162-3, circuit 9-HC23 (BN/YE), harness side and ground.  A0050065 • **Is the resistance less than 300,000 ohms and greater than 50 ohms between C3162-3 and C3162-4 and greater than 10,000 ohms between C3162-3 and ground?**	**Yes** INSTALL a new left rear heated seat module. TEST the system for normal operation. **No** GO to L10 .

L10 CHECK CIRCUIT 9-HC23 (BN/YE) FOR AN OPEN OR SHORT TO GROUND	
• Disconnect: Left Rear Seat Cushion Heater C3167. • Measure the resistance between left rear heated seat module C3162-3, circuit 9-HC23 (BN/YE), harness side and left rear seat cushion heater C3167-3, circuit 9-HC23 (BN/YE), harness side; and between left rear heated seat module C3162-3, circuit 9-HC23 (BN/YE), harness side and ground.  • **Is the resistance less than 5 ohms between the heated seat module and the seat cushion heater and greater than 10,000 ohms between the heated seat module and ground?**	**Yes** GO to L11 . **No** REPAIR circuit 9-HC23 (BN/YE). TEST the system for normal operation.
L11 CHECK CIRCUIT 8-HC23 (WH/BK) FOR AN OPEN OR SHORT TO GROUND	
• Measure the resistance between left rear heated seat module C3162-4, circuit 8-HC23 (WH/BK), harness side and left rear seat cushion heater C3167-2, circuit 8-HC23 (WH/BK), harness side; and between left rear heated seat module C3162-4, circuit 8-HC23 (WH/BK), harness side and ground.  • **Is the resistance less than 5 ohms between the heated seat module and the seat cushion heater and greater than 10,000 ohms between the heated seat module and ground?**	**Yes** INSTALL a new left rear seat cushion heater. TEST the system for normal operation. **No** REPAIR circuit 8-HC23 (WH/BK). TEST the system for normal operation.
L12 CHECK CIRCUIT 32-HC17 (WH/BU) FOR OPEN OR SHORT TO GROUND	
• Disconnect: Left Rear Seat Cushion Heater C3167. • Measure the resistance between left rear heated seat module C3162-6, circuit 20S-HC17 (PK), harness side and left rear seat cushion heater C3167-1, circuit 20S-HC17 (PK), harness side; and between left rear heated seat module C3162-6, circuit 20S-HC17 (PK), harness side and ground.	**Yes** GO to L13 . **No** REPAIR circuit 20S-HC17 (PK). TEST the system for normal operation.

 A0042230 • **Is the resistance less than 1 ohm between the heated seat module and the seat cushion heater, and greater than 10,000 ohms between the heated seat module and ground?**	
L13 CHECK CIRCUIT 31S-HC16 (BK/BU) FOR AN OPEN OR A SHORT TO GROUND	
• Disconnect: Left Rear Seat Back Heater C3168. • Measure the resistance between left rear heated seat module C3162-7, circuit 31S-HC16 (BK/BU), harness side and left rear seat back heater C3168-2, circuit 31S-HC16 (BK/BU), harness side; and between left rear heated seat module C3162-7, circuit 31S-HC16 (BK/BU), harness side and ground.  A0048794 • **Is the resistance less than 5 ohms between the heated seat module and the seat back heater, and greater than 10,000 ohms between the heated seat module and ground?**	**Yes** GO to L14 . **No** REPAIR circuit 31S-HC16 (BK/BU). TEST the system for normal operation.
L14 CHECK CIRCUIT 20S-HC16 (PK/BU) FOR AN OPEN OR A SHORT TO GROUND	
• Measure the resistance between left rear seat cushion heater C3167-4, circuit 20S-HC16 (PK/BU), harness side and left rear seat back heater C3168-1, circuit 20S-HC16 (PK/BU), harness side; and between left rear seat cushion heater C3167-4, circuit 20S-HC16 (PK/BU), harness side and ground.  A0048795 • **Is the resistance less than 5 ohms between the seat cushion heater and the seat back heater, and greater than 10,000 ohms between the seat cushion heater and ground?**	**Yes** GO to L15 . **No** REPAIR circuit 20S-HC16 (PK/BU). TEST the system for normal operation.
L15 CHECK THE SEAT BACK HEATER	
• Disconnect: Left Rear Seat Back Heater Connector. • Measure the resistance between left rear seat back heater pin 1 and pin 2, seat back heater component side.	**Yes** INSTALL a new left rear seat cushion heater. TEST the system for normal operation. **No**

 A0048777 • **Is the resistance between 0.6 and 0.9 ohm?**	INSTALL a new left rear seat back heater. TEST the system for normal operation.

Pinpoint Test M: The Right Rear Heated Seat Is Inoperative

Normal Operation

The passenger rear heated seat module is powered by battery voltage on circuit 30-HC21 (RD/GN) and by ignition voltage circuit 20-HC21D (PK/YE), and is supplied ground on circuit 31-HC21 (BK/GN). The heated seat switch has a high and low setting depending on selection. The heated seat switch uses the ground on circuit 31-HC18 (BK/GN) to provide a ground input to the heated seat module on circuit 8-HC21A (WH/GN) (high setting) or 10-HC21A (GY/OG) (low setting). The heated seat module supplies voltage to the heated seat elements in the seat cushion and the seat back.

Possible Causes

An inoperative heated seat can be caused by:

- wiring, terminals or connectors.
- a faulty heated seat switch.
- a faulty heated seat module.
- a faulty heated seat element.
- a faulty heated seat temperature sensor.

PINPOINT TEST M: THE RIGHT REAR HEATED SEAT IS INOPERATIVE

Test Step	Result / Action to Take
M1 CHECK THE HEATED SEAT SWITCH INPUT TO THE HEATED SEAT MODULE	
• Key in OFF position. • Disconnect: Right Rear Heated Seat Module C3163. • Measure the resistance between right rear heated seat module C3163-8, circuit 8-HC21 (WH/GN), and C3163-11, circuit 10-HC21A (GY/OG), harness side and ground while pressing the heated seat switch.  A0049205 • **Are the resistances less than 5 ohms when the heated seat switch is pressed?**	**Yes** GO to M3 . **No** GO to M2 .
M2 CHECK HEATED SEAT SWITCH GROUND CIRCUIT 31-HC21 (BK/GN)	

• Disconnect: Right Rear Heated Seat Switch C822. • Measure the resistance between right rear heated seat switch C822-1, circuit 31-HC21 (BK/GN), harness side and ground.  A0061877 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new heated seat switch. TEST the system for normal operation. **No** REPAIR circuit 31-HC21 (BK/GN). TEST the system for normal operation.
M3 CHECK CIRCUIT 30-HC21 (RD/GN) FOR VOLTAGE TO THE HEATED SEAT MODULE	
• Measure the voltage between right rear heated seat module C3163-12, circuit 30-HC21 (RD/GN), harness side and ground.  A0042223 • **Is the voltage greater than 10 volts?**	**Yes** GO to M4 . **No** REPAIR circuit 30-HC21 (RD/GN). TEST the system for normal operation.
M4 CHECK CIRCUIT 20-HC21D (PK/BK) FOR VOLTAGE TO THE HEATED SEAT MODULE	
• Key in ON position. • Measure the voltage between right rear heated seat module C3163-5, circuit 20-HC21D (PK/BK), harness side and ground.  A0042224 • **Is the voltage greater than 10 volts?**	**Yes** GO to M5 . **No** REPAIR circuit 20-HC21D (PK/BK). TEST the system for normal operation.
M5 CHECK HEATED SEAT MODULE GROUND CIRCUIT 31-HC21 (BK/GN)	
• Key in OFF position. • Measure the resistance between right rear heated seat module C3163-1, circuit 31-HC21 (BK/GN), harness side and ground.  A0042225	**Yes** GO to M6 . **No** REPAIR circuit 31-HC21 (BK/GN). TEST the system for normal operation.

• **Is the resistance less than 5 ohms?**	
M6 CHECK THE SEAT CUSHION HEATER AND THE SEAT BACK HEATER CIRCUITS	
• Measure the resistance between right rear heated seat module C3163-6, circuit 20-HC17 (PK), harness side and C3163-7, circuit 31S-HC16 (BK/BU), harness side; and between right rear heated seat module C3163-6, circuit 20-HC17 (PK), harness side and ground.  A0050062 • **Is the resistance greater than 1.6 ohms and less than 10 ohms between C3163-6 and C3163-7 and greater than 10,000 ohms between C3163-6 and ground?**	**Yes** GO to M7 . **No** GO to M12 .
M7 CHECK THE SEAT CUSHION HEATER AND THE SEAT BACK HEATER CIRCUITS FOR A SHORT TO VOLTAGE	
• Key in ON position. • Measure the voltage between right rear heated seat module C3163-6, circuit 20-HC17 (PK), harness side and ground and between C3163-7, circuit 31S-HC16 (BK/BU), harness side and ground.  A0050063 • **Is voltage present on either circuit?**	**Yes** REPAIR the circuit 20-HC17 (PK), 31S-HC16 (BK/BU) or 20S-HC16 (PK/BU). TEST the system for normal operation. **No** GO to M8 .
M8 CHECK THE HEATED SEAT TEMPERATURE SENSOR AND CIRCUITS FOR A SHORT TO VOLTAGE	
• Measure the voltage between right rear heated seat module C3163-3, circuit 9-HC23 (BN/YE), harness side and ground and between C3163-4, circuit 8-HC23 (WH/BK), harness side and ground.  A0050064 • **Is voltage present on either circuit?**	**Yes** REPAIR the affected circuit. TEST the system for normal operation. **No** GO to M9 .
M9 CHECK THE HEATED SEAT TEMPERATURE SENSOR	

AND CIRCUITS	
• Key in OFF position. • Measure the resistance between right rear heated seat module C3163-3, circuit 9-HC23 (BN/YE), harness side and C3163-4, circuit 8-HC23 (WH/BK), harness side; and between right rear heated seat module C3163-3, circuit 9-HC23 (BN/YE), harness side and ground.  • **Is the resistance less than 300,000 ohms and greater than 50 ohms between C3163-3 and C3163-4 and greater than 10,000 ohms between C3163-3 and ground?**	**Yes** INSTALL a new right rear heated seat module. TEST the system for normal operation. **No** GO to M10 .
M10 CHECK CIRCUIT 9-HC23 (BN/YE) FOR AN OPEN OR SHORT TO GROUND	
• Disconnect: Right Rear Seat Cushion Heater C3169. • Measure the resistance between right rear heated seat module C3163-3, circuit 9-HC23 (BN/YE), harness side and right rear seat cushion heater C3169-3, circuit 9-HC23 (BN/YE), harness side; and between right rear heated seat module C3163-3, circuit 9-HC23 (BN/YE), harness side and ground.  • **Is the resistance less than 5 ohms between the heated seat module and the seat cushion heater and greater than 10,000 ohms between the heated seat module and ground?**	**Yes** GO to M11 . **No** REPAIR circuit 9-HC23 (BN/YE). TEST the system for normal operation.
M11 CHECK CIRCUIT 8-HC23 (WH/BK) FOR AN OPEN OR SHORT TO GROUND	
• Measure the resistance between right rear heated seat module C3163-4, circuit 8-HC23 (WH/BK), harness side and right rear seat cushion heater C3169-2, circuit 8-HC23 (WH/BK), harness side; and between right rear heated seat module C3163-4, circuit 8-HC23 (WH/BK), harness side and ground.  	**Yes** INSTALL a new right rear seat cushion heater. TEST the system for normal operation. **No** REPAIR circuit 8-HC23 (WH/BK). TEST the system for normal operation.

• **Is the resistance less than 5 ohms between the heated seat module and the seat cushion heater and greater than 10,000 ohms between the heated seat module and ground?**	
M12 CHECK CIRCUIT 20-HC17 (PK) FOR OPEN OR SHORT TO GROUND	
• Disconnect: Right Rear Seat Cushion Heater C3169. • Measure the resistance between right rear heated seat module C3163-6, circuit 20-HC17 (PK), harness side and right rear seat cushion heater C3169-1, circuit 20-HC17 (PK), harness side; and between right rear heated seat module C3163-6, circuit 20-HC17 (PK), harness side and ground.  • **Is the resistance less than 1 ohm between the heated seat module and the seat cushion heater, and greater than 10,000 ohms between the heated seat module and ground?**	**Yes** GO to M13 . **No** REPAIR circuit 20-HC17 (PK). TEST the system for normal operation.
M13 CHECK CIRCUIT 31S-HC16 (BK/BU) FOR AN OPEN OR A SHORT TO GROUND	
• Disconnect: Right Rear Seat Back Heater C3170. • Measure the resistance between right rear heated seat module C3163-7, circuit 31S-HC16 (BK/BU), harness side and right rear seat back heater C3170-2, circuit 31S-HC16 (BK/BU), harness side; and between right rear heated seat module C3163-7, circuit 31S-HC16 (BK/BU), harness side and ground.  • **Is the resistance less than 5 ohms between the heated seat module and the seat back heater, and greater than 10,000 ohms between the heated seat module and ground?**	**Yes** GO to M14 . **No** REPAIR circuit 31S-HC16 (BK/BU). TEST the system for normal operation.
M14 CHECK CIRCUIT 20S-HC16 (PK/BU) FOR AN OPEN OR A SHORT TO GROUND	
• Measure the resistance between right rear seat cushion heater C3169-4, circuit 20S-HC16 (PK/BU), harness side and right rear seat back heater C3170-1, circuit 20S-HC16 (PK/BU), harness side; and between right rear seat cushion heater C3169-4, circuit 20S-HC16 (PK/BU), harness side and ground.	**Yes** GO to M15 . **No** REPAIR circuit 20S-HC16 (PK/BU). TEST the system for normal operation.

 A0048795 • **Is the resistance less than 5 ohms between the seat cushion heater and the seat back heater, and greater than 10,000 ohms between the seat cushion heater and ground?**	
M15 CHECK THE SEAT BACK HEATER	
• Disconnect: Right Seat Back Heater Connector. • Measure the resistance between right rear seat back heater pin 1 and pin 2, seat back heater component side.  A0048777 • **Is the resistance between 0.6 and 0.9 ohm?**	**Yes** INSTALL a new right rear seat cushion heater. TEST the system for normal operation. **No** INSTALL a new right rear seat back heater. TEST the system for normal operation.

Pinpoint Test N: The Left Rear Heated Seat Is Inoperative Does Not Operate In High

Normal Operation

The heated seat switch uses circuit 8-HC21A (WH/GN) for the high setting input to the heated seat module.

Possible Causes

A driver heated seat that does not operate in high can be caused by:

- wiring, terminals or connectors.
- a faulty heated seat switch.
- a faulty heated seat module.

PINPOINT TEST N: THE LEFT REAR HEATED SEAT IS INOPERATIVE DOES NOT OPERATE IN HIGH

Test Step	Result / Action to Take
N1 CHECK THE HEATED SEAT SWITCH INPUT TO THE HEATED SEAT MODULE	
• Key in OFF position. • Disconnect: Left Rear Heated Seat Module C3162. • Measure the resistance between left rear heated seat module C3162-8, circuit 8-HC21 (WH/GN), harness side and ground while pressing the heated seat switch.	**Yes** INSTALL a new heated seat module. TEST the system for normal operation. **No** GO to N2 .

 A0042472 • **Is the resistance less than 50 ohms when the heated seat switch is pressed and greater than 10,000 ohms when the heated seat switch is not pressed?**	
N2 CHECK CIRCUIT 8-HC21 (WH/GN) FOR OPEN OR SHORT TO GROUND	
• Disconnect: Left Rear Heated Seat Switch C722. • Measure the resistance between left rear heated seat switch C722-2, circuit 8-HC21 (WH/GN), harness side and left rear heated seat module C3162-8, circuit 8-HC21 (WH/GN), harness side; and between left rear heated seat switch C722-2, circuit 8-HC21 (WH/GN), harness side and ground.  A0061881 • **Is the resistance less than 1 ohm between the heated seat switch and the heated seat module and greater than 10,000 ohms between the heated seat switch and ground?**	**Yes** GO to N3 . **No** REPAIR circuit 8-HC21 (WH/GN). TEST the system for normal operation.
N3 CHECK CIRCUIT 8-HC21 (WH/GN) FOR SHORT TO VOLTAGE	
• Key in ON position. • Measure the voltage between left rear heated seat module C3162-8, circuit 8-HC21 (WH/GN), harness side and ground.  A0049210 • **Is voltage present?**	**Yes** REPAIR circuit 8-HC21 (WH/GN). TEST the system for normal operation. **No** INSTALL a new heated seat switch. TEST the system for normal operation.

Pinpoint Test O: The Left Rear Heated Seat Is Inoperative Does Not Operate In Low

Normal Operation

The heated seat switch uses circuit 10-HC21 (GY/OG) for the low setting input to the heated seat module.

Possible Causes

A driver heated seat that does not operate in low can be caused by:

- wiring, terminals or connectors.
- a faulty heated seat switch.

- a faulty heated seat module.

PINPOINT TEST O: THE LEFT REAR HEATED SEAT IS INOPERATIVE DOES NOT OPERATE IN LOW

Test Step	Result / Action to Take
O1 CHECK THE HEATED SEAT SWITCH INPUT TO THE HEATED SEAT MODULE	
• Key in OFF position. • Disconnect: Left Rear Heated Seat Module C3162. • Measure the resistance between left rear heated seat module C3162-11, circuit 10-HC21 (GY/OG), harness side and ground while pressing the heated seat switch.  A0049211 • **Is the resistance less than 50 ohms when the heated seat switch is pressed and greater than 10,000 ohms when the heated seat switch is not pressed?**	**Yes** INSTALL a new heated seat module. TEST the system for normal operation. **No** GO to O2 .
O2 CHECK CIRCUIT 10-HC21 (GY/OG) FOR OPEN OR SHORT TO GROUND	
• Disconnect: Left Rear Heated Seat Switch C722. • Measure the resistance between left rear heated seat switch C722-6, circuit 10-HC21 (GY/OG), harness side and left rear heated seat module C3162-11, circuit 10-HC21 (GY/OG), harness side; and between left rear heated seat switch C722-6, circuit 10-HC21 (GY/OG), harness side and ground.  A0061882 • **Is the resistance less than 1 ohm between the heated seat switch and the heated seat module and greater than 10,000 ohms between the heated seat switch and ground?**	**Yes** GO to O3 . **No** REPAIR circuit 10-HC21 (GY/OG). TEST the system for normal operation.
O3 CHECK CIRCUIT 10-HC21 (GY/OG) FOR SHORT TO VOLTAGE	
• Key in ON position. • Measure the voltage between left rear heated seat module C3162-11, circuit 10-HC21 (GY/OG), harness side and ground.	**Yes** REPAIR circuit 10-HC21 (GY/OG). TEST the system for normal operation.

 • **Is voltage present?**	**No** INSTALL a new heated seat switch. TEST the system for normal operation.

Pinpoint Test P: The Right Rear Heated Seat Is Inoperative Does Not Operate In High

Normal Operation

The heated seat switch uses circuit 8-HC18 (WH/GN) for the high setting input to the heated seat module.

Possible Causes

A passenger heated seat that does not operate in high can be caused by:

- wiring, terminals or connectors.
- a faulty heated seat switch.
- a faulty heated seat module.

PINPOINT TEST P: THE RIGHT REAR HEATED SEAT IS INOPERATIVE DOES NOT OPERATE IN HIGH

Test Step	Result / Action to Take
P1 CHECK THE HEATED SEAT SWITCH INPUT TO THE HEATED SEAT MODULE	
• Key in OFF position. • Disconnect: Right Rear Heated Seat Module C3163. • Measure the resistance between right rear heated seat module C3163-8, circuit 8-HC21 (WH/GN), harness side and ground while pressing the heated seat switch.  • **Is the resistance less than 50 ohms when the heated seat switch is pressed and greater than 10,000 ohms when the heated seat switch is not pressed?**	**Yes** INSTALL a new heated seat module. TEST the system for normal operation. **No** GO to P2 .
P2 CHECK CIRCUIT 8-HC21 (WH/GN) FOR OPEN OR SHORT TO GROUND	
• Disconnect: Right Rear Heated Seat Switch C822. • Measure the resistance between right rear heated seat switch C822-2, circuit 8-HC21 (WH/GN), harness side and right rear heated seat module C3163-8, circuit 8-HC21 (WH/GN), harness side; and between right rear heated seat switch C822-2, circuit 8-HC21 (WH/GN), harness side and ground.	**Yes** GO to P3 . **No** REPAIR circuit 8-HC21 (WH/GN). TEST the system for normal operation.

 A0061881 • **Is the resistance less than 1 ohm between the heated seat switch and the heated seat module and greater than 10,000 ohms between the heated seat switch and ground?**	
P3 CHECK CIRCUIT 8-HC21 (WH/GN) FOR SHORT TO VOLTAGE	
• Key in ON position. • Measure the voltage between right rear heated seat module C3163-8, circuit 8-HC21 (WH/GN), harness side and ground.  A0049210 • **Is voltage present?**	**Yes** REPAIR circuit 8-HC21 (WH/GN). TEST the system for normal operation. **No** INSTALL a new heated seat switch. TEST the system for normal operation.

Pinpoint Test Q: The Right Rear Heated Seat Is Inoperative Does Not Operate In Low

Normal Operation

The heated seat switch uses circuit 10-HC18 (GY/OG) for the low setting input to the heated seat module.

Possible Causes

A passenger heated seat that does not operate in low can be caused by:

- wiring, terminals or connectors.
- a faulty heated seat switch.
- a faulty heated seat module.

PINPOINT TEST Q: THE RIGHT REAR HEATED SEAT IS INOPERATIVE DOES NOT OPERATE IN LOW

Test Step	Result / Action to Take
Q1 CHECK THE HEATED SEAT SWITCH INPUT TO THE HEATED SEAT MODULE	
• Key in OFF position. • Disconnect: Right Rear Heated Seat Module C3163. • Measure the resistance between right rear heated seat module C3163-11, circuit 10-HC21 (GY/OG), harness side and ground while pressing the heated seat switch.	**Yes** INSTALL a new heated seat module. TEST the system for normal operation. **No** GO to Q2 .

 A0049211 • **Is the resistance less than 50 ohms when the heated seat switch is pressed and greater than 10,000 ohms when the heated seat switch is not pressed?**	
Q2 CHECK CIRCUIT 10-HC21 (GY/OG) FOR OPEN OR SHORT TO GROUND	
• Disconnect: Right Rear Heated Seat Switch C822. • Measure the resistance between right rear heated seat switch C822-6, circuit 10-HC21 (GY/OG), harness side and right rear heated seat module C3163-11, circuit 10-HC21 (GY/OG), harness side; and between right rear heated seat switch C822-6, circuit 10-HC21 (GY/OG), harness side and ground.  A0061882 • **Is the resistance less than 1 ohm between the heated seat switch and the heated seat module and greater than 10,000 ohms between the heated seat switch and ground?**	**Yes** GO to Q3 . **No** REPAIR circuit 10-HC21 (GY/OG). TEST the system for normal operation.
Q3 CHECK CIRCUIT 10-HC21 (GY/OG) FOR SHORT TO VOLTAGE	
• Key in ON position. • Measure the voltage between right rear heated seat module C3163-11, circuit 10-HC21 (GY/OG), harness side and ground.  A0049213 • **Is voltage present?**	**Yes** REPAIR circuit 10-HC21 (GY/OG). TEST the system for normal operation. **No** INSTALL a new heated seat switch. TEST the system for normal operation.

Pinpoint Test R: The Power Lumbar Is Inoperative Driver

Normal Operation

The power lumbar operation is incorporated into the power seat switch. The driver power seat switch is powered by battery voltage on circuit 30-AH40 (RD/GN) and is supplied ground on circuit 31-AH40 (BK/GN). When the lumbar knob of the power seat switch is pressed, voltage and ground are supplied to the power lumbar motor. When pressing the lumbar knob in the opposite direction, the power seat switch reverses the polarity to the power lumbar motor, which moves the lumbar mechanism in the opposite direction.

Possible Causes

An inoperative driver power lumbar can be caused by:

- wiring, terminals or connectors.
- a faulty seat control switch.
- a faulty power lumbar motor assembly.

PINPOINT TEST R: THE POWER LUMBAR IS INOPERATIVE DRIVER

Test Step	Result / Action to Take
R1 CHECK CIRCUIT 30-AH40 (RD/GN) FOR AN OPEN	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.** Refer to Section 501-20B . **NOTE:** The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag Module C316. • Connect: Restraint System Diagnostic Tool 418-133 or 501-097 to Driver Seat Side Air Bag Module C316. • Connect: Battery Ground Cable. • ⚠ **WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.** • Disconnect: Driver Seat Lumbar Control Switch C361. • Measure the voltage between driver seat lumbar control switch C361-5, circuit 30-AH40 (RD/GN), harness side and ground.  A0003120 • **Is the voltage greater than 10 volts?**	**Yes** GO to R2 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
R2 CHECK CIRCUIT 31-AH40 (BK/GN) FOR AN OPEN	
• Measure the resistance between driver seat lumbar control switch C361-3, circuit 31-AH40 (BK/GN), harness side and ground.	**Yes** GO to R3 . **No** REPAIR the circuit. TEST the system for normal

 A0003121 • **Is the resistance less than 5 ohms?**	operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
R3 CHECK THE DRIVER SEAT LUMBAR MOTOR	
• Connect: Driver Seat Lumbar Control Switch C361. • Disconnect: Driver Seat Lumbar Motor C366. • Measure the voltage between driver seat lumbar motor C366-2, circuit 32-AH39 (WH/BU), harness side and driver seat lumbar motor C366-1, circuit 33-AH39 (YE/BU), harness side.  A0061766 • Operate the driver seat lumbar control switch in both directions. • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new driver seat lumbar motor. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to R4 .
R4 CHECK CIRCUIT 32-AH39 (WH/BU) AND 33-AH39 (YE/BU) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: Driver Seat Lumbar Control Switch C361. • Measure the resistance between driver seat lumbar control switch C361-1, circuit 32-AH39 (WH/BU), harness side and ground; and between driver seat lumbar control switch C361-4, circuit 33-AH39 (YE/BU), harness side and ground.  A0003060 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to R5 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
R5 CHECK CIRCUIT 32-AH39 (WH/BU) FOR AN OPEN	

• Measure the resistance between driver seat lumbar control switch C361-1, circuit 32-AH39 (WH/BU), harness side and driver seat lumbar motor C366-2, circuit 32-AH39 (WH/BU), harness side.  A0061767 • **Is the resistance less than 5 ohms?**	**Yes** GO to R6 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
R6 CHECK CIRCUIT 33-AH39 (YE/BU) FOR AN OPEN	
• Measure the resistance between driver seat lumbar control switch C361-4, circuit 33-AH39 (YE/BU), harness side and driver seat lumbar motor C366-1, circuit 33-AH39 (YE/BU), harness side.  A0061768 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new driver seat lumbar control switch. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

Pinpoint Test S: The Power Lumbar Is Inoperative Passenger

Normal Operation

The power lumbar operation is incorporated into the power seat switch. The passenger power seat switch is powered by battery voltage on circuit 30-AH46 (RD) and is supplied ground on circuit 31-AH46 (BK). When

the lumbar knob of the power seat switch is pressed, voltage and ground are supplied to the power lumbar motor. When pressing the lumbar knob in the opposite direction, the power seat switch reverses the polarity to the power lumbar motor, which moves the lumbar mechanism in the opposite direction.

Possible Causes

An inoperative passenger power lumbar can be caused by:

- wiring, terminals or connectors.
- a faulty seat control switch.
- a faulty power lumbar motor assembly.

PINPOINT TEST S: THE POWER LUMBAR IS INOPERATIVE PASSENGER

Test Step	Result / Action to Take
S1 CHECK CIRCUIT 30-AH46 (RD) FOR AN OPEN	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.** Refer to Section 501-20B . **NOTE:** The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C314. • Connect: Restraint System Diagnostic Tool 418-133 or 501-097 to Passenger Seat Side Air Bag Module C314. • Connect: Battery Ground Cable. • ⚠ **WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.** • Disconnect: Passenger Seat Lumbar Control Switch C331. • Key in ON position. • Measure the voltage between passenger seat lumbar control switch C331-5, circuit 30-AH46 (RD), harness side and ground.	**Yes** GO to S2 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

 A0003120 • **Is the voltage greater than 10 volts?**	
S2 CHECK CIRCUIT 31-AH46 (BK) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between passenger seat lumbar control switch C331-3, circuit 31-AH46 (BK), harness side and ground.  A0003121 • **Is the resistance less than 5 ohms?**	**Yes** GO to S3 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
S3 CHECK THE PASSENGER SEAT LUMBAR MOTOR	
• Connect: Passenger Seat Lumbar Control Switch C331. • Disconnect: Passenger Seat Lumbar Motor C336. • Measure the voltage between passenger seat lumbar motor C336-2, circuit 32-AH23 (WH/BU), harness side and passenger seat lumbar motor C336-1, circuit 33-AH23 (YE/BU), harness side.  A0061766 • Operate the passenger seat lumbar control switch in both directions. • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new driver seat lumbar motor. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to S4 .
S4 CHECK CIRCUIT 32-AH45 (WH/BU) AND 33-AH45 (YE/BU) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: Passenger Seat Lumbar Control Switch C331. • Measure the resistance between passenger seat lumbar control switch C331-1, circuit 32-AH45 (WH/BU), harness side and ground; and between passenger seat lumbar control switch C331-4, circuit 33-AH45 (YE/BU), harness side and ground.	**Yes** GO to S5 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air

 A0003060 • **Are the resistances greater than 10,000 ohms?**	bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
S5 CHECK CIRCUIT 32-AH45 (WH/BU) FOR AN OPEN	
• Measure the resistance between passenger seat lumbar control switch C331-1, circuit 32-AH45 (WH/BU), harness side and passenger seat lumbar motor C336-2, circuit 32-AH45 (WH/BU), harness side.  A0061767 • **Is the resistance less than 5 ohms?**	**Yes** GO to S6 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
S6 CHECK CIRCUIT 33-AH45 (YE/BU) FOR AN OPEN	
• Measure the resistance between passenger seat lumbar control switch C331-4, circuit 33-AH45 (YE/BU), harness side and passenger seat lumbar motor C336-1, circuit 33-AH45 (YE/BU), harness side.  A0061768 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new passenger seat lumbar control switch. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

Pinpoint Test T: DTC B1676 Battery Pack Voltage Out Of Range

Normal Operation

The DSM is powered by battery voltage from circuit 29-AH35 (OG/YE) and 30-AH80 (RD) and is supplied ground on circuit 31-AH80 (BK).

Possible Causes

DTC B1676 battery pack voltage out of range can be caused by:

- a faulty DSM.

PINPOINT TEST T: DTC B1676 BATTERY PACK VOLTAGE OUT OF RANGE

Test Step	Result / Action to Take
T1 CHECK FOR VOLTAGE AT THE DSM	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.** Refer to Section 501-20B . **NOTE:** The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag Module C316. • Connect: Restraint System Diagnostic Tool 418-133 or 501-097 to Driver Seat Side Air Bag Module C316. • Connect: Battery Ground Cable. • ⚠ **WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.** • Disconnect: DSM C341b. • Key in ON position. • Measure the voltage between DSM C341b-4, circuit 30-AH80 (RD), harness side and ground.  • **Is the voltage between 11.5 and 16 volts?**	**Yes** CLEAR the DTC. REPEAT the DSM self-test. If DTC B1676 is retrieved, INSTALL a new DSM. REFER to Section 418-00 . TEST the system for normal operation. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REFER to Section 414-00 for battery and charging system repair.

Pinpoint Test U: DTC B1358 Ignition Switch Or Blower Electronics Circuit Short To Ground/DTC B2521 Tach Circuit Failure

Normal Operation

The climate controlled seat module (CCSM) provides voltage on circuit 8-FA18 (WH/BK) and ground on circuit 31S-FA18 (BK/RD) to operate the climate controlled seat blower fan. The CCSM also supplies voltage on circuit 20S-FA18 (PK/OG) that is used by the climate controlled seat blower fan to provide a feedback voltage to the CCSM indicating climate controlled seat blower fan speed.

Possible Causes

- wiring, terminals or connectors.
- CCSM.
- climate controlled seat blower fan.

PINPOINT TEST U: DTC B1358 IGNITION SWITCH OR BLOWER ELECTRONICS CIRCUIT SHORT TO GROUND/DTC B2521 TACH CIRCUIT FAILURE

Test Step	Result / Action to Take
U1 CHECK CIRCUIT 30-HC21 (RD/GN) OR CIRCUIT 30-HC22 (RD/YE)	
⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. **NOTE:** If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.** Refer to Section 501-20B . **NOTE:** The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag Module C316 or Passenger Seat Side Air Bag Module C314. • Connect: Restraint System Diagnostic Tool 418-133 or 501-097 to Driver Seat Side Air Bag Module C316 or Passenger Seat Side Air Bag Module C314. • Connect: Battery Ground Cable. • **⚠ WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.**	**Yes** GO to U2 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

• Disconnect: Driver CCSM C3031a or Passenger CCSM C3036a. • Key in ON position. • Measure the voltage between driver CCSM C3031a-4, circuit 30-HC21 (RD/GN), harness side and ground or passenger CCSM C3036a-4, circuit 30-HC22 (RD/YE), harness side and ground.  • **Is the voltage greater than 10 volts?**	
U2 CHECK THE FAN MOTOR RPM INPUT	
• Key in OFF position. • Connect: Driver CCSM C3031a or Passenger CCSM C3036a. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: CCSM Active Command Menu TURN BLOWER FULL POWER. • **NOTE:** After the active command FULL BLOW is commanded to the ON state, the climate controlled seat blower fan will operate for 15 seconds then turn OFF. • **NOTE:** The CCSM is not the source of the fault if the active command mode is operational. • Monitor the PID BLWRRPM while commanding the FULL BLOW active command ON then OFF. • **Does the PID value change when the climate controlled seat blower fan was commanded ON and OFF?**	**Yes** CHECK for causes of the intermittent fault. INSPECT the connectors, terminals and wiring. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to U3 .
U3 VERIFY THE CLIMATE CONTROLLED SEAT BLOWER FAN OPERATION	
• **NOTE:** After the active command FULL BLOW is commanded to the ON state, the climate controlled seat blower fan will operate for 15 seconds then turn OFF. • **NOTE:** The CCSM is not the source of the fault if the active command mode is operational. • Command the FULL BLOW active command ON then OFF and note the climate controlled seat blower fan operation. • **Does the climate controlled seat blower fan operate?**	**Yes** GO to U4 . **No** GO to U8 .

U4 CHECK CIRCUIT 10-FA18 (GY/BK) AND CIRCUIT 20S-FA18 (PK/OG) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Driver CCSM C3031b or Passenger CCSM C3036b. • Disconnect: Driver Climate Controlled Seat Blower Fan C3033 or Passenger Climate Controlled Seat Blower Fan C3038. • Key in ON position. • Measure the voltage between driver CCSM C3031b-10 (or passenger CCSM C3036b-10), circuit 20S-FA18 (PK/OG), harness side and ground; and between driver CCSM C3031b-14 (or passenger CCSM C3036b-14), circuit 10-FA18 (GY/BK), harness side and ground.  A0067434 • **Are the voltages less than 0.2 volt?**	**Yes** GO to U5 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
U5 CHECK CIRCUIT 10-FA18 (GY/BK) AND CIRCUIT 20S-FA18 (PK/OG) FOR SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between driver CCSM C3031b-10 (or passenger CCSM C3036b-10), circuit 20S-FA18 (PK/OG), harness side and ground; and between driver CCSM C3031b-14 (or passenger CCSM C3036b-14), circuit 10-FA18 (GY/BK), harness side and ground.  A0067435 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to U6 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
U6 CHECK CIRCUIT 10-FA18 (GY/BK) AND CIRCUIT 20S-FA18 (PK/OG) FOR AN OPEN	
• Measure the resistance between driver CCSM C3031b-10 (or passenger CCSM C3036b-10), circuit 20S-FA18 (PK/OG), harness side and driver climate controlled seat blower fan	**Yes** GO to U7 . **No** REPAIR the affected circuit. CLEAR the DTCs.

C3033-1 (or passenger climate controlled seat blower fan C3038-1), circuit 20S-FA18 (PK/OG), harness side; and between driver CCSM C3031b-14 (or passenger CCSM C3036b-14), circuit 10-FA18 (GY/BK), harness side and driver climate controlled seat blower fan C3033-2 (or passenger climate controlled seat blower fan C3038-2), circuit 10-FA18 (GY/BK), harness side.  A0067436 • **Are the resistances less than 5 ohms?**	REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
U7 CHECK THE CLIMATE CONTROLLED SEAT BLOWER FAN OUTPUT	
• Connect: Driver Climate Controlled Seat Blower Fan C3033 or Passenger Climate Controlled Seat Blower Fan C3038. • Connect fused (5A) jumper leads between driver CCSM C3031a (or passenger CCSM C3036a) as follows: ♦ Driver CCSM C3031b-10 (or passenger CCSM C3036b-10), circuit 20S-FA18 (PK/OG), harness side and battery positive. ♦ Driver CCSM C3031b-13 (or passenger CCSM C3036b-13), circuit 8-FA18 (WH/BK), harness side and battery positive. ♦ Driver CCSM C3031b-3 (or passenger CCSM C3036b-3), circuit 31S-FA18 (BK/RD), harness side and ground.  A0055558 • Measure the voltage between driver CCSM C3031b-14 (or passenger CCSM C3036b-14), circuit 10-FA18 (GY/BK), harness side and ground.	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-01 . CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** INSTALL a new climate controlled seat blower fan. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

 A0055554 • **Is voltage present?**	
U8 CHECK CIRCUIT 31S-FA18 (BK/RD) AND CIRCUIT 8-FA18 (WH/BK) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Driver CCSM C3031b or Passenger CCSM C3036b. • Disconnect: Driver Climate Controlled Seat Blower Fan C3033 or Passenger Climate Controlled Seat Blower Fan C3038. • Key in ON position. • Measure the voltage between driver CCSM C3031b-3 (or passenger CCSM C3036b-3), circuit 31S-FA18 (BK/RD), harness side and ground; and between driver CCSM C3031b-13 (or passenger CCSM C3036b-13), circuit 8-FA18 (WH/BK), harness side and ground.  A0067437 • **Are the voltages less than 0.2 volt?**	**Yes** GO to U9 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
U9 CHECK CIRCUIT 31S-FA18 (BK/RD) AND CIRCUIT 8-FA18 (WH/BK) FOR A SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between driver CCSM C3031b-3 (or passenger CCSM C3036b-3), circuit 31S-FA18 (BK/RD), harness side and ground; and between driver CCSM C3031b-13 (or passenger CCSM C3036b-13), circuit 8-FA18 (WH/BK), harness side and ground.  A0067438 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to U10 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

U10 CHECK CIRCUIT 31S-FA18 (BK/RD) AND CIRCUIT 8-FA18 (WH/BK) FOR AN OPEN	
• Measure the resistance between driver CCSM C3031b-3 (or passenger CCSM C3036b-3), circuit 31S-FA18 (BK/RD), harness side and driver climate controlled seat blower fan C3033-4 (or passenger climate controlled seat blower fan C3038-4), circuit 31S-FA18 (RD/BK), harness side; and between driver CCSM C3031b-13 (or passenger CCSM C3036b-13), circuit 8-FA18 (WH/BK), harness side and driver climate controlled seat blower fan C3033-3 (or passenger climate controlled seat blower fan C3038-3), circuit 8-FA18 (WH/BK), harness side.  A0067439 • **Are the resistances less than 5 ohms?**	**Yes** GO to U11 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
U11 CHECK THE CLIMATE CONTROLLED BLOWER FAN OPERATION	
• Connect: Driver Climate Controlled Seat Blower Fan C3033 or Passenger Climate Controlled Seat Blower Fan C3038. • Connect fused (5A) jumper leads between driver CCSM C3031b (or passenger CCSM C3036b) as follows: ♦ Driver CCSM C3031b-10 (or passenger CCSM C3036b-10), circuit 20S-FA18 (PK/OG), harness side and battery positive. ♦ Driver CCSM C3031b-13 (or passenger CCSM C3036b-13), circuit 8-FA18 (WH/BK), harness side and battery positive. ♦ Driver CCSM C3031b-3 (or passenger CCSM C3036b-3), circuit 31S-FA18 (BK/RD), harness side and ground.  A0055558 • **Does the climate controlled seat blower fan operate?**	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-01 . CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** INSTALL a new climate controlled seat blower fan. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

Pinpoint Test V: DTC B2729 Cushion Over-Temp Detected/DTC B2730 Back Over-Temp Detected/DTC B2731 Differential Temperature Fault Driver Seat

Normal Operation

Each thermo-electric device (TED) contains an internal temperature sensor (thermistor) that is used by the climate controlled seat module (CCSM) to monitor the temperature of each (TED). Based on the temperature of a TED, the internal sensor resistance will vary the voltage on circuit 8-HC23 (WH/BK) (seat cushion TED) and circuit 8-HC16 (WH/RD) (backrest TED).

Possible Causes

An overtemp or differential temperature fault can be caused by:

- wiring, terminals or connectors.
- damaged, restricted, or disconnected air ducts.
- worn, damaged or incorrectly installed foam wedge, cushion foam or seat cushion trim cover.
- a restricted seat fan motor filter.
- airflow leaks.
- collapsed airflow channels in the seat cushion foam.
- incorrect installation of a TED.
- TED.
- CCSM.

PINPOINT TEST V: DTC B2729 CUSHION OVER-TEMP DETECTED/DTC B2730 BACK OVER-TEMP DETECTED/DTC B2731 DIFFERENTIAL TEMPERATURE FAULT DRIVER SEAT

NOTE: The presence of overtemp faults (DTCs B2729 and B2730) can be induced by incorrect operation of the climate controlled seat system after an initial HEAT setting has been attained. If a HEAT setting is repeatedly turned OFF and ON in an attempt to increase the seat temperature, an overtemp condition can result and the DTC(s) will be set.

Test Step	Result / Action to Take
V1 CHECK THE SEAT CUSHION TED EXHAUST NOZZLE FOR WASTE AIRFLOW	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.** **NOTE:** If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.** Refer to Section 501-20B . **NOTE:** The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer.	**Yes** GO to V4 . **No** GO to V2 .

• Key in OFF position. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag Module C316. • Connect: Restraint System Diagnostic Tool 418-133 or 501-097 to Driver Seat Side Air Bag Module C316. • Connect: Battery Ground Cable. • ⚠ **WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.** • Key in ON position. • Set both front seats to LOW COOL (1 LED illuminated) at the dual automatic temperature control (DATC) module. • Check for air exhausting from the seat cushion TED exhaust nozzle and compare it to the air exhausting from the opposite seat. • **Is air exhausting from the seat cushion TED exhaust nozzle comparable to the air exhausting from the opposite seat?**	
V2 INSPECT THE SEAT CUSHION DUCTS	
• Key in OFF position. • Inspect the seat cushion ducts for damaged, restricted or disconnected ducts. • **Are any duct(s) damaged, restricted or disconnected?**	**Yes** REPAIR or INSTALL new duct(s) as needed. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to V3 .
V3 INSPECT THE SEAT CUSHION TED FOR CORRECT INSTALLATION	
• Key in OFF position. • Inspect the TED for correct installation to the seat cushion. • **Is the seat cushion TED correctly installed?**	**Yes** REMOVE the seat and the seat cushion trim cover. INSPECT for a worn, damaged or incorrectly installed foam wedge, cushion foam or seat cushion trim cover. INSPECT for collapsed airflow channels in the seat cushion foam. REPAIR or INSTALL a new foam wedge, seat cushion foam or seat cushion trim cover as needed. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal

	operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** INSTALL the seat cushion TED correctly. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
V4 CHECK THE SEAT BACKREST TED EXHAUST NOZZLE FOR WASTE AIRFLOW	
• Set both front seats to LOW COOL (1 LED illuminated) at the dual automatic temperature control (DATC) module. • Check for air exhausting from the seat backrest TED exhaust nozzle and compare it to the air exhausting from the opposite seat. • **Is air exhausting from the seat backrest TED exhaust nozzle comparable to the air exhausting from the opposite seat?**	**Yes** GO to V7 . **No** GO to V5 .
V5 INSPECT THE SEAT BACKREST DUCTS	
• Inspect the seat backrest ducts for damaged, restricted or disconnected ducts. • **Are any duct(s) damaged, restricted or disconnected?**	**Yes** REPAIR or INSTALL new duct(s) as needed. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to V6 .
V6 INSPECT THE SEAT BACKREST TED FOR CORRECT INSTALLATION	
• Key in OFF position. • Inspect the TED for correct installation to the seat cushion. • **Is the seat backrest TED correctly installed?**	**Yes** REMOVE the seat and the seat backrest trim cover. INSPECT for a worn, damaged or incorrectly installed foam wedge, backrest foam or seat backrest trim cover. INSPECT for

	collapsed airflow channels in the seat backrest foam. REPAIR or INSTALL a new foam wedge, seat backrest foam or seat backrest trim cover as needed. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** INSTALL the seat backrest TED correctly. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
V7 CHECK THE SEAT CUSHION AND SEAT BACKREST TEMPERATURE PIDs	
• Enter the following diagnostic mode on the diagnostic tool: CCSM Active Command Menu TED HEAT MODE. • **NOTE:** After the active command TED HEAT is commanded to the ON state, the climate controlled seat TED will operate for 15 seconds then turn off. • **NOTE:** The CCSM is not the source of the fault if the active command mode is operational. • Monitor PIDs CSHTEMP and BK_TEMP while commanding the TED HEAT active command ON. • **Is either PID greater than 185° F (85° C)?**	**Yes** If PID CSHTEMP is greater than 185° F (85° C), GO to V8 . If PID BK_TEMP is greater than 185° F (85° C), GO to V17 . **No** GO to V12 .
V8 CHECK THE SEAT CUSHION TED TEMPERATURE SENSOR CIRCUITS 8-HC23 (WH/BK) AND 9-HC23 (BN/YE) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Driver Seat Cushion TED C3035. • Disconnect: Driver CCSM C3031b. • Key in ON position. • Measure the voltage between driver seat cushion TED C3035-3, circuit 8-HC23 (WH/BK), harness side and ground; and	**Yes** GO to V9 . **No** REPAIR the affected circuits. CLEAR the DTCs. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the

between driver seat cushion TED C3035-2, circuit 9-HC23 (BN/YE), harness side and ground.  A0067444 • **Are the voltages less than 0.2 volt?**	restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
V9 CHECK THE SEAT CUSHION TED TEMPERATURE SENSOR CIRCUITS 8-HC23 (WH/BK) AND 9-HC23 (BN/YE) FOR A SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between driver seat cushion TED C3035-3, circuit 8-HC23 (WH/BK), harness side and ground; and between driver seat cushion TED C3035-2, circuit 9-HC23 (BN/YE), harness side and ground.  A0067445 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to V10 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
V10 CHECK THE SEAT CUSHION TED TEMPERATURE SENSOR CIRCUITS 8-HC23 (WH/BK) AND 9-HC23 (BN/YE) FOR AN OPEN	
• Measure the resistance between driver seat cushion TED C3035-3, circuit 8-HC23 (WH/BK), harness side and driver CCSM C3031b-18, circuit 8-HC23 (WH/BK), harness side; and between driver seat cushion TED C3035-2, circuit 9-HC23 (BN/YE), harness side and driver CCSM C3031b-17, circuit 9-HC23 (BN/YE), harness side.  A0067446 • **Are the resistances less than 5 ohms?**	**Yes** GO to V11 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

V11 CHECK THE SEAT CUSHION TEMPERATURE SENSOR	
• Measure the resistance between the seat cushion TED pin 3 and pin 2, component side.  A0055562 • **Is the resistance greater than 1,000 ohms?**	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-01 . CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** INSTALL a new seat cushion TED. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
V12 CHECK THE SEAT CUSHION AND SEAT BACKREST TEMPERATURE PIDS	
• Enter the following diagnostic mode on the diagnostic tool: CCSM Active Command Menu TED HEAT MODE. • **NOTE:** After the active command TED HEAT is commanded to the ON state, the climate controlled seat TED will operate for 15 seconds then turn off. • **NOTE:** The CCSM is not the source of the fault if the active command mode is operational. • Monitor PIDs CSHTEMP and BK_TEMP while commanding the TED HEAT active command ON. • **Did the PID values change?**	**Yes** REPAIR the climate controlled seat for airflow leaks. INSPECT the fan, TEDs, ducts, foam wedges, foam pads, trim covers and their connection points and REPAIR as needed. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** If PID CSHTEMP does not change, GO to V13 . If PID BK_TEMP does not change, GO to V21 .
V13 CHECK THE SEAT CUSHION TED HEATING ELEMENT CIRCUITS 31S-HC17 (BK/OG) AND 20S-HC17 (PK) FOR A SHORT TO VOLTAGE	

• Key in OFF position. • Disconnect: Driver Seat Cushion TED C3035. • Disconnect: Driver CCSM C3031b. • Key in ON position. • Measure the voltage between driver seat cushion TED C3035-4, circuit 31S-HC17 (BK/OG), harness side and ground; and between driver seat cushion TED C3035-6, circuit 20S-HC17 (PK), harness side and ground.  A0067447 • **Are the voltages less than 0.2 volt?**	**Yes** GO to V14 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
V14 CHECK THE SEAT CUSHION TED HEATING ELEMENT CIRCUITS 31S-HC17 (BK/OG) AND 20S-HC17 (PK) FOR A SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between driver seat cushion TED C3035-4, circuit 31S-HC17 (BK/OG), harness side and ground; and between driver seat cushion TED C3035-6, circuit 20S-HC17 (PK), harness side and ground.  A0067448 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to V15 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
V15 CHECK THE SEAT CUSHION TED HEATING ELEMENT CIRCUITS 31S-HC17 (BK/OG) AND 20S-HC17 (PK) FOR AN OPEN	
• Measure the resistance between driver seat cushion TED C3035-4, circuit 31S-HC17 (BK/OG), harness side and driver CCSM C3031b-2, circuit 31S-HC17 (BK/OG), harness side; and between driver seat cushion TED C3035-6, circuit 20S-HC17 (PK), harness side and driver CCSM C3031b-1, circuit 20S-HC17 (PK), harness side.	**Yes** GO to V16 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module

 A0067449 • **Are the resistances less than 5 ohms?**	C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
V16 CHECK THE SEAT CUSHION TED	
• Measure the resistance between the seat cushion TED pin 4 and pin 6, component side.  A0055566 • **Is the resistance between 0.5 and 7 ohms?**	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-01 . CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** INSTALL a new seat cushion TED. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
V17 CHECK THE SEAT BACKREST TED TEMPERATURE SENSOR CIRCUITS 8-HC16 (WH/RD) AND 9-HC16 (BN/RD) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Driver Seat Backrest TED C3034. • Disconnect: Driver CCSM C3031b. • Key in ON position. • Measure the voltage between driver seat backrest TED C3034-3, circuit 8-HC16 (WH/RD), harness side and ground; and between driver seat backrest TED C3034-2, circuit 9-HC16 (BN/RD), harness side and ground.  A0067444 • **Are the voltages less than 0.2 volt?**	**Yes** GO to V18 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

V18 CHECK THE SEAT BACKREST TED TEMPERATURE SENSOR CIRCUITS 8-HC16 (WH/RD) AND 9-HC16 (BN/RD) FOR A SHORT TO GROUND	
• Measure the resistance between driver seat backrest TED C3034-3, circuit 8-HC16 (WH/RD), harness side and ground; and between driver seat backrest TED C3034-2, circuit 9-HC16 (BN/RD), harness side and ground.  A0067445 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to V19 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
V19 CHECK THE SEAT BACKREST TED TEMPERATURE SENSOR CIRCUITS 8-HC16 (WH/RD) AND 9-HC16 (BN/RD) FOR AN OPEN	
• Measure the resistance between driver seat backrest TED C3034-3, circuit 8-HC16 (WH/RD), harness side and driver CCSM C3031b-19, circuit 8-HC16 (WH/RD), harness side; and between driver seat backrest TED C3034-2, circuit 9-HC16 (BN/RD), harness side and driver CCSM C3031b-20, circuit 9-HC16 (BN/RD), harness side.  A0067450 • **Are the resistances less than 5 ohms?**	**Yes** GO to V20 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
V20 CHECK THE SEAT BACKREST TEMPERATURE SENSOR	
• Measure the resistance between the seat backrest TED pin 2 and pin 3, component side.  A0055562	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-01 . CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint

• **Is the resistance greater than 1,000 ohms?**	system (SRS). REFER to Section 501-20B . **No** INSTALL a new seat backrest TED. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
V21 CHECK THE SEAT BACKREST TED HEATING ELEMENT CIRCUITS 31S-HC16 (BK/BU) AND 20S-HC16 (PK/BU) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Driver Seat Backrest TED C3034. • Disconnect: Driver CCSM C3031b. • Key in ON position. • Measure the voltage between driver seat backrest TED C3034-4, circuit 31S-HC16 (BK/BU), harness side and ground; and between driver seat backrest TED C3034-6, circuit 20S-HC16 (PK/BU), harness side and ground.  A0067447 • **Are the voltages less than 0.2 volt?**	**Yes** GO to V22 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
V22 CHECK THE SEAT BACKREST TED HEATING ELEMENT CIRCUITS 31S-HC16 (BK/BU) AND 20S-HC16 (PK/BU) FOR A SHORT TO GROUND	
• Measure the resistance between driver seat backrest TED C3034-4, circuit 31S-HC16 (BK/BU), harness side and ground; and between driver seat backrest TED C3034-6, circuit 20S-HC16 (PK/BU), harness side and ground.  A0067448	**Yes** GO to V23 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

• **Are the resistances greater than 10,000 ohms?**	
V23 CHECK THE SEAT BACKREST TED HEATING ELEMENT CIRCUITS 31S-HC16 (BK/BU) AND 20S-HC16 (PK/BU) FOR AN OPEN	
• Measure the resistance between driver seat backrest TED C3034-4, circuit 31S-HC16 (BK/BU), harness side and driver CCSM C3031b-12, circuit 31S-HC16 (BK/BU), harness side; and between driver seat backrest TED C3034-6, circuit 20S-HC16 (PK/BU), harness side and driver CCSM C3031b-11, circuit 20S-HC16 (PK/BU), harness side.  A0067451 • **Are the resistances less than 5 ohms?**	**Yes** GO to V24 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
V24 CHECK THE SEAT BACKREST TED	
• Measure the resistance between the seat backrest TED pin 4 and pin 6, component side.  A0055566 • **Is the resistance between 0.5 and 7 ohms?**	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-01 . CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** INSTALL a new seat backrest TED. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316. CONNECT driver seat side air bag module C316. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

Pinpoint Test W: DTC B2729 Cushion Over-Temp Detected/DTC B2730 Back Over-Temp Detected/DTC B2731 Differential Temperature Fault Passenger Seat

Normal Operation

Each thermo-electric device (TED) contains an internal temperature sensor (thermistor) that is used by the climate controlled seat module (CCSM) to monitor the temperature of each (TED). Based on the temperature of a TED, the internal sensor resistance will vary the voltage on circuit 8-HC24 (WH/RD) (seat cushion TED)

and circuit 8-HC19 (WH/BK) (backrest TED).

Possible Causes

An overtemp or differential temperature fault can be caused by:

- wiring, terminals or connectors.
- damaged, restricted or disconnected air ducts.
- worn, damaged or incorrectly installed foam wedge, cushion foam or seat cushion trim cover.
- a restricted seat fan motor filter.
- airflow leaks.
- collapsed airflow channels in the seat cushion foam.
- incorrect installation of a TED.
- TED.
- CCSM.

PINPOINT TEST W: DTC B2729 CUSHION OVER-TEMP DETECTED/DTC B2730 BACK OVER-TEMP DETECTED/DTC B2731 DIFFERENTIAL TEMPERATURE FAULT PASSENGER SEAT

NOTE: The presence of overtemp faults (DTCs B2729 and B2730) can be induced by incorrect operation of the climate controlled seat system after an initial HEAT setting has been attained. If a HEAT setting is repeatedly turned OFF and ON in an attempt to increase the seat temperature, an overtemp condition can result and the DTC(s) will be set.

Test Step	Result / Action to Take
W1 CHECK THE SEAT CUSHION TED EXHAUST NOZZLE FOR WASTE AIRFLOW	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.** Refer to Section 501-20B . **NOTE:** The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C314. • Connect: Restraint System Diagnostic Tool 418-133 or 501-097 to Passenger Seat Side Air Bag Module C314. • Connect: Battery Ground Cable.	**Yes** GO to W4 . **No** GO to W2 .

• **⚠ WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.** • Key in ON position. • Set both front seats to the LOW COOL (1 LED illuminated) at the dual automatic temperature control (DATC) module. • Check for air exhausting from the seat cushion TED exhaust nozzle and compare it to the air exhausting from the opposite seat. • **Is air exhausting from the seat cushion TED exhaust nozzle comparable to the air exhausting from the opposite seat?**	
W2 INSPECT THE SEAT CUSHION DUCTS	
• Key in OFF position. • Inspect the seat cushion ducts for damaged, restricted, or disconnected ducts. • **Are any duct(s) damaged, restricted, or disconnected?**	**Yes** REPAIR or INSTALL new duct(s) as needed. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to W3 .
W3 INSPECT THE SEAT CUSHION TED FOR CORRECT INSTALLATION	
• Inspect the TED for correct installation to the seat cushion. • **Is the seat cushion TED correctly installed?**	**Yes** REMOVE the seat and the seat cushion trim cover. INSPECT for a worn, damaged or incorrectly installed foam wedge, cushion foam or seat cushion trim cover. INSPECT for collapsed airflow channels in the seat cushion foam. REPAIR or INSTALL a new foam wedge, seat cushion foam or seat cushion trim cover as needed. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

	No INSTALL the seat cushion TED correctly. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
W4 CHECK THE SEAT BACKREST TED EXHAUST NOZZLE FOR WASTE AIRFLOW	
• Set both front seats to LOW COOL (1 LED illuminated) at the dual automatic temperature control (DATC) module. • Check for air exhausting from the seat backrest TED exhaust nozzle and compare it to the air exhausting from the opposite seat. • **Is air exhausting from the seat backrest TED exhaust nozzle comparable to the air exhausting from the opposite seat?**	**Yes** GO to W7 . **No** GO to W5 .
W5 INSPECT THE SEAT BACKREST DUCTS	
• Inspect the seat backrest ducts for damaged, restricted or disconnected ducts. • **Are any duct(s) damaged, restricted or disconnected?**	**Yes** REPAIR or INSTALL new duct(s) as needed. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to W6 .
W6 INSPECT THE SEAT BACKREST TED FOR CORRECT INSTALLATION	
• Inspect the TED for correct installation to the seat cushion. • **Is the seat backrest TED correctly installed?**	**Yes** REMOVE the seat and the seat backrest trim cover. INSPECT for a worn, damaged or incorrectly installed foam wedge, backrest foam or seat backrest trim cover. INSPECT for collapsed airflow channels in the seat backrest foam. REPAIR or INSTALL a new

	foam wedge, seat backrest foam or seat backrest trim cover as needed. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** INSTALL the seat backrest TED correctly. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
W7 CHECK THE SEAT CUSHION AND SEAT BACKREST TEMPERATURE PIDS	
• Enter the following diagnostic mode on the diagnostic tool: CCSM Active Command Menu TED HEAT MODE. • **NOTE:** After the active command TED HEAT is commanded to the ON state, the climate controlled seat TED will operate for 15 seconds then turn off. • **NOTE:** The CCSM is not the source of the fault if the active command mode is operational. • Monitor PIDs CSHTEMP and BK_TEMP while commanding the TED HEAT active command ON. • **Is either PID greater than 185° F (85° C)?**	**Yes** If PID CSHTEMP is greater than 185° F (85° C), GO to W8 . If PID BK_TEMP is greater than 185° F (85° C), GO to W17 . **No** GO to W12 .
W8 CHECK THE SEAT CUSHION TED TEMPERATURE SENSOR CIRCUITS 8-HC24 (WH/RD) AND 9-HC24 (BN/RD) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Passenger Seat Cushion TED C3040. • Disconnect: Passenger CCSM C3036b. • Key in ON position. • Measure the voltage between passenger seat cushion TED C3040-3, circuit 8-HC24 (WH/RD), harness side and ground; and between passenger seat cushion TED C3040-2, circuit 9-HC24 (BN/RD), harness side and ground.	**Yes** GO to W9 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from

 A0067444 • **Are the voltages less than 0.2 volt?**	passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
W9 CHECK THE SEAT CUSHION TED TEMPERATURE SENSOR CIRCUITS 8-HC24 (WH/RD) AND 9-HC24 (BN/RD) FOR A SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between passenger seat cushion TED C3040-3, circuit 8-HC24 (WH/RD), harness side and ground; and between passenger seat cushion TED C3040-2, circuit 9-HC24 (BN/RD), harness side and ground.  A0067445 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to W10 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
W10 CHECK THE SEAT CUSHION TED TEMPERATURE SENSOR CIRCUITS 8-HC24 (WH/RD) AND 9-HC24 (BN/RD) FOR AN OPEN	
• Measure the resistance between passenger seat cushion TED C3040-3, circuit 8-HC24 (WH/RD), harness side and passenger CCSM C3036b-18, circuit 8-HC24 (WH/RD), harness side; and between passenger seat cushion TED C3040-2, circuit 9-HC24 (BN/RD), harness side and passenger CCSM C3036b-17, circuit 9-HC24 (BN/RD), harness side.  A0067446 • **Are the resistances less than 5 ohms?**	**Yes** GO to W11 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
W11 CHECK THE SEAT CUSHION TEMPERATURE SENSOR	
• Measure the resistance between the seat cushion TED pin 3 and pin 2, component side.	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-01 . CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF.

 A0055562 • **Is the resistance greater than 1,000 ohms?**	DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** INSTALL a new seat cushion TED. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
W12 CHECK THE SEAT CUSHION AND SEAT BACKREST TEMPERATURE PIDS	
• Enter the following diagnostic mode on the diagnostic tool: CCSM Active Command Menu TED HEAT MODE. • **NOTE:** After the active command TED HEAT is commanded to the ON state, the climate controlled seat TED will operate for 15 seconds then turn off. • **NOTE:** The CCSM is not the source of the fault if the active command mode is operational. • Monitor PIDs CSHTEMP and BK_TEMP while commanding the TED HEAT active command ON. • **Did the PID values change?**	**Yes** REPAIR the climate controlled seat for airflow leaks. INSPECT the fan, TEDs, ducts, foam wedges, foam pads, trim covers and their connection points and REPAIR as needed. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** If PID CSHTEMP does not change, GO to W13 . If PID BK_TEMP does not change, GO to W21 .
W13 CHECK THE SEAT CUSHION TED HEATING ELEMENT CIRCUITS 31S-HC20 (BK/WH) AND 20S-HC20 (PK/WH) FOR A SHORT TO VOLTAGE	

• Key in OFF position. • Disconnect: Passenger Seat Cushion TED C3040. • Disconnect: Passenger CCSM C3036b. • Key in ON position. • Measure the voltage between passenger seat cushion TED C3040-4, circuit 31S-HC20 (BK/WH), harness side and ground; and between passenger seat cushion TED C3040-6, circuit 20S-HC20 (PK/WH), harness side and ground.  A0067447 • **Are the voltages less than 0.2 volt?**	**Yes** GO to W14 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
W14 CHECK THE SEAT CUSHION TED HEATING ELEMENT CIRCUITS 31S-HC20 (BK/WH) AND 20S-HC20 (PK/WH) FOR A SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between passenger seat cushion TED C3040-4, circuit 31S-HC20 (BK/WH), harness side and ground; and between passenger seat cushion TED C3040-6, circuit 20S-HC20 (PK/WH), harness side and ground.  A0067448 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to W15 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
W15 CHECK THE SEAT CUSHION TED HEATING ELEMENT CIRCUITS 31S-HC20 (BK/WH) AND 20S-HC20 (PK/WH) FOR AN OPEN	
• Measure the resistance between passenger seat cushion TED C3040-4, circuit 31S-HC20 (BK/WH), harness side and passenger CCSM C3036b-2, circuit 31S-HC20 (BK/WH), harness side; and between passenger seat cushion TED C3040-6, circuit 20S-HC20 (PK/WH), harness side and passenger CCSM C3036b-1, circuit 20S-HC20 (PK/WH), harness side.	**Yes** GO to W16 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

 A0067449 • **Are the resistances less than 5 ohms?**	
W16 CHECK THE SEAT CUSHION TED	
• Measure the resistance between the seat cushion TED pin 4 and pin 6, component side.  A0055566 • **Is the resistance between 0.5 and 7 ohms?**	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-01 . CLEAR the DTCs. REPEAT the self-test. REACTIVATE the supplemental restraint system (SRS). TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** INSTALL a new seat cushion TED. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
W17 CHECK THE SEAT BACKREST TED TEMPERATURE SENSOR CIRCUITS 8-HC19 (WH/BK) AND 9-HC19 (BN/YE) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Passenger Seat Backrest TED C3039. • Disconnect: Passenger CCSM C3036b. • Key in ON position. • Measure the voltage between passenger seat backrest TED C3039-3, circuit 8-HC19 (WH/BK), harness side and ground; and between passenger seat backrest TED C3039-2, circuit 9-HC19 (BN/YE), harness side and ground.	**Yes** GO to W18 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the

 A0067444 • **Are the voltages less than 0.2 volt?**	supplemental restraint system (SRS). REFER to Section 501-20B .
W18 CHECK THE SEAT BACKREST TED TEMPERATURE SENSOR CIRCUITS 8-HC19 (WH/BK) AND 9-HC19 (BN/YE) FOR A SHORT TO GROUND	
• Measure the resistance between passenger seat backrest TED C3039-3, circuit 8-HC19 (WH/BK), harness side and ground; and between passenger seat backrest TED C3039-2, circuit 9-HC19 (BN/YE), harness side and ground.  A0067445 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to W19 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
W19 CHECK THE SEAT BACKREST TED TEMPERATURE SENSOR CIRCUITS 8-HC19 (WH/BK) AND 9-HC19 (BN/YE) FOR AN OPEN	
• Measure the resistance between passenger seat backrest TED C3039-3, circuit 8-HC19 (WH/BK), harness side and passenger CCSM C3036b-19, circuit 8-HC19 (WH/BK), harness side; and between passenger seat backrest TED C3039-2, circuit 9-HC19 (BN/YE), harness side and passenger CCSM C3036b-20, circuit 9-HC19 (BN/YE), harness side.  A0067450 • **Are the resistances less than 5 ohms?**	**Yes** GO to W20 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
W20 CHECK THE SEAT BACKREST TEMPERATURE SENSOR	
• Measure the resistance between the seat backrest TED pin 2 and pin 3, component side.	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-01 . CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground

 A0055562 • **Is the resistance greater than 1,000 ohms?**	cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** INSTALL a new seat backrest TED. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
W21 CHECK THE SEAT BACKREST TED HEATING ELEMENT CIRCUITS 31S-HC19 (BK/RD) AND 20S-HC19 (PK/OG) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Passenger Seat Backrest TED C3039. • Disconnect: Passenger CCSM C3036b. • Key in ON position. • Measure the voltage between passenger seat backrest TED C3039-4, circuit 31S-HC19 (BK/RD), harness side and ground; and between passenger seat backrest TED C3039-6, circuit 20S-HC19 (PK/OG), harness side and ground.  A0067447 • **Are the voltages less than 0.2 volt?**	**Yes** GO to W22 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
W22 CHECK THE SEAT BACKREST TED HEATING ELEMENT CIRCUITS 31S-HC19 (BK/RD) AND 20S-HC19 (PK/OG) FOR A SHORT TO GROUND	
• Measure the resistance between passenger seat backrest TED C3039-4, circuit 31S-HC19 (BK/RD), harness side and ground; and between passenger seat backrest TED C3039-6, circuit 20S-HC19 (PK/OG), harness side and ground.	**Yes** GO to W23 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the

 A0067448 • **Are the resistances greater than 10,000 ohms?**	battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
W23 CHECK THE SEAT BACKREST TED HEATING ELEMENT CIRCUITS 31S-HC19 (BK/RD) AND 20S-HC19 (PK/OG) FOR AN OPEN	
• Measure the resistance between passenger seat backrest TED C3039-4, circuit 31S-HC19 (BK/RD), harness side and passenger CCSM C3036b-12, circuit 31S-HC19 (BK/RD), harness side; and between passenger seat backrest TED C3039-6, circuit 20S-HC19 (PK/OG), harness side and passenger CCSM C3036b-11, circuit 20S-HC19 (PK/OG), harness side.  A0067451 • **Are the resistances less than 5 ohms?**	**Yes** GO to W24 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
W24 CHECK THE SEAT BACKREST TED	
• Measure the resistance between the seat backrest TED pin 4 and pin 6, component side.  A0055566 • **Is the resistance between 0.5 and 7 ohms?**	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-01 . CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** INSTALL a new seat backrest TED. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from passenger seat side air bag module C314. CONNECT passenger seat side air bag

	module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

Pinpoint Test X: A Single Climate Controlled Seat Does Not Operate/Does Not Operate Correctly

Normal Operation

The climate controlled seat module (CCSM) controls are incorporated into the dual automatic temperature control (DATC) module. The DATC module communicates with the CCSM via the UBP bus.

Possible Causes

A climate controlled seat that does not operate or does not operate correctly can be caused by:

- wiring, terminals or connectors.
- UBP network communication fault.
- DATC module.
- CCSM.

PINPOINT TEST X: A SINGLE CLIMATE CONTROLLED SEAT DOES NOT OPERATE/DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
X1 CHECK FOR CCSM DTCS	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.** **NOTE:** If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.** Refer to Section 501-20B . **NOTE:** The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Depower the SRS. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag Module C316 or Passenger Seat Side Air Bag Module C314. • Connect: Restraint System Diagnostic Tool 418-133 or 501-097 to Driver Seat Side Air Bag Module C316 or Passenger Seat Side Air Bag Module C314.	**Yes** GO to the Climate Controlled Seat Module (CCSM) Diagnostic Trouble Code (DTC) Index. **No** If the diagnostic tool communicates with the CCSM, GO to X2 . If the diagnostic tool does not communicate with the CCSM, GO to X3 .

• Connect: Battery Ground Cable. • ⚠ **WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.** • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Were any DTCs retrieved?**	
X2 CHECK FOR DATC MODULE DTCS	
• Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Were any DTCs retrieved?**	**Yes** GO to Section 412-00 . **No** If the diagnostic tool communicates with the DATC module, GO to X5 . If the diagnostic tool does not communicate with the DATC module, GO to Section 418-00 to diagnose the module communications network concern. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
X3 CHECK CIRCUIT 31-HC21 (BK/GN) OR CIRCUIT 31-HC22 (BK/YE)	
• Key in OFF position. • Disconnect: Driver CCSM C3031a or Passenger CCSM C3036a. • For a driver seat, measure the resistance between driver CCSM C3031a-3, circuit 31-HC21 (BK/GN), harness side and ground.  A0067452 • **NOTE:** Passenger CCSM C3036b-9, circuit 31-HC22D (BK/YE) is used to identify the CCSM as the passenger side module. If a fault is present on circuit 31-HC22D (BK/YE), the passenger CCSM may operate when the driver CCSM operation is requested by the DATC module settings.	**Yes** GO to X4 . **No** REPAIR the affected circuit. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

• For a passenger seat, measure the resistance between passenger CCSM C3036a-3, circuit 31-HC22 (BK/YE), harness side and ground; and between passenger CCSM C3036b-9, circuit 31-HC22D (BK/YE), harness side and ground.  A0067464 • **Is the resistance less than 5 ohms?**	
X4 CHECK THE CCSM VOLTAGE	
• Key in ON position. • For driver CCSM, measure the voltage between driver CCSM C3031a-2, circuit 20-HC21 (PK/BK), harness side and ground; and between driver CCSM C3031a-4, circuit 30-HC21 (RD/GN), harness side and ground.  A0067453 • For passenger CCSM, measure the voltage between passenger CCSM C3036a-2, circuit 20S-HC22 (PK/YE), harness side and ground; and between passenger CCSM C3036a-4, circuit 30-HC22 (RD/YE), harness side and ground.  A0067453 • **Are the voltages greater than 10 volts?**	**Yes** GO to Section 418-00 to diagnose the module communications network concern. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** REPAIR the affected circuit. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .
X5 CHECK THE DATC MODULE-TO-CCSM COMMUNICATION	
• Key in OFF position. • Connect: Driver CCSM C3031a or Passenger CCSM C3036a. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: CCSM PID DATC STATE ENCODED SEAT MODE.	**Yes** The climate controlled seat system is operating correctly. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air

• Monitor the CCSM PID DATC STATE ENCODED SEAT MODE with the DATC module placed in the following climate controlled seat settings: ♦ high heat (press HEAT button, 3 LEDs illuminated). ♦ medium heat (press HEAT button, 2 LEDs illuminated). ♦ low heat (press HEAT button, 1 LED illuminated). ♦ high cool (press COOL button, 3 LEDs illuminated). ♦ medium cool (press COOL button, 2 LEDs illuminated). ♦ low cool (press COOL button, 1 LED illuminated). ♦ AUTO mode (press COOL and HEAT buttons simultaneously, center LED only illuminated). • **Does the CCSM PID match the DATC module setting?**	bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** GO to X6 .
X6 CHECK THE CCSM	
• Enter the following diagnostic mode on the diagnostic tool: CCSM Active Command THERMAL ELECTRIC DEVICE HEAT MODE. • Enter the following diagnostic mode on the diagnostic tool: CCSM PID DATC STATE ENCODED SEAT MODE. • **NOTE:** After the active command THERMAL ELECTRIC DEVICE HEAT MODE is commanded to the ON state, the TED will operate for 15 seconds then turn off. • **NOTE:** The CCSM is not the source of the fault if the active command mode is operational. • Monitor the CCSM PID DATC STATE ENCODED SEAT MODE while commanding the THERMAL ELECTRIC DEVICE HEAT MODE active command ON then OFF. • **Does the CCSM go into HEAT mode?**	**Yes** INSTALL a new DATC module. TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B . **No** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-01 . TEST the system for normal operation. TURN the ignition OFF. DISCONNECT the battery ground cable. DISCONNECT the restraint system diagnostic tool from driver seat side air bag module C316 or passenger seat side air bag module C314. CONNECT driver seat side air bag module C316 or passenger seat side air bag module C314. REPOWER the supplemental restraint system (SRS). REFER to Section 501-20B .

Front Seat

Removal

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

⚠ CAUTION: Do not handle or lift the seat by the inboard side shield or a torque tube (seat track motor cable and housing). Care must be taken when handling or lifting the seat to prevent damage.

NOTE: If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.**

NOTE: If a side air bag deployment took place, a new backrest foam pad, trim cover and side air bag module

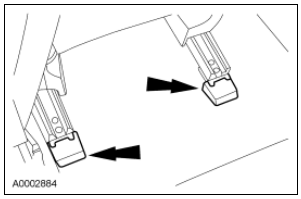
must be installed. A new backrest frame should be installed if necessary.

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

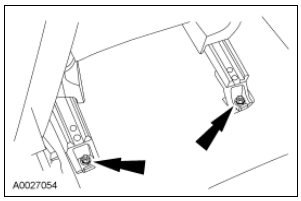
NOTE: Driver seat shown, passenger seat similar.

1. Move the seat fully forward.
2. Remove the safety belt anchor cover.
3. Remove the nut and detach the safety belt anchor.
4. Remove the 2 seat track-to-floor covers.



5. **NOTE:** Original fasteners must be discarded and new service fasteners installed. Service fasteners can be reused.

   Remove the 2 seat track-to-floor rear bolts and washers and discard.



6. Move the seat fully rearward.
7. Depower the SRS. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .
8. **NOTE:** Original fasteners must be discarded and new service fasteners installed. Service fasteners can be reused.

   Remove the 2 seat track-to-floor front bolts and washers and discard.

9. Disconnect the seat electrical connectors and remove the seat.

Installation

1. Position the seat in the vehicle and connect the seat electrical connectors.
2. **NOTE:** Original fasteners must be discarded and new service fasteners installed. Service fasteners can be reused.

   Install 2 new seat track-to-floor front bolts and washers.

- Tighten to 47 Nm (35 lb-ft).

3. Repower the SRS. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .

4. Move the seat fully forward.

5. **NOTE:** Original fasteners must be discarded and new service fasteners installed. Service fasteners can be reused.

   Install 2 new seat track-to-floor rear bolts and washers.

   - Tighten to 47 Nm (35 lb-ft).

6. Install the 2 seat track-to-floor covers.

7. Position the safety belt anchor to the seat and install the nut.
   - Tighten to 40 Nm (30 lb-ft).

8. Install the safety belt anchor cover.

9. Check the active restraint system for correct operation. For additional information, refer to Section 501-20A .

Special Tool(s)

ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

⚠ CAUTION: Do not handle or lift the seat by the inboard side shield or a torque tube (seat track motor cable and housing). Care must be taken when handling or lifting the seat to prevent damage.

NOTE: If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.**

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1. Remove the front seat and depower the SRS. For additional information, refer to Front Seat in this section.

2. Disconnect the climate controlled seat module electrical connectors.

3. Remove the climate controlled seat module from the seat cushion.

4. To install, reverse the removal procedure.
   - The climate controlled seat module must be configured when a new module is installed. For additional information, refer to Section 418-01 .

5. Install the front seat and repower the SRS. For additional information, refer to Front Seat in this section.

Front Seat Backrest

Printable View (95 KB)

Removal and Installation

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

⚠ CAUTION: Do not handle or lift the seat by the inboard side shield or a torque tube (seat track motor cable and housing). Care must be taken when handling or lifting the seat to prevent damage.

NOTE: If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.**

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Driver seat backrest shown, passenger seat backrest similar.

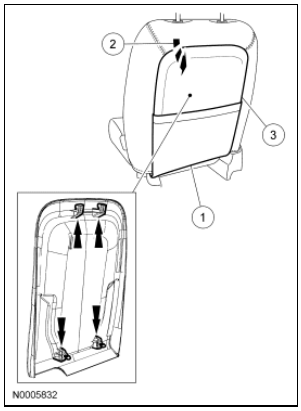
All seats

1. Remove the front seat and depower the SRS. For additional information, refer to Front Seat in this section.

2. **⚠ CAUTION: Inspect the seat back trim panel for damage. If the J-hooks are damaged or the pin-type retainers remained in the seat frame and the panel boss is cracked, install a new panel.**

   Remove the seat back trim panel.

   1. Holding the panel at bottom center, pull rearward (not up) until both lower attachments are disengaged.
   2. While pushing in at the top of the panel, slide the panel down to disengage the upper J-hooks.
   3. Remove the panel.
      - Inspect the lower panel attachments. If either pin-type retainer remained in the seat frame and the panel boss is cracked, install a new panel.
      - Inspect the upper panel attachments. If either J-hook is cracked or damaged, install a new panel.
      - Before installing the panel, install new pin-type retainers.

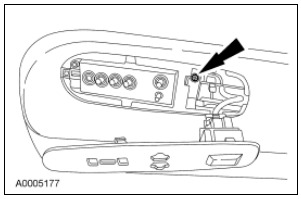


3. Carefully remove the seat control switch knobs.

4. Remove the front and rear side shield screws.

5. Detach and remove the seat control switch bezel.
    - If equipped, disconnect the power lumbar switch.

6. Remove the screw from behind the seat control switch bezel.



7. Disconnect the seat control switch electrical connector and remove the side shield.

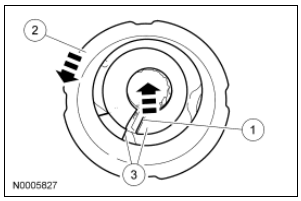
8. Disconnect the electrical connector and remove the safety belt buckle.
    - To install, tighten to 40 Nm (30 lb-ft).

Seats with manual lumbar

9. Remove the manual lumbar knob.

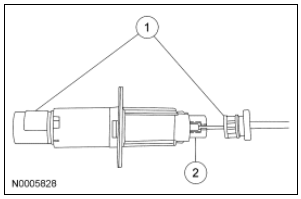
10. Remove the 2 manual lumbar adjuster screws from the seat cushion pan.

11. Release the manual lumbar adjustment screw.
    1. From inside the lumbar adjustment mechanism, push the screw stop in toward the center.
    2. While pushing the screw stop toward the center, rotate the lumbar adjustment mechanism counterclockwise.
    3. The screw stop will pass clear of the internal stop, releasing the manual lumbar adjustment screw.



12. Remove the manual lumbar cable.

1. Continue turning the manual lumbar mechanism counterclockwise until the cable support comes out.
2. Push the screw out enough to remove the cable end.



13. Route the manual lumbar adjuster cable out from the seat cushion frame.

Climate controlled seats

14. Detach the ventilation air upper blower assembly from the ventilation air lower blower assembly.

All seats

15. Remove the rear inboard trim cover from the seat track to access the inboard backrest bolts.
    - Remove the screw and detach the pin-type retainer.

16. Remove the 4 backrest-to-seat track bolts and remove the backrest.
    - Disconnect and detach any electrical connectors as needed.
    - To install, tighten to 25 Nm (18 lb-ft).

17. To install, reverse the removal procedure.

18. Install the front seat and repower the SRS. For additional information, refer to Front Seat in this section.

Front Seat Backrest Cover

Printable View (205 KB)

Removal

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Front seat back trim covers installed on seats equipped with side air bags cannot be repaired, they are to be replaced (cleaning is permissible).

⚠ WARNING: Side air bag modules with damaged covers must be replaced.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

NOTE: If a side air bag deployment took place, the backrest foam pad, trim cover and side air bag module must be replaced. The backrest frame should be replaced if necessary.

NOTE: If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.**

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Driver seat shown, passenger seat similar.

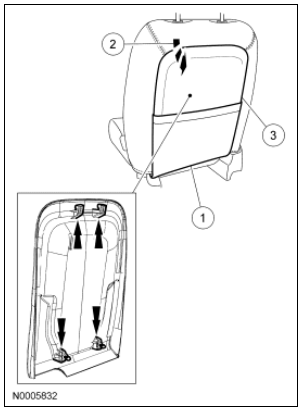
NOTE: A seat side air bag module is shown, a seat side thorax air bag module is similar. For additional information, refer to Section 501-20B in the Description and Operation portion of the section.

1. Depower the SRS. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .

2. **⚠ CAUTION: Inspect the seat back trim panel for damage. If the J-hooks are damaged or the pin-type retainers remained in the seat frame and the panel boss is cracked, install a new panel.**

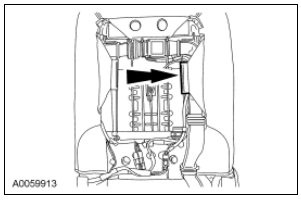
   Remove the seat back trim panel.

1. Holding the panel at bottom center, pull rearward (not up) until both lower attachments are disengaged.
2. While pushing in at the top of the panel, slide the panel down to disengage the upper J-hooks.
3. Remove the panel.
    - ♦ Inspect the lower panel attachments. If either pin-type retainer remained in the seat frame and the panel boss is cracked, install a new panel.
    - ♦ Inspect the upper panel attachments. If either J-hook is cracked or damaged, install a new panel.
    - ♦ Before installing the panel, install new pin-type retainers.



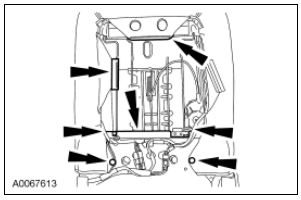
3. Remove the head restraint.

4. Release the trim cover J-clip.

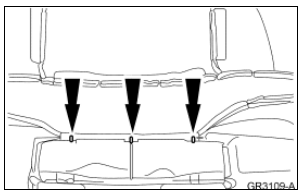


5. If equipped, remove the pin-type retainer and the ventilation air upper blower assembly.

6. Detach all the backrest trim cover J-clips and the pin-type retainers.
    - • Detach the electrical connector(s) near the bottom of the backrest.



7. Partially remove the backrest trim cover to access the hog rings and remove and discard the hog rings.

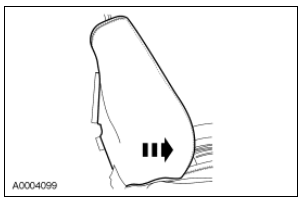


8. Remove the seat side air bag module nut cover.

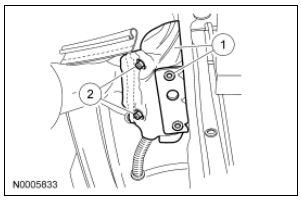
9. **NOTE:** If installing a new side air bag module, use new retaining nuts. If the same side air bag module is to be reused then reuse the side air bag module nuts.

   Remove the 2 seat side air bag module nuts from the backrest frame.

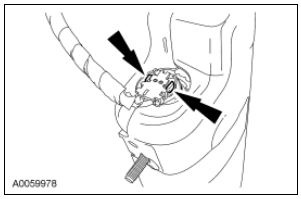
10. With one hand on the seat side air bag module, position the backrest trim cover and foam pad forward enough to access the seat side air bag module.



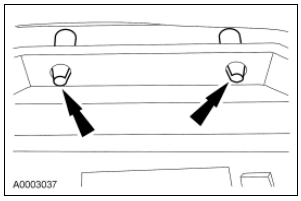
11. Remove the seat side air bag module from the deployment chute.
    1. Separate the seat side air bag module and deployment chute from the backrest frame mounting bracket.
    2. Pull the seat side air bag module mounting studs back through the deployment chute openings and remove the seat side air bag module from the deployment chute.



12. Squeeze the tabs together, disconnect and remove the seat side air bag module.



13. Pinch the end of the head restraint guide sleeves and remove.



14. Remove the backrest trim cover.

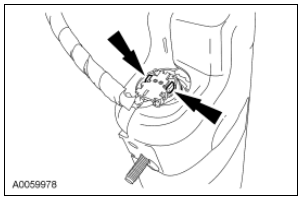
Installation

1. Position the backrest trim cover to the backrest frame and install the head restraint guide sleeves.
   - Position the seat side air bag module deployment chute through the opening in the backrest foam pad.

2. ⚠ **CAUTION: Make sure the correct seat mounted air bag module is being used. The seat side air bag module and the seat side thorax air bag module electrical connectors are unique and will not interchange. Match the electrical connector key to the keyway in the air bag module. Do not**

alter or force the electrical connector into the seat mounted air bag module. For additional information, refer to Section 501-20B in the Description and Operation portion of the section.

Match the electrical connector key to the keyway and connect the seat side air bag module or seat side thorax air bag module.



3. **⚠ WARNING: Inspect the mounting surfaces of the side air bag module for any foreign objects before installing the side air bag module. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.**

   ⚠ WARNING: Inspect the side air bag deployment chute and the side air bag cavity in the seat back pad for any foreign objects. If any foreign objects are found remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

   ⚠ WARNING: Before installing the side air bag module into the deployment chute, check it for damage and foreign objects. If the air bag module is damaged, replace it. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

   ⚠ WARNING: If the air bag cover has separated or the air bag material has been exposed, install a new side air bag module. Do not attempt to repair the air bag module. Failure to do so may result in personal injury, in the event of an air bag deployment.

   ⚠ WARNING: Check the side air bag deployment chute for damage. The deployment chute must not be repaired. If there is any damage to the deployment chute, the seat back trim cover and deployment chute must be installed new as a unit.

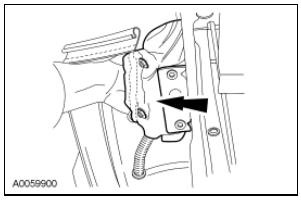
   ⚠ WARNING: If the air bag deployment chute is not properly positioned, the side air bag may not deploy properly.

   ⚠ WARNING: Inspect the mounting surfaces of the deployment chute and the seat back frame mounting bracket for any foreign objects, before installing the side air bag module/deployment chute assembly. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

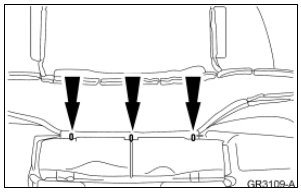
   NOTE: The alignment pin will only allow the seat side air bag module to be installed to the seat back mounting bracket one way.

   Position the seat side air bag module into the deployment chute.

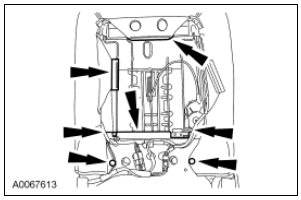
   - Position the seat side air bag module into the deployment chute with the alignment pin offset to the top and the electrical connector to the bottom of the backrest. This will position the alignment pin correctly when the seat side air bag module and deployment chute are mounted to the backrest frame mounting bracket.
   - The seat side air bag module mounting studs must come through the deployment chute stud openings.



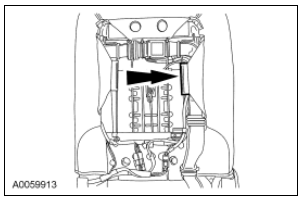
4. Position the seat side air bag to the bracket on the backrest frame and install the 2 nuts.
    - Tighten to 7 Nm (62 lb-in).
5. Install the seat side air bag module nut cover.
6. Reposition the backrest foam pad to the backrest frame as necessary.
7. Position the backrest trim cover and install the hog rings.



8. Attach all the backrest trim cover J-clips and the pin-type retainers.



9. If equipped, install the ventilation air upper blower assembly and the pin-type retainer.
10. Attach the trim cover J-clip.



11. ⚠ **CAUTION: Inspect the seat back trim panel for damage. If the J-hooks are damaged or the pin-type retainers stayed in the seat frame, install a new panel.**

    Align the seat back trim panel J-hooks to the seat back frame at the top and engage the pin-type retainers at the bottom of the seat back frame.

    - Inspect the lower panel attachments. If either pin-type retainer remained in the seat frame, install a new panel.
        - ♦ Inspect the upper panel attachments. If either J-hook is cracked or damaged, install a new panel.
        - ♦ Before installing the panel, install new pin-type retainers.
12. Install the head restraint.

13. Repower the SRS. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .

Front Seat Cushion Cover

Removal and Installation

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

⚠ CAUTION: Do not handle or lift the seat by the inboard side shield or a torque tube (seat track motor cable and housing). Care must be taken when handling or lifting the seat to prevent damage.

NOTE: If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.**

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Driver seat cushion shown, passenger seat cushion similar.

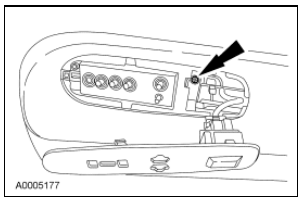
1. Remove the front seat and depower the SRS. For additional information, refer to Front Seat in this section.

2. Carefully remove the seat control switch knobs.

3. Remove the front and rear side shield screws.

4. Detach and remove the seat control switch bezel.
   - If equipped, disconnect the power lumbar switch.

5. Remove the screw from behind the seat control switch bezel.



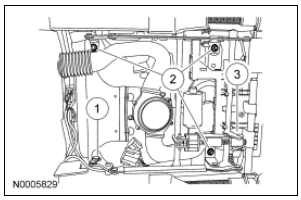
6. Disconnect the seat control switch electrical connector and remove the side shield.

7. Remove the manual lumbar knob.

8. Remove the 2 manual lumbar adjuster screws from the seat cushion pan.

9. If equipped, detach the ventilation air upper blower assembly from the ventilation air lower blower assembly.

10. Remove the nuts and the seat track.
    1. Detach the wire harness retainer from the seat track-to-cushion stud.
    2. Remove the 4 seat track-to-cushion nuts (3 shown).
        - ♦ To install, tighten to 20 Nm (15 lb-ft).
    3. Remove the seat cushion from the seat track and backrest assembly.
        - ♦ Disconnect and detach any electrical connectors as needed.



11. Detach the retainers and remove the cushion trim cover.
    - Separate the cushion trim cover from the cushion pan, cushion foam pad and, if equipped, the climate controlled seat cushion duct.

12. To install, reverse the removal procedure.

13. Install the front seat and repower the SRS. For additional information, refer to Front Seat in this section.

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

⚠ CAUTION: Do not handle or lift the seat by the inboard side shield or a torque tube (seat track motor cable and housing). Care must be taken when handling or lifting the seat to prevent damage.

NOTE: If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.**

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

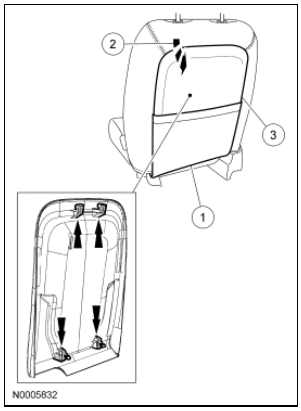
NOTE: Driver seat shown, passenger seat similar.

1. Depower the SRS. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .

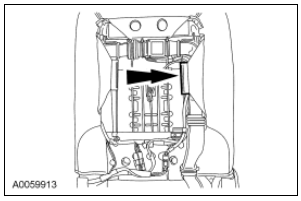
2. **⚠ CAUTION: Inspect the seat back trim panel for damage. If the J-hooks are damaged or the pin-type retainers remained in the seat frame and the panel boss is cracked, install a new panel.**

   Remove the seat back trim panel.

   1. Holding the panel at bottom center, pull rearward (not up) until both lower attachments are disengaged.
   2. While pushing in at the top of the panel, slide the panel down to disengage the upper J-hooks.
   3. Remove the panel.
      - Inspect the lower panel attachments. If either pin-type retainer remained in the seat frame and the panel boss is cracked, install a new panel.
      - Inspect the upper panel attachments. If either J-hook is cracked or damaged, install a new panel.
      - Before installing the panel, install new pin-type retainers.



3. Release the trim cover J-clip.



4. Remove the pin-type retainer, disconnect the electrical connector and remove the ventilation air upper blower assembly.

5. To install, reverse the removal procedure.

6. Repower the SRS. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .

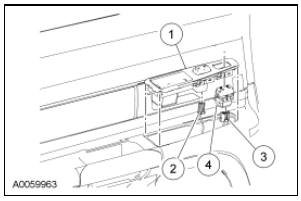
Heated Seat Switch Rear

Printable View (32 KB)

NOTE: Left side shown, right side similar.



Item	Part Number	Description
1	14527	Bezel housing
2	14A005	Connector
3	14A005	Connector
4	14D695	Heated seat switch

Removal and Installation

1. Detach the bezel housing from the door trim panel.
2. Disconnect the power window and heated seat switch electrical connectors.
3. Detach and remove the heated seat switch from the bezel housing.
4. To install, reverse the removal procedure.

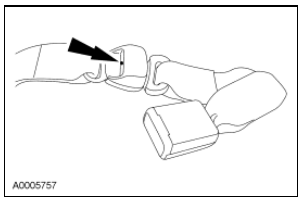
Rear Seat Backrest

Printable View (46 KB)

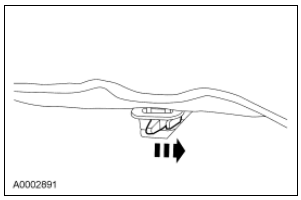
Removal

All backrests

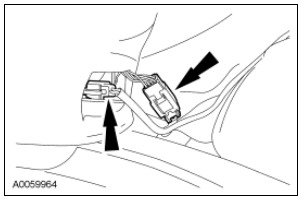
1. Using a suitable tool, release the mini-buckle.



2. Release the 2 levers located at the lower outboard edges of the seat cushion, lift the cushion up and pull the cushion out.



3. If equipped, disconnect the heated seat electrical connectors at both outboard sides of the seat cushion.



4. Remove the seat cushion.

60 percent backrest

5. From the luggage compartment, release the 60 percent seat backrest.

6. **NOTE:** Original fasteners must be discarded and new service fasteners installed. Service fasteners can be reused.

   Remove the two 60 percent rear seat backrest fasteners and discard.

7. Remove the 60 percent seat backrest.

40 percent backrest

8. From the luggage compartment, release the 40 percent seat backrest.

9. **NOTE:** Original fasteners must be discarded and new service fasteners installed. Service fasteners can be reused.

   Remove the two 40 percent rear seat backrest fasteners and discard.

10. Remove the 40 percent seat backrest.

Installation

40 percent backrest

1. Position the 40 percent seat backrest in the vehicle.

2. **NOTE:** Original fasteners must be discarded and new service fasteners installed. Service fasteners can be reused.

   Install 2 new 40 percent rear seat backrest bolt and washer assemblies W503942-S424.

   - Tighten to 17 Nm (13 lb-ft).

60 percent backrest

3. Position the 60 percent seat backrest in the vehicle.

4. **NOTE:** Original fasteners must be discarded and new service fasteners installed. Service fasteners can be reused.

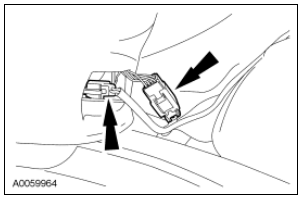
   Install 2 new 60 percent rear seat backrest bolt and washer assemblies W503942-S424.

   - Tighten to 17 Nm (13 lb-ft).

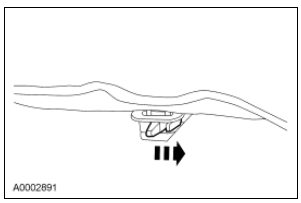
All backrests

5. Position the seat cushion in the vehicle.

6. If equipped, disconnect the heated seat electrical connectors at both outboard sides of the seat cushion.



7. Align the seat cushion and release the 2 levers located at the lower outboard edges of the seat cushion, press the cushion down and fully seat the seat cushion to the retainers.



8. Engage the mini-buckle.

9. Check the active restraint system for correct operation. For additional information, refer to Section 501-20A .

Rear Seat Backrest Cover

Printable View (24 KB)

Removal and Installation

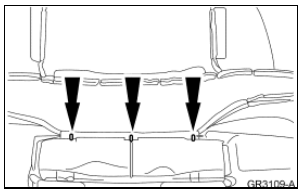
All backrests

1. Remove the rear seat backrest. For additional information, refer to Rear Seat Backrest in this section.

60 percent backrest

2. Remove the backrest folding armrest.
3. **CAUTION: Use care when separating the seat upholstery from the hook and loop strip, or the hook and loop strip can be torn from the seat backrest foam pad.**

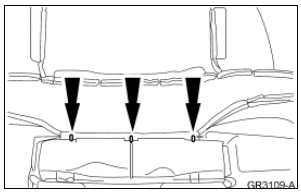
   Detach the 60 percent backrest J-strip and separate the backrest trim cover hook and loop fasteners.
4. Remove and discard the hog rings and remove the 60 percent backrest trim cover.



40 percent backrest

5. **CAUTION: Use care when separating the seat upholstery from the hook and loop strip, or the hook and loop strip can be torn from the seat backrest foam pad.**

   Detach the 40 percent backrest J-strip and separate the backrest trim cover hook and loop fasteners.
6. Remove and discard the hog rings and remove the 40 percent backrest trim cover.



All backrests

7. To install, reverse the removal procedure.

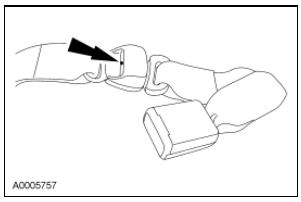
Rear Seat Bolster

Printable View (54 KB)

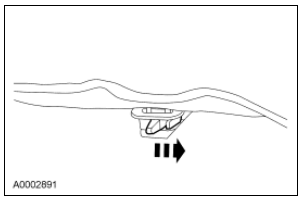
Removal and Installation

NOTE: LH side shown, RH side similar.

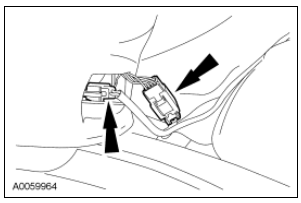
1. Using a suitable tool, release the mini-buckle.



2. Release the 2 levers located at the lower outboard edges of the seat cushion, lift the cushion up and pull the cushion out.



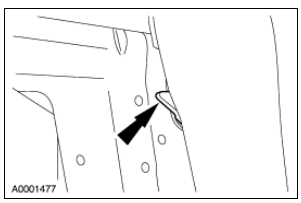
3. If equipped, disconnect the heated seat electrical connectors at both outboard sides of the seat cushion.



4. Remove the seat cushion.

5. Remove the nut at the bottom of the side bolster.
   - To install, tighten to 11 Nm (8 lb-ft).

6. Pull down the lever to release the LH latch and remove the LH side bolster.



7. To install, reverse the removal procedure.

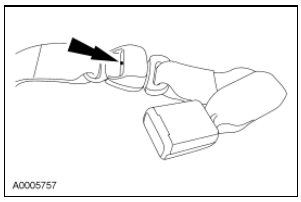
Rear Seat Cushion

Printable View (44 KB)

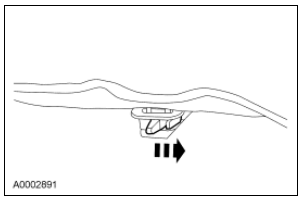
Removal and Installation

All seats

1. Using a suitable tool, release the mini-buckle.

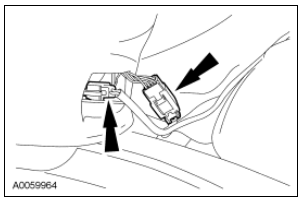


2. Release the 2 levers located at the lower outboard edges of the seat cushion, lift the cushion up and pull the cushion out.



Heated seats

3. Disconnect the heated seat electrical connectors at both outboard sides of the seat cushion.



All seats

4. Remove the seat cushion.

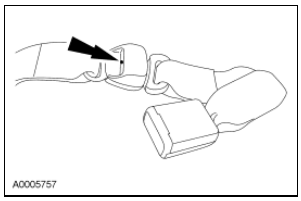
5. To install, reverse the removal procedure.
   - Check the active restraint system for correct operation. For additional information, refer to Section 501-20A .

Rear Seat Cushion Cover

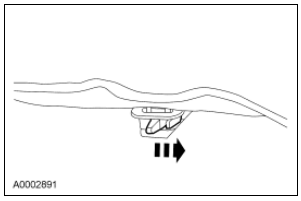
Printable View (45 KB)

Removal and Installation

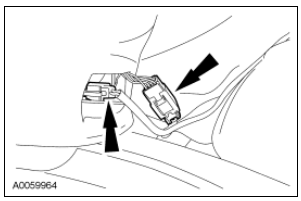
1. Using a suitable tool, release the mini-buckle.



2. Release the 2 levers located at the lower outboard edges of the seat cushion, lift the cushion up and pull the cushion out.



3. If equipped, disconnect the heated seat electrical connectors at both outboard sides of the seat cushion.



4. Remove the seat cushion.

5. Remove all the outer seat cushion trim cover hog rings.

6. ⚠ **CAUTION: Use care when separating the seat upholstery from the hook and loop strip, or the hook and loop strip can be torn from the seat cushion foam pad.**

   Separate the hook and loop fasteners.

7. Remove all the inner seat cushion trim cover hog rings.

8. Remove the seat cushion trim cover.

9. To install, reverse the removal procedure.

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

⚠ CAUTION: Do not handle or lift the seat by the inboard side shield or a torque tube (seat track motor cable and housing). Care must be taken when handling or lifting the seat to prevent damage.

NOTE: If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.**

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

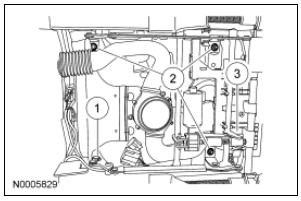
NOTE: Driver seat cushion shown, passenger seat cushion similar.

All seats

1. Remove the front seat and depower the SRS. For additional information, refer to Front Seat in this section.

2. Remove the front seat backrest. For additional information, refer to Front Seat Backrest in this section.

3. Remove the seat track and the nuts.
    1. Detach the wire harness retainer from the seat track-to-cushion stud.
    2. Remove the 4 seat track-to-cushion nuts (3 shown).
        - ♦ To install, tighten to 20 Nm (15 lb-ft).
    3. Remove the seat track.
        - ♦ Disconnect and detach any electrical connectors as needed.



Climate controlled seats

4. Disconnect and detach the electrical connectors and remove the ventilation air lower blower assembly from the cushion pan.

5. Disconnect and remove the climate controlled seat module from the cushion pan.

All seats

6. If equipped, disconnect and remove the driver seat module from the cushion pan.

7. Detach the retainers and remove the cushion trim cover.
    - Separate the cushion trim cover from the cushion pan, cushion foam pad and, if equipped, the climate controlled seat cushion duct.

8. To assemble, reverse the disassembly procedure.

9. Install the front seat backrest. For additional information, refer to Front Seat Backrest in this section.

10. Install the front seat and repower the SRS. For additional information, refer to Front Seat in this section.

Rear Seat Cushion

Disassembly

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of

an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Front seat back trim covers installed on seats equipped with side air bags cannot be repaired, they are to be replaced (cleaning is permissible).

⚠ WARNING: Side air bag modules with damaged covers must be replaced.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

⚠ CAUTION: Do not handle or lift the seat by the inboard side shield or a torque tube (seat track motor cable and housing). Care must be taken when handling or lifting the seat to prevent damage.

NOTE: If a side air bag deployment took place, the backrest foam pad, trim cover and side air bag module must be replaced. The backrest frame should be replaced if necessary.

NOTE: If a seat equipped with a supplemental restraint system (SRS) component is being serviced, **the SRS must be depowered.**

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: The driver seat is shown, the passenger seat is similar.

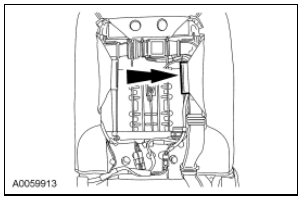
NOTE: A seat side air bag module is shown, a seat side thorax air bag module is similar. For additional information, refer to Section 501-20B in the Description and Operation portion of the section.

1. Remove the front seat and depower the SRS. For additional information, refer to Front Seat in this section.

2. Remove the front seat backrest. For additional information, refer to Front Seat Backrest in this section.

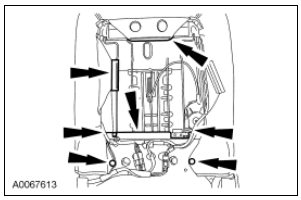
3. Remove the head restraint.

4. Release the trim cover J-clip.

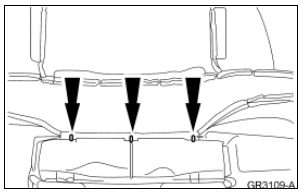


5. If equipped, remove the pin-type retainer and the ventilation air upper blower assembly.

6. Detach all the backrest trim cover J-clips and the pin-type retainers.



7. Partially remove the backrest trim cover to access the hog rings and remove and discard the hog rings.

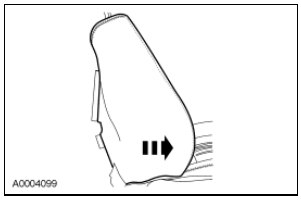


8. Remove the seat side air bag module nut cover.

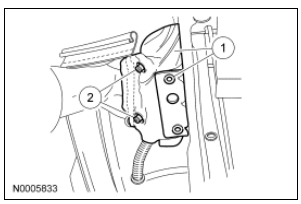
9. **NOTE:** If installing a new side air bag module, use new retaining nuts. If the same side air bag module is to be reused then reuse the side air bag module nuts.

   Remove the 2 seat side air bag module nuts from the backrest frame.

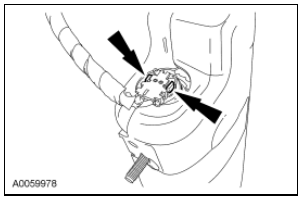
10. With one hand on the seat side air bag module, position the backrest trim cover and foam pad forward enough to access the seat side air bag module.



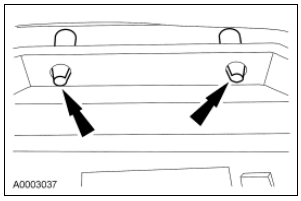
11. Remove the seat side air bag module from the deployment chute.
    1. Separate the seat side air bag module and deployment chute from the backrest frame mounting bracket.
    2. Pull the seat side air bag module mounting studs back through the deployment chute openings and remove the seat side air bag module from the deployment chute.



12. Squeeze the tabs together, disconnect and remove the seat side air bag module.



13. Pinch the end of the head restraint guide sleeves and remove.



14. Remove the backrest trim cover.
    - Carefully route the seat side air bag module deployment chute through the opening in the backrest foam pad.

15. Remove the backrest foam pad from the backrest frame.
    - If equipped, remove the climate controlled seat duct from the backrest foam pad as needed.

16. Detach and remove the lumbar assembly.

Assembly

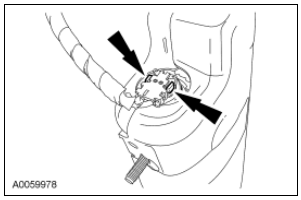
1. Install and attach the lumbar assembly.

2. Install the backrest foam pad to the backrest frame.
    - If equipped, install the climate controlled seat duct to the backrest foam pad.

3. Position the backrest trim cover to the backrest frame and install the head restraint guide sleeves.
    - Position the seat side air bag module deployment chute through the opening in the backrest foam pad.

4. ⚠ **CAUTION: Make sure the correct seat mounted air bag module is being used. The seat side air bag module and the seat side thorax air bag module electrical connectors are unique and will not interchange. Match the electrical connector key to the keyway in the air bag module. Do not alter or force the electrical connector into the seat mounted air bag module. For additional information, refer to Section 501-20B in the Description and Operation portion of the section.**

   Match the electrical connector key to the keyway and connect the seat side air bag module or seat side thorax air bag module.



5. ⚠ **WARNING: Inspect the mounting surfaces of the side air bag module for any foreign objects before installing the side air bag module. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.**

⚠ WARNING: Inspect the side air bag deployment chute and the side air bag cavity in the seat back pad for any foreign objects. If any foreign objects are found remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

⚠ WARNING: Before installing the side air bag module into the deployment chute, check it for damage and foreign objects. If the air bag module is damaged, replace it. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

⚠ WARNING: If the air bag cover has separated or the air bag material has been exposed, install a new side air bag module. Do not attempt to repair the air bag module. Failure to do so may result in personal injury, in the event of an air bag deployment.

⚠ WARNING: Check the side air bag deployment chute for damage. The deployment chute must not be repaired. If there is any damage to the deployment chute, the seat back trim cover and deployment chute must be installed new as a unit.

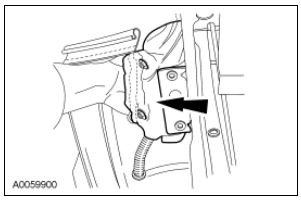
⚠ WARNING: If the air bag deployment chute is not properly positioned, the side air bag may not deploy properly.

⚠ WARNING: Inspect the mounting surfaces of the deployment chute and the seat back frame mounting bracket for any foreign objects, before installing the side air bag module/deployment chute assembly. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

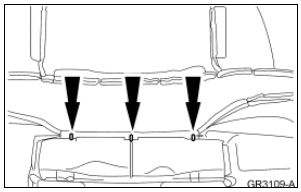
NOTE: The alignment pin will only allow the seat side air bag module to be installed to the seat back mounting bracket one way.

Position the seat side air bag module into the deployment chute.

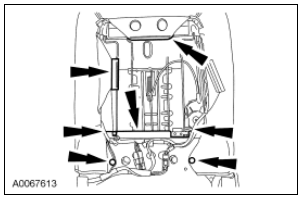
- Position the seat side air bag module into the deployment chute with the alignment pin offset to the top and the electrical connector to the bottom of the backrest. This will position the alignment pin correctly when the seat side air bag module and deployment chute are mounted to the backrest frame mounting bracket.
- The seat side air bag module mounting studs must come through the deployment chute stud openings.



6. Position the seat side air bag to the bracket on the backrest frame and install the 2 nuts.
   - Tighten to 7 Nm (62 lb-in).
7. Install the seat side air bag module nut cover.
8. Reposition the backrest foam pad to the backrest frame as necessary.
9. Position the backrest trim cover and install the hog rings.

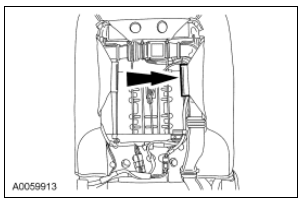


10. Attach all the backrest trim cover J-clips and the pin-type retainers.



11. If equipped, install the ventilation air upper blower assembly and the pin-type retainer.

12. Attach the trim cover J-clip.



13. ⚠ **CAUTION: Inspect the seat back trim panel for damage. If the J-hooks are damaged or the pin-type retainers stayed in the seat frame, install a new panel.**

    Align the seat back trim panel J-hooks to the seat back frame at the top and engage the pin-type retainers at the bottom of the seat back frame.

    - Inspect the lower panel attachments. If either pin-type retainer remained in the seat frame, install a new panel.
        - ♦ Inspect the upper panel attachments. If either J-hook is cracked or damaged, install a new panel.
        - ♦ Before installing the panel, install new pin-type retainers.

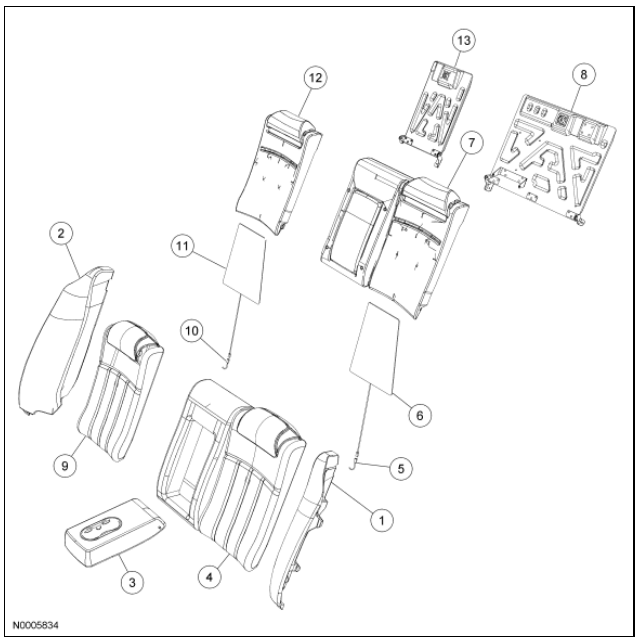
14. Install the head restraint.

15. Install the front seat backrest. For additional information, refer to Front Seat Backrest in this section.

16. Install the front seat and repower the SRS. For additional information, refer to Front Seat in this section.

Rear Seat Backrest

Printable View (150 KB)



Item	Part Number	Description
1	66893	Left bolster
2	66892	Right bolster
3	67244	Backrest folding armrest
4	66601	60 percent seat backrest trim cover
5	19K315	Backrest heater element electrical connector (if equipped)
6	14D698	Backrest heater element (if equipped)
7	66800	60 percent seat backrest foam pad
8	613A38	60 percent seat backrest support panel
9	66600	40 percent seat backrest trim cover
10	19K315	Backrest heater element electrical connector (if equipped)
11	14D698	Backrest heater element (if equipped)
12	66800	40 percent seat backrest foam pad
13	613A38	40 percent seat backrest support panel

Disassembly and Assembly

All backrests

1. Remove the rear seat backrest. For additional information, refer to Rear Seat Backrest in this section.

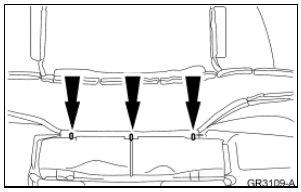
60 percent backrest

2. Remove the backrest folding armrest.

3. **⚠ CAUTION: Use care when separating the seat upholstery from the hook and loop strip, or the hook and loop strip can be torn from the seat backrest foam pad.**

   Detach the 60 percent backrest J-strip and separate the backrest trim cover hook and loop fasteners.

4. Remove and discard the hog rings and remove the 60 percent backrest trim cover.



5. If equipped, remove the backrest heater element as needed from the 60 percent backrest foam pad.

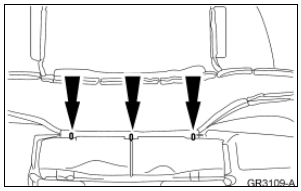
6. Remove the 60 percent backrest support panel.

40 percent backrest

7. **⚠ CAUTION: Use care when separating the seat upholstery from the hook and loop strip, or the hook and loop strip can be torn from the seat backrest foam pad.**

   Detach the 40 percent backrest J-strip and separate the backrest trim cover hook and loop fasteners.

8. Remove and discard the hog rings and remove the 40 percent backrest trim cover.



9. If equipped, remove the backrest heater element as needed from the 40 percent backrest foam pad.

10. Remove the 40 percent backrest support panel.

All backrests

11. To assemble, reverse the disassembly procedure.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Principles Of Operation

One-Touch Down/Up Window

The one-touch down feature can be activated by pressing either front window control switch to the second DOWN position. This allows either front door window glass to move downward until it is fully lowered. Momentarily pressing the front window control switch while the window is moving downward stops the front door window glass and restores proportional down operation. The one-touch up feature can be activated and operated in the same manner by pressing the window control switch to the second UP position.

Door Window Glass

The bottom of the door window glass is mounted on a slider bracket which is part of the door window regulator. Door window glass bracket spacers provide attachment points for the door window glass and prevent direct contact between the slider bracket and the door window glass.

Window Control Switch

The driver window control switch can be used to power any or all of the windows. A single window control switch is located on all passenger door armrests to activate that individual window only. The driver window control switch sends a voltage signal directly to the smart motors for operation of the front window motors in the commanded direction. The driver window control switch sends a voltage signal to the driver door module (DDM). When rear window motor operation is requested, the DDM sends a message over the standard corporate protocol (SCP) network to the rear electronic module (REM). The REM operates the rear window motors in the commanded direction.

Window Motor

NOTE: The front window motors require initialization. Refer to Door Window Motor Initialization in this section.

New front and rear window motors are installed separately. The front window motors are "smart" window motors, meaning they have the one-touch up/down features. The rear window motors have no one-touch up or down operation, only proportional up/down operation.

Front Electronic Module (FEM) and Rear Electronic Module (REM)

The FEM receives inputs and delivers outputs to a majority of the electronically controlled features which reside primarily in the front of the vehicle, including the RH power window. The REM receives inputs and delivers outputs to a majority of the electronically controlled features which reside primarily in the rear of the vehicle, including the rear power windows. The FEM and REM are configurable modules and must be correctly configured to the vehicle. The modules may also be configured to allow additional features or functions to be added to the vehicle. The FEM and REM do not have any optional window control configurations.

Driver Door Module (DDM)

The DDM receives inputs from the remote keyless entry (RKE) transmitter and hardwired components such as the LH front window control switch and delivers outputs in the form of SCP network messages and hardwired component control, including control of the LF and RF power window and roof opening panel (if equipped) during the global open/close feature. The DDM is a configurable module and must be correctly configured to the vehicle. The DDM may also be configured to allow additional features or functions to be added to the vehicle. The only DDM window feature that can be optionally configured is the window global open and close feature.

Global Open/Close

The global open/close feature is controlled by the DDM. The global open feature involves the DDM either receiving a signal from the door lock cylinder being held in the UNLOCK position for two seconds or the DDM receives a signal from a remote keyless entry (RKE) transmitter (when the customer holds the UNLOCK button on the transmitter for two seconds to activate the feature) and sends a voltage signal to the LH front, RH front smart window motors and the smart roof opening panel motor (if equipped). The smart window motors and smart roof opening panel motor will carry out a global open (simultaneous opening of the front windows and roof opening panel). Pressing any button on the RKE transmitter, or actuating the door lock cylinder to the UNLOCK or LOCK position will interrupt the global open function. The global close feature can only be accomplished with the key in the door lock cylinder. The key must hold the door lock cylinder to the LOCK position for two seconds, at which time the DDM will receive the door lock cylinder signal and send a global close signal to the smart window motor and the smart roof opening panel motors. The smart motors will then carry out a global close (simultaneous closing of the front windows and roof opening panel) function. The global close function can be terminated in the same manner as the global open function.

Module Inputs and Outputs

This system is unique in that many of the inputs that the FEM, REM and DDM receive are over the SCP communication network. These input messages come from other modules connected to the network. The FEM, REM and DDM interpret the inputs then command the correct output that was requested. The modules also receive inputs which come from components directly hardwired to the modules, such as the window control switches.

One type of output the modules provide is over the SCP communication network in the form of messages. These types of outputs are usually generated from a module monitoring a hardwired input and sending a status message to another module. These outputs are commonly required by other modules to carry out their functions. The second type of output is the control of a component directly hardwired to the module.

Passenger Window Power Supply

The REM controls the power supply to all three passenger window control switches. To protect the REM from a potential failure, the REM removes power from the common passenger window power supply when a short to ground is sensed in any passenger window control switch, associated circuitry or the power output circuit of the REM. Power is be restored to the power output circuit upon a cycling of the ignition switch. If the REM output circuit is shorted to ground, the REM immediately removes power from the common power supply circuit. If any passenger window control switches or their associated circuits are shorted to ground, the power will remain on the REM output circuit until the switch or circuit containing the short to ground is activated.

Passenger Window Lock-Out

The LH front window control switch incorporates a passenger window lock-out switch. Activating the passenger window lock-out switch sends a separate voltage signal to the DDM. The DDM then outputs a message to the REM. The REM removes power to the passenger window control switches. Passenger window operation is allowed from only the LH front window control switch, or until the passenger window lock-out switch is turned off.

Passenger Front Power Window

The passenger front power window is controlled by input signals from the LH front window control switch or the RH front window control switch. The REM powers the RH front window control switch, which sends a voltage signal (when activated by the passenger) to the RH front window smart motor. The window motor raises or lowers (proportionally or one-touch, depending on the command) the window according to the command signal from the RH front window control switch. The DDM powers the LH front window control switch so it may send a voltage signal (when activated by the driver) to the RH front window smart motor.

LH Rear and RH Rear Power Windows

The LH rear and RH rear power windows are controlled by the REM. Operating commands for the rear power windows are received from the LH front window control switch over the SCP network from the DDM, or directly from the LH rear or RH rear window control switches, which are hardwired to the REM.

Activating the LH rear or RH rear switch on the LH front window control switch causes the DDM to send a message to the REM over the SCP network. The REM will then control power and ground to the appropriate window motor to raise or lower the window.

Activating either the LH rear or RH rear window control switch sends a voltage signal to the REM. The REM controls power and ground to the appropriate window motor to raise or lower the window. A voltage signal will only be received if the window lockout is OFF and the REM is supplying voltage to the rear window control switch power circuit. The rear window motors are not smart motors and have only proportional mode operation with no one-touch operation.

Heated Rear Window

The heated rear window is controlled by the REM, PCM and the dual auto temp control (DATC) module. The heated rear window switch is incorporated into the DATC module. When the switch is pressed ON, the DATC module sends a message over the SCP network to the REM. The REM checks other messages for vehicle rpm from the PCM. If the rpm message is received, the REM grounds the heated rear window relay coil control circuit (which is hardwired to the REM). The ground signal closes the heated rear window relay which applies power to the heated rear window grid. Fault management of the heated rear window feature prevents the heated rear window from operating when an rpm or ignition switch invalid/missing data message is received. The heated rear window eliminates condensation on the rear window.

Diagnosis

The FEM, REM and DDM constantly monitor their systems and generate diagnostic trouble codes (DTC) if there is a concern. DTCs can be retrieved with the diagnostic tool or an equivalent tester through the SCP communication network.

This vehicle design makes it unique in that electronic functions are divided into zones. The DDM controls features near the driver front door. The FEM controls features in the front portion of the vehicle and the REM controls the features in the rear portion. These systems use the SCP communication network in order to transmit and receive messages. It is vital when diagnosing the vehicle electronic systems to understand where the input (command) originates, all input information messages necessary in order for a feature to operate correctly, which module(s) receive(s) the input (or command message), if the module which received the input (message) controls the output of the feature or does it output a message over the communication network to another module, and which module controls the output of the feature.

Delayed Accessory

The delayed accessory feature allows the power windows, radio and roof opening panel (if equipped) to function for up to ten minutes after the ignition is turned OFF or until any door is opened. The delayed accessory function is controlled by the DDM. When the ignition switch is turned from ON to OFF, the DDM begins the timing sequence. If a door is opened, the FEM or the REM (the FEM monitors the front door ajar switches and the REM monitors the rear door ajar switches) sends a signal to the DDM over the SCP network, and the DDM turns off the accessory delay function. If the ignition switch is turned to another position, the DDM will also cancel the delayed accessory function.

Heated Wiper Park

The heated wiper park grid (located within the lower painted area of the windshield) receives power from the heated wiper park relay located in the underhood auxiliary junction box (AJB). The heated wiper park relay coil is connected to a fused circuit from the underhood AJB. The heated wiper park relay is controlled by a switched ground from the dual automatic temperature control (DATC) module heated wiper park ON/OFF switch. The heated wiper park grid is automatically activated by the DATC module when ambient air temperature drops below 3° C (38° F) and will shut off automatically when ambient air temperature rises above 3° C (38° F), or if the vehicle voltage is low.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect the following for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Window regulator • Window run weather-strip	• Battery junction box (BJB) fuse: ♦ 9 (5A) ♦ 16 (20A) ♦ 19 (20A)

• Door window glass	♦ 20 (30A) ♦ 22 (30A) ♦ 25 (40A) ♦ 26 (20A) ♦ 27 (30A) ♦ 29 (30A) ♦ 30 (20A) • Central junction box (CJB) fuse 7 (5A) • Underhood auxiliary junction box (AJB) fuse 13 (30A) • LH front window control switch • RH front, LH rear or RH rear window control switch(es) • Window motor(s) • DATC module • DDM • FEM • REM • Heated rear window grid • Heated wiper park grid • Circuitry

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP, UBP or ISO circuit fault, all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for the DDM, DATC, FEM or REM; refer to Section 419-10 .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the DDM, DATC, FEM or REM.

7. If the DTCs retrieved are related to the concern, go to the Driver Door Module (DDM) Diagnostic Trouble Code (DTC) Index, Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index or the Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index to continue diagnosis.

8. If DTCs are retrieved that are not found in the following Indexes, refer to the Diagnostic Trouble Code (DTC) Index in Section 419-10 .

9. If no DTCs related to the concern are retrieved, GO to Symptom Chart to continue diagnosis.

Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU is Defective	FEM	CLEAR the DTC. REPEAT the FEM self-test. If DTC B1342 is retrieved, INSTALL a new FEM. REFER to Section 419-10 . REPEAT the self-test.
B1676	Battery Pack Voltage Out of Range	FEM	REFER to Section 414-00 .
B2477	Module Configuration Failure	FEM	REFER to Section 418-01 .

Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU is Defective	REM	CLEAR the DTC. REPEAT the REM self-test. If DTC B1342 is retrieved, INSTALL a new REM. REFER to Section 419-10 . REPEAT the self-test.
B1676	Battery Pack Voltage Out of Range	REM	REFER to Section 414-00 .
B2174	Window Driver Rear Remote Up Switch Short to Battery	REM	Go To Pinpoint Test D .
B2178	Window Driver Rear Remote Down Switch Short to Battery	REM	Go To Pinpoint Test D .
B2190	Window Passenger Rear Remote Up Switch Short to Battery	REM	Go To Pinpoint Test D .
B2194	Window Passenger Rear Remote Down Switch Short to Battery	REM	Go To Pinpoint Test D .
B2477	Module Configuration Failure	REM	REFER to Section 418-01 .

Driver Door Module (DDM) Diagnostic Trouble Code (DTC) Index

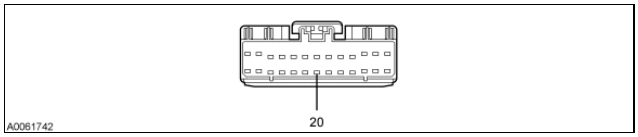
DTC	Description	Source	Action
B1342	ECU is Defective	DDM	CLEAR the DTC. REPEAT the self-test. If DTC B1342 is retrieved, INSTALL a new DDM. REFER to Section 419-10 . REPEAT the self-test.
B1416	Power Window LR Motor Circuit Short to Battery	DDM	Go To Pinpoint Test D .
B1424	Power Window RR Motor Circuit Short to Battery	DDM	Go To Pinpoint Test D .
B2359	Accessory Delay Output Circuit Failure	DDM	CHECK circuit 10-AJ43 (GY/VT) for an open, a short to ground, or a short to voltage. If no fault is found, INSTALL a new DDM. REFER to Section 419-10 . TEST the system for normal operation.

B2360	Window Motor Control Output Circuit Failure	DDM	Go To Pinpoint Test F .
B2477	Module Configuration Failure	DDM	REFER to Section 418-01 .

Symptom Chart

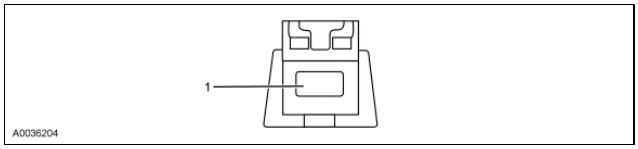
Symptom Chart
Connector Circuit Reference

Dual Automatic Temperature Control (DATC) Module C228b



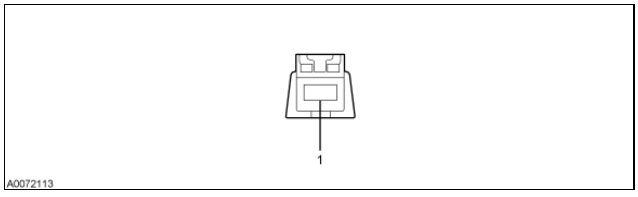
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
20	91S-HB7 (BN/RD) heated wiper park relay solenoid coil ground	10 volts or greater with the heated wiper park OFF.

Heated Rear Window Power C402a



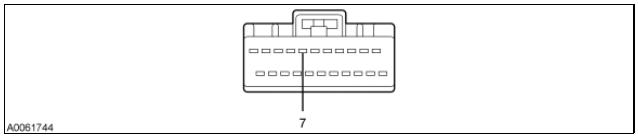
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	15S-HB19 (GN/BU) power to the heated rear window grid	10 volts or greater with key ON, engine running and the heated rear window ON, 5 ohms or less between the heated rear window and relay (relay removed).

Heated Rear Window C402b



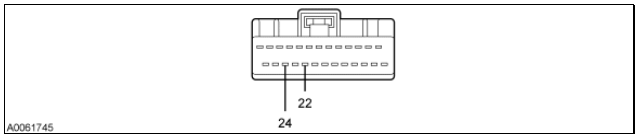
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	31-HB19 (BK/BU) heated rear window grid ground	5 ohms or less to ground.

Rear Electronic Module (REM) C420b



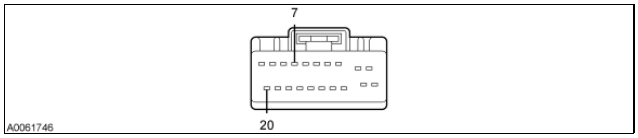
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
7	91S-HB23 (BN/WH) heated rear window relay solenoid ground	10 volts or greater with the heated rear window OFF, 5 ohms or less between connectors (both disconnected).

Rear Electronic Module (REM) C420c



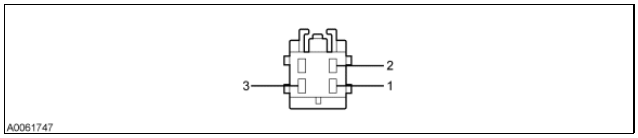
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
22	10-AJ14 (GY/VT) LH rear window control switch DOWN command input	5 ohms or less between connectors, 10,000 ohms or greater between circuit 10-AJ14 (GY/VT) and ground.
24	8-AJ14 (WH/BU) LH rear window control switch UP command input	5 ohms or less between connectors, 10,000 ohms or greater between circuit 8-AJ14 (WH/BU) and ground.

Rear Electronic Module (REM) C420d



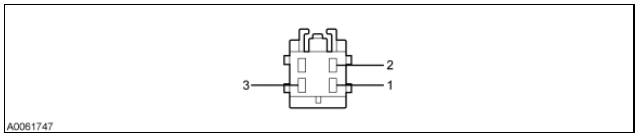
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
7	8-AJ24 (WH) RH rear window control switch UP command input	5 ohms or less between connectors, 10,000 ohms or greater between circuit 8-AJ24 (WH) and ground.
20	10-AJ24 (GY) RH rear window control switch DOWN command input	5 ohms or less between connectors, 10,000 ohms or greater between circuit 10-AJ24 (GY) and ground.

Rear Electronic Module (REM) C420f



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	35-AJ13 (VT/BU) switched voltage/ground to LH rear window motor	10 volts or greater with the LR window motor in one direction and 0 volts with the window motor in the opposite direction. 5 ohms or less between connectors, 10,000 ohms or greater between circuit 35-AJ13 (VT/BU) and ground.
2	34-AJ13 (BU/RD) switched ground/voltage to LH rear window motor	0 volts with the window motor in one direction and 10 volts or greater in the opposite direction. 5 ohms or less between connectors, 10,000 ohms or greater between circuit 34-AJ13 (BU/RD) and ground.
3	31-DK30 (BK/OG) dedicated ground for LH rear window motor	5 ohms or less to ground.

Rear Electronic Module (REM) C420g



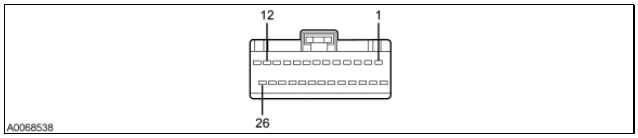
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	34-AJ23 (BU/OG) switched voltage/ground to RH rear window motor	10 volts or greater with the RH rear window motor in one direction and 0 volts with the window motor in the opposite direction. 5 ohms or less between connectors, 10,000 ohms or greater between circuit 34-AJ23 (BU/OG) and ground.
2	31-DK30B (BK/OG) dedicated ground for RH rear window motor	5 ohms or less to ground.
3	35-AJ23 (VT/WH) switched ground/voltage to RH rear window motor	0 volts with the window motor in one direction and 10 volts or greater with the window motor in the opposite direction. 5 ohms or less between connectors, 10,000 ohms or greater between circuit 35-AJ23 (VT/WH) and ground.

Heated Rear Window Relay C443

	Circuit Designation/Description	Normal Condition/Measurement

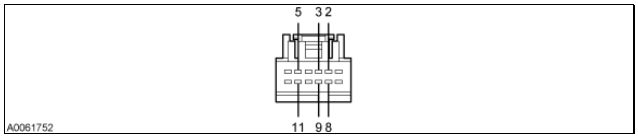
Pin Number(s)		
30	30-HB23B (RD/WH) heated rear window relay voltage input	10 volts or greater at all times. 5 ohms or less between the BJB fuse 29 (30A) output cavity and the heated rear window relay (BJB fuse 29 (30A) removed).
85	91S-HB23 (BN/WH) heated rear window relay solenoid ground	10 volts or greater between pin 85 and ground. 5 ohms or less between connectors (heated rear window relay removed).
86	30-HB23A (RD/WH) heated rear window relay solenoid voltage	10 volts or greater at all times. 5 ohms or less between heated rear window relay and BJB fuse 29 (30A) output cavity (BJB fuse 29 (30A) removed).
87	15S-DA13 (GN/YE) heated rear window relay voltage feed to heated rear window	10 volts or greater with ignition switch in the ON position and the heated rear window switch ON. 5 ohms or less between the heated rear window relay and the heated rear window grid (heated rear window relay removed).

Driver Door Module (DDM) 501d



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	10-AJ43 (GY/VT) DDM accessory delay circuit to LH and RH front window motor.	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 10-AJ43 (GY/VT) and ground.
12	7-AJ7 (YE/RD) voltage output to LH front window control switch	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 7-AJ7 (YE/RD) and ground.
26	8-AJ43 (WH/BU) DDM global open/close circuit to LH and RH front window motor.	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 8-AJ43 (WH/BU) and ground.

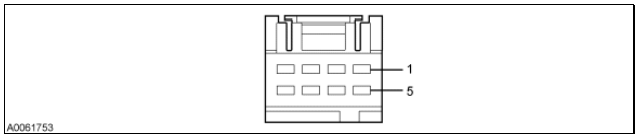
LH Front Window Control Switch C504a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	8-AJ56 (WH/GN) LH front window control switch AUTO input to RH front window motor	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 8-AJ56 (WH/GN) and ground.
3		

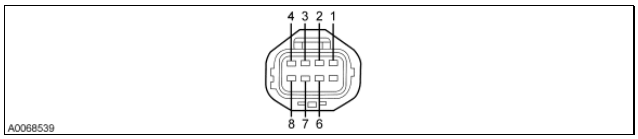
	7S-AJ47 (YE/BK) LH front window control switch UP input to the RH front window motor	5 ohms or less between connectors. 10,000 ohms or greater between circuit 7S-AJ47 (YE/BK) and ground.
5	7S-AJ40 (YE/GN) LH front window control switch DOWN input to the LH front window motor	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 7S-AJ40 (YE/GN) and ground.
8	31-AJ7 (BK/BU) LH front window control switch ground	5 ohms or less between ground. 10,000 ohms or greater between circuit 31-AJ7 (BK/BU) and ground.
9	7S-AJ48 (YE/VT) LH front window control switch DOWN input to the RH front window motor	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 7S-AJ48 (YE/GN) and ground.
11	8-AJ42 (WH/GN) LH front window control switch AUTO input to the LH front window motor	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 8-AJ42 (WH/GN) and ground.

LH Front Window Control Switch C504b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	7-AJ7 (YE/RD) LH front window control switch voltage input	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 7-AJ7 (YE/RD) and ground.
5	7S-AJ41 (YE/BK) LH front window control switch UP input to the LH front window motor	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 7S-AJ41 (YE/BK) and ground.

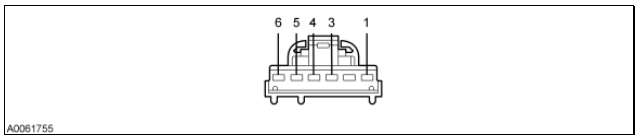
LH Front Window Motor C524



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-AJ42 (WH/GN) AUTO input from the LH front window control switch	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 8-AJ42 (WH/GN) and ground.
2	10-AJ43 (GY/VT) delayed accessory input to the LH front window motor	10 volts or greater with ignition switch in the ON position. 5 ohms or less between the LH front window motor and the DDM (both connectors

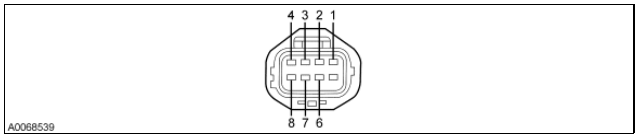
		disconnected).
3	7S-AJ41 (YE/BK) UP command input from the LH front window control switch	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 7S-AJ41 (YE/BK) and ground.
4	7S-AJ40 (YE/GN) DOWN command input from the LH front window control switch	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 7S-AJ40 (YE/GN) and ground.
6	8-AJ43B (WH/BU) global open/close input to LH front window motor	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 8-AJ43B (WH/BU) and ground.
7	30-AJ80 (RD) B+ voltage to LH front window motor	10 volts or greater at all times. 5 ohms or less between the LH front window motor and the BJB fuse 20 (30A) output cavity (BJB fuse 20 (30A) removed).
8	31-AJ80 (BK/OG) LH front window motor ground	5 ohms or less to ground.

RH Front Window Control Switch C604



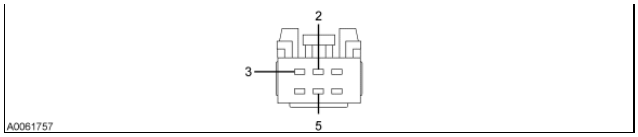
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	7S-AJ47B (YE/BK) UP command output from the RH front window control switch	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 7S-AJ47 (YE/BK) and ground.
3	31-LH31 (BK) RH front window control switch ground	5 ohms or less to ground.
4	8-AJ56B (WH/GN) RH front window control switch AUTO output	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 8-AJ56 (WH/GN) and ground.
5	7-AJ18 (YE/VT) voltage feed to RH front window control switch from the REM	5 ohms or less between the connectors (both disconnected). 10,000 ohms or greater between circuit 7-AJ18 (YE/VT) and ground.
6	7S-AJ48B (YE/VT) DOWN command from the RH front window control switch to the RH front window motor	5 ohms or less between the connectors (both disconnected). 10,000 ohms or greater between circuit 7S-AJ48 (YE/VT) and ground.

RH Front Window Motor C608



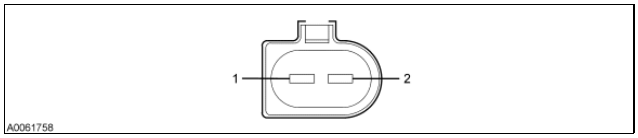
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-AJ56A (WH/GN) AUTO input to the RH front window motor	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 8-AJ56 (WH/GN) and ground.
2	10-AJ43A (GY/VT) delayed accessory input to the RH front window motor	10 volts or greater with the ignition switch in the ON position. 5 ohms or less between the RH front window motor and the DDM (both connectors disconnected).
3	7S-AJ47A (YE/BK) UP command input to the RH front window motor	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 7S-AJ47 (YE/BK) and ground.
4	7S-AJ48A (YE/VT) DOWN command input to the RH front window motor	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 7S-AJ48 (YE/VT) and ground.
6	8-AJ43A (WH/BU) global open/close input	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 8-AJ43A (WH/BU) and ground.
7	30-AJ71 (RD/YE) B+ power input to RH front window motor	10 volts or greater at all times. 5 ohms or less between the RH front window motor and the BJB fuse 26 (20A) output cavity, BJB fuse 26 (20A) removed.
8	31-AJ71 (BK/YE) RH front window motor ground	5 ohms or less to the ground.

LH Rear Window Control Switch C701



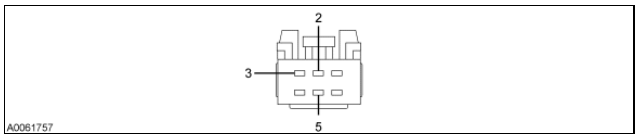
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	10-AJ14 (GY/VT) DOWN command from the LH rear window control switch	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 10-AJ14 (GY/VT) and ground.
3	7-AJ14A (YE/BU) voltage input to LH rear window control switch from the REM	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 7-AJ14A (YE/BU) and ground.
5	8-AJ14A (WH/BU) UP command from the LH rear window control switch	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 8-AJ14A (WH/BU) and ground.

LH Rear Window Motor C703



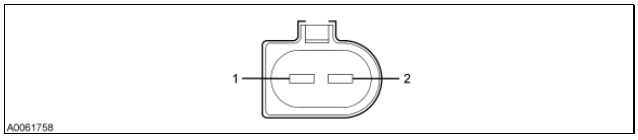
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	35-AJ13 (VT/BU) switched voltage/ground to LH rear window motor	10 volts or greater with the window motor in one direction, and 0 volts with the motor in the opposite direction. 5 ohms or less between the connectors. 10,000 ohms or greater between circuit 35-AJ13 (VT/BU) and ground (both connectors disconnected).
2	34-AJ13 (BU/RD) switched ground/voltage to LH rear window motor	0 volts with the window motor in one direction, and 10 volts or greater with the motor in the opposite direction. 5 ohms or less between the connectors. 10,000 ohms or greater between circuit 34-AJ13 (BU/RD) and ground (both connectors disconnected).

RH Rear Window Control Switch C801



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	10-AJ24 (GY) RH rear window control switch DOWN command	5 ohms or less between connectors. 10,000 ohms or greater between circuit 10-AJ24 (GY) and ground.
3	7-AJ24 (YE) power input to the RH rear window control switch from the REM	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 7-AJ24 (YE) and ground (both connectors disconnected),
5	8-AJ24 (WH) UP command from the RH rear window control switch	5 ohms or less between the connectors. 10,000 ohms or greater between circuit 8-AJ24 (WH) and ground.

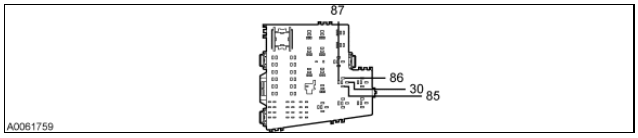
RH Rear Window Motor C803



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	35-AJ23 (VT/WH) switched voltage/ground to the RH rear window motor	10 volts or greater with the window motor in one direction, and 0 volts with the motor in the opposite direction. 5 ohms or less between the REM and the RH rear window motor, 10,000 ohms or greater between circuit 35-AJ23 (VT/WH)

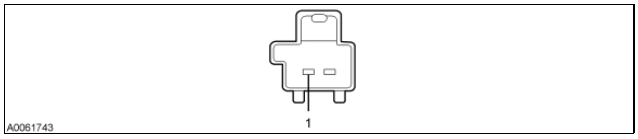
		and ground (both connectors disconnected).
2	34-AJ23 (BU/OG) switched ground/voltage to the RH rear window motor	0 volts with the window motor in one direction, and 10 volts or greater with the motor in the opposite direction. 5 ohms or less between the REM and the RH rear window motor, 10,000 ohms or greater between circuit 34-AJ23 (BU/OG) and ground (both connectors disconnected).

Heated Wiper Park Relay C1014



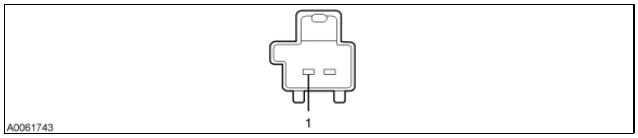
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
30	30-HB8 (RD/OG) voltage input to the heated wiper park relay	10 volts or greater at all times. 5 ohms or less between the heated wiper park relay and the AJB fuse 13 (30A) output cavity (AJB fuse 13 (30A) removed).
85	91S-HB7 (BN/RD) heated wiper park relay solenoid ground	10 volts or greater with the heated wiper park OFF, 0 volts with the heated wiper park ON. 5 ohms or less between the connectors.
86	30-HB8A (RD/OG) voltage input to the heated wiper park relay solenoid	10 volts or greater at all times. 5 ohms or less between the heated wiper park relay and the AJB fuse 13 (30A) output cavity (AJB fuse 13 (30A) removed).
87	30S-HB42 (RD/YE) voltage output from the heated wiper park relay to the grids	10 volts or greater with the key ON and the heated wiper park relay ON. 5 ohms or less between the heated wiper park relay and the heated wiper park grids (heated wiper park relay removed).

Heated Wiper Park C2272a



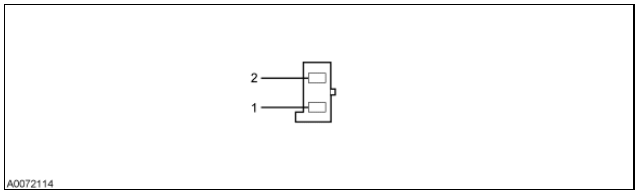
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	30S-HB42 (RD/YE) heated wiper park grids voltage feed	10 volts or greater with the heated wiper park ON (C2272a disconnected), 5 ohms or less between pin 87 of the heated wiper park relay and C2272a (heated wiper park relay removed).

Heated Wiper Park C2272b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	31-HB42 (BK/YE) heated wiper park grids ground	5 ohms or less to ground.

Heated Rear Window Capacitor C4220



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	15S-HB19A (GN/BU) voltage to heated rear window grid	10 volts or greater with the engine running and the heated rear window on. Less than 5 ohms between the relay and capacitor (both connectors disconnected).
2	15S-HB19 (GN/BU) voltage to heated rear window grid	10 volts or greater with the engine running and the heated rear window on. Less than 5 ohms between the capacitor and grid connector (both connectors disconnected).

Pinpoint Test A: All Power Windows Are Inoperative

Normal Operation

The LH front smart window motor receives voltage from the BJB through circuit 30-AJ80 (RD) while the RH front smart window motor receives voltage from the BJB through circuit 30-AJ71 (RD/YE). The DDM provides a delayed accessory voltage to both smart motors through circuits 10-AJ43B and 10-AJ43A (GY/VT). This is only used by the smart motors as input logic. The LH front window control switch receives voltage from the DDM on circuit 7-AJ7 (YE/RD) and ground on circuit 31-AJ7 (BK/BU). When either of the smart motors receives an input from their respective window control switches, they operate in the commanded direction. Voltage from the BJB at all times is necessary for the global open/close feature to operate. The rear window motors are not smart motors, so they receive voltage from the REM, as per the command from their respective window control switches to the REM. If the command originates from the LH front window control switch, the DDM will send a message over the SCP bus to the REM, which commands the correct window motor in the desired direction.

Possible Causes

- circuit 7-AJ7 (YE/RD) open
- circuit 31-AJ7 (BK/BU) open
- LH front window control switch
- DDM

PINPOINT TEST A: ALL POWER WINDOWS ARE INOPERATIVE

Test Step	Result / Action to Take
A1 CHECK CIRCUIT 7-AJ7 (YE/RD) FOR VOLTAGE	
• Key in OFF position. • Disconnect: LH Front Window Control Switch C504b. • Key in ON position. • Measure the voltage between the LH front window control switch C504b-1, circuit 7-AJ7 (YE/RD), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to A3 . **No** GO to A2 .
A2 CHECK CIRCUIT 7-AJ7 (YE/RD) FOR AN OPEN	
• Key in OFF position. • Disconnect: DDM C501d. • Measure the resistance between the LH front window control switch C504b-1, circuit 7-AJ7 (YE/RD), harness side and the DDM C501d-12, circuit 7-AJ7 (YE/RD), harness side  • **Is the resistance less than 5 ohms?**	**Yes** GO to A4 . **No** REPAIR the circuit. TEST the system for normal operation.
A3 CHECK CIRCUIT 31-AJ7 (BK/BU) FOR AN OPEN	
• Key in OFF position. • Disconnect: LH Front Window Control Switch C504a. • Measure the resistance between the LH front window control switch C504a-8, circuit 31-AJ7 (BK/BU), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new LH front window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
A4 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all the DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the DDM connectors and make sure they seat correctly.
• Operate the system and verify if the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 419-10 . REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test B: A Single Power Window Is Inoperative LH Front

Normal Operation

The LH front window smart motor receives voltage from the battery junction box (BJB) on circuit 30-AJ80 (RD) and ground from circuit 31-AJ80 (BK/OG). A delayed accessory input is sent from the driver door module (DDM) to the LH front window smart motor on circuit 10-AJ43B (GY/VT) so the LH front window smart motor microprocessor can determine whether or not to allow window motor operation. The LH front window control switch sends a command over circuits 7S-AJ41 (YE/BK), 8-AJ42 (WH/GN) or 7S-AJ40 (YE/GN) to the LH front smart window motor to initiate operation.

Possible Causes

- circuit 10-AJ43 (GY/VT) open or shorted to ground
- circuit 30-AJ80 (RD) open
- circuits 7S-AJ41 (YE/BK), 8-AJ42 (WH/GN) or 7S-AJ40 (YE/GN) open or shorted to ground
- circuit 31-AJ80 (BK/OG) open
- BJB
- LH front control switch
- LH front window motor
- DDM

PINPOINT TEST B: A SINGLE POWER WINDOW IS INOPERATIVE LH FRONT

Test Step	Result / Action to Take
B1 CHECK THE POWER TO THE WINDOW MOTOR	
NOTE: The LH front window motor is not on the multiplex link. **NOTE:** A new LH front window motor is in the proportional up/down mode until initialized. Refer to Door Window Motor Initialization in this section. **NOTE:** The LH front window motor must be initialized whenever the following occurs: the motor is removed from the window regulator, a new window motor is installed, a new window regulator is installed, a new window glass is installed, a new top run is installed and any operation in which grease or lubricants are applied to the window system. • Key in OFF position. • Disconnect: LH Front Window Motor C524. • Measure the voltage between the LH front window motor C524-7, circuit 30-AJ80 (RD), harness side and ground.	**Yes** GO to B2 . **No** REPAIR the circuit. INITIALIZE the LH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.

 A0061052 • **Is the voltage greater than 10 volts?**	
B2 CHECK THE LH FRONT WINDOW MOTOR DELAYED ACCESSORY POWER	
• Key in ON position. • Measure the voltage between the LH front window motor C524-2, circuit 10-AJ43B (GY/VT), harness side and ground.  A0061053 • **Is the voltage greater than 10 volts?**	**Yes** GO to B3 . **No** REPAIR the circuit. INITIALIZE the LH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.
B3 CHECK THE LH FRONT WINDOW MOTOR GROUND	
• Key in OFF position. • Measure the resistance between the LH front window motor C524-8, circuit 31-AJ80 (BK/OG), harness side and ground.  A0061054 • **Is the resistance less than 5 ohms?**	**Yes** GO to B4 . **No** REPAIR the circuit. INITIALIZE the LH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.
B4 CHECK CIRCUITS 7S-AJ41 (YE/BK), 8-AJ42 (WH/GN) AND 7S-AJ40 (YE/GN) FOR AN OPEN	
• Disconnect: LH Front Window Control Switch C504a, C504b. • Measure the resistance between the LH front window control switch C504a-5, circuit 7S-AJ40 (YE/GN), harness side and the LH front window motor C524-4, circuit 7S-AJ40 (YE/GN), harness side; and between LH front window control switch C504a-11, circuit 8-AJ42 (WH/GN), harness side and the LH front window motor C524-1, circuit 8-AJ42 (WH/GN), harness side; and between the LH front window control switch C504b-5, circuit 7S-AJ41 (YE/BK), harness side and the LH front window motor C524-3, circuit 7S-AJ41 (YE/BK), harness side.	**Yes** GO to B5 . **No** REPAIR the circuit(s) as necessary. INITIALIZE the LH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.

 • **Are the resistances less than 5 ohms?**	
B5 CHECK THE LH FRONT WINDOW CONTROL SWITCH	
• Carry out the window control switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Does the LH front window control switch pass the component test?**	**Yes** INSTALL a new LH front window motor. REFER to Front Door Window Regulator and Motor in this section. INITIALIZE the LH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation. **No** INSTALL a new LH front window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation.

Pinpoint Test C: A Single Power Window Is Inoperative RH Front

Normal Operation

The RH front window smart motor receives voltage from the BJB on circuit 30-AJ71 (RD/YE) and ground from circuit 31-AJ71 (BK/YE). A delayed accessory input is sent from the DDM to the RH front smart motor on circuit 10-AJ43A (GY/VT) so the RH front smart window motor microprocessor can determine whether or not to allow window motor operation. The RH front window control switch sends a command over circuits 7S-AJ47A (YE/BK), 8-AJ56A (WH/GN) or 7S-AJ48A (YE/VT) to the RH front smart window motor to initiate operation.

Possible Causes

- circuit 30-AJ71 (RD/YE) open
- circuits 7S-AJ47A (YE/BK), 8-AJ56A (WH/GN) or 7S-AJ48A (YE/VT) open or shorted to ground
- circuit 31-AJ71 (BK/YE) open
- BJB
- LH front window control switch
- RH front window control switch
- LH front window motor
- DDM

PINPOINT TEST C: A SINGLE POWER WINDOW IS INOPERATIVE RH FRONT

Test Step	Result / Action to Take
C1 CHECK THE VOLTAGE TO THE WINDOW MOTOR	
NOTE: The RH front window motor is not on the multiplex link. **NOTE:** A new RH front window motor is in the proportional up/down mode until initialized. Refer to Door Window Motor Initialization in this section. **NOTE:** The RH front window motor must be initialized whenever the following occurs: the motor is removed from the window regulator, a new window motor is installed, a new window regulator is installed, a new window glass is installed, a new top run is installed and any operation in which grease or lubricants are applied to the window system. • Key in OFF position. • Disconnect: RH Front Window Motor C608. • Measure the voltage between the RH front window motor C608-7, circuit 30-AJ71 (RD/YE), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to C2 . **No** REPAIR the circuit. INITIALIZE the RH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.
C2 CHECK THE RH FRONT WINDOW MOTOR DELAYED ACCESSORY VOLTAGE	
• Key in ON position. • Measure the voltage between the RH front window motor C608-2, circuit 10-AJ43A (GY/VT), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to C3 . **No** REPAIR the circuit. INITIALIZE the RH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.
C3 CHECK THE RH FRONT WINDOW MOTOR GROUND	
• Key in OFF position. • Measure the resistance between the RH front window motor C608-8, circuit 31-AJ71 (BK/YE), harness side and ground.  	**Yes** GO to C4 . **No** REPAIR the circuit. INITIALIZE the RH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.

• **Is the resistance less than 5 ohms?**	
C4 CHECK THE RH FRONT WINDOW MOTOR	
• Key in OFF position. • Disconnect: RH Front Window Control Switch C604. • Key in ON position. • Connect a fused (5A) jumper wire between the RH front window control switch C604-1, circuit 7S-AJ47B (YE/BK), harness side and the RH front window control switch C604-5, circuit 7-AJ18 (YE/VT), harness side. The window should operate in the UP direction.  A0068542 • Connect a fused (5A) jumper wire between the RH front window control switch C604-6, circuit 7S-AJ48B (YE/VT), harness side and the RH front window control switch C604-5, circuit 7-AJ18 (YE/VT), harness side. The window should operate in the DOWN direction.  A0068543 • **Does the window operate correctly?**	**Yes** INSTALL a new RH front window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** GO to C5 .
C5 CHECK CIRCUITS 7S-AJ47B (YE/BK), 8-AJ56B (WH/GN) AND 7S-AJ48B (YE/VT) FOR AN OPEN	
• Key in OFF position. • Disconnect: RH Front Window Motor C608. • Measure the resistance between the RH front window control switch C604-1, circuit 7S-AJ47B (YE/BK), harness side and the RH front window motor C608-3, circuit 7S-AJ47A (YE/BK), harness side; and between the RH front window control switch C604-4, circuit 8-AJ56B (WH/GN), harness side and the RH front window motor C608-1, circuit 8-AJ56 (WH/GN), harness side; and between the RH front window control switch C604-6, circuit 7S-AJ48B (YE/VT), harness side and the RH front window motor C608-4, circuit 7S-AJ48A (YE/VT), harness side.  A0061058 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new RH front window motor. REFER to Front Door Window Glass in this section. INITIALIZE the RH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation. **No** REPAIR the circuit(s) as necessary. INITIALIZE the RH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test D: A Single Power Window Is Inoperative LH Rear or RH Rear

Normal Operation

The LH rear and RH rear window control switches receive a voltage input from the REM on circuit 7-AJ14A (YE/BU) (LH rear) and circuit 7-AJ24 (YE) (RH rear). The LH rear window control switch sends a passenger input command to the REM over circuits 8-AJ14 (WH/BU) (UP) and 10-AJ14 (GY/VT) (DOWN) while the RH rear window control switch sends a passenger input command to the REM over circuits 8-AJ24 (WH) (UP) and 10-AJ24 (GY) (DOWN). The REM appropriately applies voltage and ground over the LH rear window motor circuits 35-AJ13 (VT/BU) and 34-AJ13 (BU/RD) and over the RH rear window motor circuits 35-AJ23 (VT/WH) and 34-AJ23 (BU/OG) in order to operate the correct window motor in the commanded direction. These window motors are not smart motors and therefore have only proportional up/down operation with no one-touch feature.

Possible Causes

- circuits 7-AJ14 (YE/BU), 7-AJ24 (YE), 8-AJ14A (WH/BU), 8-AJ24 (WH), 10-AJ14A (GY/VT), 10-AJ24 (GY), 31-DK30 (BK/OG), 34-AJ13 (BU/RD), 34-AJ23 (BU/OG), 35-AJ13 (VT/BU) or 35-AJ23 (VT/WH) open
- LH rear or RH rear window control switch
- LH rear or RH rear window motor
- REM

PINPOINT TEST D: A SINGLE POWER WINDOW IS INOPERATIVE LH REAR OR RH REAR

Test Step	Result / Action to Take
D1 CHECK THE VOLTAGE TO THE LR OR RR WINDOW CONTROL SWITCH	
• Key in OFF position. • Disconnect: Inoperative Rear Window Control Switch C701/C801. • Key in ON position. • **NOTE:** Make certain the window lock-out switch is in the UNLOCK position. • Measure the voltage between the inoperative rear window control switch C701-3, circuit 7-AJ14 (YE/BU) (LH rear), harness side and ground or C801-3, circuit 7-AJ24 (YE) (RH rear), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to D2 . **No** REPAIR the circuit. TEST the system for normal operation.
D2 CHECK THE GROUNDS TO THE REM	

• Key in OFF position. • Disconnect: REM C420f, C420g. • Measure the resistance between the REM C420f-3, circuit 31-DK30 (BK/OG), harness side and ground; and between the REM C420g-2, circuit 31-DK30 (BK/OG), harness side and ground.  A0061730 • **Are the resistances less than 5 ohms?**	**Yes** GO to D3 . **No** REPAIR the circuit(s) as necessary. TEST the system for normal operation.
D3 CHECK CIRCUITS 8-AJ14A (WH/BU), 10-AJ14A (GY/VT), 8-AJ24 (WH) AND 10-AJ24 (GY) FOR AN OPEN	
• Disconnect: REM C420c, C420d. • **NOTE:** If the LH rear window motor is inoperative, follow Step 2. If the RH rear window motor is inoperative, follow Step 3. • If the LH rear window motor is inoperative, measure the resistance between the LH rear window control switch C701-5, circuit 8-AJ14A (WH/BU), harness side and the REM C420c-24, circuit 8-AJ14A (WH/BU), harness side; and between the LH rear window control switch C701-2, circuit 10-AJ14 (GY/VT), harness side and the REM C420c-22, circuit 10-AJ14A (GY/VT), harness side.  A0061731 • If the RH rear window motor is inoperative, measure the resistance between the RH rear window control switch C801-5, circuit 8-AJ24 (WH), harness side and the REM C420d-7, circuit 8-AJ24 (WH), harness side and between the RH rear window control switch C801-2, circuit 10-AJ24 (GY), harness side and the REM C420d-20, circuit 10-AJ24 (GY), harness side.  A0061732 • **Are the resistances less than 5 ohms?**	**Yes** GO to D4 . **No** REPAIR the circuit(s) as necessary. TEST the system for normal operation.
D4 CHECK THE INOPERATIVE WINDOW CONTROL SWITCH	
• Connect: REM C420c, C420d, C420f, C420g. • Key in ON position. • Connect a fused (5A) jumper wire between the inoperative window control switch C701/C801-3, circuit 7-AJ14 (YE/BU) (LH rear), harness side or circuit 7-AJ24 (YE) (RH rear), harness side and C701/C801-5,	**Yes** INSTALL a new rear window control switch. REFER to Window Control Switch in this section.

circuit 8-AJ14 (WH/BU) (LH rear), harness side or circuit 8-AJ24 (WH) (RH rear), harness side. The window motor should operate in the UP direction.  A0061733 • Connect a fused (5A) jumper wire between the inoperative window control switch C701/C801-3, circuit 7-AJ14 (YE/BU) (LH rear), harness side or circuit 7-AJ24 (YE) (RH rear), harness side and C701/C801-2, circuit 10-AJ14 (GY/VT) (LH rear), harness side or circuit 10-AJ24 (GY) (RH rear), harness side. The window motor should operate in the DOWN direction.  A0061734 • **Does the window operate correctly?**	TEST the system for normal operation. **No** GO to D5 .
D5 CHECK THE INOPERATIVE WINDOW MOTOR CIRCUITS	
• Key in OFF position. • Disconnect: REM C420f, C420g. • Disconnect: Inoperative Window Motor C703/C803. • **NOTE:** If the LH rear window motor is inoperative, follow Step 4. If the RH rear window motor is inoperative, follow Step 5. • Measure the resistance between the LH rear window motor C703-1, circuit 35-AJ13A (VT/BU), harness side and the REM C420f-1, circuit 35-AJ13 (VT/BU), harness side; and between C703-2, circuit 34-AJ13A (BU/RD), harness side and the REM C420f-2, circuit 34-AJ13 (BU/RD), harness side.  A0061735 • Measure the resistance between the RH rear window motor C803-1, circuit 35-AJ23 (VT/WH), harness side and the REM C420g-3, circuit 35-AJ23 (VT/WH), harness side; and between C803-2, circuit 34-AJ23 (BU/OG), harness side and the REM C420g-1, circuit 34-AJ23 (BU/OG), harness side.	**Yes** INSTALL a new window motor. REFER to Rear Door Window Glass in this section. **No** REPAIR the circuit(s) as necessary. TEST the system for normal operation.

 • **Are the resistances less than 5 ohms?**	

Pinpoint Test E: The One-Touch Up/Down Feature Is Inoperative

Normal Operation

NOTE: Excessive bounce-back (bounce-back that occurs with no obstructions present) may indicate a non-initialized window motor.

NOTE: The front window motors must be initialized whenever the following occurs: the motor is removed from the window regulator, a new motor is installed, a new window regulator is installed, a new window glass is installed, a glass top run removal and installation and when carrying out any operation in which grease or lubricants are applied to the window system. A new front window motor is in a proportional up/down mode until initialized.

NOTE: If this procedure is only partially completed, the front window motor remains non-initialized and only the proportional up/down functions operate. A non-initialized window motor may allow one-touch down operation, but does NOT allow one-touch up operation.

If the front window control switch is pressed (key ON) to the second detent, one-touch operation occurs in the commanded direction when voltage is sent from the front window control switch to the front window motor over circuit 8-AJ42 (WH/GN) (LF) or circuit 8-AJ56 (WH/GN) (RF).

Possible Causes

- loss of B+ voltage (30-AJ80 {RD} {LH front}, 30-AJ71 {RD/YE} {RH front}) to the smart window motor
- new smart window motor that has not been initialized
- new components that may affect the window travel
- window motor
- front window control switch

PINPOINT TEST E: THE ONE-TOUCH UP/DOWN FEATURE IS INOPERATIVE

Test Step	Result / Action to Take
E1 CHECK FOR POWER (B+) LOSS DURING FRONT WINDOW OPERATION	
NOTE: If window motor has one-touch-down operation with no one-touch-up operation and has been initialized, the smart window motor needs to be replaced and initialized. **NOTE:** The smart window motors are not on the multiplex link. **NOTE:** A new smart window motor is in proportional up/down mode until initialized. Refer to Door Window Motor Initialization in this section. **NOTE:** The smart window motor must be initialized whenever the following occurs: the motor has been removed, a new motor is installed, a new window regulator is installed, a new window glass is installed, a new top run is installed and when	**Yes** RAISE the front window to the fully closed position. MAKE SURE the window glass stalls into the upper header seal. Normal functionality should resume. TEST the

carrying out any operation in which grease or lubricants are applied to the window system. • Verify if power (B+) (circuit 30-AJ80 {RD} {LH front}, circuit 30-AJ71 {RD/YE} (RH front}) is lost during front window operation. • **Is power (B+) lost during front window operation?**	system for normal operation. **No** GO to E2 .
E2 INITIALIZE THE FRONT WINDOW MOTOR	
• Key in ON position. • Carry out the front window motor initialization procedure. Refer to Door Window Motor Initialization in this section. • **Are the one-touch up/down functions operating correctly?**	**Yes** The repair is complete. TEST the system for normal operation. **No** GO to E3 .
E3 CHECK THE FRONT WINDOW CONTROL SWITCH	
• Key in OFF position. • Disconnect: Front Window Control Switch. • Carry out the front window switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Does the front window control switch pass the component test?**	**Yes** GO to E4 . **No** INSTALL a new front window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation.
E4 CHECK THE FRONT WINDOW SWITCH TO FRONT WINDOW MOTOR CIRCUITS	
• Disconnect: Front Window Motor C524/C608. • For the LH front window motor, measure the resistance between the LH front window motor C524-3, circuit 7S-AJ41 (YE/BK), harness side and the LH front window control switch C504b-5, circuit 7S-AJ41 (YE/BK), harness side; and between the LH front window motor C524-1, circuit 8-AJ42 (WH/GN), harness side and the LH front window control switch C504a-11, circuit 8-AJ42 (WH/GN), harness side; and between the LH front window motor C524-4, circuit 7S-AJ40 (YE/GN), harness side and the LH front window control switch C504a-5, circuit 7S-AJ40 (YE/GN), harness side.  • For the RH front window motor, measure the resistance between the RH front window motor C608-3, circuit 7S-AJ47A (YE/BK), harness side and the LH front window control switch C504a-3, circuit 7S-AJ47 (YE/BK), harness side; and between the RH front window motor C608-1, circuit 8-AJ56 (WH/GN), harness side and the LH front window control switch C504a-2, circuit 8-AJ56 (WH/GN), harness side; and between the RH front window motor C608-4, circuit 7S-AJ48A (YE/VT), harness side and the LH front window control switch C504a-9,	**Yes** INSTALL a new front window motor. REFER to Front Door Window Regulator and Motor in this section. INITIALIZE the window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation. **No** REPAIR the circuit(s) as necessary. INITIALIZE the front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.

circuit 7S-AJ48 (YE/VT), harness side.  • **Are the resistances less than 5 ohms?**	

Pinpoint Test F: The Global Open/Close Feature Does Not Operate Correctly

Normal Operation

The LH and RH front window motors are energized by voltage on circuits 30-AJ80 (RD) and 31-AJ71 (RD/YE). The LH and RH front window motors are grounded through circuits 31-AJ80 (BK/OG) and 31-AJ71 (BK/YE). When the global open/close feature is activated the DDM sends a signal via circuit 8-AJ43 (GY/VT) to the LH and RH front window motors. The global open/close feature does not function when the delayed accessory is active. The roof opening panel performs global open/close with the windows (if equipped). A failure in the central locking system could cause the global open/close feature to be inoperative.

Possible Causes

- circuit 8-AJ43 (WH/BU) open
- circuit 8-AJ43A (WH/BU) open
- circuit 8-AJ43B (WH/BU) open
- DDM
- driver door lock cylinder switch

PINPOINT TEST F: THE GLOBAL OPEN/CLOSE FEATURE DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
F1 VERIFY ALL POWER DOOR LOCKS ARE OPERATIONAL	
• Operate all of the door locks with the door key. • **Do all of the door locks operate with the door key?**	**Yes** GO to F2 . **No** REFER to Section 501-14 to diagnose the symptom all door locks are inoperative from the driver door lock cylinder.
F2 CHECK CIRCUITS 8-AJ43 (WH/BU), 8-AJ43A (WH/BU) AND 8-AJ43B (WH/BU) FOR AN OPEN	
• Disconnect: LH Front Window Motor C524. • Disconnect: RH Front Window Motor C608. • Disconnect: DDM C501d. • Measure the resistance between the LH front window motor C524-6, circuit 8-AJ43B (WH/BU), harness side and the DDM C501d-26, circuit 8-AJ43 (WH/BU), harness side; and between the RH front window motor C608-6, circuit 8-AJ43A (WH/BU),	**Yes** INSTALL a new DDM. REFER to Section 419-10 . TEST the system for normal operation. **No** REPAIR the circuit. TEST

harness side and the DDM C501d-26, circuit 8-AJ43 (WH/BU), harness side.  • **Is the resistance less than 5 ohms on all circuits?**	the system for normal operation.

Pinpoint Test G: The Defrost System Is Inoperative

Normal Operation

The heated rear window operates only when the engine is running. The heated rear window relay coil is grounded by the REM when the module receives a SCP bus signal from the DATC module to turn on the heated rear window. The heated rear window relay has battery voltage to it at all times on circuits 30-HB23A (RD/WH) and 30-HB23B (RD/WH). When the REM grounds the relay coil and closes the relay, it supplies voltage to the heated rear window over circuit 15S-DA13 (GN/YE) to circuit 15S-HB19A (GN/BU) through the heated rear window capacitor jumper circuit, then to circuit 15S-HB19 (GN/BU).

Possible Causes

- circuit 15S-DA13 (GN/YE), 15S-HB19 (GN/BU) open
- heated rear window relay
- BJB
- DATC module
- REM
- heated rear window capacitor jumper circuit

PINPOINT TEST G: THE DEFROST SYSTEM IS INOPERATIVE

Test Step	Result / Action to Take
G1 CHECK THE REM DTCS	
• Retrieve the recorded results from the REM self-test. • **Are any REM DTCs recorded?**	**Yes** REFER to the Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index. **No** GO to G2 .
G2 CHECK THE REM OUTPUT	
• Connect the diagnostic tool. • Key in ON position. • Trigger the REM active command R DEF RLY to ON then OFF while listening for the heated rear window relay to click. • **Does the heated rear window relay click when activated ON and OFF?**	**Yes** GO to G3 . **No** GO to G6 .
G3 CHECK THE HEATED REAR WINDOW POWER	

• Key in OFF position. • Disconnect: Heated Rear Window C402a. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Trigger the REM active command R DEF RLY to ON. • Measure the voltage between the heated rear window C402a, circuit 15S-HB19 (GN/BU), harness side and ground.  A0003178 • **Is the voltage greater than 10 volts?**	**Yes** GO to G4 . **No** GO to G10 .
G4 CHECK THE HEATED REAR WINDOW GROUND	
• Key in OFF position. • Disconnect: Heated Rear Window Ground C402b. • Measure the resistance between the heated rear window ground C402b-1, circuit 31-HB19 (BK/BU), harness side and ground.  A0003179 • **Is the resistance less than 5 ohms?**	**Yes** GO to G5 . **No** REPAIR the circuit. TEST the system for normal operation.
G5 CHECK THE HEATED REAR WINDOW GRID	
• Carry out the grid wire component test. Refer to Component Tests in this section. • **Does the heated rear window grid pass the component test?**	**Yes** INSTALL a new DATC module. REFER to Section 412-04 . REPEAT the self-test. If the heated rear window is still inoperative, INSTALL a new REM, REFER to Section 419-10 . REPEAT the self-test. TEST the system for normal operation. **No** REPAIR the heated rear window grid. REFER to Lead Terminal Repair in this section. TEST the system for normal operation.
G6 CHECK THE VOLTAGE SUPPLY TO THE HEATED REAR WINDOW RELAY	

• Key in OFF position. • Disconnect: Heated Rear Window Relay C443. • Key in ON position. • Measure the voltage between the heated rear window relay C443-86, circuit 30-HB23A (RD/WH), harness side and ground; and between the heated rear window relay C443-30, circuit 30-HB23B (RD/WH), harness side and ground.  A0062373 • **Are the voltages greater than 10 volts?**	**Yes** GO to G7 . **No** GO to G9 .
G7 CHECK THE HEATED REAR WINDOW RELAY	
• Check the heated rear window relay. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Does the heated rear window relay pass the component test?**	**Yes** GO to G8 . **No** INSTALL a new heated rear window relay. TEST the system for normal operation.
G8 CHECK CIRCUIT 91S-HB23 (BN/WH) FOR AN OPEN	
• Key in OFF position. • Disconnect: REM C420b. • Measure the resistance between the REM C420b-7, circuit 91S-HB23 (BN/WH), harness side and the heated rear window relay C443-85, circuit 91S-HB23 (BN/WH), harness side.	**Yes** INSTALL a new DATC module. REFER to Section 412-04 . REPEAT the self-test. If the heated rear window is still inoperative, INSTALL a new REM. REFER to Section 419-10 . REPEAT the self-test. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

 A0003177 • **Is the resistance less than 5 ohms?**	
G9 CHECK CIRCUIT 30-HB23 (RD/WH) FOR AN OPEN	
• Key in OFF position. • Disconnect: BJB Fuse 29 (30A). • Measure the voltage between the BJB fuse 29 (30A) input cavity and ground.  A0005750 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR circuit 30-HB23 (RD/WH). TEST the system for normal operation. **No** REPAIR the BJB input circuit. TEST the system for normal operation.
G10 CHECK CIRCUIT 15S-HB19 (GN/BU) FOR AN OPEN	
• Key in OFF position. • Disconnect: Heated Rear Window Relay C443. • Measure the resistance between the heated rear window C402a-1, circuit 15S-HB19 (GN/BU) harness side and the heated rear window relay C443-87, circuit 15S-DA13 (GN/YE), harness side.	**Yes** GO to G11 . **No** REPAIR the circuit. TEST the system for normal operation.

 A0003180 • **Is the resistance less than 5 ohms?**	
G11 CHECK THE HEATED REAR WINDOW RELAY	
• Check the heated rear window relay. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Does the heated rear window relay pass the component test?**	**Yes** REPAIR circuit 30-HB23 (RD/WH). TEST the system for normal operation. **No** INSTALL a new heated rear window relay. TEST the system for normal operation.

Pinpoint Test H: The Defrost System Does Not Shut Off Automatically

Normal Operation

The heated rear window relay coil stays grounded by the REM for approximately 10 minutes, after which the REM removes the ground to circuit 91S-HB23 (BN/WH), thereby opening the heated rear window relay. This disconnects the voltage from circuits 15S-DA13 (GN/YE)/15S-HB19 (GN/BU), which powers the heated rear window.

Possible Causes

- circuit 91S-HB23 (BN/WH) short to ground
- circuits 15S-DA13 (GN/YE), 15S-HB19 (GN/BU) short to voltage
- heated rear window relay
- REM
- DATC module

PINPOINT TEST H: THE DEFROST SYSTEM DOES NOT SHUT OFF AUTOMATICALLY

Test Step	Result / Action to Take
H1 CHECK THE REM DTCS	
• Retrieve the recorded results from the REM self-test. • **Are any REM DTCs recorded?**	**Yes** REFER to the Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index. **No** GO to H2 .
H2 CHECK FOR A STICKING HEATED REAR WINDOW RELAY	

• Key in OFF position. • Disconnect: Heated Rear Window Relay C443. • Key in ON position. • **Is the heated rear window off?**	**Yes** GO to H3 . **No** GO to H5 .
H3 CHECK THE HEATED REAR WINDOW RELAY	
• Key in OFF position. • Check the heated rear window relay. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Does the heated rear window relay pass the component test?**	**Yes** GO to H4 . **No** INSTALL a new heated rear window relay. TEST the system for normal operation.
H4 CHECK CIRCUIT 91S-HB23 (BN/WH) FOR A SHORT TO GROUND	
• Disconnect: REM C420b. • Measure the resistance between the REM C420b-7, circuit 91S-HB23 (BN/WH), harness side and ground.  A0003181 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new REM. REFER to Section 419-10 . TEST the system for normal operation. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.
H5 CHECK CIRCUITS 15S-DC1 (GN/YE), 29S-HB1 (OG/YE) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: BJB Fuse 9 (5A). • Key in ON position. • Measure the voltage between the BJB fuse 9 (5A) input cavity, circuit 15S-DC1 (GN/YE) and ground; and between the BJB fuse 9 (5A) output cavity, circuit 29S-HB1 (OG/YE) and ground.  A0008334	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** REPAIR circuit 29S-HB1 (OG/YE). TEST the system for normal operation.

• **Does circuit 15S-DC1 (GN/YE) have greater than 10 volts?**	

Pinpoint Test I: The Defrost System Is Inoperative Heated Wiper Park

Normal Operation

The heated wiper park relay is supplied voltage by the AJB fuse 13 (30A) through circuits 30-HB8 (RD/OG) and 30-HB8A (RD/OG). When the ambient temperature falls below 3°C (38°F), the DATC module grounds circuit 91S-HB7 (BN/RD), closing the heated wiper park relay. This allows voltage to flow through circuit 30S-HB42 (RD/YE) to the heated wiper park grids in the windshield.

Possible Causes

- circuits 30S-HB42 (RD/YE), 91S-HB7 (BN/RD), 30-HB8 (RD/OG), 30-HB8A (RD/OG), 31-HB42 (BK/YE) open
- heated wiper park relay
- DATC module
- heated wiper park grids

PINPOINT TEST I: THE DEFROST SYSTEM IS INOPERATIVE HEATED WIPER PARK

Test Step	Result / Action to Take
I1 CHECK THE VOLTAGE TO THE HEATED WIPER PARK RELAY	
• Key in OFF position. • Disconnect: Heated Wiper Park Relay C1014. • Measure the voltage between the heated wiper park relay C1014-86, circuit 30-HB8A (RD/OG), harness side and ground; and between the heated wiper park relay C1014-30, circuit 30-HB8 (RD/OG), harness side and ground.  A0005159 • **Are both voltages greater than 10 volts?**	**Yes** GO to I2 . **No** GO to I6 .
I2 CHECK THE SWITCHED GROUND FROM THE DATC MODULE	

• Key in ON position. • Turn on the climate control. • **NOTE:** The Heated wiper park remains on for 90 seconds. • Press the auto and defrost buttons simultaneously to turn on the heated wiper park. • Measure the voltage between the heated wiper park relay C1014-85, circuit 91S-HB7 (BK/BU), harness side and the heated wiper park relay C1014-86, circuit 30-HB8A (RD/OG), harness side.  • **Is the voltage greater than 10 volts?**	**Yes** GO to I3 . **No** GO to I7 .
I3 CHECK THE HEATED WIPER PARK RELAY OUTPUT	
• Key in OFF position. • Connect: Heated Wiper Park Relay C1014. • Disconnect: Heated Wiper Park C2272a. • Key in ON position. • Turn on the climate control. • **NOTE:** The Heated wiper park remains on for 90 seconds. • Press the auto and defrost buttons simultaneously to turn on the heated wiper park. • Measure the voltage between the heated wiper park C2272a-1, circuit 30S-HB42 (RD/YE), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to I5 . **No** GO to I4 .
I4 CHECK CIRCUIT 30S-HB42 (RD/YE) FOR AN OPEN	

• Key in OFF position. • Disconnect: Heated Wiper Park Relay C1014. • Measure the resistance between the heated wiper park relay C1014-87, circuit 30S-HB42 (RD/YE), harness side and the heated wiper park C2272a-1, circuit 30S-HB42 (RD/YE), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new heated wiper park relay. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
I5 CHECK THE HEATED WIPER PARK GROUND	
• Key in OFF position. • Disconnect: Heated Wiper Park C2272b. • Key in ON position. • Turn on the climate control. • **NOTE:** The Heated wiper park remains on for 90 seconds. • Press the auto and defrost buttons simultaneously to turn on the heated wiper park. • Measure the voltage between the heated wiper park C2272a-1, circuit 30S-HB42 (RD/YE), harness side and the heated wiper park C2272b-1, circuit 31-HB42 (BK/YE), harness side.  • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new windshield. REFER to Windshield Glass in this section. TEST the system for normal operation. **No** REPAIR circuit 31-HB42 (BK/YE). TEST the system for normal operation.
I6 CHECK THE UNDERHOOD AJB FOR VOLTAGE	
• Disconnect: Underhood AJB Fuse 13 (30A). • Measure the voltage between the underhood AJB fuse 13 (30A) input cavity, and ground.	**Yes** REPAIR circuit 30-HB8 (RD/OG). TEST the system for normal operation. **No** REPAIR the underhood AJB input circuit. TEST the system for normal operation.

 A0005753 • **Is the voltage greater than 10 volts?**	
I7 CHECK CIRCUIT 91S-HB7 (BN/RD) FOR AN OPEN	
• Key in OFF position. • Disconnect: DATC Module C228b. • Measure the resistance between the heated wiper park relay C1014-85, circuit 91S-HB7 (BN/RD), harness side and the DATC module C228b-20, circuit 91S-HB7 (BN/RD), harness side.  A0005158 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new DATC module. REFER to Section 412-04 . TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test J: The Defrost System Does Not Shut Off Automatically Heated Wiper Park

Normal Operation

The heated wiper park relay is supplied voltage by the AJB fuse 13 (30A) through circuit 30-HB8 (RD/OG). When the ambient temperature falls below 3°C (38°F), the module grounds circuit 91S-HB7 (BN/RD), closing the heated wiper park relay. This allows voltage to flow through circuit 30S-HB42 (RD/YE) to the heated wiper park grids in the windshield. It automatically switches off when the ambient temperature rises above 3°C (38°F).

Possible Causes

- circuit 91S-HB7 (BN/RD) short to ground
- circuit 30S-HB42 (RD/YE) short to voltage
- heated wiper park relay
- DATC module

Test Step	Result / Action to Take
J1 CHECK FOR A SHORTED CONTROL CIRCUIT	
• Key in OFF position. • Disconnect: Heated Wiper Park Relay C1014. • Measure the resistance between the heated wiper park relay C1014-85, circuit 91S-HB7 (BN/RD), harness side and ground.  A0005157 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to J3 . **No** GO to J2 .
J2 CHECK CIRCUIT 91S-HB7 (BN/RD) FOR A SHORT TO GROUND	
• Disconnect: DATC Module C228b. • Measure the resistance between the heated wiper park relay C1014-85, circuit 91S-HB7 (BN/RD), harness side and ground.  A0005157 • **Is the resistance greater 10,000 ohms?**	**Yes** INSTALL a new DATC module. REFER to Section 412-04 . TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
J3 CHECK CIRCUIT 30S-HB42 (RD/YE) FOR A SHORT TO BATTERY	

• Key in ON position. • Measure the voltage between the heated wiper park relay C1014-87, circuit 30S-HB42 (RD/YE), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** INSTALL a new heated wiper park relay. TEST the system for normal operation.

Component Test

Grid Wire Test

1. Using a bright lamp in the vehicle, inspect the wire grid from the exterior. A broken grid wire will appear as a brown spot.

2. Run the engine at idle. Set the rear window defrost switch to ON. The indicator light should come on.

3. Working in the vehicle with a voltmeter, contact the broad red-brown stripes of the rear glass window positive lead to battery side and the negative lead to ground side. The meter should read 10-13 volts. A lower voltage reading indicates a loose ground connection.

4. Contact a good ground point with the negative lead of the meter. The voltage reading should remain the same.

5. With the negative lead of the meter grounded, touch each grid line of the rear window defrost glass at its midpoint with the positive lead. A reading of approximately six volts indicates that the line is good. A reading of zero volts indicates that the line is broken between the midpoint and the B+ side of the grid line. A reading of 12 volts indicates that the circuit is broken between the midpoint of the grid line and ground.

Window Grid Wire Repair

Printable View (35 KB)

Material

Item	Specification
Ultra-Clear Spray Glass Cleaner ZC-23	ESR-M14P5-A
Acrylic Lacquer Touch-up Paint (match color to exterior grid wire)	ESR-M2P100-C
Rear Window Defroster Repair PM-11 (Canada CPM-11)	WSB-M4J58-B
Polypropylene Film Fine Line Tape (commercially available)	

NOTE: If the first layer of the heated rear window grid (brown) is damaged or missing, it is necessary to apply touch-up paint on the glass prior to applying the silver rear window defroster repair.

NOTE: The grid line material is not embedded into the glass but is baked to the glass surface and consequently can be scraped off. Inoperative lines may appear to the eye to be undamaged due to residue remaining on the glass and will require diagnosis with a voltmeter or 12V test lamp. For additional information, refer to Diagnosis and Testing in the section.

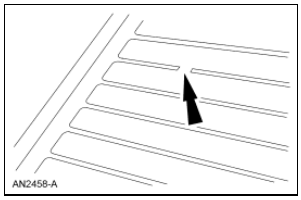
NOTE: An undamaged grid line will have small ridges that project above the surface of the glass and can easily be felt when running a fingernail across them. Grid lines that have been "razor bladed" will feel smooth when a fingernail is dragged across the affected area. There may be some residue left on the glass that appears to be grid material but a check with a voltmeter or 12V test lamp will confirm an open circuit.

NOTE: If the brown color under the grid line is damaged or missing (this is very rare), it will be necessary to apply acrylic lacquer touch-up paint for color match. This paint must meet specification ESR-M2P100-C and should be applied to the glass prior to applying the rear window defroster repair compound.

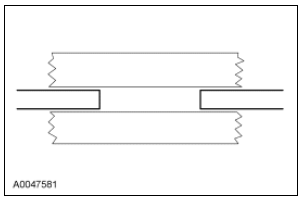
NOTE: The interior side of the grid lines are not painted, but due to the silver tarnishing will tend to change the grid to a gold or brown color. The repair area will be bright silver and will also tarnish over time to match the rest of the grid.

1. Bring the vehicle up to room temperature of at least 16°C (61°F) or above.
2. **NOTE:** Do not use scrapers, sharp instruments, or abrasive window cleaners on the interior surface of the rear window glass as this may cause damage to the grid lines.

   Clean the entire grid line repair area with window cleaner and 0000 steel wool to remove all dirt, wax, grease, oil or other foreign matter.
3. Mark the location of the grid break on the exterior of the rear window glass.



4. Using a polypropylene film fine line tape, mask the area directly above and below the grid break extending the tape 26 mm (1.02 in) beyond the concern area in both directions. The break area should be at the center of the mask.



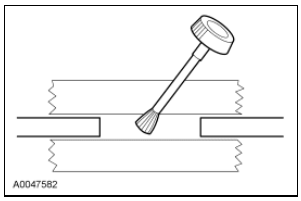
5. **NOTE:** If the brown layer is not broken or missing, apply only the silver grid repair compound to the break.

   NOTE: If both the brown and silver layers of the grid are broken or missing, apply a coating of the acrylic touch-up paint across the break in the grid line first. Do not overlap the silver grid line with the paint. Several applications may be necessary to achieve a color match.

   NOTE: Extend the silver repair coating at least 6.35 mm (0.25 inch) on both sides of the break area.

   NOTE: Allow at least 5 minutes of drying time between applications for the touch-up paint or the silver repair coating. Applying fewer coats or not allowing adequate drying time between coats will produce repaired resistance that is greater than OEM resistance, resulting in poor defrost performance and excessive localized heating.

   Apply the repair coating to the grid break area in several smooth, continuous strokes.
   Apply a minimum of 6 applications of the grid repair compound.



6. After 5 minutes, or after the repair area has dried completely, remove the mask.

7. ⚠ **CAUTION: Be careful not to damage the grid line with the razor blade. If this occurs, additional repair may be necessary.**

   Remove any excess repair compound above or below the grid line with a razor blade.

8. **NOTE:** The repair coating air-dries in approximately 1 minute and can be energized after 5 minutes.

   NOTE: Optimum adhesion occurs after approximately 24 hours.

   Test the system for normal operation.

Lead Terminal Repair

Printable View (20 KB)

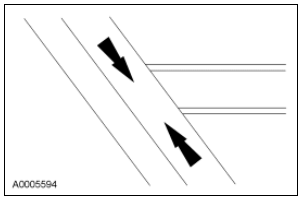
Material

Item	Specification
Terminal Kit - Back Glass 4F1Z-14421-AA	
Ultra-Clear Spray Glass Cleaner ZC-23	ESR-M14P5-A

1. **NOTE:** The rear window glass must be at least 16°C (61°F) (room temperature) at the time of the repair.

   NOTE: The new terminal will cover the original terminal location, but it must be placed so that the terminal conductive areas will be placed on a good conductive base.

   Clean the bus bar in the area to be repaired with steel wool (3/0 to 4/0 grade), and then with window cleaner to remove all dirt, wax, grease, oil or other foreign matter.



2. ⚠ **CAUTION: Do not use any type of flame torch or flame heated soldering gun for this procedure. Testing indicated inadequate heat generation at the tip and the exhaust heat can cause damage to plastic trim parts in the area. Use only an electric soldering gun with 100 watts or more of power. Before using the soldering gun, be sure to melt a small amount of rosin core solder to the tip. The solder will assist in achieving better heat transfer from the soldering gun tip to the new terminal.**

   NOTE: The new terminal has pre-applied solder, flux and temperature-sensitive paint. The paint provides a visual indication when the terminal has reached the correct temperature to melt solder on the terminal. When the correct temperature is achieved the temperature paint will liquefy and change color.

   NOTE: Depending on the original terminal location, and whether the terminal is covered by pillar trim, will determine where to locate the new terminal. Some grid line buss-bars may only allow the placement of the terminal above or below the original tab location due to space limitations. For most vehicle applications the replacement tab location will cover the original tab location but still allow the replacement tab to attach to the buss-bar on good conductive material.

   Place the replacement terminal type A over the original tab location, making sure the conductive areas of the terminal will be on a good conductive area. Do not place the terminal tab foot on the original location which does not have conductive material.

3. Hold the terminal in place with an item such as a regular lead pencil at a 90 degree angle from the terminal. (Holding at other than a 90 degree angle may allow the terminal to slip when the solder liquefies.)

4. Place the soldering gun tip on the top of the terminal but not on the painted areas of the tab. Energize the soldering gun and watch for the painted area of the terminal to liquefy and change color. The paint should liquefy in approximately 25-45 seconds after heating. As soon as the paint color completely changes on either side of the terminal, de-energize the soldering gun and continue to hold the terminal in place with the soldering gun and pencil for an additional 30 seconds.

5. Remove the soldering gun and pencil from the terminal. The terminal should be allowed to cool for another 2 minutes before the wiring lead is attached to the terminal.

6. Attach the electrical lead connection to this terminal, turn on the heated rear window, and verify the operation.

Door Window Motor Initialization

Printable View (10 KB)

⚠ CAUTION: Make sure no obstructions are present in the window system when carrying out this procedure.

NOTE: A battery disconnect will not require this procedure to be carried out.

NOTE: Excessive bounce-back (bounce-back that occurs with no obstructions present) may indicate a non-initialized window motor.

NOTE: The front window motors must be initialized whenever: the motor is removed from the window regulator, a new motor is installed, a new window regulator is installed, a new window glass is installed, a glass top run removal and installation and when carrying out any operation in which grease or lubricants are applied to the window system. A new front window motor will be in a proportional up/down mode until initialized.

NOTE: All front window components (window glass, window regulator, window motor and glass top run) must be installed and tightened to specification before carrying out this procedure.

NOTE: If this procedure is only partially completed, the front window motor will remain non-initialized and only the proportional up/down functions will operate. A non-initialized window motor may allow one-touch down operation, but will NOT allow one-touch up operation.

NOTE: If the one touch up does not function after three attempts using the window control switch initialization method, especially if false bounce back occurs, perform the Door Window Motor Initialization using the diagnostic tool.

Using the window control switch

⚠ CAUTION: Make sure there are no obstructions present in the window system when carrying out this procedure.

1. Press and hold the window control switch in the UP position at the second detent until the window glass stalls into the glass top run. Once the top run is reached, hold the window control switch in the UP position at the second detent for an additional 2 seconds.

2. Test for correct window operation by performing the one touch down and the one touch up features.

Using the diagnostic tool

⚠ CAUTION: Make sure there are no obstructions present in the window system whem carrying out this procedure.

⚠ CAUTION: Bounce back is disabled during this procedure.

NOTE: This procedure will terminate without initialization if a corresponding window switch is pressed before stall is reached.

3. Carry out the window calibration self-test using the diagnostic tool.

4. After stalling into the header seals, the front windows will move to the full open position.

5. Test for correct window operation by attempting the one touch down and the one touch up features.

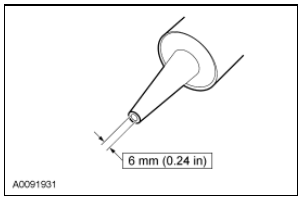
Windshield Reseal

Printable View (18 KB)

Material

Item	Specification
Urethane Adhesive Essex 400-HV	WSB-M2G316-B

1. Remove the cowl grille panel. For additional information, refer to Section 501-02 .
2. Remove the 2 windshield mouldings. For additional information, refer to Windshield Moulding in this section.
3. Remove the screws and the 2 sun visors.
4. Remove the screws and the 2 sun visor clips.
5. Remove the 2 A-pillar trim panels.
6. Position the 2 front door weatherstrip aside.
7. If equipped, remove the 2 front passenger assist handles.
8. Partially lower the front portion of the headliner and block with a suitable material.
9. Clean the interior and exterior of the windshield glass surface with non-alcohol based glass cleaner.
10. Cut the urethane adhesive applicator tip to specification.



11. **NOTE:** Use either a high-ratio, electric or battery-operated caulk gun that will apply the urethane with less effort and continuous bead.

    NOTE: Make sure that all gaps in the urethane adhesive are smoothed into one continuous bead.

    Apply urethane adhesive over top of the existing urethane adhesive.

    - Apply the urethane to the top and sides of the windshield from the interior of the vehicle.
    - Apply the urethane to the bottom of the windshield from the exterior of the vehicle.

12. **NOTE:** The urethane adhesive must cure for a minimum of 1 hour before testing for air or water leaks.

After the urethane has cured, check the windshield seal for air or water leaks through the urethane bead and add urethane adhesive as necessary.

13. Position the headline.

14. If equipped, install the 2 front passenger assist handles.

15. Install the 2 front door weatherstrips.

16. Install the 2 A-pillar trim panels.

17. Install the 2 sun visor clips and screws.

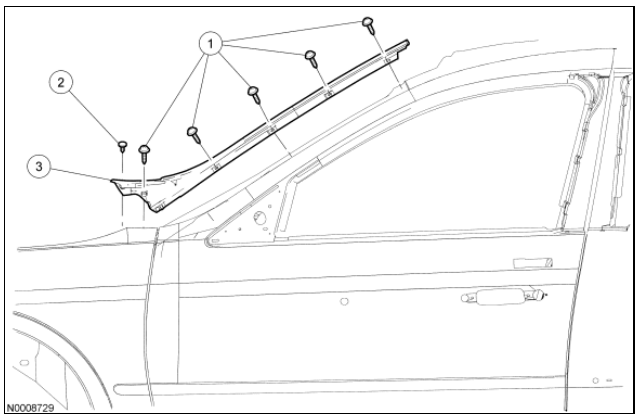
18. Position the 2 sun visors and install the screws.
    - Connect the electrical connectors.

19. Install the 2 windshield mouldings. For additional information, refer to Windshield Moulding in this section.

20. Install the cowl panel grille. For additional information, refer to Section 501-02 .

Windshield Moulding

Printable View (72 KB)



Item	Part Number	Description
1		Windshield moulding screws (5 required)
2		Windshield moulding pin-type retainer
3		Windshield moulding

Removal and Installation

NOTE: The LH side is shown, the RH side is similar.

1. Remove the 5 windshield moulding screws.
2. Remove the pin-type retainer and the windshield moulding.
3. To install, reverse the removal procedure.

Windshield Glass

Printable View (88 KB)

Special Tool(s)

ST1320-A	Interior Auto Glass Cut-Out Knife Kit (electric) 164-R2450 or equivalent
ST2579-A	Interior Auto Glass Cut-Out Knife Kit (Air Powered) 164-R2451 or equivalent
ST2085-A	The Pumper 164-R2459 or equivalent

Material

Item	Specification
Urethane Metal Primer Essex U-413	WSB-M2G234-C
Urethane Glass Prep Essex U-401	WSB-M5B280-C
Urethane Glass Primer Essex U-402	WSB-M2G314-B
Urethane Adhesive Essex 400-HV	WSB-M2G316-B

Removal

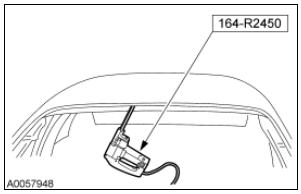
1. Remove the cowl panel grille. For additional information, refer to Section 501-02 .
2. Remove the windshield moulding. For additional information, refer to Windshield Moulding in this section.
3. Remove the interior rear view mirror. For additional information, refer to Section 501-09 .
4. If equipped, remove the rain sensor module.
5. Remove the 2 A-pillar trim panels.
6. Disconnect the windshield electrical connectors.
7. Lower the front portion of the headliner.
8. Using a soft brush or vacuum, remove dirt and foreign material from the pinch weld.
9. ⚠ **CAUTION: Cover the instrument panel in order to prevent possible damage.**

   ⚠ **CAUTION: Care must be used to avoid scratching the pinch weld.**

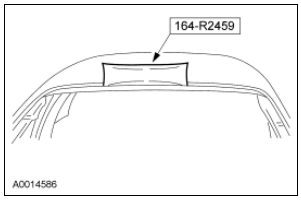
NOTE: Lubricate the existing urethane adhesive with water to aid the special tool while cutting

NOTE: When cutting foam inside, first cut the foam dam to access the urethane adhesive

Using the special tool, starting at the top center of the windshield glass, cut the urethane adhesive away from the glass and work down the sides.



10. Using the special tool, distance the windshield from the body.



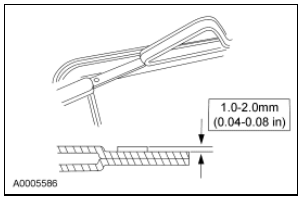
11. Remove the dual lock windshield glass stops from the sheet metal frame.
12. Using the special tool, cut the remaining urethane adhesive and remove the windshield.
13. Using a soft brush or vacuum, remove dirt and foreign material from the pinch weld.

Installation

⚠ **CAUTION: After installing the new windshield glass, the vehicle should not be driven until the urethane adhesive has cured. The curing time at temperatures above 13°C (55°F) and relative humidity above 50% is 12-24 hours. (Refer to the drive away chart for the cure times as the temperatures and humidity vary). Inadequate curing of the urethane adhesive may adversely affect the strength of the urethane adhesive bond.**

1. Dry fit the new windshield glass to the existing urethane bed on the body pinch weld. Align the windshield in the opening for uniform fit and adjust the setting blocks as needed for the best fit.
2. Use tape or non-permanent marking pencil to make alignment marks on the windshield glass (preferably at the setting blocks), and the body to aid in the installation alignment of the new windshield.
3. After alignment, remove the windshield glass and moulding from the vehicle and place them on a stable work surface.
4. ⚠ **CAUTION: Care must be taken to avoid scratching the pinch weld.**

   Trim the remaining urethane adhesive on the pinch weld. The urethane must be smooth and free of cuts and contamination after trimming. Avoid touching the urethane surface after preparation.



5. ⚠ **CAUTION: All rust found on the pinch weld must be removed and the pinch weld restored to OEM specifications. If surface rust is found, remove completely down to clean, bare metal. Prime the pinch weld metal with an original equipment manufacturer (OEM) recommended curing automotive paint primer and allow it to cure. If rust has penetrated through the pinch weld metal, repair the pinch weld sheet metal at a body shop before proceeding.**

   Check the pinch weld for damaged sheet metal, raised sheet metal at the spot welds, rust or foreign material that may cause glass breakage. Clean or repair the surface as necessary.

6. Use a wool applicator to apply urethane metal primer to any exposed metal on the pinch weld. Allow 6 to 10 minutes to dry.

7. Clean the inside of the glass surface with an alcohol-free cleaner to make sure the ceramic-coated area is clean.

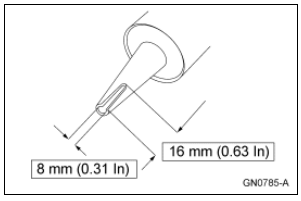
8. **NOTE:** If the moulding is already on the windshield glass, proceed to the next step.

   Align the "V" notch in the ceramic paint and windshield glass outside moulding at top center. Fully seat the windshield glass outside moulding along the top edge of the windshield glass and along the sides and bottom edges of the windshield glass.

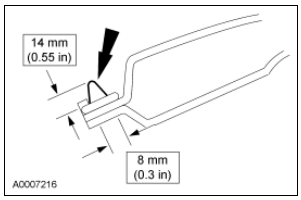
9. Remove the dual lock windshield glass stop adhesive backing.

10. Apply urethane glass primer to the same area that was prepped in the previous step. Allow 5 minutes to dry.

11. Cut the urethane adhesive applicator tip to specification.



12. Apply a bead of urethane adhesive to the pinch weld.



13. ⚠ **CAUTION: Open the windows to prevent the windshield glass from being pushed out by air pressure if a door is closed.**

    Install the windshield glass on the pinch weld. Align the windshield glass to the body using the alignment marks while pushing downward to set the stops.

14. **NOTE:** The urethane adhesive must cure for a minimum of 1 hour before testing for air or water leaks.

    After the urethane has cured, check the windshield seal for air or water leaks through the urethane adhesive bead and add urethane adhesive as necessary.

15. Place 2 strips of duct tape onto the windshield glass and secure it to the roof panel. This helps avoid misalignment while the urethane cures.

16. Install the headliner.

17. Connect the windshield electrical connectors.

18. Install the 2 A-pillar trim panels.

19. If equipped, install the rain sensor module.

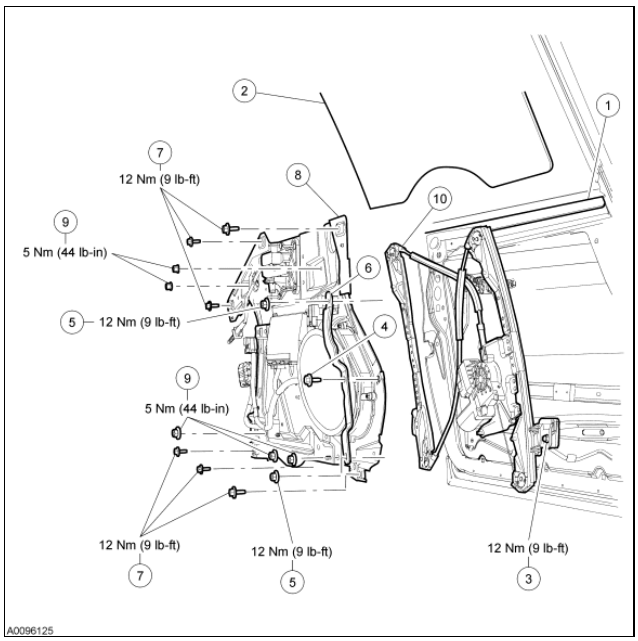
20. Install the interior rear view mirror. For additional information, refer to Section 501-09 .

21. Install the windshield moulding. For additional information, refer to Windshield Moulding in this section.

22. Install the cowl panel grille. For additional information, refer to Section 501-02 .

Front Door Glass, Frames and Mechanisms Exploded View

Printable View (146 KB)



Item	Part Number	Description
1		Interior weatherstrip
2	21410/21411	Front door window glass

4		Front door inner support bracket bolt
5		Front door inner support bracket nut (2 required)
6		Front door inner support bracket
7		Front door inner module assembly bolts (6 required)
8		Front door inner module assembly
9		Front door window glass regulator nuts (5 required)
10	23200/23201	Front door window regulator

1. For additional information, refer to the procedures in this section.

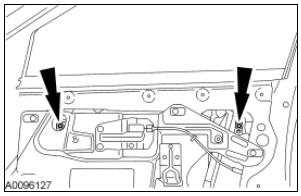
Front Door Window Glass

Printable View (31 KB)

Removal

NOTE: The front window motors must be initialized whenever the following occurs: the motor is removed from the window regulator, a new motor is installed, a new window regulator is installed, a new window glass is installed, a glass top run removal and installation has been carried out or when carrying out any operation in which grease or lubricants are applied to the window system. A new front window motor is in a proportional up/down mode until initialized. For additional information, refer to Door Window Motor Initialization in this section.

1. Remove the front door trim panel. For additional information, refer to Section 501-05 .
2. Remove the watershield.
3. Remove the interior weatherstrip.
4. Connect the window control switch electrical connector.
5. Connect the battery. For additional information, refer to Section 414-01 .
6. Using the window control switch, position the front door window regulator-to-glass clamp bolts to align with the access holes.



7. Loosen the 2 front door window regulator-to-glass clamp bolts, allowing the window glass to move from the clamp.
8. Hold the glass in place, lower the front door window regulator to the full down position, and remove the front door window glass.

Installation

1. Position the front door window glass against the B-pillar.
2. **NOTE:** Make sure the front door window glass correctly seats in the glass mounting brackets as the front door window regulator is raised.

   Support the front door window glass and raise the front door window regulator to the full upright position.
3. Tighten the 2 front door window regulator-to-glass clamp bolts after the glass is fully seated in the clamp.
   - Tighten to 12 Nm (9 lb-ft).
4. Disconnect the battery.

5. Disconnect the window control switch electrical connector.

6. Install the interior weatherstrip.

7. Install the watershield.

8. Install the front door trim panel. For additional information, refer to Section 501-05 .

Front Door Window Regulator and Motor

Printable View (24 KB)

Removal and Installation

1. Remove the front door window glass. For additional information, refer to Front Door Window Glass in this section.

2. Remove the front door inner support bracket bolt.
   - To install, tighten to 12 Nm (9 lb-ft).

3. Remove the 2 nuts and the front door inner support bracket.
   - To install, tighten to 12 Nm (9 lb-ft).

4. Remove the 6 front door inner module assembly bolts.
   - To install, tighten to 12 Nm (9 lb-ft).

5. If equipped, disconnect the remote keyless entry keypad electrical connector.

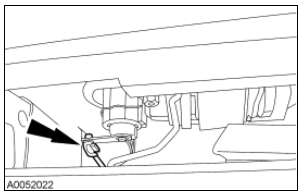
6. Disconnect the exterior mirror electrical connector and release the locators from the front door inner module assembly.

7. Disconnect the front door inner module assembly electrical connector, main wiring harness electrical connector and release the locators from the front door inner module assembly.

8. Remove the lower theft shield screw.
   - To install, tighten to 10 Nm (89 lb-in).

9. Remove the nut and the lower theft shield.

10. On the LH door, disconnect the door lock cylinder actuating rod.



11. Open the clip and disconnect the exterior door handle actuator rod.
    - If equipped, disconnect the door lock cylinder switch electrical connector.

12. Disconnect the front door latch electrical connector.

13. Remove the 3 door latch screws and position the door latch aside.
    - To install, tighten to 13 Nm (10 lb-ft).

14. Remove the front door inner module assembly.

15. Remove the 5 nuts and the front door window regulator.
    - To install, tighten to 5 Nm (44 lb-in).

16. To install, reverse the removal procedure.

- Make sure the alignment dowels are seated before installing the inner door module bolts.
- Tighten the inner door module bolts that are next to the alignment dowels first.

Rear Door Glass, Frames and Mechanisms Exploded View

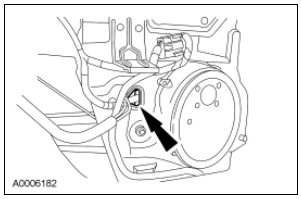
Rear Door Window Glass

Printable View (36 KB)

Removal and Installation

1. Remove the rear door trim panel. For additional information, refer to Section 501-05 .
2. Remove the watershield.
3. Connect the window control switch electrical connector.
4. Connect the battery. For additional information, refer to Section 414-01 .
5. Using the window control switch, position the rear door window glass to access the 2-part retainer.



6. Using a suitable tool, remove the center portion of the retainer pin and then the outer portion of the retainer pin.
7. Remove the rear door window glass.
8. **NOTE:** Prior to attaching the rear window glass to the regulator, reinstall the outer and center portions of the retainer pin into the rear door window glass. The retainer pin should protrude an equal distance on both sides of the window glass.

   To install, reverse the removal procedure.

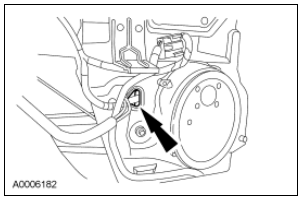
   - Install the retainer pin into the rear door window glass.
   - Operate the rear door window regulator to the full up position until an audible click is heard when the retaining pin is engaged with the regulator.
   - Operate the rear door window glass and regulator for correct operation.

Rear Door Window Regulator and Motor

Printable View (36 KB)

Removal and Installation

1. Remove the rear door trim panel. For additional information, refer to Section 501-05 .
2. Remove the watershield.
3. Remove the interior weatherstrip.
4. Connect the window control switch electrical connector.
5. Connect the battery. For additional information, refer to Section 414-01 .
6. Using the window control switch, position the rear door window glass to access the 2-part retainer.



7. Manually raise and support the glass in the full up position.
8. Remove the 4 bolts and the rear door inner module assembly.
   - To install, tighten to 12 Nm (9 lb-ft).
9. Disconnect the electrical connector.
10. Position the rear door inner module assembly aside to access the rear window regulator.
11. Remove the 3 rear door window regulator nuts.
    - To install, tighten to 10 Nm (89 lb-in).
12. Disconnect the regulator motor electrical connector.
13. Remove the rear door window regulator.
14. If necessary, remove the 3 screws and the rear door window regulator motor.
    - To install, tighten to 3 Nm (27 lb-in).
15. **NOTE:** Prior to attaching the rear window glass to the regulator, reinstall the outer and center portions of the retainer pin into the rear door window glass. The retainer pin should protrude an equal distance on both sides of the window glass.

    To install, reverse the removal procedure.

    - Install the retainer pin into the rear door window glass.
    - Operate the rear door window regulator to the full up position until an audible click is heard when the retaining pin is engaged with the regulator.
    - Operate the rear door window glass and regulator for correct operation.

Material

Item	Specification
Urethane Metal Primer Essex U-413	WSB-M2G234-C
Urethane Glass Prep Essex U-401	WSB-M5B280-C
Urethane Glass Primer Essex U-402	WSB-M2G314-B
Urethane Adhesive Essex 400-HV	WSB-M2G316-B

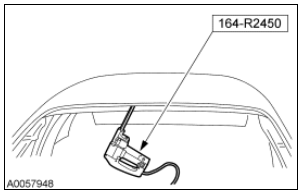
Removal

⚠ WARNING: To prevent glass splinters from entering the eyes or cutting the hands, wear safety glasses and heavy gloves when cutting the glass from the vehicle.

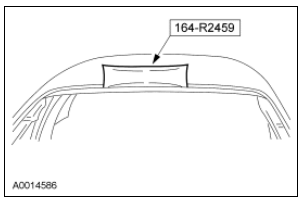
⚠ CAUTION: Care must be taken to avoid scratching the pinch weld.

1. Remove the rear quarter trim panel. For additional information, refer to Section 501-05 .
2. Disconnect the 3 rear window glass electrical connectors.
3. Lower the rear portion of the headliner.
4. Using a soft brush or vacuum, remove the dirt and foreign material from the pinch weld.
5. **NOTE:** Lubricate the existing urethane adhesive with water to aid the special tool while cutting

   Using the special tool, starting at the top center of the rear window glass, cut the urethane adhesive away from the glass and work down the sides.



6. Using the special tool, distance the rear window glass from the body.



7. Using the special tool, cut the remaining urethane adhesive and remove the rear window glass.

8. Using a soft brush or vacuum, remove the dirt and foreign material from the pinch weld.

Installation

⚠ CAUTION: After installing the new urethane-installed rear window glass, the vehicle should not be driven until the urethane adhesive has cured. The curing time at temperatures above 13°C (55°F) and relative humidity above 50% is 12-24 hours. (Refer to the drive away chart for the cure times as the temperatures and humidity vary). Inadequate curing of the urethane adhesive may adversely affect the strength of the urethane adhesive bond.

1. Dry fit the rear window glass to the existing urethane bed on the body pinch weld. Align the rear window glass in the opening for a uniform fit.

2. Use tape or non-permanent marking pencil to make alignment marks on the rear window glass (preferably at the setting blocks), and the body to aid in the installation alignment of the rear window glass.

3. After alignment, remove the rear window glass and moulding from the vehicle and place them on a stable work surface.

4. Trim the remaining urethane adhesive on the pinch weld using only the full-cut method. In this method, most of the existing urethane adhesive is removed leaving a level bead around the entire pinch weld.

5. **⚠ WARNING: All rust found on the pinch weld must be removed and the pinch weld restored to original equipment manufacturer (OEM) specifications. If surface rust is found, remove completely down to clean, bare metal. Prime the pinch weld metal with an OEM recommended curing automotive paint primer and allow it to cure correctly. If rust has penetrated through the pinch weld metal, repair the pinch weld sheet metal at a body shop before proceeding.**

   Check the pinch weld for damaged sheet metal, raised sheet metal at the spot welds, rust or foreign material that may cause glass breakage. Clean or repair the surface as necessary.

6. Use a wool applicator to apply urethane metal primer to any exposed metal on the pinch weld. Allow 6 to 10 minutes to dry.

7. If reinstalling the original rear window glass, remove any excess urethane adhesive.

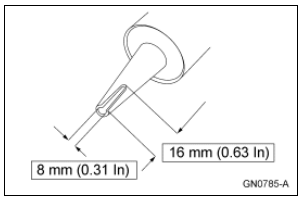
8. Clean the inside of the rear window glass surface with an alcohol-free cleaner to make sure the ceramic-coated area is clean.

9. ⚠ **CAUTION: Wipe off the urethane glass prep immediately after each application because it flash dries. Apply deliberate strokes, making sure not to overlap the applied area**

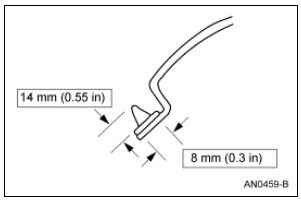
   If installing a new rear window glass, apply urethane glass prep twice around the glass surface to be prepped.

10. If installing a new rear window glass, apply urethane glass primer to the same area that was prepped in the previous step. Allow 5 minutes to dry.

11. Cut the urethane adhesive applicator tip to specification.



12. Apply a bead of urethane adhesive to the pinch weld.



13. ⚠ **CAUTION: Open the windows to prevent the rear window glass from being pushed out by air pressure if a door is closed.**

    Install the rear window glass on the pinch weld. Align the rear window glass to the body using the alignment marks while pushing downward to set the stops.

14. **NOTE:** The urethane adhesive must cure for a minimum of 1 hour before testing for air or water leaks.

    After the urethane has cured, check the windshield seal for air or water leaks through the urethane adhesive bead and add urethane adhesive as necessary.

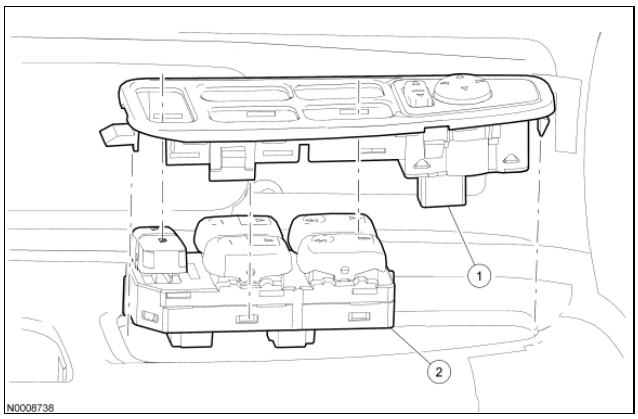
15. Position the headliner.

16. Connect the 3 rear window glass electrical connectors.

17. Install the quarter trim panel. For additional information, refer to Section 501-05 .

Window Control Switch

Printable View (70 KB)



Item	Part Number	Description
1		window control switch bezel
2		window control switch

Removal and Installation

NOTE: The LH front window control switch is shown, all others are similar.

1. Disconnect the battery. For additional information, refer to Section 414-01 .
2. Carefully lift out the window control switch and bezel from the front of the door panel to avoid breaking the tab.
3. Disconnect the window control switch electrical connector.
4. Remove the window control switch from the window control switch bezel.
5. To install, reverse the removal procedure.

Instrument Panel

Printable View (7 KB)

Instrument Panel

The instrument panel consists of the following components:

- passenger air bag module
- instrument panel cluster finish panel
- glove compartment
- audio unit
- climate control unit
- instrument panel finish panels
- instrument panel defroster opening grille
- instrument panel steering column cover reinforcement
- instrument panel steering column cover

Console

Printable View (7 KB)

Console

The floor console houses the electronic parking brake, traction/advance trac switch, auxiliary power point, 2 cup holders and extra storage space in the rear of the passenger compartment. The overhead console incorporates 2 interior lights with switches, the roof opening panel switch and the parking aid switch.

1. For additional information, refer to the procedures in this section.

Glove Compartment

Printable View (8 KB)

1. Disconnect the battery. For additional information, refer to Section 414-01 .
2. Remove the instrument panel trim panel.
3. Release the glove compartment arm assist cable from the assist arm.
4. Lift up on the glove compartment door assist arms and lower the glove compartment.
5. Remove the 2 glove compartment assist cable bracket screws.
6. Remove the 5 screws and the glove compartment bin.
7. Disconnect the glove compartment lamp electrical connector.
8. Remove the 5 bolts and the glove compartment door frame.
   - To install, tighten to 5 Nm (44 lb-in).
9. To install, reverse the removal procedure.

Steering Column Cover

Printable View (7 KB)

1. Remove the 2 screws and position the hood release handle aside.

2. Remove the 3 pin-type retainers and the instrument panel steering column reinforcement cover.

3. If necessary, remove upper LH instrument panel steering column reinforcement screw.
   - To install, tighten to 3 Nm (27 lb-in).

4. If necessary, remove the 3 screws and the instrument panel steering column reinforcement.
   - To install, tighten to 9 Nm (80 lb-in).

5. To install, reverse the removal procedure.

Instrument Cluster Finish Panel

Printable View (7 KB)

1. Adjust the steering column to the full tilt down and full extended position.
2. Disconnect the battery. For additional information, refer to Section 414-01 .
3. Remove the 3 pin-type retainers and the instrument panel steering column reinforcement cover.
4. Remove the outer instrument panel finish panel.
   - Disconnect the electrical connectors.
5. Remove the inner instrument panel finish panel.
6. Remove the 5 screws and instrument cluster finish panel
7. To install, reverse the removal procedure.

Instrument Panel

Printable View (11 KB)

Removal and Installation

NOTE: Electronic modules are sensitive to static electrical charges. If exposed to these charges, damage may result.

1. Depower the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in Section 501-20B .
2. Remove the floor console. For additional information, refer to Floor Console in this section.
3. Remove the transmission range selector lever. For additional information, refer to Section 307-05 .
4. Remove the LH and RH A-pillar lower trim panels.
5. Remove the upper A-pillars.
6. Remove the 2 screws and position the hood release handle aside.
7. Disconnect the LH instrument panel harness electrical connectors.
8. ⚠ **CAUTION: Secure the steering wheel to prevent any rotation or damage to the air bag sliding contact.**

   Remove the pinch bolt and separate the intermediate shaft from the steering column.

   - To install, tighten to 35 Nm (26 lb-ft).
9. Remove the screw and the RH floor heat duct.
10. Loosen the bolt and disconnect the RH instrument panel bulkhead electrical connector.
11. Disconnect the RH instrument panel harness electrical connectors.
12. Remove the instrument panel defroster opening grille.
    - Disconnect the electrical connector.
13. Remove the 3 instrument panel cowl top screws.
14. Remove the LH and RH instrument panel side finish panels.
15. Remove the 2 instrument panel top bolts.
    - To install, tighten to 20 Nm (15 lb-ft).
16. Position the carpet aside, and remove the 4 instrument panel tunnel brace bolts.
    - To install, tighten to 20 Nm (15 lb-ft).
17. Remove the 2 LH instrument panel cowl side bolts and nut.
    - To install, tighten to 20 Nm (15 lb-ft).

18. Remove the RH instrument panel cowl side bolt and nut.
    - To install, tighten to 20 Nm (15 lb-ft).

19. Position the carpet aside and disconnect the LH junction box electrical connector.

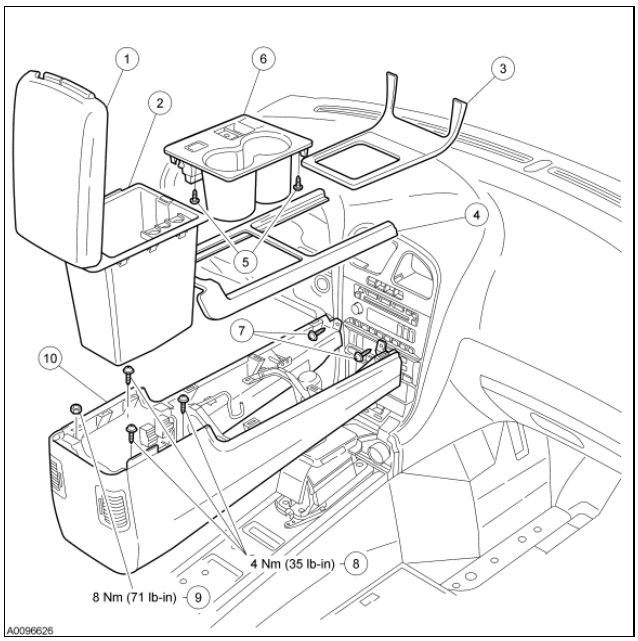
20. **NOTE:** Two technicians are required to carry out this step.

    Remove the instrument panel.

21. To install, reverse the removal procedure.

Floor Console

Printable View (161 KB)



Item	Part Number	Description
1	060A74	Floor console armrest
2	06010	Floor console storage bin
3	060A74	Floor console finish panel (front)
4	044D90	Floor console finish panel (center)
5		Floor console cup holder screws (2 required)
6	13562	Floor console cup holder
7		Floor console front screws (2 required)
8		Floor console rear screws (3 required)
9		Floor console nut
10	045E24	Floor console

Removal and Installation

1. Position the seats as needed to remove the console.

2. Disconnect the battery. For additional information, refer to Section 414-01 .

3. Remove the floor console storage bin.
    1. Remove the 3 screws and the armrest.
    2. Remove the floor console storage bin screw.
    3. Remove the pin-type retainer.
    - Disonnect the electrical connectors.

4. Remove the floor console front finish panel.
    - Pull upward from the front of the trim panel to release the retainers.
    - Disconnect the electrical connectors.

5. Remove the floor console center finish panel.

6. If necessary, remove the 2 screws and the floor console cup holder.

7. Remove the 2 floor console front screws.

8. Remove the 3 floor console rear screws.
    - To install, tighten to 4 Nm (35 lb-in).

9. **NOTE:** Lift the console from the rear and slide it rearward to release the rear seat heater ducts from the instrument panel.

   Remove the nut and the floor console.

    - Disconnect the electrical connector.
    - To install, tighten to 8 Nm (71 lb-in).

10. To install, reverse the removal procedure.

Handles, Locks, Latches and Entry Systems

Printable View (8 KB)

The hood latch system consists of 1 latch controlled by the hood release handle under the lower steering column cover.

The door latch system consists of a primary latch, fastened to the inside of the door frame, that is controlled by the exterior and interior door handles. The door latch system has an integrated door ajar switch, door lock actuator, and a driver set/reset switch (driver door only). The door locks are actuated by either a remote keyless entry (RKE) transmitter, the interior door lock/unlock switch (located on the driver and passenger door trim panels), manually inserting the key into the driver door lock cylinder to lock/unlock, or using the RKE keypad.

The luggage compartment lid latch is equipped with an interior release handle and an actuator. The luggage compartment lid can be locked and unlocked using the lock cylinder (the valet key will not fit the lock cylinder), the luggage compartment interior trim remote switch (the remote switch opens the luggage compartment lid if it is not in the lock position), the RKE transmitter, and the RKE keypad.

The RKE transmitter communicates with the driver door module (DDM), which controls the output functions of the driver door lock actuator. The DDM communicates through the standard corporate protocol (SCP) link to the rear electronics module (REM) and the front electronic module (FEM) for the lock and unlock commands. The REM controls the output function of the luggage compartment lid actuator and the passenger door actuators. The REM is located in the RH rear side of the luggage compartment.

The RKE keypad remote entry feature allows the following functions to be carried out:

- unlock the driver door (when 2-stage unlocking is enabled)
- unlock all doors
- lock all doors
- arm the security system
- disarm the security system
- reset a panic alarm
- recall the memory seat/mirrors/steering column/pedals position associated with a particular remote entry device (when enabled)
- release the luggage compartment lid actuator

It also illuminates the RKE keypad lamp and issues illuminated entry on/off requests to the DDM, when locking and unlocking. The keyless entry keypad is wired to the DDM which controls the output functions of the driver door lock. The DDM then communicates with the REM which controls the output functions of the passenger door locks and the luggage compartment lid.

When any new lock cylinder is installed, the luggage compartment lid lock cylinder, the driver door lock cylinder and ignition lock cylinders should be installed as a set. This eliminates carrying an extra key which fit only 1 lock. If a new key is used, the new key code number is stamped on a metal tag attached to the key.

Individual lock cylinders are repaired by discarding the inoperative cylinder and building a new lock cylinder using the appropriate lock repair package. The lock repair package includes a detailed instruction sheet to build the new lock cylinder to the current key code of the vehicle.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Principles of Operation

Rear Electronic Module (REM)

The REM controls the output functions of the passenger door lock actuators and the luggage compartment lid actuator.

Locking and Unlocking

The driver door lock function is controlled by the driver door module (DDM).

The passenger door locks and the luggage compartment lid actuator functions are controlled by the REM.

The passenger lock/unlock actuators are hardwired to the REM.

Smart Lock

The smart lock feature is controlled by the REM. This feature prevents the operator from accidentally locking the vehicle with the key in the ignition lock cylinder. The REM receives the key-in-ignition status from the instrument cluster and the driver and passenger door ajar status from the front electronic module (FEM) before this feature can function. If the key is in the ignition switch, the driver door is ajar, and an attempt is made to lock the vehicle with the driver door lock control switch, all the doors lock and the driver door unlocks. If the key is in the ignition, the passenger door is ajar, and an attempt is made to lock the vehicle with the passenger door lock control switch, all the doors lock and then all the doors unlock.

Auto Lock

The autolock feature is controlled by the REM. This feature locks the doors whenever the vehicle is being driven. This feature uses inputs from the ignition switch, the digital transmission range (TR) selector, the brake pedal position (BPP) sensor, and the driver and passenger door ajar switch status. The autolock function works when the following conditions are concurrently met during the current ignition cycle:

- all the doors are closed
- the autolock function is active (this function has not been disabled through the message center or any programmable options)
- the ignition switch is in the RUN position
- the transmision is in any forward gear, or reverse
- the vehicle speed exceeds 5 km/h (3 mph)

The autolocks are activated again if at least one door has been opened and closed since the last auto lock function and the following conditions are met:

- the autolock function is active (this function has not been disabled through the message center or any programmable options)
- the ignition switch is in the RUN position
- the transmision is in any forward gear, or reverse
- the vehicle speed exceeds 5 km/h (3 mph)
- all the doors are closed

Interior Power Lock/Unlock

The power lock/unlock function is independent of the ignition switch position. Power lock of all doors is accomplished by:

- the driver or passenger door lock control switch
- a lock command from the remote keyless entry (RKE) transmitter
- a lock command from the driver set/reset switch (part of the door latch)
- the RKE keypad

If the perimeter alarm is armed, the interior luggage compartment lid release and door lock control switches are disabled. Disarming the alarm (through valid unlock commands) enables them.

When the LOCK button on the RKE transmitter is pressed once, the power lock function initiates the locking of all doors. If pressed twice and all doors, luggage compartment lid, and hood are closed, then the horn chirps once (if horn chirp is enabled). If pressed twice and any door, luggage compartment lid or hood is open/ajar then the horn chirps twice (if horn chirp is enabled). If 2-stage unlocking is enabled, the driver door unlocks on the first occurrence of one of the following events with no other identical UNLOCK events in the past 5 seconds:

- a command from the RKE transmitter
- a command from the driver set/reset switch (part of the door latch)
- a command from the RKE keypad

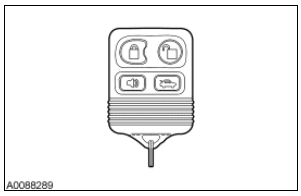
When 2-stage unlocking is enabled, if a subsequent unlock event of the same type occurs within 5 seconds without the doors being relocked, all the doors unlock. When 2-stage unlock is disabled, all doors unlock at the first (and all subsequent) unlock commands.

Luggage Compartment Lid

The luggage compartment lid feature is controlled by the FEM and the REM. The luggage compartment lid release switch is hardwired to the FEM. When the switch is active, the FEM sends a command to the REM through the standard corporate protocol (SCP) communication network. The REM also needs the vehicle speed status (must be less than 5 km/h [3 mph]) from the network in order to activate the luggage compartment lid actuator. The REM also activates the luggage compartment lid actuator by a command from the DDM through the SCP communication network (RKE transmitter or RKE keypad).

Remote Keyless Entry (RKE)

The door locks and luggage compartment lid can be operated by the RKE transmitter. When a command is received from the RKE transmitter, the DDM sends a command to the FEM or the REM to unlock a door or unlatch the luggage compartment lid.



The RKE transmitter initiates the following electronic system functions:

- opens the trunk
- unlocks the driver door
- unlocks all doors
- locks all doors
- activates/deactivates the panic alarm
- commands the interior lamps on (when unlocking) and off (when locking)
- sounds the horn once when LOCK is pressed twice within 3 seconds and the doors, the hood, and the trunk are closed
- sounds the horn twice when the LOCK button is pressed twice within 3 seconds and any door, the hood, or the trunk is open

The RKE transmitter has a minimum operating range of 10 m (33 feet).

The RKE transmitters can be programmed using a diagnostic tool or by using the ignition lock cylinder method.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Door lock mechanisms	• Rear battery junction box (BJB) fuse(s):

	♦ 1 (15A) ♦ 4 (10A) ♦ 23 (30A) ♦ 25 (40A) ♦ 27 (30A) • Central junction box (CJB) fuse(s): ♦ 7 (5A) ♦ 20 (10A) ♦ 22 (10A) • Driver door module (DDM) • Rear electronic module (REM) • Front electronic module (FEM) • Circuitry • Remote keyless entry (RKE) transmitter

3. If the concern remains after the inspection, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

4. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool manual.

5. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for DDM, refer to Section 419-10 .
   - No response/not equipped for REM, refer to Section 419-10 .
   - No response/not equipped for FEM, refer to Section 419-10 .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs, and carry out the self-test diagnostics for the DDM, FEM, or REM.

6. If the DTCs retrieved are related to the concern, go to Driver Door Module (DDM) Diagnostic Trouble Code (DTC) Index, the Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index, the Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index, or the Switched System Power (SSP) Relay Index to continue diagnosis.

7. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Driver Door Module (DDM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1309	Power Door Lock Circuit Short to Ground	DDM	Go To Pinpoint Test C .
B1341	Power Door Unlock Circuit Short to Ground	DDM	Go To Pinpoint Test C .
B1526	Keyless Entry Circuit Short to Ground	DDM	Go To Pinpoint Test J .
B2112	Door Driver Set Switch Stuck Failure	DDM	Go To Pinpoint Test E .

B2116	Door Driver Reset Switch Stuck Failure	DDM	Go To Pinpoint Test E .
B2425	Remote Keyless Entry Out of Synchronization	DDM	Go To Pinpoint Test Q .

Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1551	Luggage Compartment Lid Release Circuit Failure	FEM	Go To Pinpoint Test A .

Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1300	Power Door Lock Circuit Failure	REM	Go To Pinpoint Test D .
B1310	Power Door Unlock Circuit Failure	REM	Go To Pinpoint Test D .

Switched System Power (SSP) Relay Index

Relay	Fuse	Controlled System(s)
SSP1	Rear BJB fuse 27 (30A)	• Driver door lock (FEM) • LH high beam headlamps (FEM) • Front parking, turn, and side marker lamps (FEM) • RH low beam headlamp • Driver power mirror • PATS
SSP4	Rear BJB fuse 23 (30A)	• LH rear parking and stoplamps (REM) • RH rear turn signals (REM) • RH front, RH rear, and LH rear door locks (REM) • License lamps • Luggage compartment lid actuator and remote switch • Fuel door release actuator and switch • Luggage compartment lamp

When diagnosing an SSP relay, check that all systems for that relay are inoperative. Refer to Section 417-01 if:

- all systems for one SSP relay are inoperative
- all systems for all SSP relays are inoperative

Symptom Chart

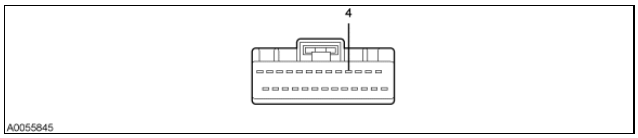
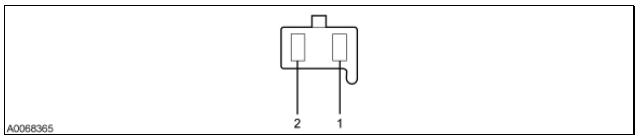
Front Electronic Module (FEM) C201e



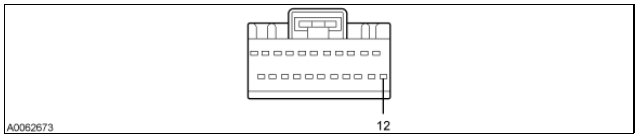
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
4	8-AA30 (WH) FEM signal circuit	Less than 5 ohms between the FEM and the luggage compartment lid remote switch. Greater than 10,000 ohms between the FEM and ground.

Luggage Compartment Lid Remote Switch C207



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-AA30 (WH) luggage compartment lid remote switch signal circuit	Less than 5 ohms between the front electronic module (FEM) and the luggage compartment lid remote switch. Greater than 10,000 ohms between the luggage compartment lid remote switch and ground.
2	31-AA30 (BK/YE) luggage compartment lid remote switch ground	0 volts, less than 5 ohms between the luggage compartment lid remote switch and ground.

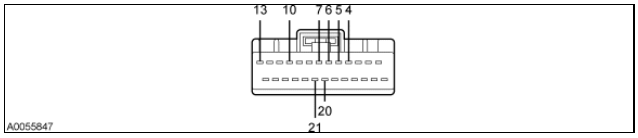
Rear Electronic Module (REM) C420b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement

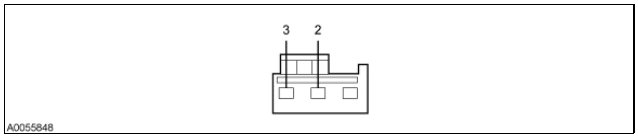
12	31-DK30H (BK/OG) REM ground	0 volts, less than 5 ohms between the REM and ground.

REM C420c



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
4	33-AA15 (YE/GN) LH rear door latch lock output	0 volts, less than 5 ohms between the LH rear door latch and the REM. Greater than 10,000 ohms between the REM and ground.
5	33-AA2 (YE/RD) RH front and RH rear door latch lock output	0 volts, less than 5 ohms between the RH front and RH rear door latch and the REM. Greater than 10,000 ohms between the REM and ground.
6	32-AA1 (WH/RD) RH front and RH rear door latch unlock output	0 volts, less than 5 ohms between the RH front and RH rear door latch and the REM. Greater than 10,000 ohms between the REM and ground.
7	32-AA16 (WH/BK) LH rear door latch unlock output	0 volts, less than 5 ohms between the LH rear door latch and the REM. Greater than 10,000 ohms between the REM and ground.
10	29S-AA83 (OG) luggage compartment lid actuator output	0 volts, less than 5 ohms between the luggage compartment lid actuator and the REM.
13	29S-DK31 (OG/BK) REM fused voltage supply	10 volts or greater with the ignition switch in the ON position.
20	8-AA20 (WH/BU) passenger door lock control switch lock input	0 volts, less than 5 ohms between the passenger door lock control switch and the REM. Greater than 10,000 ohms between the REM and ground.
21	8-AA21 (WH/GN) passenger door lock control switch unlock input	0 volts, less than 5 ohms between the passenger door lock control switch and the REM. Greater than 10,000 ohms between the REM and ground.

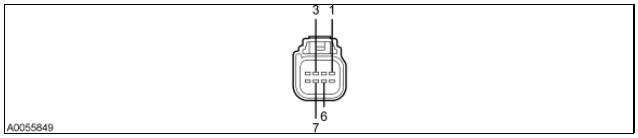
Luggage Compartment Lid Actuator C430



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	29S-AA83 (OG) luggage compartment lid actuator voltage	Less than 5 ohms between the luggage compartment lid actuator and the REM. Greater than 10,000 ohms between

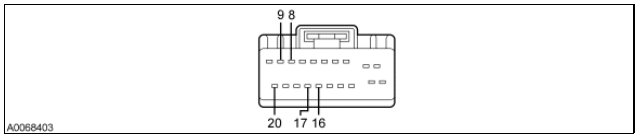
	supply	the luggage compartment lid actuator and ground.
3	31-AA83 (BK/OG) luggage compartment lid actuator ground	0 volts, less than 5 ohms between the luggage compartment lid actuator and ground.

Remote Keyless Entry (RKE) Keypad C500



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-AA70 (WH/GN) RKE keypad input circuit	Less than 5 ohms between the RKE keypad and the DDM. Greater than 10,000 ohms between the RKE keypad and ground.
3	10-AA70 (GY/OG) RKE keypad input circuit	Less than 5 ohms between the RKE keypad and the DDM. Greater than 10,000 ohms between the RKE keypad and ground.
6	9-AA70 (BN/GN) RKE keypad ground	Less than 5 ohms between the RKE keypad and the DDM.
7	7-AA70 (YE/GN) RKE keypad input circuit	Less than 5 ohms between the RKE keypad and the DDM. Greater than 10,000 ohms between the RKE keypad and ground.

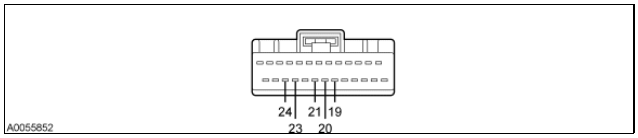
Driver Door Module (DDM) C501c



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
8	33-AA10 (YE/BK) driver door latch lock output	Less than 5 ohms between the DDM and the driver door latch. Greater than 10,000 ohms between the DDM and ground
9	32-AA11 (WH/VT) driver door latch unlock output	Less than 5 ohms between the DDM and the driver door latch. Greater than 10,000 ohms between the DDM and ground.
16	Circuit 31S-AA78 (BK/BU) driver set switch circuit	Less than 5 ohms between the DDM and the driver door latch. Greater than 10,000 ohms between the DDM and ground.
17	31S-AA79 (BK/WH) driver reset switch circuit	Less than 5 ohms between the DDM and the driver door latch. Greater than 10,000 ohms between the DDM and

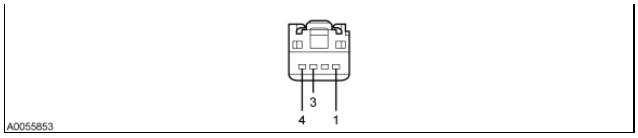
		ground.
20	9-AA70 (BN/GN) RKE keypad signal return circuit	0 volts, less than 5 ohms between the DDM and the RKE entry keypad.

DDM C501d



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
19	8-AA70 (WH/GN) RKE keypad input circuit	Less than 5 ohms between the RKE keypad and the DDM. Greater than 10,000 ohms between the RKE keypad and ground.
20	10-AA70 (GY/OG) RKE keypad input circuit	Less than 5 ohms between the RKE keypad and the DDM. Greater than 10,000 ohms between the RKE keypad and ground.
21	7-AA70 (YE/GN) RKE keypad input circuit	Less than 5 ohms between the RKE keypad and the DDM. Greater than 10,000 ohms between the RKE keypad and ground.
23	8-AA10 (WH/BK) driver door lock control switch lock input circuit	Less than 5 ohms between the driver door lock control switch and the DDM. Greater than 10,000 ohms between the DDM and ground.
24	8-AA11 (WH/VT) driver door lock control switch unlock input circuit	Less than 5 ohms between the driver door lock control switch and the DDM. Greater than 10,000 ohms between the DDM and ground.

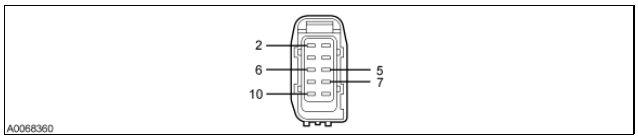
Driver Door Lock Control Switch C505



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-AA10 (WH/BK) driver door lock control switch lock input	Less than 5 ohms between the driver door lock control switch and the DDM. Greater than 10,000 ohms between the driver door lock control switch and ground.
3	8-AA11 (WH/VT) driver door lock control switch unlock input	Less than 5 ohms between the driver door lock control switch and the DDM. Greater than 10,000 ohms between the driver door lock control switch and ground.
4		

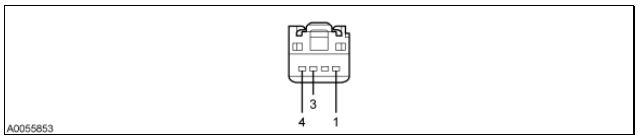
	31-LH28 (BK) driver door lock control switch ground	0 volts, less than 5 ohms between the driver door lock control switch and ground.

Driver Door Latch C525



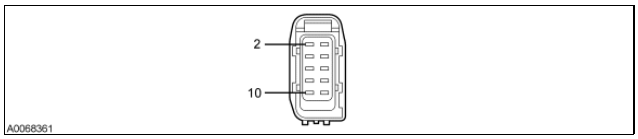
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	33-AA10 (YE/BK) driver door latch lock output	Less than 5 ohms between the driver door latch and the DDM. Greater than 10,000 ohms between the driver door latch and ground.
5	31S-AA79 (BK/WH) driver reset switch circuit	Less than 5 ohms between the driver door latch and the DDM. Greater than 10,000 ohms between the driver door latch and ground.
6	31-AA58 (BK) driver set/reset switch ground circuit	Less than 5 ohms between the driver door latch and ground.
7	31S-AA78 (BK/BU) driver set switch circuit	Less than 5 ohms between the driver door latch and the DDM. Greater than 10,000 ohms between the driver door latch and ground.
10	32-AA11 (WH/VT) driver door latch lock output	Less than 5 ohms between the driver door latch and the DDM. Greater than 10,000 ohms between the driver door latch and ground.

Passenger Door Lock Control Switch C605



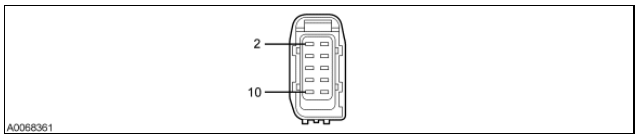
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-AA20 (WH/BU) passenger door lock control switch lock input	Less than 5 ohms between the passenger door lock control switch and the DDM. Greater than 10,000 ohms between the passenger door lock control switch and ground.
3	8-AA21 (WH/GN) passenger door lock control switch unlock input	Less than 5 ohms between the passenger door lock control switch and the DDM. Greater than 10,000 ohms between the passenger door lock control switch and ground.
4	31-LH42 (BK) passenger door lock control switch ground	0 volts, less than 5 ohms between the passenger door lock control switch and ground.

RH Front Door Latch C609



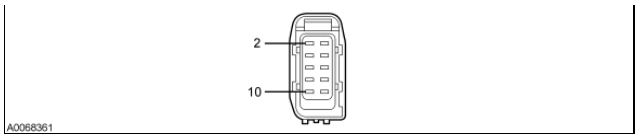
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	33-AA20 (YE/BU) RH front door latch output	Less than 5 ohms between the RH front door latch and the REM. Greater than 10,000 ohms between the RH front door latch and ground.
10	32-AA21 (WH/GN) RH front door latch unlock output	Less than 5 ohms between the RH front door latch and the REM. Greater than 10,000 ohms between the RH front door latch and ground.

LH Rear Door Latch C704



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	33-AA15 (YE/GN) LH rear door latch output	Less than 5 ohms between the LH rear door latch and the REM. Greater than 10,000 ohms between the LH rear door latch and ground.
10	32-AA16 (WH/BK) LH rear door latch unlock output	Less than 5 ohms between the LH rear door latch and the REM. Greater than 10,000 ohms between the LH rear door latch and ground.

RH Rear Door Latch C804



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement

2	33-AA25 (YE/RD) RH rear door latch lock output	Less than 5 ohms between the RH rear door latch and the REM. Greater than 10,000 ohms between the RH rear door latch and ground.
10	32-AA26 (WH/BU) RH rear door latch unlock output	Less than 5 ohms between the RH rear door latch and the REM. Greater than 10,000 ohms between the RH rear door latch and ground.

Pinpoint Test A: The Luggage Compartment Lid Is Inoperative From The Remote Switch

Normal Operation

The luggage compartment lid remote switch supplies a ground signal to the front electronic module (FEM). When the FEM receives the ground signal through circuit 8-AA30 (WH), the FEM sends a standard corporate protocol (SCP) message to the rear electronic module (REM), which energizes circuit 29S-AA83 (OG) and releases the luggage compartment lid.

Possible Causes

- circuit 8-AA30 (WH) open or short to ground
- circuit 31-AA30 (BK/YE) open
- circuit 31-DA3 (BK/OG) open
- luggage compartment lid remote switch
- FEM

PINPOINT TEST A: THE LUGGAGE COMPARTMENT LID IS INOPERATIVE FROM THE REMOTE SWITCH

Test Step	Result / Action to Take
A1 CHECK THE LUGGAGE COMPARTMENT LID REMOTE SWITCH INPUT TO THE FRONT ELECTRONIC MODULE (FEM)	
NOTE: Cycle the ignition switch from OFF to ON to enable the switched system power feature. • Key in OFF position. • Unlock the luggage compartment release switch with the valet key. • Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: FEM Luggage Compartment Lid Remote Switch PID. • Press and release the luggage compartment lid remote switch while monitoring the FEM luggage compartment lid remote switch PID. • **Does the FEM luggage compartment lid remote switch PID agree with the luggage compartment lid remote switch position?**	**Yes** GO to A7 . **No** If the FEM luggage compartment lid remote switch PID indicates ON, GO to A2 . If the PID indicates OFF, GO to A4 .
A2 CHECK THE LUGGAGE COMPARTMENT LID REMOTE SWITCH	
	Yes INSTALL a new luggage

• Enter the following diagnostic mode on the diagnostic tool: Monitor the FEM Luggage Compartment Lid Remote Switch PID. • Disconnect: Luggage Compartment Lid Remote Switch C207. • **Does the FEM luggage compartment lid remote switch PID change from ON to OFF?**	compartment lid remote switch. CLEAR the DTCs. REPEAT the self-test. **No** GO to A3 .
A3 CHECK CIRCUIT 8-AA30 (WH) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: FEM C201e. • Measure the resistance between the FEM C201e-4, circuit 8-AA30 (WH), harness side and ground.  A0056609 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to A7 . **No** GO to A4 .
A4 CHECK CIRCUIT 8-AA30 (WH) FOR AN OPEN	
• Disconnect: FEM C201e. • Disconnect: Luggage Compartment Lid Remote Switch C207. • Measure the resistance between the FEM C201e-4, circuit 8-AA30 (WH), harness side and the luggage compartment lid remote switch C207-1, circuit 8-AA30 (WH), harness side.  A0068362 • **Is the resistance less than 5 ohms?**	**Yes** Connect all the connectors and GO to A5 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
A5 CHECK THE LUGGAGE COMPARTMENT LID REMOTE SWITCH	
• Key in OFF position. • Enter the following diagnostic mode on the diagnostic tool: FEM Luggage Compartment Lid Remote Switch PID. • Connect a fused (10A) jumper wire between the luggage compartment lid remote switch C207-2, circuit 31-AA30 (BK/YE), harness side and the luggage compartment lid remote switch C207-1, circuit 8-AA30 (WH), harness side while monitoring the FEM luggage compartment lid remote switch PID.	**Yes** INSTALL a new luggage compartment lid remote switch. CLEAR the DTCs. REPEAT the self-test. **No** GO to A6 .

 A0068363 • **Does the FEM luggage compartment lid remote switch PID change from OFF to ON?**	
A6 CHECK CIRCUIT 31-AA30 (BK/YE) FOR AN OPEN	
• Measure the resistance between the luggage compartment lid remote switch C207-2, circuit 31-AA30 (BK/YE), harness side and ground.  A0068364 • **Is the resistance less than 5 ohms?**	**Yes** GO to A7 . **No** REPAIR the circuit 31-AA30 (BK/YE) or circuit 31-DA3 (BK/OG). CLEAR the DTCs. REPEAT the self-test.
A7 CHECK FOR CORRECT FEM OPERATION	

• Disconnect all the FEM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the FEM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FEM. REFER to Section 419-10 . REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test B: The Luggage Compartment Lid Is Inoperative From The Remote Switch And The Remote Keyless Entry (RKE) Transmitter

Normal Operation

The luggage compartment lid remote switch supplies a ground signal to the front electronic module (FEM). When the FEM receives ground through circuit 8-AA30 (WH), the FEM sends a standard corporate protocol (SCP) message to the rear electronic module (REM), which energizes circuit 29S-AA83 (OG) and releases the luggage compartment lid. When the driver door module (DDM) receives the signal to open the luggage compartment lid from the remote keyless entry (RKE) transmitter, the DDM sends an SCP message to the REM, which energizes circuit 29S-AA83 (OG) and releases the luggage compartment lid.

Possible Causes

- circuit 29S-AA83 (OG) short to ground or open
- circuit 31-AA83 (BK/OG) open
- luggage compartment lid actuator
- REM

PINPOINT TEST B: THE LUGGAGE COMPARTMENT LID IS INOPERATIVE FROM THE REMOTE SWITCH AND THE REMOTE KEYLESS ENTRY (RKE) TRANSMITTER

Test Step	Result / Action to Take
B1 CHECK THE LUGGAGE COMPARTMENT LID REMOTE SWITCH INPUT TO THE FEM	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: FEM Luggage Compartment Lid Remote Switch PID. • Press and release the luggage compartment lid remote switch while monitoring the FEM luggage compartment lid remote switch PID. • **Does the FEM luggage compartment lid remote switch PID agree with the luggage compartment lid remote switch position?**	**Yes** GO to B2 . **No** GO to B7 .
B2 CHECK THE REAR ELECTRONIC MODULE (REM) OUTPUT USING ACTIVE COMMANDS	
• Enter the following diagnostic mode on the diagnostic tool: REM Active Command. • Trigger the REM active command RELEASE ON. • **Does the luggage compartment lid release?**	**Yes** GO to B7 . **No** GO to B3 .
B3 CHECK THE LUGGAGE COMPARTMENT LID REMOTE SWITCH OUTPUT FROM THE REM	
• Disconnect: Luggage Compartment Lid Actuator C430. • Enter the following diagnostic mode on the diagnostic tool: Trigger the REM Luggage Compartment Lid Release Active Command ON . • Measure the voltage between the luggage compartment lid actuator C430-2, circuit 29S-AA83 (OG), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to B4 . **No** GO to B5 .
B4 CHECK CIRCUIT 31-AA83 (BK/OG) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the luggage compartment lid actuator C430-3, circuit 31-AA83 (BK/OG), harness side and ground.	**Yes** INSTALL a new luggage compartment lid actuator. CLEAR the DTCs. REPEAT the self-test. **No**

 A0056653 • **Is the resistance less than 5 ohms?**	REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B5 CHECK CIRCUIT 29S-AA83 (OG) FOR AN OPEN	
• Key in OFF position. • Disconnect: REM C420c. • Measure the resistance between the REM C420c-10, circuit 29S-AA83 (OG), harness side and the luggage compartment lid actuator C430-2, circuit 29S-AA83 (OG), harness side.  A0004140 • **Is the resistance less than 5 ohms?**	**Yes** GO to B6 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B6 CHECK CIRCUIT 29S-AA83 (OG) FOR A SHORT TO GROUND	
• Measure the resistance between the REM C420c-10, circuit 29S-AA83 (OG), harness side and ground.  A0005707 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to B7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B7 CHECK FOR CORRECT REM OPERATION	

• Disconnect all the REM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the REM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new REM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test C: All Door Locks Are Inoperative From The Driver Door Lock Control Switch

Normal Operation

The driver door lock control switch supplies a ground signal to the driver door module (DDM). When the DDM receives ground through circuit 8-AA10 (WH/BK), the DDM sends a message through the standard corporate protocol (SCP) network to the rear electronic module (REM,) which locks the passenger doors. At the same time the DDM locks the driver door. When the DDM receives ground through circuit 8-AA11 (WH/VT), the DDM sends a message through the SCP network to the REM, which unlocks the passenger doors at the same time the DDM unlocks the driver door.

Possible Causes

- circuit 8-AA10 (WH/BK) short to ground or open
- circuit 8-AA11 (WH/VT) short to ground or open
- circuit 31-LH28 (BK) open
- driver door lock control switch
- DDM

PINPOINT TEST C: ALL DOOR LOCKS ARE INOPERATIVE FROM THE DRIVER DOOR LOCK CONTROL SWITCH

Test Step	Result / Action to Take
C1 RETRIEVE THE RECORDED DTCS FROM BOTH THE CONTINUOUS AND ON-DEMAND SELF-TEST DDM	
• Check for recorded driver door module (DDM) DTCs from the continuous and on-demand self-test. • **Are any DDM DTCs recorded?**	**Yes** If DTC B1309 or DTC B1341 were retrieved, GO to C3 . For all other DDM DTCs, REFER to the Driver Door Module DDM Diagnostic Trouble Code (DTC) Index. **No** GO to C2 .
C2 CHECK THE DRIVER DOOR LOCK CONTROL SWITCH AND CIRCUITS MONITOR THE DDM DOOR LOCK AND DOOR UNLOCK PIDS	
NOTE: Cycle the key from OFF to ON to enable the switched system power feature. • Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: DDM Door Lock and Door Unlock PIDs. • Lock and unlock the driver door using the driver door lock control switch while monitoring the DDM door lock and door unlock PIDs. • **Do the DDM door LOCK and door UNLOCK PIDs values agree with the driver door lock control switch positions?**	**Yes** GO to C8 . **No** If the PID(s) read YES at all times, GO to C3 . If the PID(s) read NO at all times, GO to C5 .
C3 CHECK THE DRIVER DOOR LOCK CONTROL SWITCH	
• Key in OFF position. • Disconnect: Driver Door Lock Control Switch C505.	**Yes** GO to C4 .

• Carry out the driver door lock control switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the driver door lock control switch OK?**	**No** INSTALL a new driver door lock control switch. REFER to Door Lock Control Switch in this section. CLEAR the DTCs. REPEAT the self-test.
C4 CHECK CIRCUITS 8-AA10 (WH/BK) AND 8-AA11 (WH/VT) FOR A SHORT TO GROUND	
• Disconnect: DDM C501d. • Measure the resistance between the DDM C501d-23, circuit 8-AA10 (WH/BK), harness side and ground; and between the DDM C501d-24, circuit 8-AA11 (WH/VT), harness side and ground.  A0004129 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to C8 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.
C5 CHECK THE DRIVER DOOR LOCK CONTROL SWITCH	
• Key in OFF position. • Disconnect: Driver Door Lock Control Switch C505. • Carry out the driver door lock control switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the driver door lock control switch OK?**	**Yes** GO to C6 . **No** INSTALL a new driver door lock control switch. REFER to Door Lock Control Switch in this section. CLEAR the DTCs. REPEAT the self-test.
C6 CHECK CIRCUIT 31-LH28 (BK) FOR AN OPEN	
• Measure the resistance between the driver door lock control switch C505-4, circuit 31-LH28 (BK), harness side and ground.  A0056655 • **Is the resistance less than 5 ohms?**	**Yes** GO to C7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C7 CHECK CIRCUITS 8-AA10 (WH/BK) AND 8-AA11 (WH/VT) FOR AN OPEN	
• Disconnect: DDM C501d. • Measure the resistance between the DDM C501d-23, circuit 8-AA10 (WH/BK), harness side and the driver door lock control switch C505-1, circuit 8-AA10 (WH/BK), harness	**Yes** GO to C8 . **No** REPAIR the circuit(s) in

side; and between the DDM C501d-24, circuit 8-AA11 (WH/VT), harness side and the driver door lock control switch C505-3, circuit 8-AA11 (WH/VT), harness side.  A0056656 • **Are the resistances less than 5 ohms?**	question. CLEAR the DTCs. REPEAT the self-test.
C8 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all the DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 419-10 . REPEAT the self-test.
	
	No
	The system is operating correctly at this time. THE concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test D: All Door Locks Are Inoperative From The Passenger Door Lock Control Switch

Normal Operation

The passenger door lock control switch supplies a ground signal to the rear electronic module (REM). When the REM receives ground through circuit 8-AA20 (WH/BU), the REM locks the passenger doors and sends a standard corporate protocol (SCP) message to the driver door module (DDM) to lock the driver door. When the REM receives ground through circuit 8-AA21 (WH/GN), the REM unlocks the passenger doors and sends an SCP message to the DDM to unlock the driver door.

Possible Causes

- circuit 8-AA20 (WH/BU) open or short to ground
- circuit 8-AA21 (WH/GN) open or short to ground
- circuit 31-LH42 (BK) open
- passenger door lock control switch
- REM

PINPOINT TEST D: ALL DOOR LOCKS ARE INOPERATIVE FROM THE PASSENGER DOOR LOCK CONTROL SWITCH

Test Step	Result / Action to Take
D1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST REAR ELECTRONIC MODULE (REM)	
• Check for recorded REM DTCs from the continuous and on-demand self-test.	**Yes** For DTC B1300 or B1310, GO to D3 .

• **Are any REM DTCs recorded?**	For all other REM DTCs, REFER to the Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index. **No** GO to D2 .
D2 CHECK THE PASSENGER DOOR LOCK CONTROL SWITCH AND CIRCUITS MONITOR THE REM RH FRONT DOOR LOCK AND UNLOCK PIDS	
NOTE: Cycle the ignition switch from OFF to ON to enable the switched system power feature. • Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: REM RH Front Door Lock and Unlock PIDs. • Lock and unlock the RH front door using the passenger door lock control switch while monitoring the REM RH front door lock and unlock PIDs. • **Do the REM RH front door lock and unlock PIDs values agree with the passenger door lock control switch positions?**	**Yes** GO to D8 . **No** If the PID(s) read YES at all times, GO to D3 . If the PID(s) read NO at all times, GO to D5 .
D3 CHECK THE PASSENGER DOOR LOCK CONTROL SWITCH	
• Key in OFF position. • Disconnect: Passenger Door Lock Control Switch C605. • Carry out the passenger door lock control switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the passenger door lock control switch OK?**	**Yes** GO to D4 . **No** INSTALL a new passenger door lock control switch. REFER to Door Lock Control Switch in this section. CLEAR the DTCs. REPEAT the self-test.
D4 CHECK CIRCUITS 8-AA20 (WH/BU) AND 8-AA21 (WH/GN) FOR A SHORT TO GROUND	
• Disconnect: REM C420c. • Measure the resistance between the REM C420c-20, circuit 8-AA20 (WH/BU), harness side and ground; and between the REM C420c-21, circuit 8-AA21 (WH/GN), harness side and ground.  • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to D8 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.

D5 CHECK THE PASSENGER DOOR LOCK CONTROL SWITCH	
• Key in OFF position. • Disconnect: Passenger Door Lock Control Switch C605. • Carry out the passenger door lock control switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the passenger door lock control switch OK?**	**Yes** GO to D6 . **No** INSTALL a new passenger door lock control switch. REFER to Door Lock Control Switch in this section. CLEAR the DTCs. REPEAT the self-test.
D6 CHECK CIRCUIT 31-LH42 (BK) FOR AN OPEN	
• Measure the resistance between the passenger door lock control switch C605-4, circuit 31-LH42 (BK), harness side and ground.  A0056655 • **Is the resistance less than 5 ohms?**	**Yes** GO to D7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
D7 CHECK CIRCUITS 8-AA20 (WH/BU) AND 8-AA21 (WH/GN) FOR AN OPEN	
• Disconnect: REM C420c. • Measure the resistance between the REM C420c-20, circuit 8-AA20 (WH/BU), harness side and the passenger door lock control switch C605-1, circuit 8-AA20 (WH/BU), harness side; and between the REM C420c-21, circuit 8-AA21 (WH/GN), harness side and the passenger door lock control switch C605-3, circuit 8-AA21 (WH/GN), harness side.  A0056657 • **Are the resistances less than 5 ohms?**	**Yes** GO to D8 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.
D8 CHECK FOR CORRECT REM OPERATION	

• Disconnect all the REM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the REM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new REM. REFER to Section 419-10 . REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been

	caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test E: All Door Locks Are Inoperative From The Driver Door Lock Cylinder

Normal Operation

When the driver door lock cylinder is turned once to either the lock or the unlock position, the driver set/reset switch grounds either circuit 31S-AA78 (BK/BU) for the lock command or circuit 31S-AA79 (BK/WH) for the unlock command through circuit 31-AA58 (BK) to the driver door module (DDM). The DDM locks and unlocks the driver door. When a global lock/unlock command is requested through driver door lock cylinder, the driver set/reset switch grounds either circuit 31S-AA78 (BK/BU) for the lock command or circuit 31S-AA79 (BK/WH) for the unlock command through circuit 31-AA58 (BK) to the driver door module (DDM). The DDM locks or unlocks the driver door and sends a standard corporate protocol (SCP) message to the rear electronic module (REM) to lock/unlock the passenger doors.

Possible Causes

- circuit 31-AA58 (BK) open
- circuit 31S-AA78 (BK/BU) open or short to ground
- circuit 31S-AA79 (BK/WH) open or short to ground
- driver door latch (driver set/reset switch)
- DDM

PINPOINT TEST E: ALL DOOR LOCKS ARE INOPERATIVE FROM THE DRIVER DOOR LOCK CYLINDER

Test Step	Result / Action to Take
E1 RETRIEVE THE RECORDED DTCS FROM BOTH THE CONTINUOUS AND ON-DEMAND SELF-TEST DRIVER DOOR MODULE (DDM)	
• Check for recorded DDM DTCs from the continuous and on-demand self-test. • **Are any DDM DTCs recorded?**	**Yes** For DTC B2112 or DTC B2116, GO to E3 . For all other DDM DTCs, REFER to the Driver Door Module (DDM) Diagnostic Trouble Code (DTC) Index. **No** GO to E2 .
E2 CHECK THE DRIVER DOOR LOCK CYLINDER AND CIRCUITS MONITOR THE DDM LOCK CYLINDER INPUT SWITCH STATUS AND DOOR UNLOCK DISARM INPUT SWITCH STATUS PIDS	
NOTE: Cycle the ignition switch from the OFF to the ON position to enable the switched system power feature. • Key in OFF position. • Connect the diagnostic tool.	**Yes** GO to E9 . **No** GO to E3 .

• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: DDM Lock Cylinder Input Switch Status and Door Unlock Disarm Input Switch Status PIDs. • Lock and unlock the driver door using the driver door lock cylinder while monitoring the DDM lock cylinder input switch status and door unlock disarm input switch status PIDs. • **Do the DDM lock cylinder input switch status and door unlock disarm input switch status PID values agree with the driver door lock cylinder positions?**	
E3 CHECK CIRCUITS 31S-AA78 (BK/BU) AND 31S-AA79 (BK/WH) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: DDM C501c. • Measure the resistance between the DDM C501c-16, circuit 31S-AA78 (BK/BU), harness side and ground; and between the DDM C501c-17, circuit 31S-AA79 (BK/WH), harness side and ground.  A0003773 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to E5 . **No** GO to E4 .
E4 CHECK THE DRIVER DOOR LOCK LATCH FOR A SHORT TO GROUND	
• Disconnect: Driver Door Latch C525. • Measure the resistance between the DDM C501c-16, circuit 31S-AA78 (BK/BU), harness side and ground; and between the DDM C501c-17, circuit 31S-AA79 (BK/WH), harness side and ground.  A0003773 • **Are the resistances greater than 10,000 ohms?**	**Yes** INSTALL a new driver door latch. REFER to Front Door Latch in this section. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.
E5 CHECK THE DDM FOR AN INTERNAL SHORT TO GROUND	
• Connect: DDM C501c. • Disconnect: Driver Door Latch C525. • Measure the resistance between the driver door latch C525-7, circuit 31S-AA78 (BK/BU), harness side and ground; and between the driver door latch C525-5, circuit 31S-AA79 (BK/WH), harness side and ground.	**Yes** GO to E6 . **No** GO to E9 .

 A0003772 • **Are the resistances greater than 10,000 ohms?**	
E6 CHECK CIRCUIT 31-AA58 (BK) FOR AN OPEN	
• Measure the resistance between the driver door latch C525-6, circuit 31-AA58 (BK), harness side and ground.  A0004114 • **Is the resistance less than 5 ohms?**	**Yes** GO to E7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
E7 CHECK THE DRIVER SET AND RESET SWITCH	
• Connect: Driver Door Latch C525. • Disconnect: DDM C501c. • Measure the resistance between the DDM C501c-16, circuit 31S-AA78 (BK/BU), harness side and ground while turning the key cylinder to the SET position; and between the DDM C501c-17, circuit 31S-AA79 (BK/WH), harness side and ground while turning the key cylinder to the RESET position.  A0003773 • **Are the resistances less than 5 ohms?**	**Yes** GO to E9 . **No** GO to E8 .
E8 CHECK CIRCUITS 31S-AA78 (BK/BU) AND 31S-AA79 (BK/WH) FOR AN OPEN	
• Disconnect: Driver Door Latch C525. • Measure the resistance between the DDM C501c-16, circuit 31S-AA78 (BK/BU), harness side and the driver door latch C525-7, circuit 31S-AA78 (BK/BU), harness side; and between the DDM C501c-17, circuit 31S-AA79 (BK/WH), harness side and the driver door latch C525-5, circuit 31S-AA79 (BK/WH), harness side.  A0004115	**Yes** INSTALL a new driver door latch. REFER to Front Door Latch in this section. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.

• **Are the resistances less than 5 ohms?**	
E9 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all the DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM.
	REFER to Section 419-10 .
	REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.
	CLEAR the DTCs.
	REPEAT the self-test.

Pinpoint Test F: A Single Door Lock Is Inoperative Driver Door

Normal Operation

The driver door module (DDM) receives lock/unlock inputs from the driver door lock control switch, passenger door lock control switch (through the rear electronic module), remote keyless entry (RKE) transmitter, or RKE keypad. The DDM then locks/unlocks the driver door through circuit 33-AA10 (YE/BK) and circuit 32-AA11 (WH/VT).

Possible Causes

- circuit 33-AA10 (YE/BK) short to ground or open
- circuit 32-AA11 (WH/VT) short to ground or open
- driver door latch
- DDM

PINPOINT TEST F: A SINGLE DOOR LOCK IS INOPERATIVE DRIVER DOOR

Test Step	Result / Action to Take
F1 CHECK THE DRIVER DOOR LOCK OPERATION USING ACTIVE COMMANDS	
NOTE: Cycle the key from OFF to ON to enable the switched system power feature. • Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Active Commands. • Trigger the DDM driver door lock and driver door unlock active commands on and off. • **Do the DDM driver door lock and driver door unlock active commands operate correctly?**	**Yes** GO to F5 . **No** GO to F2 .
F2 CHECK THE DDM LOCK AND UNLOCK OUTPUTS USING THE ACTIVE COMMANDS	

• Key in OFF position. • Disconnect: Driver Door Latch C525. • Key in ON position. • Measure the voltage between the driver door latch C525-2, circuit 33-AA10 (YE/BK), harness side and ground while triggering the DDM driver door lock active command to ON; and measure the voltage between the driver door latch C525-10, circuit 32-AA11 (WH/VT), harness side and ground while triggering the DDM driver door unlock active command to ON.  A0004118 • **Are the voltages greater than 10 volts?**	**Yes** INSTALL a new driver door latch. REFER to Front Door Latch in this section. CLEAR the DTCs. REPEAT the self-test. **No** GO to F3 .
F3 CHECK CIRCUITS 33-AA10 (YE/BK) AND 32-AA11 (WH/VT) FOR AN OPEN	
• Key in OFF position. • Disconnect: DDM C501c. • Measure the resistance between the driver door latch C525-2, circuit 33-AA10 (YE/BK), harness side and the DDM C501c-8, circuit 33-AA10 (YE/BK), harness side; and between the driver door latch C525-10, circuit 32-AA11 (WH/VT), harness side and the DDM C501c-9, circuit 32-AA11 (WH/VT), harness side.  A0004119 • **Are the resistances less than 5 ohms?**	**Yes** GO to F4 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.
F4 CHECK CIRCUITS 33-AA10 (YE/BK) AND 32-AA11 (WH/VT) FOR A SHORT TO GROUND	
• Measure the resistance between the driver door latch C525-2, circuit 33-AA10 (YE/BK), harness side and ground; and between the driver door latch C525-10, circuit 32-AA11 (WH/VT), harness side and ground.  A0004120 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to F5 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.
F5 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all the DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test G: More Than One Door Lock Is Inoperative RH Front Door, RH Rear Door, and LH Rear Door

Normal Operation

The driver door module (DDM) receives lock/unlock inputs from the driver door lock control switch, remote keyless entry (RKE) transmitter, or RKE keypad. The DDM sends a standard corporate protocol (SCP) message to the rear electronic module (REM) for the lock/unlock function.

The REM receives lock/unlock input from the DDM and the passenger door lock control switch. The REM then locks/unlocks the passenger doors through circuit 32-AA1 (WH/RD), circuit 32-AA16 (WH/BK), circuit 33-AA2 (YE/RD), and circuit 33-AA15 (YE/GN). The REM is energized through circuit 29S-DK31 (OG/BK) and grounded through circuit 31-DK30H (BK/OG).

Possible Causes

- circuit 29S-DK31 (OG/BK) short to ground or open
- circuit 31-DK30 (BK/OG) open
- circuit 32-AA1 (WH/RD) short to ground or open
- circuit 32-AA16 (WH/BK) short to ground or open
- circuit 33-AA2 (YE/RD) short to ground or open
- circuit 33-AA15 (YE/GN) short to ground or open
- REM

PINPOINT TEST G: MORE THAN ONE DOOR LOCK IS INOPERATIVE RH FRONT DOOR, RH REAR DOOR, AND LH REAR DOOR

Test Step	Result / Action to Take
G1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST REAR ELECTRONIC MODULE (REM)	
• Check for recorded REM DTCs from the continuous and on-demand self-test. • **Are any DTCs recorded?**	**Yes** REFER to the Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index. **No** GO to G2 .

G2 CHECK BATTERY JUNCTION BOX (BJB) FUSE 1 (15A) FOR VOLTAGE	
NOTE: Cycle the ignition switch from the OFF to the ON position to enable the switched system power feature. • Disconnect: BJB fuse 1 (15A). • Measure the voltage between the BJB fuse 1 (15A) input cavity, component side and ground.  A0004121 • **Is the voltage greater than 10 volts?**	**Yes** CONNECT the BJB fuse 1 (15A). GO to G3 . **No** REPAIR the BJB. TEST the system for normal operation.
G3 CHECK CIRCUIT 29S-DK31 (OG/BK) FOR AN OPEN	
• Key in OFF position. • Disconnect: REM C420c. • Key in ON position. • Measure the voltage between the REM C420c-13, circuit 29S-DK31 (OG/BK), harness side and ground.  A0004122 • **Is the voltage greater than 10 volts?**	**Yes** GO to G4 . **No** REPAIR circuit 29S-DK31 (OG/BK). TEST the system for normal operation.
G4 CHECK THE REM OUTPUT USING THE ACTIVE COMMANDS	
• Key in OFF position. • Connect: REM C420c. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Active Commands. • Trigger the REM LH rear LOCK, RH rear LOCK, RH rear UNLOCK, and LH rear UNLOCK active commands ON and OFF while observing the RH rear and LH rear latches. • **Do the RH rear and the LH rear latches operate correctly?**	**Yes** GO to G6 . **No** If a single latch does not operate, REFER to Symptom Chart. If both latches do not operate, GO to G5 .
G5 CHECK CIRCUITS 33-AA2 (YE/RD), 32-AA1 (WH/RD), 33-AA15 (YE/GN), AND 32-AA16 (WH/BK) FOR A SHORT TO GROUND	

<table>
<tr>
<td>
• Key in OFF position.

• Connect all the REM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• Is the concern still present?
</td>
<td>Yes
INSTALL a new REM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.

No
The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.</td>
</tr>
</table>

Pinpoint Test H: More Than One Door Lock Is Inoperative RH Front Door and RH Rear Door

Normal Operation

The driver door module (DDM) receives lock/unlock inputs from the driver door lock control switch, remote keyless entry (RKE) transmitter, or RKE keypad. The DDM sends an standard corporate protocol (SCP) message to the rear electronic module (REM) for the lock/unlock function.

The REM receives lock/unlock input from the DDM and the passenger door lock control switch. The REM then locks/unlocks the RH front door and RH rear door through circuit 32-AA1 (WH/RD), circuit 33-AA25 (YE/RD), circuit 33-AA2 (YE/RD), circuit 32-AA21 (WH/GN), circuit 33-AA20 (YE/BU), and circuit 32-AA26 (WH/BU).

Possible Causes

- circuit 32-AA21 (WH/GN) short to ground or open
- circuit 32-AA1 (WH/RD) short to ground or open
- circuit 32-AA26 (WH/BU) short to ground or open
- circuit 33-AA20 (YE/BU) short to ground or open
- circuit 33-AA2 (YE/RD) short to ground or open
- circuit 33-AA25 (YE/RD) short to ground or open
- door latch (front or rear)
- REM

PINPOINT TEST H: MORE THAN ONE DOOR LOCK IS INOPERATIVE RH FRONT DOOR AND RH REAR DOOR

Test Step	Result / Action to Take
H1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST REAR ELECTRONIC MODULE (REM)	
• Check for recorded REM DTCs from the continuous and on-demand self-test. • **Are any DTCs recorded?**	**Yes** REFER to the Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index. **No** GO to H2 .
H2 CHECK THE REM OUTPUT USING THE ACTIVE COMMANDS	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Active Commands. • Trigger the REM RH rear lock and RH rear unlock active commands ON and OFF while observing the RH front and RH rear lock function. • **Do the REM RH rear lock and RH rear unlock active commands operate correctly?**	**Yes** GO to H6 . **No** GO to H3 .
H3 CHECK THE REM OUTPUT TO THE RH FRONT AND THE RH REAR LATCHES	
NOTE: Disconnect the inoperative door latch. If both doors are inoperative, disconnect both latches. • Key in OFF position. • Disconnect: RH Rear Door Latch C804.	**Yes** INSTALL a new door latch(es). REFER to Front Door Latch or Rear Door Latch in this section. TEST the

• Disconnect: RH Front Door Latch C609. • Key in ON position. • Measure the voltage between the RH front door latch C609-2, circuit 33-AA20 (YE/BU), harness side and ground while triggering the REM RH front door lock active command to ON; and measure the voltage between the RH front door latch C609-10, circuit 32-AA21 (WH/GN), harness side and ground while triggering the REM RH front door unlock active command to ON.  A0004118 • Measure the voltage between the RH rear door latch C804-2, circuit 33-AA25 (YE/RD), harness side and ground while triggering the REM RH rear door lock active command to ON; and measure the voltage between RH rear door latch C804-10, circuit 32-AA26 (WH/BU), harness side and ground while triggering the REM RH rear door unlock active command to ON.  A0004118 • **Are the voltages greater than 10 volts?**	system for normal operation. **No** GO to H4 .
H4 CHECK CIRCUITS 33-AA20 (YE/BU), 32-AA21 (WH/GN), 33-AA2 (YE/RD), 32-AA1 (WH/RD), 32-AA26 (WH/BU), AND 33-AA25 (YE/RD) FOR AN OPEN	
• Key in OFF position. • Disconnect: REM C420c. • Measure the resistance between the RH front door latch C609-2, circuit 33-AA20 (YE/BU), harness side and the REM C420c-5, circuit 33-AA2 (YE/RD), harness side; and between the RH front door latch C609-10, circuit 32-AA21 (WH/GN), harness side and the REM C420c-6, circuit 32-AA1 (WH/RD), harness side.  A0004124 • Measure the resistance between the RH rear door latch C804-2, circuit 33-AA25 (YE/RD), harness side and the REM C420c-5, circuit 33-AA2 (YE/RD), harness side; and between the RH rear	**Yes** GO to H5 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.

door lock latch C804-10, circuit 32-AA26 (WH/BU), harness side and the REM C420c-6, circuit 32-AA1 (WH/RD), harness side.  A0004124 • **Are the resistances less than 5 ohms?**	
H5 CHECK CIRCUITS 33-AA2 (YE/RD) AND 32-AA1 (WH/RD) FOR A SHORT TO GROUND	
• Measure the resistance between the REM C420c-5, circuit 33-AA2 (YE/RD), harness side and ground; and between the REM C420c-6, circuit 32-AA1 (WH/RD), harness side and ground.  A0004125 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to H6 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.
H6 CHECK FOR CORRECT REM OPERATION	

• Disconnect all the REM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the REM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new REM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test I: A Single Door Lock Is Inoperative LH Rear Door

Normal Operation

The driver door module (DDM) receives lock/unlock inputs from the driver door lock control switch, remote keyless entry (RKE) transmitter, or RKE keypad. The DDM sends a standard corporate protocol (SCP) message to the rear electronic module (REM) for the lock/unlock function.

The REM receives lock/unlock input from the DDM and the passenger door lock control switch. The REM then locks/unlocks the LH rear door through circuit 32-AA16 (WH/BK) and circuit 33-AA15 (YE/GN).

Possible Causes

- circuit 32-AA16 (WH/BK) short to ground or open
- circuit 33-AA15 (YE/GN) short to ground or open
- rear door latch
- REM

PINPOINT TEST I: A SINGLE DOOR LOCK IS INOPERATIVE LH REAR DOOR

Test Step	Result / Action to Take
I1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST REAR ELECTRONIC MODULE (REM)	
• Check for recorded REM DTCs from the continuous and on-demand self-test. • **Are any DTCs recorded?**	**Yes** REFER to the Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index. **No** GO to I2 .
I2 CHECK THE REM OUTPUT USING THE ACTIVE COMMANDS	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Active Commands. • Trigger the REM LH rear lock and LH rear unlock active commands ON and OFF while observing the LH rear lock function. • **Does the LH rear lock operate correctly?**	**Yes** GO to I6 . **No** GO to I3 .
I3 CHECK THE REM OUTPUT TO THE LH REAR LATCH	
• Key in OFF position. • Disconnect: LH Rear Door Latch C704. • Key in ON position. • Measure the voltage between the LH rear door latch C704-2, circuit 33-AA15 (YE/GN), harness side and ground while triggering the REM LH rear door lock active command to ON; and measure the voltage between the LH rear door latch C704-10, circuit 32-AA16 (WH/BK), harness side and ground while triggering the REM LH rear door unlock active command to ON.  A0004118 • **Are the voltages greater than 10 volts?**	**Yes** INSTALL a new rear door latch. REFER to Rear Door Latch in this section. TEST the system for normal operation. **No** GO to I4 .
I4 CHECK CIRCUITS 33-AA15 (YE/GN) AND 32-AA16 (WH/BK) FOR AN OPEN	

• Key in OFF position. • Disconnect: REM C420c. • Measure the resistance between the LH rear door latch C704-2, circuit 33-AA15 (YE/GN), harness side and the REM C420c-4, circuit 33-AA15 (YE/GN), harness side; and between the LH rear door latch C704-10, circuit 32-AA16 (WH/BK), harness side and the REM C420c-7, circuit 32-AA16 (WH/BK), harness side.  A0056658 • **Are the resistances less than 5 ohms?**	**Yes** GO to I5 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.
I5 CHECK CIRCUITS 33-AA15 (YE/GN) AND 32-AA16 (WH/BK) FOR A SHORT TO GROUND	
• Measure the resistance between the REM C420c-4, circuit 33-AA15 (YE/GN), harness side and ground; and between the REM C420c-7, circuit 32-AA16 (WH/BK), harness side and ground.  A0004141 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to I6 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.
I6 CHECK FOR CORRECT REM OPERATION	

• Disconnect all the REM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the REM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new REM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test J: The Doors Do Not Lock/Unlock Using The Remote Keyless Entry Keypad

Normal Operation

When the customer code buttons are pressed on the remote keyless entry (RKE) keypad, a signal is sent to the driver door module (DDM) to activate the function requested. The customer code is entered to unlock the driver door. Entering the customer code and pressing the 3/4 button unlocks all the doors. Pressing 7/8 and 9/0 locks all the doors.

Customer code 1 is used to unlock the door and recall memory position 1. Customer Code 2 is used to unlock the door and recall memory position 2.

Possible Causes

- circuit 7-AA70 (YE/GN) short to ground or open
- circuit 8-AA70 (WH/GN) short to ground or open
- circuit 9-AA70 (BN/GN) open
- circuit 10-AA70 (GY/OG) short to ground or open
- RKE keypad
- DDM

PINPOINT TEST J: THE DOORS DO NOT LOCK/UNLOCK USING THE REMOTE KEYLESS ENTRY KEYPAD

Test Step	Result / Action to Take
J1 CHECK THE LOCK/UNLOCK OPERATION FROM THE DRIVER DOOR LOCK CONTROL SWITCH	
• Lock and unlock all the doors using the driver door lock control switch. • **Do all the doors lock and unlock correctly?**	**Yes** If the memory seat does not operate correctly using the remote keyless entry (RKE) keypad, but all other functions operate correctly, GO to J2 . If one or more other functions do not operate correctly using the RKE keypad, GO to J3 . **No** GO to Symptom Chart to diagnose the inoperative function.
J2 CHECK THAT THE RKE KEYPAD IS ASSOCIATED WITH A MEMORY POSITION	
• Activate the RKE keypad memory recall feature. • Position the seat, mirrors, steering column, and adjustable pedals to the desired positions. • **Does the RKE keypad operate correctly?**	**Yes** The system is operating correctly at this time. CLEAR the DTCs. REPEAT the self-test. **No** GO to J3 .
J3 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCs)	
• Check for recorded results from the driver door module (DDM) self-test. • **Is DTC B1526 recorded?**	**Yes** GO to J4 . **No** GO to J6 .
J4 CHECK THE RKE KEYPAD INPUT TO THE DDM FOR A SHORT TO GROUND	

• Key in OFF position. • Disconnect: DDM C501d. • Measure the resistance between DDM C501d, harness side and ground as follows: **DDM Connector/Pin** / **Circuit** C501d-19 / 8-AA70 (WH/GN) C501d-20 / 10-AA70 (GY/OG) C501d-21 / 7-AA70 (YE/GN)  • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to J10 . **No** GO to J5 .
J5 CHECK THE RKE KEYPAD FOR A SHORT TO GROUND	
• Disconnect: RKE Keypad C500. • Measure the resistance between DDM C501d, harness side and ground as follows: **DDM Connector/Pin** / **Circuit** C501d-19 / 8-AA70 (WH/GN) C501d-20 / 10-AA70 (GY/OG) C501d-21 / 7-AA70 (YE/GN)  • **Are the resistances greater than 10,000 ohms?**	**Yes** INSTALL a new RKE keypad. REFER to Remote Keyless Entry Keypad in this section. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit(s). CLEAR the DTCs. REPEAT the self-test.
J6 CHECK THE FACTORY KEYLESS CODE	
• Enter the following diagnostic mode on the diagnostic tool: DDM Key Code PID. • Record the code. • **Does the recorded code match the code on the factory sticker or wallet card?**	**Yes** GO to J7 . **No** CHECK the operation of the factory code retrieved from the DDM. If OK, NOTIFY the customer of the correct code. If still

	inoperative, CLEAR the DTCs. REPEAT the self-test and GO to J7 .
J7 CHECK THE RKE KEYPAD OPERATION	
• Key in OFF position. • Disconnect: DDM C501d. • Measure the resistance between DDM C501d, harness side and ground while pressing the associated RKE keypad button as follows: **DDM Connector/Pin** / **Circuit** / **RKE Keypad Buttons** C501d-19 / 8-AA70 (WH/GN) / 1/2, 3/4, and 5/6 C501d-20 / 10-AA70 (GY/OG) / 5/6 and 7/8 C501d-21 / 7-AA70 (YE/GN) / 3/4 and 9/0  A0056659 • **Are the resistances less than 5 ohms with the associated buttons pressed?**	**Yes** GO to J10 . **No** GO to J8 .
J8 CHECK CIRCUIT 9-AA70 (BN/GN) FOR AN OPEN	
• Disconnect: DDM C501c. • Disconnect: RKE Keypad C500. • Measure the resistance between the RKE keypad C500-6, circuit 9-AA70 (BN/GN), harness side and the DDM C501c-20, circuit 9-AA70 (BN/GN), harness side.  A0056660 • **Is the resistance less than 5 ohms?**	**Yes** GO to J9 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
J9 CHECK THE RKE KEYPAD CIRCUITS FOR AN OPEN	
• Measure the resistance between DDM C501d, harness side and RKE keypad C500 as follows:	**Yes** INSTALL a new RKE keypad. REFER to Remote Keyless Entry Keypad in this section. CLEAR the

<table><tr><th>DDM Connector/Pin</th><th>Circuit</th><th>RKE Keypad Connector/Pin</th></tr><tr><td>C501d-19</td><td>8-AA70 (WH/GN)</td><td>C500-1</td></tr><tr><td>C501d-20</td><td>10-AA70 (GY/OG)</td><td>C500-3</td></tr><tr><td>C501d-21</td><td>7-AA70 (YE/GN)</td><td>C500-7</td></tr></table> • **Are the resistances less than 5 ohms?**	DTCs. REPEAT the self-test **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
J10 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all the DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test

Pinpoint Test K: The Doors Do Not Lock/Unlock Using The Remote Keyless Entry Transmitter

Normal Operation

Remote locking and unlocking of the doors is accomplished by the driver door module (DDM) receiving a command message from the remote keyless entry (RKE) transmitter. The DDM processes the command and sends a signal directly to the driver door latch. The DDM sends a message through the standard corporate protocol (SCP) network to the rear electronic module (REM), which activates the passenger door latches. Fault management disables the remote locking and unlocking feature in the event of an invalid or missing ignition switch or PRNDL message to the DDM.

All RKE transmitters must be present to begin diagnosis of the RKE system.

Aftermarket or dealer-installed systems may adversely affect the RKE system operation. These systems should be disconnected before diagnosing any RKE concerns.

Possible Causes

- RKE transmitter battery
- RKE transmitter programming
- RKE transmitter
- aftermarket systems
- high power devices
- TV/radio transmission towers
- DDM

PINPOINT TEST K: THE DOORS DO NOT LOCK/UNLOCK USING THE REMOTE KEYLESS ENTRY TRANSMITTER

Test Step	Result / Action to Take
K1 CHECK FOR THE CORRECT REMOTE KEYLESS ENTRY (RKE) TRANSMITTERS	
• Check that the correct RKE transmitters are used with the vehicle. • Make sure the RKE transmitters are those provided with the OEM system and not from an aftermarket or a dealer-installed system that may have been installed on the vehicle. • **Are all the correct RKE transmitters present?**	**Yes** GO to K2 . **No** The system cannot be tested without the correct RKE transmitters. INFORM the customer that all the correct RKE transmitters need to be present to proceed with diagnosis of the system.
K2 CHECK THE OPERATION OF THE RKE TRANSMITTER WITH THE IGNITION SWITCH IN THE OFF POSITION	
• Key in OFF position. • Check the operation of the RKE transmitter. • **Does the system operate correctly now?**	**Yes** The system is operating as designed. INFORM the customer the correct vehicle behavior is for the RKE transmitters to function only with the ignition switch in the OFF or RUN position with the transmission in PARK or NEUTRAL. **No** GO to K3 .
K3 CHECK THE POWER DOOR LOCK SYSTEM FOR CORRECT OPERATION	
• Verify the door lock/unlock operation by actuating the driver door lock control switch. • **Do all the doors lock and unlock correctly?**	**Yes** GO to K4 . **No** To diagnose the inoperative door locks, Go To Pinpoint Test C .
K4 CHECK FOR COMPLETE FUNCTIONALITY OF THE RKE TRANSMITTER(S)	
• Check all the RKE transmitter buttons for correct operation. • **Does the panic button operate correctly?**	**Yes** REPLACE the inoperative RKE transmitter. PROGRAM the inoperative RKE transmitter using the diagnostic tool or PROGRAM all the RKE transmitters using the ignition cylinder method. REFER to Remote Keyless Entry Transmitter Programming in this section. INFORM the customer any RKE transmitters not present will need to be programmed. CLEAR the DTCs. REPEAT the self-test.

	No GO to K5 .
K5 MAKE SURE THE RKE TRANSMITTER SIGNAL IS BEING RECEIVED	
• Connect the diagnostic tool. • Enter the following diagnostic mode on the diagnostic tool: DDM function tests, transmitter test, or program transmitter. • Monitor the RKE transmitter identification code (TIC) through the diagnostic tool menus. • **NOTE:** The vehicle must be electronically unlocked through the RKE transmitter or the door lock control switch prior to using any diagnostic tools. • Verify the RKE transmitter signal is being received. Using a diagnostic tool, press a button on the RKE transmitter while observing the diagnostic tool. • **Does the TIC show up on the diagnostic tool screen when a button is pressed?**	**Yes** GO to K6 . **No** GO to K7 .
K6 CHECK IF THE RKE TRANSMITTERS ARE PROGRAMMED	
• Enter the following diagnostic mode on the diagnostic tool: DDM function tests, RKE transmitter test, or program RKE transmitter. • Monitor the RKE transmitter TIC/DATA through the diagnostic tool menus. • Verify the RKE transmitters are programmed to the vehicle. • **Does the TIC displayed under the current RKE transmitter match any of the TICs stored in memory?**	**Yes** GO to K8 . **No** PROGRAM all of the RKE transmitters. REFER to Remote Keyless Entry Transmitter Programming in this section. INFORM the customer that any RKE transmitters not present will need to be programmed. CLEAR the DTCs. REPEAT the self-test.
K7 CHECK THE RKE TRANSMITTER BATTERY	
• Using a thin coin, open the RKE transmitter. • Do not clean any grease from the battery terminal on the back surface of the circuit board.	**Yes** GO to K9 . **No** INSTALL a new battery. Be sure the battery is seated correctly. DO NOT program the RKE transmitters. Faulty or

• Verify the correct battery is being used (CR2032). • Remove the RKE transmitter battery and measure the voltage. • **Is the voltage greater than 2.5 volts?**	dead batteries do not erase TICs from memory. CLEAR the DTCs. REPEAT the self-test.
K8 CHECK IF THE RKE TRANSMITTER IS OUT OF SYNCHRONIZATION WITH THE DDM	
• **NOTE:** The vehicle must be electronically unlocked through the RKE transmitter or the door lock control switch prior to using any service tools. • Retrieve any continuous DTCs with the diagnostic tool. • **Is continuous DTC B2425 stored in the DDM?**	**Yes** To diagnose the RKE transmitter out of synchronization, Go To Pinpoint Test Q . **No** GO to K9 .
K9 CHECK FOR NORMAL OPERATION WITH A KNOWN GOOD RKE TRANSMITTER	
• Enter the following diagnostic mode on the diagnostic tool: DDM function tests, transmitter test, or program transmitter. • Monitor the RKE transmitter TIC/DATA through the diagnostic tool menus. • Using the customer's second RKE transmitter or a known good RKE transmitter that is correct for the vehicle, verify the RKE transmitter signal is being received. • **Does the TIC show up on the diagnostic tool when a button is pressed on the RKE transmitter?**	**Yes** REPLACE the inoperative RKE transmitter. PROGRAM all the RKE transmitter(s). REFER to Remote Keyless Entry Transmitter Programming in this section. INFORM the customer any RKE transmitters not present will need to be programmed. CLEAR the DTCs. REPEAT the self-test. **No** GO to K10 .
K10 CHECK THE DDM FOR CORRECT OPERATION	

• Disconnect all the DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 419-10 .PROGRAM all the remote transmitters. REFER to Remote Keyless Entry Transmitter Programming in this section. INFORM the customer any remote transmitters not present will need to be programmed. CLEAR the DTCs. REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

	CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test L: Panic Feature Is Inoperative

Normal Operation

When the panic button on the remote keyless entry (RKE) transmitter is pressed, it sends a signal to the driver door module (DDM), which sends the information to the front electronic module (FEM) to activate the alarm.

Possible Causes

- RKE transmitter battery
- RKE transmitter programming
- DDM

PINPOINT TEST L: PANIC FEATURE IS INOPERATIVE

Test Step	Result / Action to Take
L1 CHECK THE FRONT ELECTRONIC MODULE (FEM) INPUT	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: FEM Panic PID. • Press the PANIC button while monitoring the FEM panic PID. • **Does the FEM panic PID indicate PANIC?**	**Yes** REFER to Section 419-01B to diagnose the alarm. **No** GO to L2 .
L2 CHECK THE REMOTE KEYLESS ENTRY (RKE) TRANSMITTER LUGGAGE COMPARTMENT LID RELEASE BUTTON WITH THE DIAGNOSTIC TOOL	
• Enter the following diagnostic mode on the diagnostic tool: DDM FUNCTION TEST TIC/DATA. • Press the luggage compartment lid release button on the RKE transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does last received data indicate TRUNK?**	**Yes** GO to L5 . **No** GO to L3 .
L3 CHECK THE BATTERY IN THE RKE TRANSMITTER	
• Install a new battery in the RKE transmitter. • Enter the following diagnostic mode on the diagnostic tool: DDM FUNCTION TEST TIC/DATA. • Press the luggage compartment lid release button on the RKE transmitter while monitoring the DDM FUNCTION TEST	**Yes** TEST all the RKE transmitter functions. TEST the system for normal operation. **No** GO to L4 .

TIC/DATA. • **Does last received data indicate TRUNK?**	
L4 CHECK THE PROGRAMMING OF THE RKE TRANSMITTER	
• Program the RKE transmitter. Refer to Remote Keyless Entry Transmitter Programming in this section. • Enter the following diagnostic mode on the diagnostic tool: DDM FUNCTION TEST TIC/DATA. • Press the luggage compartment lid release button on the RKE transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does last received data indicate TRUNK?**	**Yes** The RKE transmitter was not programmed. TEST the system for normal operation. **No** PROGRAM a new RKE transmitter to the vehicle. REFER to Remote Keyless Entry Transmitter Programming in this section. TEST the system for normal operation.
L5 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all the DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 419-10 . REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test M: The Auto-lock Does Not Operate Correctly

Normal Operation

The auto-locking function causes the vehicle to automatically lock all doors when all of the following conditions are concurrently met during the current key cycle:

- all the doors are closed
- the auto-locking function is active
- the ignition switch is in the ON position
- the transmission is in DRIVE or REVERSE
- the vehicle speed exceeds 5 km/h (3 mph)

After the initial activation of auto-locking and at least one door has been opened, auto-locking is activated again if the following conditions are concurrently met:

- all the doors are closed
- the auto-locking function is active
- the ignition switch is in the ON position
- the transmission is in DRIVE or REVERSE
- the vehicle speed exceeds 5 km/h (3 mph)

Possible Causes

- Door ajar switches
- Driver door module (DDM)

- Vehicle speed sensor (VSS) message from the anti-lock brake system (ABS) module
- Digital transmission range (TR) sensor message from the powertrain control module (PCM)

PINPOINT TEST M: THE AUTO-LOCK DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
M1 CHECK THE DRIVER DOOR AJAR PID	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Close all the doors and the luggage compartment lid. • Enter the following diagnostic mode on the diagnostic tool: FEM Driver Door Ajar PID. • **Does the FEM driver door ajar PID read AJAR?**	**Yes** REFER to Section 417-02 to diagnose the door ajar switch. **No** GO to M2 .
M2 CHECK THE RH FRONT DOOR AJAR PID	
• Enter the following diagnostic mode on the diagnostic tool: FEM RH Front Door Ajar PID. • **Does the FEM RH front door ajar PID read AJAR?**	**Yes** REFER to Section 417-02 to diagnose the door ajar switch. **No** GO to M3 .
M3 CHECK THE LH REAR DOOR AJAR PID	
• Enter the following diagnostic mode on the diagnostic tool: REM LH Rear Door Ajar PID. • **Does the REM LH rear door ajar PID read AJAR?**	**Yes** REFER to Section 417-02 to diagnose the door ajar switch. **No** GO to M4 .
M4 CHECK THE RH REAR DOOR AJAR PID	
• Enter the following diagnostic mode on the diagnostic tool: REM RH Rear Door Ajar PID.	**Yes** REFER to Section 417-02 to diagnose the door ajar switch. **No** GO to M5 .

• **Does the REM RH rear door ajar PID read AJAR?**	
M5 CHECK THE LUGGAGE COMPARTMENT LID AJAR PID	
• Enter the following diagnostic mode on the diagnostic tool: REM Luggage Compartment Lid Ajar PID. • **Does the REM luggage compartment lid ajar PID read AJAR?**	**Yes** REFER to Section 417-02 to diagnose the luggage compartment lid ajar switch. **No** GO to M6 .
M6 CHECK THE IGNITION SWITCH POSITION STATUS	
• Enter the following diagnostic mode on the diagnostic tool: FEM Ignition Switch Position PID. • Enter the following diagnostic mode on the diagnostic tool: FEM Vehicle Speed Sensor (VSS) PID. • Enter the following diagnostic mode on the diagnostic tool: PCM Digital Transmission Range Sensor PID. • **Are the FEM and PCM PIDs correct?**	**Yes** GO to M7 . **No** If the FEM ignition switch position PID is incorrect, REFER to Section 211-05 to diagnose the ignition switch. If the FEM VSS PID is incorrect, REFER to Section 206-09 to diagnose the VSS signal. If the PCM digital transmission range (TR) sensor PID is incorrect, REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual to diagnose the digital TR sensor.
M7 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all the DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test N: The Smart Lock Does Not Operate Correctly

Normal Operation

The smart unlocking function helps prevent the driver from locking the keys in the vehicle. When the driver or passenger door is ajar, the key is in the ignition switch, and the driver door lock control switch is pressed, all the doors lock, then the driver door unlocks. When the driver or passenger door is ajar, the key is in the ignition switch, and the passenger door lock control switch is pressed, all the doors lock, then all the doors unlock.

Possible Causes

- Driver door ajar switch
- Passenger door ajar switch
- Driver door module (DDM)

PINPOINT TEST N: THE SMART LOCK DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
N1 CHECK THE COURTESY LAMPS	
• Open the driver door. • **Do the courtesy lamps illuminate?**	**Yes** GO to N2 . **No** REFER to Section 417-02 to diagnose the interior lighting.
N2 CHECK THE WARNING CHIMES	
• Key in ON position. • Open the driver door. • **Do the warning chimes operate correctly?**	**Yes** GO to N3 . **No** REFER to Section 413-09 to diagnose the warning chimes.
N3 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all the DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test O: The Luggage Compartment Lid Is Inoperative Using The Remote Keyless Entry Transmitter

Normal Operation

When the luggage compartment lid release button on the remote keyless entry (RKE) transmitter is pressed, it sends a signal to the driver door module (DDM), which sends a message through the standard corporate protocol (SCP) network to the rear electronic module (REM) to energize the luggage compartment lid actuator.

Possible Causes

- RKE transmitter battery
- RKE transmitter programming
- RKE transmitter association with a memory position
- DDM

PINPOINT TEST O: THE LUGGAGE COMPARTMENT LID IS INOPERATIVE USING THE REMOTE KEYLESS ENTRY TRANSMITTER

NOTE: The luggage compartment lid key cylinder does not arm/disarm the perimeter alarm. Once armed, the perimeter alarm can only be disarmed using the remote keyless entry (RKE) transmitter or the driver set/reset switch.

Test Step	Result / Action to Take
O1 TEST THE LUGGAGE COMPARTMENT LID REMOTE SWITCH	
• Press the luggage compartment lid remote switch. • **DOES the luggage compartment lid open?**	**Yes** GO to O2 . **No** Go To Pinpoint Test A to diagnose the inoperative luggage compartment lid from the remote switch.
O2 CHECK THE RKE TRANSMITTER LUGGAGE COMPARTMENT LID RELEASE BUTTON WITH THE DIAGNOSTIC TOOL	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: DDM FUNCTION TEST TIC/DATA. • Press the luggage compartment lid release button on the RKE transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does last received data indicate TRUNK?**	**Yes** GO to O5 . **No** GO to O3 .
O3 CHECK THE BATTERY IN THE RKE TRANSMITTER	
• Install a new battery in the RKE transmitter. • Enter the following diagnostic mode on the diagnostic tool: DDM FUNCTION TEST	**Yes** TEST all the RKE transmitter functions. CLEAR the DTCs. REPEAT the self-test. **No**

TIC/DATA. • Press the luggage compartment lid release button on the RKE transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does last received data indicate TRUNK?**	GO to O4 .
O4 CHECK THE PROGRAMMING OF THE RKE TRANSMITTER	
• Program all the RKE transmitters. Refer to Remote Keyless Entry Transmitter Programming in this section. • Enter the following diagnostic mode on the diagnostic tool: DDM FUNCTION TEST TIC/DATA. • Press the luggage compartment lid release button on the RKE transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does last received data indicate TRUNK?**	**Yes** The RKE transmitter was not programmed. CLEAR the DTCs. REPEAT the self-test. **No** PROGRAM a new RKE transmitter to the vehicle. REFER to Remote Keyless Entry Transmitter Programming in this section. CLEAR the DTCs. REPEAT the self-test.
O5 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all the DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test P: The Memory Seat Does Not Operate Correctly Using The Remote Keyless Entry Transmitter

Normal Operation

When the UNLOCK button on the remote keyless entry (RKE) transmitter is pressed, it sends a signal to the driver door module (DDM) to initiate the memory seat function if the RKE transmitter has been associated with a memory position.

Possible Causes

- RKE transmitter battery
- RKE transmitter programming
- RKE transmitter association with a memory position
- DDM

PINPOINT TEST P: THE MEMORY SEAT DOES NOT OPERATE CORRECTLY USING THE REMOTE KEYLESS ENTRY TRANSMITTER

Test Step	Result / Action to Take
P1 CHECK THE MEMORY SET SWITCH	
• Make sure the key is in the ignition lock cylinder. • Operate the memory seat using the memory set switch. • **Does the memory seat operate correctly?**	**Yes** GO to P2 . **No** REFER to Section 501-10 to diagnose the memory set switch.
P2 CHECK THE REMOTE KEYLESS ENTRY (RKE) TRANSMITTER BUTTONS WITH THE DIAGNOSTIC TOOL	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: DDM FUNCTION TEST TIC/DATA. • Press the LOCK then the UNLOCK buttons on the RKE transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does the data received indicate LOCK, then UNLOCK?**	**Yes** GO to P5 . **No** GO to P3 .
P3 CHECK THE BATTERY IN THE RKE TRANSMITTER	
• Install a new battery in the RKE transmitter. • Enter the following diagnostic mode on the diagnostic tool: DDM FUNCTION TEST TIC/DATA. • Press the LOCK then the UNLOCK buttons on the RKE transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does the data received indicate LOCK, then UNLOCK?**	**Yes** TEST all the RKE transmitter functions. CLEAR the DTCs. REPEAT the self-test. **No** GO to P4 .
P4 CHECK THE PROGRAMMING OF THE RKE TRANSMITTER	
• Program all the RKE transmitters. Refer to Remote Keyless Entry Transmitter Programming in this section. • Enter the following diagnostic mode on the diagnostic tool: DDM FUNCTION TEST TIC/DATA. • Press the LOCK then the UNLOCK buttons on the RKE transmitter while	**Yes** The RKE transmitter was not programmed. CLEAR the DTCs. REPEAT the self-test. **No** PROGRAM a new RKE transmitter to the vehicle. REFER to Remote Keyless Entry Transmitter Programming in this section. CLEAR the DTCs. REPEAT the self-test.

monitoring the DDM FUNCTION TEST TIC/DATA. • **Does the data received indicate LOCK, then UNLOCK?**	
P5 CHECK THAT THE RKE TRANSMITTER IS ASSOCIATED WITH A MEMORY POSITION	
• Activate the RKE transmitter memory recall feature. • Position the seat, mirrors, steering column, and adjustable pedals to the desired positions. • **Does the RKE transmitter operate correctly?**	**Yes** The system is operating correctly at this time. INFORM the customer of the correct process to program the RKE transmitter to a memory position. **No** GO to P6 .
P6 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all the DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test Q: The Remote Keyless Entry Transmitter Is Out Of Synchronization

Normal Operation

The remote keyless entry (RKE) transmitters and the driver door module (DDM) use a rolling code to prevent the codes from being captured by a code grabber. The system advances the counter in the RKE transmitter and in the DDM every time a RKE transmitter button is pressed.

All RKE transmitters must be present to begin diagnosis of the RKE system.

Possible Causes

- aftermarket systems
- high power devices
- TV/radio transmission towers
- RKE transmitter
- DDM
- RKE transmitter button pressed a substantial amount of times while outside the range of the vehicle

PINPOINT TEST Q: THE REMOTE KEYLESS ENTRY TRANSMITTER IS OUT OF SYNCHRONIZATION

Test Step	Result / Action to Take
Q1 RESYNCHRONIZE THE INOPERATIVE REMOTE KEYLESS ENTRY (RKE) TRANSMITTER	

• Key in OFF position. • Press any button on the inoperative RKE transmitter 4 times consecutively within 30 seconds. • **Does the RKE transmitter operate correctly?**	**Yes** The system is OK. CLEAR the DTCs. REPEAT the self-test. **No** GO to Q2 .
Q2 CHECK FOR A SECOND RKE TRANSMITTER	
• Check for another RKE transmitter that operates with the vehicle. • **Is there another RKE transmitter that operates with the vehicle?**	**Yes** GO to Q3 . **No** GO to Q4 .
Q3 RESYNCHRONIZE THE INOPERATIVE RKE TRANSMITTER USING THE SECOND RKE TRANSMITTER	
• Key in OFF position. • Press any button on the operational RKE transmitter. • Within 30 seconds, press a button on the inoperative RKE transmitter. • Check the inoperative RKE transmitter for correct operation. • **Does the inoperative RKE transmitter operate now?**	**Yes** The system is OK. CLEAR the DTCs. REPEAT the self-test. **No** GO to Q4 .
Q4 PROGRAM ALL THE RKE TRANSMITTERS	
• Program the inoperative RKE transmitter individually using a diagnostic tool or program all RKE transmitters using the manual key cycle method. Refer to Remote Keyless Entry Transmitter Programming in this section. • **Does the inoperative RKE transmitter operate now?**	**Yes** The system is OK. INFORM the customer that any RKE transmitters not present will need to be programmed. CLEAR the DTCs. REPEAT the self-test. **No** To diagnose the inoperative RKE transmitter, Go To Pinpoint Test K .

Pinpoint Test R: The Remote Keyless Entry Transmitter Has Poor Range Performance

Normal Operation

Remote locking and unlocking of the doors is accomplished by the driver door module (DDM) receiving a command message from the remote keyless entry (RKE) transmitter. The DDM processes the command and sends a signal directly to the driver door latch. The DDM sends a message through the standard corporate protocol (SCP) network to the rear electronic module (REM), which activates the passenger door latches. The RKE transmitter has a minimum operating range of 10 m (33 feet).

All RKE transmitters must be present to begin diagnosis of the RKE system.

Aftermarket or dealer-installed system may adversely affect the RKE system operation. These systems should be disconnected before diagnosing any RKE concerns.

Possible Causes

- RKE transmitter
- DDM

PINPOINT TEST R: THE REMOTE KEYLESS ENTRY TRANSMITTER HAS POOR RANGE PERFORMANCE

Test Step	Result / Action to Take
R1 CHECK FOR THE CORRECT REMOTE KEYLESS ENTRY (RKE) TRANSMITTERS	
• Check that the correct RKE transmitters are used with the vehicle. • Make sure the RKE transmitters are those provided with the OEM system and not from an aftermarket or a dealer-installed system that may have been installed on the vehicle. • **Are all the correct RKE transmitters present?**	**Yes** GO to R2 . **No** The system cannot be tested without the correct RKE transmitters. INFORM the customer that all the correct RKE transmitters need to be present to proceed with diagnosis of the system.
R2 CHECK ALL RKE TRANSMITTERS FOR POOR RANGE PERFORMANCE	
NOTE: The 3 m (10 ft) measurement of range is not the standard, but is a guideline that clearly indicates a vehicle is experiencing poor range performance. • Check all the RKE transmitters for poor range performance (less than 3 m [10ft]). • **Do all RKE transmitters experience poor range?**	**Yes** GO to R3 . **No** REPLACE the inoperative RKE transmitter and PROGRAM all the RKE transmitters. REFER to Remote Keyless Entry Transmitter Programming in this section. INFORM the customer any RKE transmitters not present need to be programmed. CLEAR the DTCs. REPEAT the self-test.
R3 CHECK THE LOCATION OF THE VEHICLE AND THE APPROACH ANGLES AROUND VEHICLE	
• Make sure the poor performance is consistent in nature and not from one approach angle. • The RKE transmitter range performance may be degraded in certain locations. For example, if the vehicle is within 0.8 km (0.5 miles) of high power devices or radio/TV towers, the operating distance of the transmitters may be reduced. • **Is the poor range performance consistent around the vehicle?**	**Yes** GO to R4 . **No** The system is operating correctly at this time. CLEAR the DTCs. REPEAT the self-test.
R4 CHECK THE DDM FOR CORRECT OPERATION	

• Disconnect all the DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still
	Yes
	INSTALL a new DDM. REFER to Section 419-10 .PROGRAM all the RKE transmitters. REFER to Remote Keyless Entry Transmitter Programming in this section. INFORM the customer any RKE transmitters not present will need to be programmed. CLEAR the DTCs. REPEAT the self-test.

present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Remote Keyless Entry Transmitter Programming

Printable View (9 KB)

NOTE: All remote keyless entry (RKE) transmitters must be programmed at the same time.

NOTE: Programming of the RKE transmitters can be accomplished using a diagnostic tool or by carrying out the following steps:

1. The vehicle must be electronically unlocked before entering program mode using the RKE transmitter, RKE keypad (if equipped) or door lock control switch while the driver door is open.

2. Turn the key from OFF to RUN 8 times within 10 seconds, with the eighth turn ending in RUN. If the module has successfully entered the program mode, it locks and then unlocks all doors.

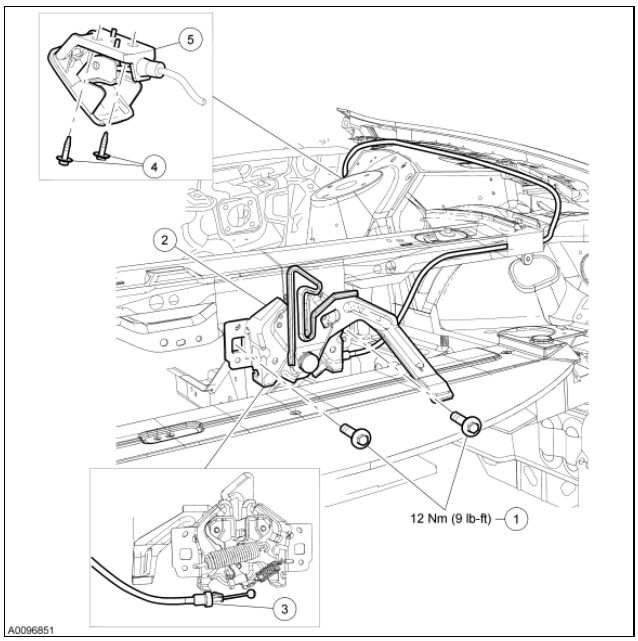
3. Within 20 seconds, press any button on a RKE transmitter, and the doors will lock and then unlock to confirm that each RKE transmitter has been programmed. Repeat this step for each RKE transmitter.

4. If the door locks do not respond for any RKE transmitter, wait several seconds and press the button again. If the door locks still fail to respond, refer to Inspection and Verification in this section. Make sure that no more than the maximum number of RKE transmitters are attempted to be programmed.

5. Exiting the programming mode is accomplished if one of the following occurs:
   - The key transitions to the OFF position.
   - 20 seconds have passed since entering programming mode or since the last RKE transmitter was programmed.
   - The maximum number of RKE transmitters have been programmed.

Hood Latch and Components Exploded View

Printable View (177 KB)



Item	Part Number	Description
1	N808727-S	Hood latch bolts (2 required)
2	011403	Hood latch
3	-	Hood latch release cable (part of 16B975)
4	-	Hood latch release handle screws (2 required)
5	16B975	Hood latch release handle and cable assembly

Hood Latch

Printable View (9 KB)

Material

Item	Specification
Multi-Purpose Grease Spray XL-5	ESB-M1C93-B

Removal and Installation

1. **NOTE:** Mark the hood latch prior to the removal of the bolts.

   Remove the 2 hood latch bolts.

   - To install, tighten to 12 Nm (9 lb-ft).

2. Position the hood latch up.

3. Disconnect the hood latch release cable and remove the hood latch.
   - Lubricate the hood latch after installation.

4. To install, reverse the removal procedure.
   - When a new hood latch is installed, the latch adjustment must be checked to make sure the latch is installed correctly.

Hood Latch Release Handle

ST1132-A	Heavy Duty Riveter 501-D011 (D80L-23200-A)

Removal and Installation

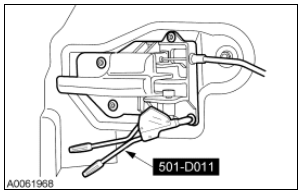
1. Remove the rear door latch. For additional information, refer to rear door latch in this section..

2. Remove the 4 interior rear door handle rivets.
   - To install, use the special tool to install the new rivets.



3. Remove the interior rear door handle.

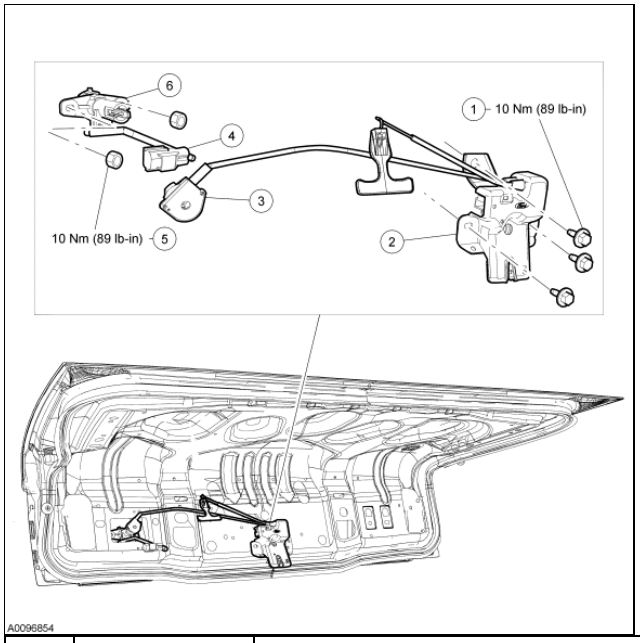
4. To install, reverse the removal procedure.

Luggage Compartment Lid Latch

Printable View (154 KB)

Material

Item	Specification
Multi-Purpose Grease Spray XL-5	ESB-M193-B



Item	Part Number	Description
1	W7707795-S	Luggage compartment lid latch bolts (3 required)
2	7643282	Luggage compartment lid latch
3	5422400	Luggage compartment lid actuating cable
4	11471	Luggage compartment lid lock cylinder electrical connector
5	N806385	Luggage compartment lid lock cylinder nuts (2 required)
6	43262	Luggage compartment lid lock cylinder

Removal and Installation

1. Remove the luggage compartment lid trim panel.

2. Remove the 3 luggage compartment lid latch bolts.
   - To install, tighten to 10 Nm (89 lb-in).

3. Position the luggage compartment lid latch aside.
   - When a new luggage compartment lid latch is installed, the latch adjustment must be checked to make sure the latch was installed correctly.

4. Disconnect the luggage compartment lid actuating cable.

5. To install, reverse the removal procedure.
    - Lubricate the luggage compartment lid latch after it is installed.

Door Lock Cylinder

Printable View (9 KB)

Removal and Installation

NOTE: The passenger side is shown, the driver side is similar.

NOTE: When any new lock cylinder is installed, the luggage compartment lid lock cylinder, the driver door lock cylinder, and ignition lock cylinder should be installed as a set. This eliminates carrying an extra key that fits only 1 lock. If a new key is used, the new key code number is stamped on a metal tag attached to the key.

NOTE: Individual lock cylinders are repaired by discarding the inoperative cylinder and building a new lock cylinder using the appropriate lock repair package. The lock repair package includes a detailed instruction sheet to build the new lock cylinder to the current key code of the vehicle.

1. Remove the front door trim panel. For additional information, refer to Section 501-05 .

2. Remove the front door latch shield screw.
   - To install, tighten to 10 Nm (89 lb-in).

3. Remove the front door latch shield nut.
   - To install, tighten to 10 Nm (89 lb-in).

4. Remove the front door latch shield.

5. Remove the nut and the door lock cylinder.
   - To install, tighten to 10 Nm (89 lb-in).

6. To install, reverse the removal procedure.

Luggage Compartment Lid Lock Cylinder

Printable View (9 KB)

Removal and Installation

NOTE: When any new lock cylinder is installed, the luggage compartment lid lock cylinder, the driver door lock cylinder, and ignition lock cylinder should be installed as a set. This eliminates carrying an extra key that fits only 1 lock. If a new key is used, the new key code number is stamped on a metal tag attached to the key.

NOTE: Individual lock cylinders are repaired by discarding the inoperative cylinder and building a new lock cylinder using the appropriate lock repair package. The lock repair package includes a detailed instruction sheet to build the new lock cylinder to the current key code of the vehicle.

1. Remove the luggage compartment lid trim panel.

2. Disconnect the luggage compartment lid lock cylinder electrical connector.

3. Remove the 2 nuts and the luggage compartment lid lock cylinder.
   - To install, tighten to 10 Nm (89 lb-in).

4. Remove

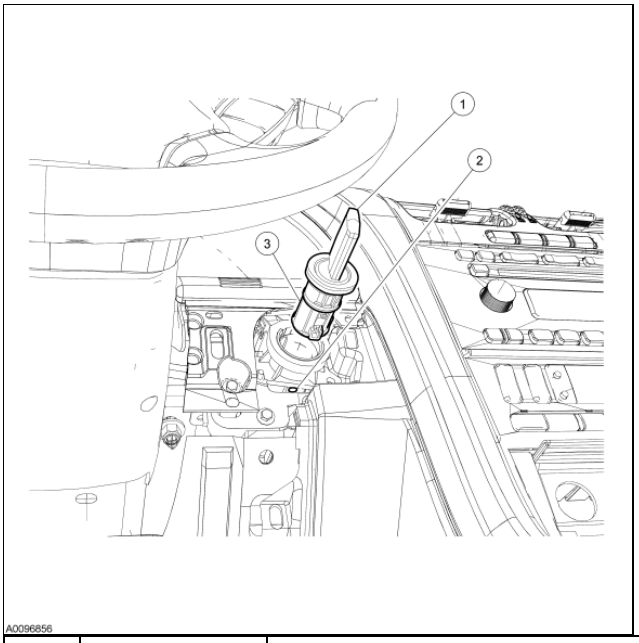
5. To install, reverse the removal procedure.

Ignition Lock Cylinder

Printable View (139 KB)

Material

Item	Specification
Multi-Purpose Grease Spray XL-5	ESB-M1C93-B



Item	Part Number	Description
1	7822053	Ignition key
2	-	Ignition lock cylinder release button (part of 11583)
3	11583	Ignition lock cylinder

Removal and Installation

NOTE: When any new lock cylinder is installed, the luggage compartment lid lock cylinder, the driver door lock cylinder, and ignition lock cylinder should be installed as a set. This eliminates carrying an extra key that fits only 1 lock. If a new key is used, the new key code number is stamped on a metal tag attached to the key.

NOTE: Individual lock cylinders are repaired by discarding the inoperative cylinder and building a new lock cylinder using the appropriate lock repair package. The lock repair package includes a detailed instruction sheet to build the new lock cylinder to the current key code of the vehicle.

1. Disconnect the battery and wait at least 1 minute to allow for depletion of the restraint system back up power supply. For additional information refer to Section 414-01 .

2. Remove the steering column cover. For additional information, refer to Section 501-12 .

3. Remove the inner instrument panel finish panel.

4. Turn the ignition switch to the RUN position.

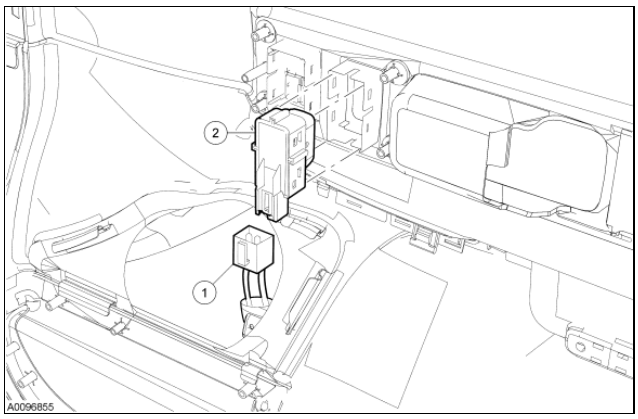
5. Using a small flat-blade screwdriver, press and hold the ignition lock cylinder release button.

6. Remove the ignition lock cylinder.

7. To install, reverse the removal procedure.
    - Lubricate the ignition lock cylinder before installing it.

Door Lock Control Switch

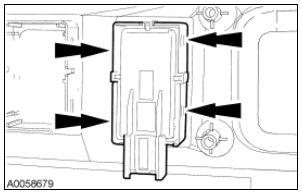
Printable View (127 KB)



Item	Part Number	Description
1	14A205/14B121	Door lock control switch electrical connector
2	14017	Door lock control switch

Removal and Installation

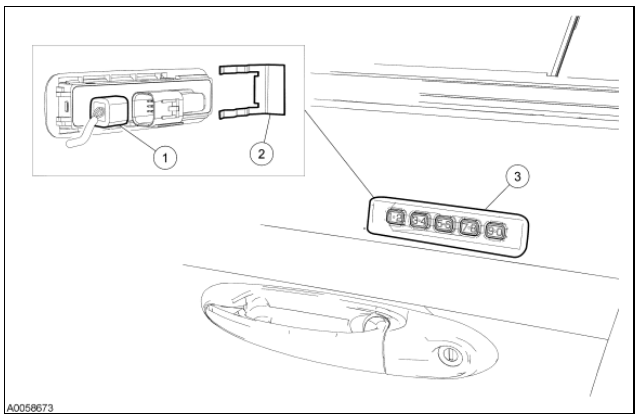
1. Remove the door trim panel. For additional information, refer to Section 501-05 .
2. Disconnect the door lock control switch electrical connector.
3. Release the switch from the locking tabs.



4. Remove the door lock control switch.
5. To install, reverse the removal procedure.

Remote Keyless Entry Keypad

Printable View (47 KB)



Item	Part Number	Description
1	-	Remote keyless entry (RKE) keypad electrical connector (part of 14K138)
2	-	RKE keypad retaining clip (part of 14A626)
3	14A626	RKE keypad

Removal and Installation

1. Remove the front door trim panel. For additional information, refer to Section 501-05 .
2. Disconnect the RKE keypad electrical connector.
3. Remove the RKE keypad retaining clip.
4. Remove the RKE keypad.
5. To install, reverse the removal procedure.

ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool
ST1138-A	Flex Probe Kit 105-R025B or equivalent
ST1453-A	SABRE Premium Battery and Electrical System Tester 010-00736 or equivalent

Principles Of Operation

The windshield wiper motor receives inputs from the following: multifunction switch, ignition switch, auxiliary junction box (AJB), and central junction box (CJB). The wiper and washer systems are controlled by the smart wiper motor. The wiper/washer portion of the multifunction switch is hardwired to the smart wiper motor. When the switch is moved to the desired position, the smart wiper motor processes this information and outputs the appropriate command(s) to one of the 3 internal relays. The relays control the wiper high and low motor speeds and washer pump actuation.

The following components are integrated into the windshield wiper motor: the windshield wiper motor module, high/low speed relay, run/park sensor (Hall-effect), and the washer pump relay.

High Speed Windshield Wipers

High speed operation is activated when the multifunction switch supplies a ground to the wiper motor module input. This ground is applied to the run/park and high/low relays contained in the wiper motor electronics, activating the relays and providing high speed operation. The windshield wiper motor module continues to cycle the windshield wiper in high speed operation until the inputs from the multifunction switch are changed from the high speed position.

Low Speed Windshield Wipers

Low speed operation is activated when the multifunction switch supplies a specific ground to the inputs of the windshield wiper motor module. The windshield wiper motor module then supplies a ground to the windshield wiper run/park relay coil, activating it. The run/park relay and high/low relay are contained in the wiper motor electronics. When the windshield wiper run/park relay is activated, the deactivated windshield high/low relay connects voltage to the windshield wiper motor low input, activating the wiper motor. The

windshield wiper motor module continues to operate the windshield wiper motor in the same manner as in high speed, but in low speed with the wiper motor connected to the low speed input.

Intermittent Speed Windshield Wipers

The 5 intermittent wiper dwell times are activated with grounds controlled by the multifunction switch inputs to the windshield wiper motor module. When in intermittent mode of operation, the wiper motor operates in low speed. Once the windshield wiper motor module receives the necessary inputs from the multifunction switch, it then activates the windshield wiper run/park relay coil and switches voltage through the windshield wiper high/low relay. The high/low relay remains deactivated, supplying the voltage to the wiper motor low speed input and activating the windshield wiper motor. When the windshield wiper motor module receives the grounded input, the motor continues to operate until the Hall-effect sensor senses the wiper motor magnet, which turns off the run/park sensor output to the windshield wiper run/park software, deactivating the relay and disconnecting voltage to the wiper motor. The windshield wipers remain parked until the windshield wiper motor module completes a time-out and then repeats the intermittent windshield wiper cycle.

Default Mode

The windshield wiper motor defaults to this mode when the Hall-effect sensor signal is lost. This can be caused by an obstruction of the windshield wipers, a binding linkage, or an electronics concern. The motor operates in either low or high speeds; intermittent operation is not available. The windshield wipers do not park correctly in this situation and must be manually walked down the glass by changing the multifunction switch input to the wiper motor module (OFF to Low).

Rain Sensor Wiper Function Rain Sensor Module

The rain sensor module (if equipped) is located on the inside of the windshield to the right of the rear view mirror. When the ignition switch is turned to the ON position, the rain sensor module starts to communicate with the windshield wiper motor module. If the multifunction switch is set to 1 of the 5 AUTO positions, 1 calibration wipe is performed by the wiper motor. If no moisture is present on the windshield, no additional wipes occur and only low and high speed operation can be activated from the multifunction switch. The rain-sensitive wiper system activates the wipers and adjusts the wiper speed automatically by detecting the amount of moisture on the windshield. If moisture is present on the windshield, the rain sensor provides wipe information to the wiper motor electronics module. The rate of wipes can be adjusted by selecting a different sensitivity setting on the multifunction switch. To activate the rain sensitive wiper system, the wipers must be set to 1 of the 5 sensitivity settings on the multifunction switch lever. These settings allow the driver to select the wiper sensitivity that is best suited for the present needs. The lowest position (closest to OFF) is the least sensitive to moisture and the highest is the most sensitive to moisture.

Washer System

The windshield washer is activated by the internal windshield wiper motor module when it receives a ground from the multifunction switch from the washer input. Dependent on the correct ground, the internal windshield wiper motor module activates the windshield washer relay (internal) by grounding the respective relay coil. When the relay is activated, it connects voltage to the washer pump while the washer level switch provides ground to the washer pump.

Low Washer Fluid Level Lamp/Indicator

The low washer fluid lamp/indicator feature is controlled by the front electronic module (FEM) and the instrument cluster. The low washer fluid switch is hardwired to the FEM. If the fluid level is low, the FEM sends a message through the standard corporate protocol (SCP) communication network to the instrument cluster. The instrument cluster then processes the message and outputs an audible and visual warning. If equipped with a message center, a warning message is displayed. For additional information, refer to Section

413-01 .

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect the following for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Hoses to windshield washer pump • Wiper linkage	• Battery junction box (BJB) fuse 22 (20A) • Central junction box (CJB) fuse(s): ♦ 12 (5A) ♦ 26 (5A) • Circuitry • Front electronic module (FEM) • Multifunction switch • Rain sensor module • Wiper motor • Washer pump

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the tool menu. If the diagnostic does not communicate with the vehicle.
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP, UBP or ISO circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for front electronic module (FEM), refer to section Section 419-10 .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out the self-test for the FEM.

7. If the DTCs retrieved are related to the concern, go to the Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index.

8. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Failure	FEM	CLEAR the DTC. REPEAT the FEM self-test. If DTC B1342 is retrieved, INSTALL a new FEM. REFER to Section 419-10 . REPEAT the self-test.
B1479	Low Washer Fluid Level Switch Circuit Failure	FEM	REPAIR the low washer fluid indicator lamp. REFER to Section 413-01 for the correct diagnostic direction.

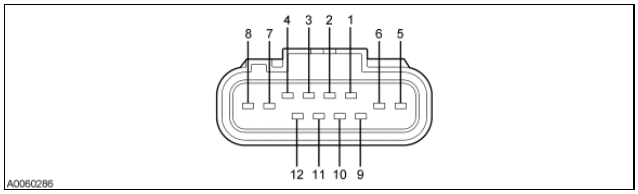
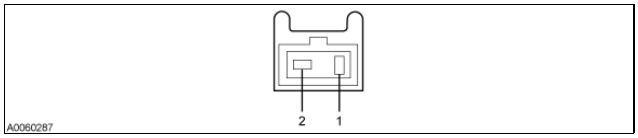
Windshield Wiper Motor C125



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-KA11 (WH/BK) high speed wiper command input	10,000 ohms or greater to ground or 0 volts.
2	8-KA5 (WH/BK) wiper motor headlamp command output ground signal	10,000 ohms or greater to ground or 0 volts.
3	91-KA8 (BN/RD) logic ground	5 ohms or less to ground.
4	8-KA41 (WH/GN) wiper motor rain sensor input V+BATT	10,000 ohms or greater to ground or 10 volts.
5	30-KA8 (RD/BU) V+ BATT	10,000 ohms or greater to ground or 10 volts.
6	31-KA8 (BK/BU) wiper motor ground	5 ohms or less to ground or 0 volts.
7	75S-KA7 (YE/VT) washer pump output	10,000 ohms or greater to ground or 0 volts.
8	75-KA8 (YE/RD) ignition switch V+ BATT	10,000 ohms or greater to ground or 10 volts.
9	8-KA10 (WH/GN) digital code input A	10,000 ohms or greater to ground or 0 volts.
10	8-KA8 (WH/RD) digital code input C	10,000 ohms or greater to ground or 0 volts.
11	10-KA8 (GY/RD) digital code input B	10,000 ohms or greater to ground or 0 volts.

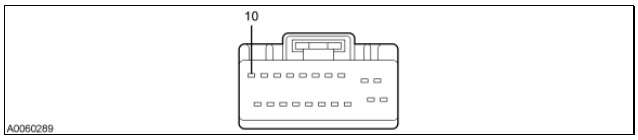
12	8-KA7 (WH/VT) wash command input	10,000 ohms or greater to ground or 0 volts.

Washer Pump Motor C137



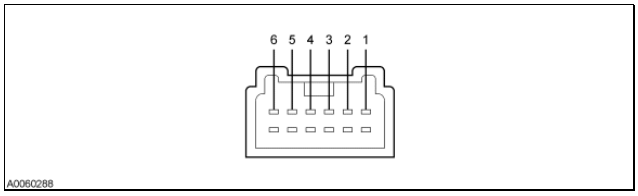
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	31-KA7 (BK/WH) ground	5 ohms or less to ground.
2	75S-KA7 (YE/VT) power	10 volts or greater with the washer switch activated and the ignition switch in the ON position.

Front Electronic Module (FEM) C201f



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
10	8-KA5 (WH/BK) headlamp command FEM input	Ground signal when wiper motor is activated.

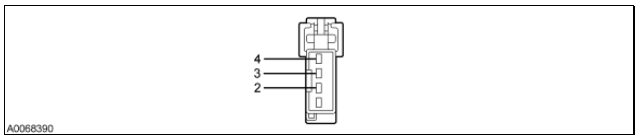
Multifunction Switch C202



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-KA8 (WH/RD) digital code output C	10,000 ohms or greater to ground or 0 volts.
2	31-KA19 (BK/RD) ground	5 ohms or less to ground and 0 volts.
3	8-KA10 (WH/GN) digital code output A	10,000 ohms or greater to ground or 0 volts.
4	10-KA8 (GY/RD) digital code output B	10,000 ohms or greater to ground or 0 volts.
5	8-KA7 (WH/VT) wash command output	

		10,000 ohms or greater to ground or 0 volts.
6	8-KA11 (WH/BK) high speed wiper command output	10,000 ohms or greater to ground or 0 volts.

Rain Sensor C914



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	75-KA41 (YE/GN) V+BATT	10 volts or greater.
3	31-KA41 (BK/GN) ground	5 ohms or less to ground.
4	8-KA41 (WH/GN) rain sensor	10,000 ohms or greater to ground or 0 volts.

Pinpoint Test A: The Wipers Are Inoperative

Normal Operation

The windshield wiper motor receives inputs from the multifunction switch circuits 8-KA8 (WH/RD), 10-KA8 (GY/RD), 8-KA11 (WH/BK), and 8-KA10 (WH/GN). The windshield wiper motor module (internal) then controls the wiper run/park relay (internal) using internal circuitry to control the windshield wiper motor in conjunction with the wiper HI/LO relay (internal).

Possible Causes

- circuit 8-KA8 (WH/RD) open
- circuit 8-KA10 (WH/GN) open
- circuit 8-KA11 (WH/BK) open
- circuit 10-KA8 (GY/RD) open
- circuit 30-KA8 (RD/BU) open
- circuit 31-KA8 (BK/BU) open
- circuit 31-KA19 (BK/RD) open
- circuit 75-KA8 (YE/RD) open
- circuit 91-KA8 (BN/RD) open
- multifunction switch
- windshield wiper motor

PINPOINT TEST A: THE WIPERS ARE INOPERATIVE

Test Step	Result / Action to Take
A1 CHECK CIRCUITS 75-KA8 (YE/RD) AND 30-KA8 (RD/BU) FOR VOLTAGE	

• Key in OFF position. • Disconnect: Windshield Wiper Motor C125. • Key in ON position. • Measure the voltage between the windshield wiper motor C125-5, circuit 30-KA8 (RD/BU), harness side and ground; and between the windshield wiper motor C125-8, circuit 75-KA8 (YE/RD), harness side and ground.  A0045928 • **Are the voltages greater than 10 volts?**	**Yes** GO to A2 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.
A2 CHECK CIRCUITS 31-KA8 (BK/BU) AND 91-KA8 (BN/RD) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the windshield wiper motor C125-6, circuit 31-KA8 (BK/BU), harness side and ground; and between the windshield wiper motor C125-3, circuit 91-KA8 (BK/BU), harness side and ground.  A0037610 • **Are the resistances less than 5 ohms?**	**Yes** GO to A3 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.
A3 CHECK THE MULTIFUNCTION SWITCH	
• Disconnect: Multifunction Switch C202. • Carry out the multifunction switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Does the multifunction switch pass the component test?**	**Yes** GO to A4 . **No** INSTALL a new multifunction switch. REFER to Section 211-05 .
A4 CHECK CIRCUIT 31-KA19 (BK/RD) FOR AN OPEN	
• Measure the resistance between the multifunction switch C202-2, circuit 31-KA19 (BK/RD), harness side and ground.  A0060291 • **Is the resistance less than 5 ohms?**	**Yes** GO to A5 . **No** REPAIR the circuit. TEST the system for normal operation.

<table>
<tr><td>A5 CHECK CIRCUITS 8-KA8 (WH/RD), 10-KA8 (GY/RD), 8-KA11 (WH/BK), AND 8-KA10 (WH/GN) FOR AN OPEN</td><td></td></tr>

GO to A7 .

No
The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.</td></tr>
<tr><td>A7 CHECK THE WINDSHIELD WIPER MOTOR</td><td></td></tr>
<tr><td>• Key in OFF position.
• Disconnect: Windshield Wiper Motor C125.
• Carry out the windshield wiper motor component test as described in this section.
• Does the windshield wiper motor pass the component test?</td><td>Yes
The system is operating correctly at this time. The concern may have been caused by binding or an incorrect pivot arm adjustment. REFER to Windshield Wiper Blade and Pivot Arm Adjustment in this section. TEST the system for normal operation.

No
INSTALL a new windshield wiper</td></tr>
</table>

	motor. REFER to Windshield Wiper Motor in this section.

Pinpoint Test B: The Wipers Stay On Continuously

Normal Operation

The windshield wiper motor receives inputs from the multifunction switch circuits 8-KA8 (WH/RD), 10-KA8 (GY/RD), 8-KA11 (WH/BK), and 8-KA10 (WH/GN). The windshield wiper motor module (internal) controls the wiper run/park relay (internal) using internal circuitry to control the windshield wiper motor in conjunction with the wiper HI/LO relay (internal).

Possible Causes

- circuit 31-KA19 (BK/RD) open
- circuit 8-KA8 (WH/RD) short to ground
- circuit 10-KA8 (GY/RD) short to ground
- circuit 8-KA11 (WH/BK) short to ground
- circuit 8-KA10 (WH/GN) short to ground
- windshield wiper motor
- multifunction switch

PINPOINT TEST B: THE WIPERS STAY ON CONTINUOUSLY

Test Step	Result / Action to Take
B1 CHECK THE MULTIFUNCTION SWITCH	
• Key in OFF position. • Disconnect: Multifunction Switch C202. • Carry out the multifunction switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Does the multifunction switch pass the component test?**	**Yes** GO to B2 . **No** INSTALL a new multifunction switch. REFER to Section 211-05 . TEST the system for normal operation.
B2 CHECK CIRCUIT 31-KA19 (BK/RD) FOR AN OPEN	
• Measure the resistance between the multifunction switch C202-2, circuit 31-KA19 (BK/RD), harness side and ground.  	**Yes** GO to B3 . **No** REPAIR the circuit. TEST the system for normal operation.

• **Is the resistance less than 5 ohms?**	
B3 CHECK CIRCUITS 8-KA8 (WH/RD), 10-KA8 (GY/RD), 8-KA11 (WH/BK)' AND 8-KA10 (WH/GN) FOR A SHORT TO GROUND	
• Disconnect: Windshield Wiper Motor C125. • Using the following table, measure the resistance between the windshield wiper motor C125, harness side and ground: **Windshield Wiper Motor** / **Circuit** C125-1 / 8-KA11 (WH/BK) C125-9 / 8-KA10 (WH/GN) C125-10 / 8-KA8 (WH/RD) C125-11 / 10-KA8 (GY/RD)  A0062375 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to B4 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.
B4 CHECK FOR CORRECT WINDSHIELD WIPER MOTOR OPERATION	

• Disconnect all the windshield wiper motor connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the windshield wiper motor connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	GO to B5 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

B5 CHECK THE WINDSHIELD WIPER MOTOR	

• Key in OFF position. • Disconnect: Windshield Wiper Motor C125. • Carry out the windshield wiper motor component test as described in this section. • **Does the windshield wiper motor pass the component test?**	**Yes** The system is operating correctly at this time. The concern may have been caused by a binding or an incorrect pivot arm adjustment. REFER to Windshield Wiper Blade and Pivot Arm Adjustment in this section. TEST the system for normal operation. **No** INSTALL a new windshield wiper motor. REFER to Windshield Wiper Motor in this section.

Pinpoint Test C: The High/Low Wiper Speeds Do Not Operate Correctly (Intermittent Wiper Mode OK)

Normal Operation

The windshield wiper motor receives inputs from the multifunction switch circuits 8-KA8 (WH/RD), 10-KA8 (GY/RD), 8-KA11 (WH/BK), and 8-KA10 (WH/GN). The windshield wiper motor module (internal) then controls the wiper run/park relay (internal) using internal circuitry to control the windshield wiper motor in conjunction with the wiper HI/LO relay (internal).

Possible Causes

- circuit 31-KA19 (BK/RD) open
- circuit 8-KA8 (WH/RD) open
- circuit 10-KA8 (GY/RD) open
- circuit 8-KA11 (WH/BK) open
- circuit 8-KA10 (WH/GN) open
- multifunction switch
- windshield wiper motor

PINPOINT TEST C: THE HIGH/LOW WIPER SPEEDS DO NOT OPERATE CORRECTLY (INTERMITTENT WIPER MODE OK)

Test Step	Result / Action to Take
C1 CHECK THE MULTIFUNCTION SWITCH	
• Key in OFF position. • Disconnect: Multifunction Switch C202. • Carry out the multifunction switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Does the multifunction switch pass the component test?**	**Yes** GO to C2 . **No** INSTALL a new multifunction switch. REFER to Section 211-05 . TEST the system for normal operation.
C2 CHECK CIRCUIT 31-KA19 (BK/RD) FOR AN OPEN	

• Measure the resistance between the multifunction switch C202-2, circuit 31-KA19 (BK/RD), harness side and ground.  A0060291 • **Is the resistance less than 5 ohms?**	**Yes** GO to C3 . **No** REPAIR the circuit. TEST the system for normal operation.
C3 CHECK CIRCUITS 8-KA8 (WH/RD), 10-KA8 (GY/RD), 8-KA11 (WH/BK), AND 8-KA10 (WH/GN) FOR AN OPEN	
• Disconnect: Windshield Wiper Motor C125. • Using the following table, measure the resistance between the multifunction switch C202, harness side, and the windshield wiper motor C125, harness side: **Multifunction Switch** / **Windshield Wiper Motor** / **Circuit** C202-1 / C125-10 / 8-KA8 (WH/RD) C202-3 / C125-9 / 8-KA10 (WH/GN) C202-4 / C125-11 / 10-KA8 (GY/RD) C202-6 / C125-1 / 8-KA11 (WH/BK)  A0056857 • **Are the resistances less than 5 ohms?**	**Yes** GO to C4 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.
C4 CHECK FOR CORRECT WINDSHIELD WIPER MOTOR OPERATION	

• Disconnect all the windshield wiper motor connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the windshield wiper motor connectors and make sure they seat correctly.
	Yes
	GO to C5 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

• Operate the system and verify the concern is still present. • **Is the concern still present?**	
C5 CHECK THE WINDSHIELD WIPER MOTOR	
• Key in OFF position. • Disconnect: Windshield Wiper Motor C125. • Carry out the windshield wiper motor component test as described in this section. • **Did the windshield wiper motor pass the component test?**	**Yes** The system is operating correctly at this time. The concern may have been caused by a binding or an incorrect pivot arm adjustment. REFER to Windshield Wiper Blade and Pivot Arm Adjustment in this section. TEST the system for normal operation. **No** INSTALL a new windshield wiper motor. REFER to Windshield Wiper Motor in this section. TEST the system for normal operation.

Pinpoint Test D: The Intermittent Wiper Speed Does Not Operate Correctly (High/Low Speeds OK)

Normal Operation

The windshield wiper motor receives inputs from the multifunction switch circuits 8-KA8 (WH/RD), 10-KA8 (GY/RD), 8-KA11 (WH/BK), and 8-KA10 (WH/GN). The windshield wiper motor module (internal) then controls the wiper run/park relay (internal) using internal circuitry to control the windshield wiper motor in conjunction with the wiper HI/LO relay (internal).

Possible Causes

- circuit 31-KA19 (BK/RD) open
- circuit 8-KA8 (WH/RD) open
- circuit 10-KA8 (GY/RD) open
- circuit 8-KA10 (WH/GN) open
- multifunction switch
- windshield wiper motor

PINPOINT TEST D: THE INTERMITTENT WIPER SPEED DOES NOT OPERATE CORRECTLY (HIGH/LOW SPEEDS OK)

Test Step	Result / Action to Take
D1 CHECK THE MULTIFUNCTION SWITCH	
• Key in OFF position. • Disconnect: Multifunction Switch C202. • Carry out the multifunction switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Does the multifunction switch pass the component test?**	**Yes** GO to D2 . **No** INSTALL a new multifunction switch. REFER to Section 211-05 . TEST the system for normal operation.
D2 CHECK CIRCUIT 31-KA19 (BK/RD) FOR AN OPEN	

• Measure the resistance between the multifunction switch C202-2, circuit 31-KA19 (BK/RD), harness side and ground.  A0060291 • **Is the resistance less than 5 ohms?**	**Yes** GO to D3 . **No** REPAIR the circuit. TEST the system for normal operation.
D3 CHECK CIRCUITS 8-KA8 (WH/RD), 10-KA8 (GY/RD), AND 8-KA10 (WH/GN) FOR AN OPEN	
• Disconnect: Windshield Wiper Motor C125. • Using the following table, measure the resistance between the multifunction switch C202, harness side and the windshield wiper motor C125, harness side: **Multifunction Switch** / **Windshield Wiper Motor** / **Circuit** C202-1 / C125-10 / 8-KA8 (WH/RD) C202-3 / C125-9 / 8-KA10 (WH/GN) C202-4 / C125-11 / 10-KA8 (GY/RD)  A0060292 • **Are the resistances less than 5 ohms?**	**Yes** GO to D4 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.
D4 CHECK FOR CORRECT WINDSHIELD WIPER MOTOR OPERATION	

• Disconnect all the windshield wiper motor connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the windshield wiper motor connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	GO to D5 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

D5 CHECK THE WINDSHIELD WIPER MOTOR	

• Key in OFF position. • Disconnect: Windshield Wiper Motor C125. • Carry out the windshield wiper motor component test as described in this section. • **Does the windshield wiper motor pass the component test?**	**Yes** The system is operating correctly at this time. The concern may have been caused by a binding or an incorrect pivot arm adjustment. REFER to Windshield Wiper Blade and Pivot Arm Adjustment in this section. TEST the system for normal operation. **No** INSTALL a new windshield wiper motor. REFER to Windshield Wiper Motor in this section.

Pinpoint Test E: The Wash And Wipe Functions Are Inoperative

Normal Operation

The wash/wipe function is activated when the windshield wiper motor module (internal) receives a reference signal through circuit 8-KA7 (WH/VT). When the multifunction switch wash button is pressed for longer than 0.25 seconds, the windshield wiper motor cycles, sending battery voltage through circuit 75S-KA7 (YE/VT) to the washer pump motor. When the wash button is pressed for less than 0.25 seconds the windshield wiper motor cycles only once, which is considered the mist position.

Possible Causes

- circuit 31-KA19 (BK/RD) open
- circuit 8-KA7 (WH/VT) open
- circuit 31-KA7 (BK) open or short to ground
- multifunction switch
- washer pump relay
- washer pump motor

PINPOINT TEST E: THE WASH AND WIPE FUNCTION ARE INOPERATIVE

Test Step	Result / Action to Take
E1 CHECK THE MULTIFUNCTION SWITCH	
• Key in OFF position. • Disconnect: Multifunction Switch C202. • Carry out the multifunction switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Does the multifunction switch pass the component test?**	**Yes** GO to E2 . **No** INSTALL a new multifunction switch. REFER to Section 211-05 .
E2 CHECK CIRCUIT 31-KA19 (BK/RD) FOR AN OPEN	
• Measure the resistance between the multifunction switch C202-2, circuit 31-KA19 (BK/RD), harness side and ground.	**Yes** GO to E3 . **No** REPAIR the circuit. TEST the system for normal operation.

 A0060291 • **Is the resistance less than 5 ohms?**	
E3 CHECK CIRCUIT 8-KA7 (WH/VT) FOR AN OPEN	
• Disconnect: Windshield Wiper Motor C125. • Measure the resistance between the multifunction switch C202-5, circuit 8-KA7 (WH/VT), harness side and the windshield wiper motor C125-12, circuit 8-KA7 (WH/VT), harness side.  A0060293 • **Is the resistance less than 5 ohms?**	**Yes** Go To Pinpoint Test F to diagnose the washer pump. **No** REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test F: The Washer Pump Is Inoperative

Normal Operation

The multifunction switch sends a reference signal through circuit 8-KA7 (WH/VT) to the windshield wiper motor module (internal); the windshield wiper motor in turn sends battery voltage through circuit 75S-KA7 (YE/VT) to activate the washer pump motor.

Possible Causes

- circuit 8-KA7 (WH/VT) open
- circuit 31-KA7 (BK) open
- circuit 31-KA19 (BK/RD) open
- circuit 75S-KA7 (YE/VT) open
- windshield wiper motor
- multifunction switch
- washer pump motor

PINPOINT TEST F: THE WASHER PUMP IS INOPERATIVE

Test Step	Result / Action to Take
F1 CHECK THE WASHER PUMP MOTOR FOR VOLTAGE	
• Key in OFF position. • Disconnect: Washer Pump Motor C137. • Key in ON position. • Measure the voltage between the washer pump motor C137-2, circuit 75S-KA7 (YE/VT) harness side and ground while pressing the multifunction switch to the wash position.	**Yes** GO to F2 . **No** GO to F3 .

 • **Is the voltage greater than 10 volts?**	
F2 CHECK CIRCUIT 31-KA7 (BK) FOR GROUND	
• Measure the resistance between the washer pump motor C137-1, circuit 31-KA7 (BK) harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new washer pump. REFER to Windshield Washer Pump and Reservoir in this section. **No** REPAIR the circuit. TEST the system for normal operation.
F3 CHECK CIRCUIT 75S-KA7 (YE/VT) FOR AN OPEN	
• Key in OFF position. • Disconnect: Windshield Wiper Motor C125. • Measure the resistance between the windshield wiper motor C125-7, circuit 75S-KA7 (YE/VT), harness side and the washer pump motor C137-2, circuit 75S-KA7 (YE/VT), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to F4 . **No** REPAIR the circuit. TEST the system for normal operation.
F4 CHECK THE MULTIFUNCTION SWITCH	
• Key in OFF position. • Disconnect: Multifunction Switch C202. • Carry out the multifunction switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Does the multifunction switch pass the component test?**	**Yes** GO to F5 . **No** INSTALL a new multifunction switch. REFER to Section 211-05 .
F5 CHECK CIRCUIT 31-KA19 (BK/RD) FOR AN OPEN	

• Measure the resistance between the multifunction switch C202-2, circuit 31-KA19 (BK/RD), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to F6 . **No** REPAIR the circuit. TEST the system for normal operation.
F6 CHECK CIRCUIT 8-KA7 (WH/VT) FOR AN OPEN	
• Measure the resistance between the multifunction switch C202-5, circuit 8-KA7 (WH/VT), harness side and the windshield wiper motor C125-12, circuit 8-KA7 (WH/VT), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to F7 . **No** REPAIR the circuit. TEST the system for normal operation.
F7 CHECK FOR CORRECT WINDSHIELD WIPER MOTOR OPERATION	

• Disconnect all the windshield wiper motor connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the windshield wiper motor connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	GO to F8 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

F8 CHECK THE WINDSHIELD WIPER MOTOR	
• Key in OFF position. • Disconnect: Windshield Wiper Motor C125. • Carry out the windshield wiper motor component test as described in this section. • **Does the windshield wiper motor pass the component test?**	**Yes** The system is operating correctly at this time. The concern may have been caused by binding or an incorrect pivot arm adjustment. REFER to Windshield Wiper Blade and Pivot Arm Adjustment in this section. TEST the system for normal operation. **No** INSTALL a new windshield wiper motor. REFER to Windshield Wiper Motor in this section.

Pinpoint Test G: The Headlamps Do Not Illuminate When The Wipers Are On

Normal Operation

The windshield wipers are activated by a ground signal sent from the wiper motor through circuit 8-KA5 (WH/BK) to the front electronic module (FEM). After 10 seconds of a continuous ground signal from the wiper motor on circuit 8-KA5 (WH/BK), the FEM illuminates the headlamps.

Possible Causes

- circuit 8-KA5 (WH/BK) open
- FEM
- windshield wiper motor

PINPOINT TEST G: THE HEADLAMPS DO NOT ILLUMINATE WHEN THE WIPERS ARE ON

Test Step	Result / Action to Take
G1 CHECK THE HEADLAMPS FOR NORMAL OPERATION	
• Turn the headlamp switch to the ON position. • **Do the headlamps illuminate?**	**Yes** GO to G2 . **No** REFER to Section 417-01 to correctly diagnose the headlamps.
G2 CHECK CIRCUIT 8-KA5 (WH/BK) FOR A GROUND SIGNAL	
• Disconnect: Front Electronic Module (FEM) C201f. • Key in ON position. • Turn the multifunction switch to the LO position • **NOTE:** Wait a minimum of 10 seconds before performing this step. • Measure the resistance between the FEM C201f-10, circuit 8-KA5 (WH/BK), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to G4 . **No** GO to G3 .
G3 CHECK CIRCUIT 8-KA5 (WH/BK) FOR AN OPEN	

• Key in OFF position. • Disconnect: Windshield Wiper Motor C125. • Measure the resistance between the FEM C201f-10, circuit 8-KA5 (WH/BK), harness side and the windshield wiper motor C125-2, circuit 8-KA5 (WH/BK), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to G5 . **No** REPAIR the circuit. TEST the system for normal operation.
G4 CHECK FOR CORRECT FEM OPERATION	

• Disconnect all the FEM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the FEM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FEM. REFER to Section 419-10 . TEST the system for normal operation
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

G5 CHECK FOR CORRECT WINDSHIELD WIPER MOTOR OPERATION	

• Disconnect all the windshield wiper motor connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the windshield wiper motor connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	GO to G6 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

G6 CHECK THE WINDSHIELD WIPER MOTOR	
• Key in OFF position. • Disconnect: Windshield Wiper Motor C125. • Carry out the windshield wiper motor component test as described in this section. • **Does the windshield wiper motor pass the component test?**	**Yes** The system is operating correctly at this time. The concern may have been caused by a binding or an incorrect pivot arm adjustment. REFER to Windshield Wiper Blade and Pivot Arm Adjustment in this section. TEST the system for normal operation. **No** INSTALL a new windshield wiper motor. REFER to Windshield Wiper Motor in this section. TEST the system for normal operation.

Pinpoint Test H: The Moisture-Sensitive Wipers Do Not Operate Correctly

Normal Operation

With the multifunction switch in the AUTO position, a ground signal is sent to the windshield wiper motor through circuit 8-KA10 (WH/GN). When the rain sensor module senses moisture on the windshield, it sends a V+BATT signal through circuit 8-KA41 (WH/GN) to the windshield wiper motor, which activates the windshield wipers.

Possible Causes

- circuit 8-KA10 (WH/GN) open
- circuit 8-KA41 (WH/GN) open
- circuit 31-KA19 (BK/RD) open
- circuit 31-KA41 (BK/OG) open
- circuit 75-KA41 (YE/GN) open
- multifunction switch
- rain sensor module
- windshield wiper motor

PINPOINT TEST H: THE MOISTURE-SENSITIVE WIPERS DO NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
H1 CHECK THE WIPERS FOR NORMAL OPERATION	
• Key in ON position. • Turn the multifunction switch to the LO position. • **Do the windshield wipers operate correctly?**	**Yes** GO to H2 . **No** Go To Pinpoint Test A .
H2 CHECK THE RAIN SENSOR MODULE	
• Turn the multifunction switch to the AUTO position. • Pour water on the windshield over the rain sensor module. • **Do the windshield wipers operate correctly?**	**Yes** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation. **No** GO to H3 .
H3 CHECK CIRCUIT 75-KA41 (YE/GN) FOR VOLTAGE	
• Key in OFF position. • Disconnect: Rain Sensor Module C914. • Key in ON position. • Measure the voltage between the rain sensor module C914-2, circuit 75-KA41 (YE/GN), harness side and ground.	**Yes** GO to H4 . **No** REPAIR the circuit. TEST the system for normal operation.

 • **Is the voltage greater than 10 volts?**	
H4 CHECK CIRCUIT 31-KA41 (BK/OG) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the rain sensor module C914-3, circuit 31-KA41 (BK/GN), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to H5 . **No** REPAIR the circuit. TEST the system for normal operation.
H5 CHECK CIRCUIT 8-KA41 (WH/GN) FOR AN OPEN	
• Disconnect: Windshield Wiper Motor C125. • Measure the resistance between the rain sensor module C914-4, circuit 8-KA41 (WH/GN), harness side and the windshield wiper motor C125-4, circuit 8-KA41 (WH/GN) harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to H6 . **No** REPAIR the circuit. TEST the system for normal operation.
H6 CHECK CIRCUIT 8-KA10 (WH/GN) FOR AN OPEN	
• Key in OFF position. • Disconnect: Multifunction Switch C202. • Measure the resistance between the multifunction switch C202-3, circuit 8-KA10 (WH/GN), harness side and the windshield wiper motor C125-9, circuit 8-KA10 (WH/GN), harness side.	**Yes** GO to H7 . **No** REPAIR the circuit. TEST the system for normal operation.

 • **Is the resistance less than 5 ohms?**	
H7 CHECK CIRCUIT 31-KA19 (BK/RD) FOR AN OPEN	
• Measure the resistance between the multifunction switch C202-2, circuit 31-KA19 (BK/RD), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to H8 . **No** REPAIR the circuit. TEST the system for normal operation.
H8 CHECK THE MULTIFUNCTION SWITCH	
• Key in OFF position. • Disconnect: Multifunction Switch C202. • Carry out the multifunction switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Does the multifunction switch pass the component test?**	**Yes** GO to H9 . **No** INSTALL a new multifunction switch. REFER to Section 211-05 . TEST the system for normal operation.
H9 CHECK FOR CORRECT RAIN SENSOR MODULE OPERATION	

• Disconnect all the rain sensor module connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the rain sensor module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	GO to H10 .
	
	No
	INSTALL a new multifunction switch. REFER to Section 211-05 .

H10 CHECK FOR CORRECT WINDSHIELD WIPER MOTOR OPERATION	
	Yes GO to H11 .

• Disconnect all the windshield wiper motor connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all the windshield wiper motor connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	No
	INSTALL a new rain sensor module. TEST the system for normal operation.

H11 CHECK THE WINDSHIELD WIPER MOTOR	
• Key in OFF position. • Disconnect: Windshield Wiper Motor C125. • Carry out the windshield wiper motor component test as described in this section. • **Does the windshield wiper motor pass the component test?**	**Yes** The system is operating correctly at this time. The concern may have been caused by a binding or an incorrect pivot arm adjustment. REFER to Windshield Wiper Blade and Pivot Arm Adjustment in this section. TEST the system for normal operation. **No** INSTALL a new windshield wiper motor. REFER to Windshield Wiper Motor in this section. TEST the system for normal operation.

Component Test Windshield Wiper Motor

⚠ **CAUTION: Do not handle the windshield wiper motor roughly when diagnosing the wiper operations. Failure to follow these instructions may result in damage to the motor magnets and may render the windshield wiper motor inoperative. Rough handling of new windshield wiper motors may also damage the motor magnets.**

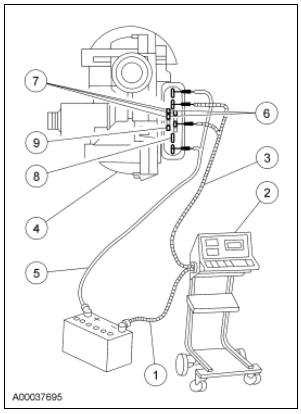
NOTE: The windshield wiper motor component test is carried out to determine if the windshield wiper motor and module are functional and not in a software safe mode. Refer to Principles of Operation in this section for software safe mode parameters.

NOTE: Battery voltage must remain within 10 to 15 volts to carry out the test and keep the windshield wiper motor from entering its software safe mode.

NOTE: When connecting the power and ground test leads to the windshield wiper motor terminals, care must be taken to not short the terminals between power and ground, as well as making sure the logic ground, pin 3, is always securely connected to prevent permanent windshield wiper motor module damage.

If the windshield wiper motor does not pass any of the following tests, install a new windshield wiper motor. Refer to Windshield Wiper Motor in this section.

Use the SABRE Premium Battery and Electrical System Tester to test the windshield wiper motor.



To test the windshield wiper motor, remove the windshield wiper mounting arm and pivot shaft from the windshield wiper motor. Refer to Windshield Wiper Motor in this section.

Disconnect the wiper motor. Connect the (1) green lead from the (2) SABRE to the battery negative (-) post. Connect the red lead (3) from the SABRE to the wiper motor (4) component side connector ground and logic ground pins 6 and 3 (3). Connect the battery positive cable (5) to the windshield wiper motor (4) component side connector battery and logic positive pins 5 and 8 (5).

Low Speed

Test the low speed mode by connecting a separate set of test leads from the battery ground (-) post to the windshield wiper motor (4) component side pins 9 and 10 (6). When these pins are grounded, the windshield wiper motor operation should now be in low speed mode.

High Speed

Test the high speed mode by connecting a separate set of test leads from the battery ground (-) post to windshield wiper motor (4) component side pins 1, 9, and 10 (7). When these pins are grounded, the windshield wiper motor operation should now be in high speed mode.

Washer Pump Relay (Integral)

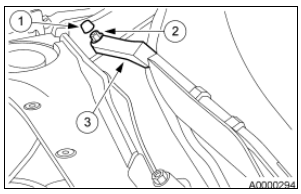
Test the windshield wiper motor internal washer relay function by measuring the voltage between the windshield wiper motor (4) component side pin 7 (8), and ground while grounding the windshield wiper motor (4) component side pin 12 (9). When wash command input pin 12 is grounded, measured voltage should read 10 volts or greater.

Windshield Wiper Blade and Pivot Arm Adjustment

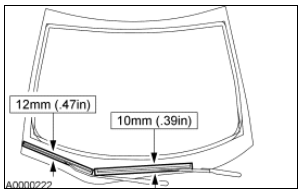
Printable View (44 KB)

1. Cycle and park the windshield wipers.

2. Remove the windshield wiper pivot arm(s).
    1. Remove the nut cover(s).
    2. Remove the nut(s).
    3. Remove the pivot arm(s).



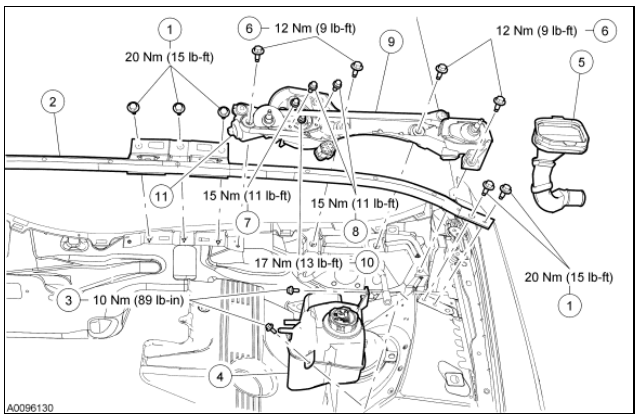
3. Install the wiper blade and pivot arm onto the pivot shaft and align the blade to the silver dots in the windshield.



4. Tighten the windshield wiper pivot arm nut(s).
    - Tighten to 25 Nm (18 lb-ft).
    - Install the pivot arm nut cover(s).

Wiper and Washer System Exploded View

Printable View (136 KB)



Item	Part Number	Description

Wiper Mounting Arm and Pivot Shaft Printable View (30 KB)

Removal and Installation

1. ⚠ **CAUTION: The windshield wiper system has an auto park feature. It is necessary to disconnect the battery.**

   Disconnect the battery. For additional information, refer to Section 414-01 .

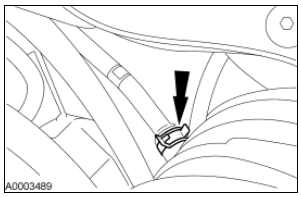
2. Partially drain the engine cooling system. For additional information, refer to Section 303-03 .

3. Remove the cowl panel grille. For additional information, refer to Section 501-02 .

4. Remove the 7 bolts and the strut tower support brace.
   - To install, tighten to 20 Nm (15 lb-ft).

5. Remove the 2 degas bottle bolts.
   - To install, tighten to 10 Nm (89 lb-in).

6. Disconnect the degas return hose from the degas return tube.



7. **NOTE:** When positioning the degas bottle aside, it is necessary to reroute the degas bottle lower hose in front of the brake booster.

   Position the degas bottle aside.

8. Remove the 5 bolts and the mounting arm and pivot shaft assembly.
   - To install, tighten to 12 Nm (9 lb-ft).

9. Position the windshield wiper mounting arm and pivot shaft assembly aside, and loosen the upper windshield wiper motor bolt.
   - To install, tighten to 15 Nm (11 lb-ft).

10. Disconnect the electrical connector and remove the mounting arm and pivot shaft assembly.

11. To install, reverse the removal procedure.

Windshield Wiper Motor

Printable View (9 KB)

Removal and Installation

1. Remove the wiper mounting arm and pivot shaft. For additional information, refer to Wiper Mounting Arm and Pivot Shaft in this section.

2. Rotate the wiper output arm to the 6 o'clock position.

3. **NOTE:** To remove the lower wiper motor bolts, it is necessary to rotate the bottom of the windshield wiper mounting arm and pivot shaft assembly upward.

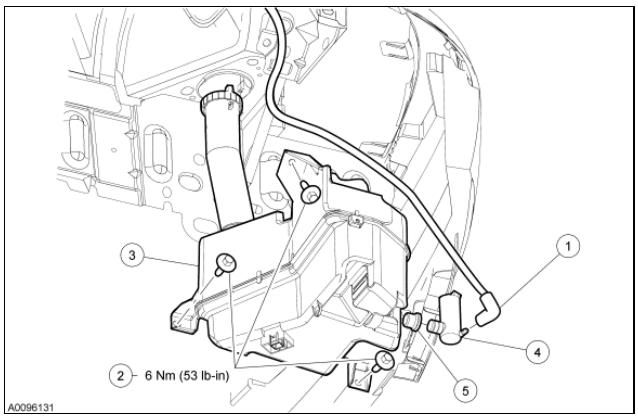
   Remove the 2 lower bolts and the windshield wiper motor.

   - To install, tighten to 15 Nm (11 lb-ft).

4. To install, reverse the removal procedure.

Windshield Washer Pump and Reservoir

Printable View (116 KB)



Item	Part Number	Description
1	17A605	Windshield washer hose
2	N806702-S55	Windshield washer reservoir screws (3 required)
3	17618	Windshield washer reservoir
4	17K624	Windshield washer motor and pump assembly
5	17B618	Pump seal

Removal and Installation

1. ⚠ **CAUTION: Do not make electrical connections prior to filling the windshield washer reservoir. Do not operate the windshield washer pump prior to filling the windshield washer reservoir.**

   Disconnect the battery. For additional information, refer to Section 414-01 .

2. Position the right-front splash shield aside. For additional information, refer to Section 501-02 .

3. Disconnect the windshield washer hose and collect the windshield washer fluid in a container.

4. Remove the 3 screws and the windshield washer reservoir.
   - To install, tighten to 6 Nm (53 lb-in).

5. Disconnect the electrical connector and remove the washer motor and pump assembly.

6. To install, reverse the removal procedure.

Roof Opening Panel

Printable View (7 KB)

The roof opening panel is an electronically operated panel that is opened, closed or vented (tilted) by the roof opening panel switch. The switch has 2 detents for opening, 2 detents for closing and a center position for venting operations. Manual open and close are provided by the motor as long as the switch is held in the first detent. Express open or express close occurs if the switch is moved to the second detent, at which time it is released. Proportional tilt-up occurs when the vent/tilt switch is pressed while the roof opening panel is in the fully closed or tilt range. Proportional tilt-up stops when the vent/tilt switch is released. One-touch tilt occurs when the vent/tilt switch is released and released while the roof opening panel is in fully open or slide. When commanded, the roof opening panel express closes then moves to the full vent position.

Roof Opening Panel

Printable View (150 KB)

Refer to Wiring Diagrams Cell 101 , Roof Opening Panel for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Roof opening panel glass • Roof opening panel • Roof opening panel drain hoses • Roof opening panel lifter assemblies • Roof opening panel water trough • Roof opening panel seal	• Rear battery junction box (BJB) fuse 16 (20A) • Circuitry • Driver door module (DDM) • Loose or corroded connections • Roof opening panel motor • Roof opening panel control switch

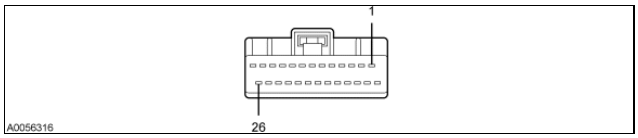
3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. Any disassembly of the roof opening panel requires initialization. Refer to Roof Opening Panel Motor Initialization in this section.
5. If the concern is not visually evident, verify the symptom and GO to Symptom Chart .

Symptom Chart

Symptom Chart

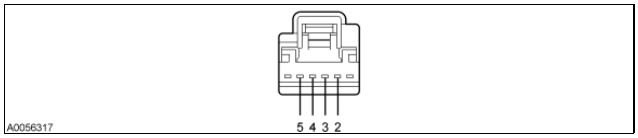
Connector Circuit Reference

Driver Door Module (DDM) C501d



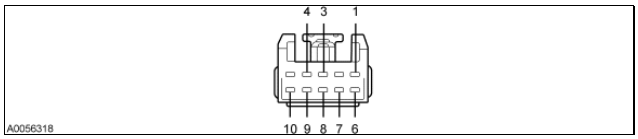
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	10-AJ43B (GY/VT) DDM delayed accessory circuit	Less than 5 ohms between the DDM and the roof opening panel motor.
26	8-AJ43B (WH/BU) DDM global open/close circuit	Less than 5 ohms between the DDM and the roof opening panel motor. Greater than 10,000 ohms between the DDM and ground.

Roof Opening Panel Control Switch C912



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	32-AG10 (WH/BU) roof opening panel open/express close circuit	Less than 5 ohms between the roof opening panel control switch and the roof opening panel motor. Greater than 10,000 ohms between the roof opening panel control switch and ground with the roof opening panel motor disconnected.
3	9-AG7 (BN/RD) roof opening panel ground circuit	Less than 5 ohms between the roof opening panel control switch and the roof opening panel motor. Greater than 10,000 ohms between the roof opening panel control switch and ground.
4	32-AG12 (WH/GN) roof opening panel auto open/tilt up circuit	Less than 5 ohms between the roof opening panel control switch and the roof opening panel motor. Greater than 10,000 ohms between the roof opening panel control switch and ground with the roof opening panel motor disconnected.
5	33-AG10 (YE/BU) roof opening panel motor close/tilt down circuit	Less than 5 ohms between the roof opening panel control switch and the roof opening panel motor. Greater than 10,000 ohms between the roof opening panel control switch and ground with the roof opening panel motor disconnected.

Roof Opening Panel Motor C920



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	30-AG12 (RD/GN) roof opening panel motor voltage supply circuit	Greater than 10 volts between the roof opening panel motor and ground.
3	10-AJ43B (GY/VT) delayed accessory circuit	Less than 5 ohms between the roof opening panel motor and the DDM. Greater than 10,000 ohms between the roof opening panel motor and ground.
4	32-AG12 (WH/GN) roof opening panel motor auto open/tilt up circuit	Less than 5 ohms between the roof opening panel motor and the roof opening panel control switch. Greater than 10,000 ohms between the roof opening panel motor and ground.
6	8-AJ43B (WH/BU) roof opening panel motor global open/close circuit	Less than 5 ohms between the roof opening panel motor and the driver door module (DDM). Greater than 10,000 ohms between the roof opening panel motor and ground with the roof opening panel motor disconnected.
7	9-AG7 (BN/RD) roof opening panel motor ground circuit	Less than 5 ohms between the roof opening panel motor and the roof opening panel control switch. Greater than 10,000 ohms between the roof opening panel motor and ground.
8	33-AG10 (YE/BU) roof opening panel motor close/tilt down circuit	Less than 5 ohms between the roof opening panel motor and the roof opening panel control switch. Greater than 10,000 ohms between the roof opening panel motor and ground.
9	32-AG10 (WH/BU) roof opening panel motor open/express close circuit	Less than 5 ohms between the roof opening panel motor and the roof opening panel control switch. Greater than 10,000 ohms between the roof opening panel motor and ground.
10	31-AG12 (BK/GN) roof opening panel motor ground circuit	0 volts between the roof opening panel motor and ground. Less than 5 ohms between the roof opening panel motor and ground.

Pinpoint Test A: The Roof Opening Panel Has Excessive Wind Noise

Normal Operation

When the roof opening panel glass is completely closed, it should be flush with the roof panel.

Possible Causes

- roof opening panel adjustment
- roof opening panel seal

PINPOINT TEST A: THE ROOF OPENING PANEL HAS EXCESSIVE WIND NOISE

Test Step	Result / Action to Take

A1 CHECK THE ROOF OPENING PANEL SEALS	
• **NOTE:** Make sure the seals are not loose, cracked, pinched or obstructed. • Check the roof opening panel seals. • **Are the seals OK?**	**Yes** GO to A2 . **No** INSTALL a new roof opening panel. REFER to Roof Opening Panel Glass in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section.
A2 CHECK THE ROOF OPENING PANEL ADJUSTMENT	
• Key in ON position. • Open and close the roof opening panel glass. • Check the adjustment when the roof opening panel glass closes. • **Is the adjustment OK?**	**Yes** CHECK for correct installation of the roof opening panel motor. REFER to Roof Opening Panel Motor in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** ADJUST the roof opening panel. REFER to Roof Opening Panel Alignment in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test B: The Roof Opening Panel Leaks

Normal Operation

When the roof opening panel glass is completely closed, it should be flush with the roof panel.

Possible Causes

- roof opening panel adjustments
- roof opening panel drain hoses
- roof opening panel seal
- roof opening panel
- roof opening panel frame

PINPOINT TEST B: THE ROOF OPENING PANEL LEAKS

Test Step	Result / Action to Take
B1 CHECK THE ADJUSTMENT OF THE ROOF OPENING PANEL	
• **NOTE:** Make sure the roof opening panel seals are not cracked or loose. • Check the roof opening panel seals.	**Yes** GO to B2 . **No** ADJUST the roof opening panel. REFER to Roof Opening Panel Alignment in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in

• **Do the roof opening panel seals seat correctly?**	this section. TEST the system for normal operation.
B2 CHECK THE ROOF OPENING PANEL DRAIN HOSES	
• **NOTE:** Make sure the roof opening panel drain hoses are not cracked, slit, pinched or obstructed. • Check the 4 roof opening panel drain hoses for correct operation. • **Are the roof opening panel drain hoses OK?**	**Yes** GO to B3 . **No** REPAIR the roof opening panel drain hose(s). TEST the system for normal operation.
B3 CHECK THE ROOF OPENING PANEL DRAIN HOSE ATTACHMENT POINTS	
• **NOTE:** Make sure the roof opening panel drain hose attachment points are not damaged or obstructed. • Check the roof opening panel drain hose attachment points for correct attachment. • **Are the attachment points OK?**	**Yes** GO to B4 . **No** INSTALL a new roof opening panel drain hose(s). TEST the system for normal operation.
B4 CHECK THE ROOF OPENING PANEL WATER TROUGH CONDITION	
• Check the roof opening panel water trough and the water trough seal for damage. • **Are the roof opening panel water trough and seal OK?**	**Yes** GO to B5 . **No** REPAIR the roof opening panel water trough and seal. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
B5 CHECK THE CONDITION OF THE ROOF OPENING PANEL	
• Check the roof opening panel frame for damage that may cause the roof opening panel seal to seat incorrectly. • **Is the roof opening panel assembly OK?**	**Yes** INSTALL a new roof opening panel frame. REFER to Roof Opening Panel Frame in this section. TEST the system for normal operation. **No** REPAIR or INSTALL a new roof opening panel frame. REFER to Roof Opening Panel Frame in this section. TEST the system for normal operation.

Pinpoint Test C: The Roof Opening Panel Rattles

Normal Operation

When the roof opening panel glass is completely closed, it should be flush with the roof panel. All components should be secured correctly.

Possible Causes

- roof opening panel operation
- roof opening panel tracks
- roof opening panel water trough
- roof opening panel lifter assemblies
- headliner
- roof opening panel motor pad

PINPOINT TEST C: THE ROOF OPENING PANEL RATTLES

Test Step	Result / Action to Take
C1 CHECK THE ROOF OPENING PANEL OPERATION	
• Check the roof opening panel during operation. • **Is the roof opening panel loose?**	**Yes** ADJUST the roof opening panel. REFER to Roof Opening Panel Alignment in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** GO to C2 .
C2 CHECK THE ROOF OPENING PANEL TRACKS	
• Open the roof opening panel. • Check the roof opening panel tracks for obstructions and damage. • **Are the roof opening panel tracks OK?**	**Yes** GO to C3 . **No** REMOVE all the roof opening panel track obstructions and REPAIR the roof opening panel tracks. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
C3 CHECK THE ROOF OPENING PANEL WATER TROUGH AND TROUGH GUIDES	
• Check the roof opening panel water trough and trough guides for any loose fasteners or obstructions. • **Are the roof opening panel trough and trough guides installed securely and free from**	**Yes** GO to C4 . **No** REMOVE all obstructions from the roof opening panel trough and INSTALL securely. SECURE the trough guides or INSTALL a new roof opening panel frame if damaged. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.

obstructions?	
C4 CHECK THE ROOF OPENING PANEL MOTOR PAD	
• Check the motor pad for correct installation and damage. • **Is the motor pad installed correctly and not damaged?**	**Yes** GO to C5 . **No** INSTALL the motor pad correctly or INSTALL a new motor pad. TEST the system for normal operation.
C5 CHECK THE ROOF OPENING PANEL AIR DEFLECTOR ASSEMBLY	
• Check the roof opening panel air deflector for obstructions and damage. • **Is the roof opening panel air deflector OK?**	**Yes** GO to C6 . **No** REMOVE all obstructions and REPAIR as necessary. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
C6 CHECK THE ROOF OPENING PANEL	
• Verify the roof opening panel is free from obstruction and damage, and is securely fastened. • **Is the roof opening panel assembly OK?**	**Yes** GO to C7 . **No** REPAIR or INSTALL a new roof opening panel frame. REFER to Roof Opening Panel Frame in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
C7 CHECK THE ROOF OPENING PANEL LIFTER ASSEMBLIES	
• Verify the roof opening panel lifter assemblies are free from obstructions and damage. • **Are the roof opening panel lifter assemblies OK?**	**Yes** INSTALL a new roof opening panel frame. REFER to Roof Opening Panel Frame in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** REMOVE all obstructions from the roof opening panel lifter assemblies and REPAIR any damage. TEST the system for normal operation.

Pinpoint Test D: The Roof Opening Panel Is Noisy During Operation

Normal Operation

The roof opening panel should operate smoothly while opening and closing.

Possible Causes

- roof opening panel
- roof opening panel lifter assemblies
- roof opening panel adjustment
- roof opening panel motor

PINPOINT TEST D: THE ROOF OPENING PANEL IS NOISY DURING OPERATION

Test Step	Result / Action to Take
D1 CHECK THE ROOF OPENING PANEL FOR OBSTRUCTIONS OR DAMAGE	
• Check the roof opening panel for any obstructions and damage. • **Are there any obstructions or damage?**	**Yes** REMOVE all obstructions. REPAIR any damage or INSTALL a new roof opening panel frame. REFER to Roof Opening Panel Frame in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** GO to D2 .
D2 CHECK THE ROOF OPENING PANEL OPERATION	
• Check the roof opening panel during operation. • **Is the roof opening panel loose or incorrectly adjusted?**	**Yes** ADJUST the roof opening panel. REFER to Roof Opening Panel Alignment in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** GO to D3 .
D3 CHECK THE ROOF OPENING PANEL TRACKS	
• Open the roof opening panel. • Check the roof opening panel tracks for obstructions and damage. • **Are the roof opening panel tracks OK?**	**Yes** GO to D4 . **No** REMOVE all obstructions and REPAIR any damage. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
D4 CHECK THE ROOF OPENING PANEL LIFTER ASSEMBLIES	
• Check the roof opening panel lifter assemblies for obstructions and damage. • **Are the roof opening**	**Yes** GO to D5 . **No** REMOVE all obstructions and REPAIR any damage. INITIALIZE

panel lifter assemblies OK?	the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
D5 CHECK THE ROOF OPENING PANEL MOTOR	
• Gain access to the roof opening panel motor. • Open the roof opening panel. • **Does the roof opening panel motor make excessive noise?**	**Yes** INSTALL a new roof opening panel motor. REFER to Roof Opening Panel Motor in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** ADJUST the roof opening panel. REFER to Roof Opening Panel Frame in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test E: The Roof Opening Panel Is Inoperative

Normal Operation

The roof opening panel motor is energized by voltage on circuit 30-AG12 (RD/GN). The roof opening panel motor is grounded through circuit 31-AG12 (BK/GN). When the roof opening panel control switch is pressed it connects circuit 32-AG12 (WH/GN) to circuit 9-AG7 (BR/RD) for tilt up. When the roof opening panel control switch is slid to the open position and released it connects circuit 32-AG10 (WH/BU) to circuit 9-AG7 (BN/RD) for open. When the roof opening panel control switch is slid to the close position and released it connects circuit 33-AG10 (YE/BU) to circuit 9-AG7 (BN/RD) for close.

Possible Causes

- circuit 9-AG7 (BN/RD) short to ground or open
- circuit 30-AG12 (RD/GN) open
- circuit 31-AG12 (BK/GN) open
- circuit 10-AJ43B (GY/VT) open
- roof opening panel lifter assemblies
- roof opening panel adjustment
- roof opening panel motor
- roof opening panel control switch
- rear battery junction box (BJB) fuse 16 (20A) open

PINPOINT TEST E: THE ROOF OPENING PANEL IS INOPERATIVE

Test Step	Result / Action to Take
E1 VERIFY THE POWER WINDOWS ARE OPERATIONAL	
• Operate the power windows. • **Do the power windows operate?**	**Yes** GO to E2 . **No** REFER to Section 501-11 to diagnose the inoperative windows.
E2 VERIFY THE ROOF OPENING PANEL ADJUSTMENT	

• Verify the roof opening panel is adjusted correctly. • **Is the roof opening panel adjusted correctly?**	**Yes** GO to E3 . **No** ADJUST the roof opening panel. REFER to Roof Opening Panel Alignment in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
E3 CHECK THE ROOF OPENING PANEL LIFTER ASSEMBLIES FOR OBSTRUCTIONS AND DAMAGE	
• Check the roof opening panel lifter assemblies for obstructions and damage. • **Are the roof opening panel lifter assemblies OK?**	**Yes** GO to E4 . **No** REMOVE all obstructions and REPAIR any damage. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
E4 CHECK CIRCUIT 30-AG12 (RD/GN) FOR VOLTAGE	
• Disconnect: Roof Opening Panel Motor C920. • Measure the voltage between the roof opening panel motor C920-1, circuit 30-AG12 (RD/GN), harness side and ground.  A0056601 • **Is the voltage greater than 10 volts?**	**Yes** GO to E5 . **No** REPAIR the circuit. TEST the system for normal operation.
E5 CHECK CIRCUIT 31-AG12 (BK/GN) FOR AN OPEN	
• Measure the resistance between the roof opening panel motor C920-10, circuit 31-AG12 (BK/GN), harness side and ground.  A0056602 • **Is the resistance less than 5 ohms?**	**Yes** GO to E6 . **No** REPAIR the circuit. TEST the system for normal operation.

E6 CHECK THE ROOF OPENING PANEL CONTROL SWITCH	
• Disconnect: Roof Opening Panel Control Switch C912. • Carry out the roof opening panel control switch component test. Refer to Component Test in this section. • **Is the roof opening panel control switch OK?**	**Yes** GO to E7 . **No** INSTALL a new roof opening panel control switch. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
E7 CHECK CIRCUIT 9-AG7 (BN/RD) FOR A SHORT TO GROUND OR AN OPEN	
• Measure the resistance between the roof opening panel motor C920-7, circuit 9-AG7 (BN/RD), harness side and ground; and between the roof opening panel motor C920-7, circuit 9-AG7 (BN/RD), harness side and the roof opening panel control switch C912-3, circuit 9-AG7 (BN/RD), harness side.  A0061760 • **Is the resistance greater than 10,000 ohms between the roof opening panel motor and ground, and less than 5 ohms between the roof opening panel control switch and the roof opening panel motor?**	**Yes** GO to E8 . **No** REPAIR the circuit. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
E8 CHECK CIRCUIT 10-AJ43B (GY/VT) FOR AN OPEN	
• Disconnect: DDM C501d. • Measure the resistance between the roof opening panel motor C920-3, circuit 10-AJ43B (GY/VT), harness side and the DDM C501d-1, circuit 10-AJ43B (GY/VT), harness side.  A0056604 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new roof opening panel motor. REFER to Roof Opening Panel Motor in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** REPAIR the circuit. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test F: The Roof Opening Panel Does Not Open Or Close

Normal Operation

The roof opening panel motor is energized by voltage on circuit 30-AG12 (RD/GN). The roof opening panel motor is grounded through circuit 31-AG12 (BK/GN). When the roof opening panel control switch is slid to the open position and released it connects circuit 32-AG10 (WH/BU) to circuit 9-AG7 (BN/RD) for open. When the roof opening panel control switch is slid to the close position and released it connects circuit 33-AG10 (YE/BU) to circuit 9-AG7 (BN/RD) for close.

Possible Causes

- circuit 32-AG10 (WH/BU) short to ground or open
- circuit 33-AG10 (YE/BU) short to ground or open
- roof opening panel lifter assemblies
- roof opening panel adjustment
- roof opening panel motor
- roof opening panel control switch

PINPOINT TEST F: THE ROOF OPENING PANEL DOES NOT OPEN OR CLOSE

Test Step	Result / Action to Take
F1 VERIFY THE ROOF OPENING PANEL ADJUSTMENT	
• Verify the roof opening panel is adjusted correctly. • **Is the roof opening panel adjusted correctly?**	**Yes** GO to F2 . **No** ADJUST the roof opening panel. REFER to Roof Opening Panel Alignment in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
F2 CHECK THE ROOF OPENING PANEL LIFTER ASSEMBLIES FOR OBSTRUCTIONS AND DAMAGE	
• Check the roof opening panel lifter assemblies for obstructions and damage. • **Are the roof opening panel lifter assemblies OK?**	**Yes** GO to F3 . **No** REMOVE all obstructions and REPAIR any damage. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
F3 CHECK THE ROOF OPENING PANEL CONTROL SWITCH	
• Key in OFF position. • Disconnect: Roof Opening Panel Control Switch C912. • Carry out the roof opening panel control switch component test. Refer to Component Test in this section. • **Is the roof opening panel control switch OK?**	**Yes** If the open function is inoperative, GO to F4 . If the close function is inoperative, GO to F5 . **No**

	INSTALL a new roof opening panel control switch. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
F4 CHECK CIRCUIT 32-AG10 (WH/BU) FOR A SHORT TO GROUND OR AN OPEN	
• Disconnect: Roof Opening Panel Motor C920. • Measure the resistance between the roof opening panel motor C920-9, circuit 32-AG10 (WH/BU), harness side and ground; and between the roof opening panel motor C920-9, circuit 32-AG10 (WH/BU), harness side and the roof opening panel control switch C912-2, circuit 32-AG10 (WH/BU), harness side.  A0056605 • **Is the resistance greater than 10,000 ohms between the roof opening panel motor and ground, and less than 5 ohms between the roof opening panel control switch and the roof opening panel motor?**	**Yes** INSTALL a new roof opening panel motor. REFER to Roof Opening Panel Motor in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** REPAIR the circuit. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
F5 CHECK CIRCUIT 33-AG10 (YE/BU) FOR A SHORT TO GROUND OR AN OPEN	
• Disconnect: Roof Opening Panel Motor C920. • Measure the resistance between the roof opening panel motor C920-8, circuit 33-AG10 (YE/BU), harness side and ground; and between the roof opening panel motor C920-8, circuit 33-AG10 (YE/BU), harness side and the roof opening panel control switch C912-5, circuit 33-AG10 (YE/BU), harness side.  A0056606 • **Is the resistance greater than 10,000 ohms between the roof opening panel motor and ground, and less than 5 ohms between the roof opening panel control switch and the roof opening panel motor?**	**Yes** INSTALL a new roof opening panel motor. REFER to Roof Opening Panel Motor in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** REPAIR the circuit. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test G: The Roof Opening Panel Does Not Open Or Close In Vent Position

Normal Operation

The roof opening panel motor is energized by voltage on circuit 30-AG12 (RD/GN). The roof opening panel motor is grounded through circuit 31-AG12 (BK/GN). When the roof opening panel control switch is pressed, it connects circuit 32-AG12 (WH/GN) to circuit 9-AG7 (BR/RD) for tilt up. When the roof opening panel control switch is slid to the close position and released it connects circuit 33-AG10 (YE/BU) to circuit 9-AG7 (BN/RD) for close.

Possible Causes

- circuit 32-AG12 (WH/GN) short to ground or open
- circuit 33-AG10 (YE/BU) short to ground or open
- roof opening panel lifter assemblies
- roof opening panel adjustment
- roof opening panel motor
- roof opening panel control switch

PINPOINT TEST G: THE ROOF OPENING PANEL DOES NOT OPEN OR CLOSE IN VENT POSITION

Test Step	Result / Action to Take
G1 VERIFY THE ROOF OPENING PANEL ADJUSTMENT	
• Verify the roof opening panel is adjusted correctly. • **Is the roof opening panel adjusted correctly?**	**Yes** GO to G2 . **No** ADJUST the roof opening panel. REFER to Roof Opening Panel Alignment in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
G2 CHECK THE ROOF OPENING PANEL LIFTER ASSEMBLIES FOR OBSTRUCTIONS AND DAMAGE	
• Check the roof opening panel lifter assemblies for obstructions and damage. • **Are the roof opening panel lifter assemblies OK?**	**Yes** GO to G3 . **No** REMOVE all obstructions and REPAIR any damage. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
G3 CHECK THE ROOF OPENING PANEL CONTROL SWITCH	
• Key in OFF position. • Disconnect: Roof Opening Panel Control Switch C912. • Carry out the roof opening panel control switch component test. Refer to Component Test in this section. • **Is the roof opening panel control switch OK?**	**Yes** GO to G4 . **No** INSTALL a new roof opening panel control switch. INITIALIZE the

	roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
G4 CHECK CIRCUIT 32-AG12 (WH/GN) FOR A SHORT TO GROUND OR AN OPEN	
• Disconnect: Roof Opening Panel Motor C920. • Measure the resistance between the roof opening panel motor C920-4, circuit 32-AG12 (WH/GN), harness side and ground; and between the roof opening panel motor C920-4, circuit 32-AG12 (WH/GN), harness side and the roof opening panel control switch C912-4, circuit 32-AG12 (WH/GN), harness side.  A0056603 • **Is the resistance greater than 10,000 ohms between the roof opening panel motor and ground, and less than 5 ohms between the roof opening panel control switch and the roof opening panel motor?**	**Yes** GO to G5 . **No** REPAIR the circuit. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
G5 CHECK CIRCUIT 33-AG10 (YE/BU) FOR A SHORT TO GROUND OR AN OPEN	
• Measure the resistance between the roof opening panel motor C920-8, circuit 33-AG10 (YE/BU), harness side and ground; and between the roof opening panel motor C920-8, circuit 33-AG10 (YE/BU), harness side and the roof opening panel control switch C912-5, circuit 33-AG10 (YE/BU), harness side.  A0062046 • **Is the resistance greater than 10,000 ohms between the roof opening panel motor and ground, and less than 5 ohms between the roof opening panel motor and the roof opening panel control switch?**	**Yes** INSTALL a new roof opening panel motor. REFER to Roof Opening Panel Motor in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** REPAIR the circuit. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test H: The Global Open/Close Is Inoperative

Normal Operation

The roof opening panel motor is energized by voltage on circuit 30-AG12 (RD/GN). The roof opening panel motor is grounded through circuit 31-AG12 (BK/GN). When the global open or close feature is activated the DDM sends a signal via circuit 8-AJ43 (WH/BU) to the roof opening panel motor. The global open/close does not function when the delayed accessory is active.

Possible Causes

- circuit 8-AJ43 (WH/BU) open
- roof opening panel motor
- driver door module (DDM)

PINPOINT TEST H: THE GLOBAL OPEN/CLOSE IS INOPERATIVE

Test Step	Result / Action to Take
H1 VERIFY THE POWER WINDOWS ARE OPERATIONAL	
• Operate the power windows, using the global open/close procedure. • **Do the power windows operate correctly?**	**Yes** GO to H2 . **No** REFER to Section 501-11 to diagnose the inoperative windows.
H2 CHECK CIRCUIT 8-AJ43 (WH/BU) FOR AN OPEN	
• Disconnect: Roof Opening Panel Motor C920. • Disconnect: DDM C501d. • Measure the resistance between the roof opening panel motor C920-6, circuit 8-AJ43B (WH/BU), harness side and the DDM C501d-26, circuit 8-AJ43 (WH/BU), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new roof opening panel motor. REFER to Roof Opening Panel Motor in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** REPAIR the circuit. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test I: The Express Open/Close Is Inoperative

Normal Operation

When the roof opening panel control switch is placed in the second detent of the open position the roof opening panel opens automatically to the full-open position. When the roof opening panel control switch is placed in the second detent of the close position, the roof opening panel closes automatically to the full-close position.

Possible Causes

- roof opening panel control switch
- roof opening panel motor

PINPOINT TEST I: THE EXPRESS OPEN/CLOSE IS INOPERATIVE

Test Step	Result / Action to Take
I1 CHECK THE ROOF OPENING PANEL CONTROL SWITCH	
• Key in OFF position. • Disconnect: Roof Opening Panel Control Switch C912. • Carry out the roof opening panel control switch component test. Refer to Component Test in this section. • **Is the roof opening panel control switch OK?**	**Yes** INSTALL a new roof opening panel motor. Refer to Roof Opening Panel Motor in this section. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** INSTALL a new roof opening panel control switch. INITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.

Component Test

Roof Opening Panel Control Switch

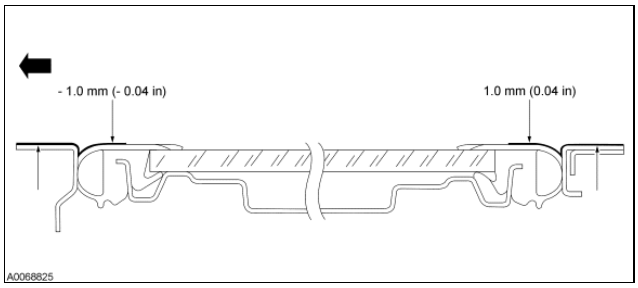
1. Measure the resistance between the following roof opening panel control switch C912 pins (component side) as follows:

Switch Position	Pin	Resistance Value
Off	Between All Pins	Greater than 10,000 ohms
Tilt Up	3 and 4	Less than 5 ohms
Open	2 and 3	Less than 5 ohms
One Touch Open	2, 3 and 4	Less than 5 ohms
Close/Tilt Down	3 and 5	Less than 5 ohms
One Touch Close	2, 3 and 5	Less than 5 ohms

Roof Opening Panel Alignment

Printable View (26 KB)

1. Cycle the roof opening panel glass through the fully-open to the fully-closed position.
2. Loosen the 4 roof opening panel glass screws.
3. Adjust the roof opening panel glass to specification.



4. Tighten the 4 roof opening panel glass screws.
   - Tighten to 4 Nm (35 lb-in).
5. Initialize the roof opening panel motor. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

Roof Opening Panel Motor Initialization

Printable View (9 KB)

NOTE: This procedure must be carried out when repairs (including lubrication) are performed on any part of the roof opening panel system.

Vehicles with existing roof opening panel and the glass in the slide range fore/aft

1. Turn the key to the ON position, then begin moving the glass panel using express open or express close.
2. While the glass panel is moving, press and hold the tilt switch for 10 seconds.
3. The glass stops as soon as the switch is pressed.
4. After 10 seconds, release the tilt switch. (Continue to step 9.)

Vehicles with existing roof opening panel and the glass in the closed or vent range

5. Press and hold the tilt switch.
6. The glass will move to full tilt position and stop, but do not release the tilt switch.
7. Continue holding the tilt switch for an additional 10 seconds. After 10 seconds, release the tilt switch. (Continue to step 8.)

Vehicles with new or existing roof opening panel and the glass in the slide, closed or vent range

8. Press and hold the tilt switch.
9. The glass panel is driven in the tilt up direction to the tilt up hard stop.
10. The drive recognizes a hard stop has occurred.
11. The drive reverses the glass panel to the normal tilt up soft stop position.
12. After the glass stops, release the tilt switch.
13. Within 5 seconds of releasing the tilt switch, press and hold the switch.
14. The drive moves through the full closed position to the full open position and back to full closed.
15. Test the express open and express close using the switch.

Water Drainage System Check and Water Leak Corrections

Printable View (9 KB)

NOTE: One drain hose is attached at each corner of the roof panel. The 2 front drain hoses are routed down the windshield pillars and into the cowl sides exiting at the rocker panel drain holes. The 2 rear drain hoses are routed down the rear pillars, along the inside rear quarter panel and through the rear of the vehicle.

1. Pour water into the drain trough and inspect the front and rear of the vehicle to make sure the water drains from the rocker panels and rear quarter panels.

2. If the water flow is restricted, remove any material in the drain hose system. Test by pouring water slowly into the system.

3. Verify the roof opening panel seal is not damaged. If the seal is damaged, a new roof opening panel glass must be installed. For additional information, refer to Roof Opening Panel Glass in this section. Initialize the roof opening panel motor. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

4. Check the roof opening panel alignment. For additional information, refer to Roof Opening Panel Alignment in this section. Initialize the roof opening panel motor. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

Roof Opening Panel Glass

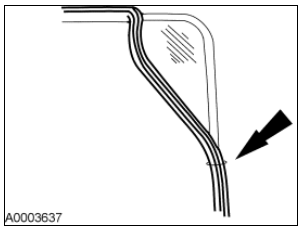
Printable View (17 KB)

Removal

1. Operate the roof opening glass assembly to the closed position.
   - Position the LH and RH sight shields forward.
2. Remove the 4 roof opening panel glass screws.
3. From the exterior of the vehicle, lift the roof opening glass from the vehicle.
4. Remove the roof opening glass seal.

Installation

1. Install the roof opening glass seal.
   - Position the roof opening glass seal seam in the center of the passenger side of the roof opening glass.



2. **NOTE:** Make sure to carefully align the sight shield to the retainer prior to positioning into place.

   Install the roof opening panel glass and the 4 screws.

   - Tighten to 4 Nm (35 lb-in).
   - Position the LH and RH sight shields into place.
3. Align the roof opening glass. For additional information, refer to Roof Opening Panel Alignment in this section.

Roof Opening Panel Motor

Printable View (9 KB)

Removal and Installation

1. **NOTE:** Make sure the roof opening panel glass does not move during the motor removal or installation. The roof opening panel timing may be affected and cause the roof opening panel glass to bind.

   Remove the overhead console.

   - Disconnect the 4 electrical connectors.

2. Disconnect the roof opening panel motor electrical connector.

3. Remove the 3 screws and the roof opening panel motor.
   - To install, tighten to 3 Nm (27 lb-in).

4. **NOTE:** If the roof opening panel glass moved while the roof opening panel motor was removed, the roof opening panel motor must be initialized.

   To install, reverse the removal procedure.

   - If necessary, initialize the roof opening panel motor. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

Roof Opening Panel Frame

Printable View (19 KB)

Removal

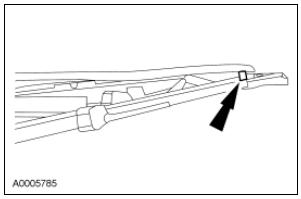
1. Remove the headliner. For additional information, refer to Section 501-05 .
2. Disconnect the 2 rear and the 2 front drain hoses.
3. Disconnect the roof opening panel motor electrical connector.
4. **NOTE:** Support the roof opening panel frame to prevent it from dropping.

   Remove the 8 bolts and the roof opening panel frame.

Installation

1. **NOTE:** The roof opening panel frame is available separately or as an assembly with the roof opening panel shield and glass.

   If necessary, transfer the roof opening panel shield and glass components to the roof opening panel frame. For additional information, refer to Roof Opening Panel Shield in this section.
2. Position the roof opening panel frame to the vehicle and the 2 alignment pins.



3. Install the 8 roof opening panel frame bolts.
   - Tighten to 10 Nm (89 lb-in).
4. Connect the roof opening panel motor electrical connector.
5. Connect the 2 front and the 2 rear drain hoses.
6. Install the headliner. For additional information, refer to Section 501-05 .
7. Align the roof opening panel glass. For additional information, refer to Roof Opening Panel Alignment in this section.

Roof Opening Panel Shield

Printable View (7 KB)

Removal and Installation

1. Remove the trough assembly. For additional information, refer to Trough Assembly in this section.

2. Pull the roof opening panel opening shield forward.

3. Remove the roof opening panel shield.
   - Lift the forward edge slightly.
   - Release the front and rear tabs from the roof opening panel frame tracks.

4. To install, reverse the removal procedure.

Trough Assembly

Printable View (7 KB)

Removal and Installation

1. Remove the roof opening glass. For additional information, refer to Roof Opening Panel Glass in this section.
2. If equipped, loosen the 2 trough assembly screws.
3. Release the clips and remove the roof opening panel trough.
4. To install, reverse the removal procedure.

Printable View (8 KB)

Removal and Installation

1. Remove the headlamps. For additional information, refer to Section 417-01 .
2. Remove the 6 screws, the pin-type retainer, and the front valance panel.
3. Remove the 6 fender splash shield screws.
4. Remove the 6 lower fender splash shield screws.
5. Disconnect the 2 fog lamp electrical connectors.
6. Disconnect the 2 side marker lamp electrical connectors.
7. Remove the 4 front bumper cover bracket bolts from the fenders.
   - To install, tighten to 7 Nm (62 lb-in).
8. Pull the center tabs downward and the outboard tabs on each side outward and remove the front bumper cover.
9. To install, reverse the removal procedure.

Front Bumper

Printable View (9 KB)

Removal and Installation

1. Remove the front bumper cover. For additional information, refer to Front Bumper Cover in this section.

2. Remove the front bumper insulator.

3. **NOTE:** Spot welding the bumper is not required for installation.

   Drill out the 6 front bumper spot welds.

4. Remove the 8 bolts and the front bumper.
   - To install, tighten the 6 front bumper bolts to 25 Nm (18 lb-ft).
   - To install, tighten the 2 front bumper bolts to 10 Nm (89 lb-ft).

5. To install, reverse the removal procedure.

Rear Bumper Cover

Printable View (82 KB)

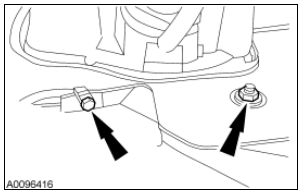
Removal and Installation

1. Remove the luggage compartment trim panels.

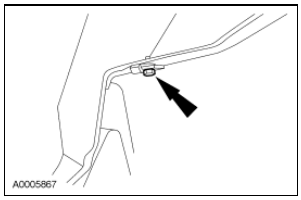
2. Remove the 4 rear bumper cover inner fender screws (2 on each side).

3. Remove the 2 rear bumper cover screws.

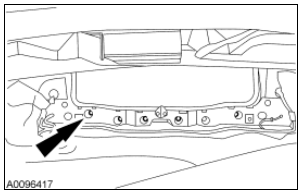
4. On the RH side, remove the rear bumper cover bolt and the nut located in the wheel well area.
   - To install, tighten to 7 Nm (62 lb-in).



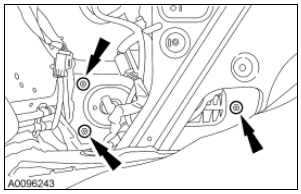
5. On the LH side, remove the rear bumper cover bolt.
   - To install, tighten to 7 Nm (62 lb-in).



6. From the luggage compartment, remove the 5 rear bumper cover nuts.
   - To install, tighten to 7 Nm (62 lb-in).



7. From the luggage compartment, remove the 6 rear bumper cover nuts (3 on each side).
   - To install, tighten to 7 Nm (62 lb-in).



8. Remove the rear bumper cover.
   - If equipped, disconnect the electrical connector.

9. To install, reverse the removal procedure.

Rear Bumper

Printable View (7 KB)

Removal and Installation

1. Remove the rear bumper cover. For additional information, refer to Rear Bumper Cover in this section.

2. Remove the 2 rivets and the rear bumper cover insulator.
   - Use the special tool to install the new rivets.

3. Remove the bolt and the exhaust bracket.
   - To install, tighten to 30 Nm (22 lb-ft).

4. Remove the 4 bolts and the rear bumper.
   - To install, tighten to 23 Nm (17 lb-ft).

5. To install, reverse the removal procedure.

Safety Belt System

Printable View (20 KB)

⚠ WARNING: All safety belt assemblies including retractors, buckles, front seat belt buckle support assemblies (slide bar), if equipped, shoulder belt height adjusters, if equipped, child safety seat tether bracket assemblies, if equipped, and attaching hardware should be inspected after any collision. Ford recommends new safety belt assemblies be installed unless a qualified technician finds the assemblies show no damage and operate correctly. Safety belt assemblies not in use during a collision should also be inspected and new assemblies installed if either damage or incorrect operation is noted.

The Automatic Locking Retractor (ALR) feature of the safety belt retractor must be checked by a qualified technician to verify that the ALR feature for a child seat is functioning properly, in addition to other checks for correct safety belt system function. A belt and retractor assembly must be replaced if the safety belt assembly's "automatic locking retractor" feature or any other safety belt function is not operating properly when inspected according to the functional inspection procedures in the workshop manual. Failure to replace the belt and retractor assembly could increase the risk of injury in collisions.

⚠ WARNING: Each seating position in the vehicle has a specific safety belt assembly which consists of one buckle and one tongue. The safety belt assembly is designed to be used as a pair and is not to be used across seating positions.

⚠ WARNING: Never put a rear-facing child seat on the front seat of a vehicle with a passenger airbag. If the airbag deploys, it can hit the back of the child seat with enough force to cause severe personal injury or death to the infant.

⚠ WARNING: A forward-facing child safety seat should only be placed in the front seat when it is unavoidable. If you must place a forward facing child seat in the front, always move the seat as far back as possible, because the force of the deploying front passenger air bag could cause death or serious injury to the infant. If the vehicle is equipped with a passenger airbag deactivation switch, the passenger airbag must be deactivated.

NOTE: New safety belt buckles, height adjusters, center adjust tongues and belts and retractors can be installed separately. However, if a safety assembly was in use during a collision, a new belt and retractor must be installed as well as the center adjust tongue, and belt and buckle assembly or the center adjust tongue, and the cable and buckle assembly. When installing new safety belts and buckles, height adjusters, safety cables and buckles, center adjust tongues, and belt and retractors, use only the parts specified in the Ford Master Parts Catalogs for the make and model of the vehicle being repaired. Safety belt assemblies must not be interchanged between vehicle models.

The active restraint system consists of:

- front seat safety belt retractor pretensioners with adjustable D-rings.
- front seat safety belt buckles attached to the power seat track bracket.
- rear seat safety belt retractors attached to the C-pillar behind the corner trim panel.
- the rear center safety belt retractor, which is located under the package tray trim.
- the rear LH, RH and center buckle ends, which are secured to the rear floor pan under the rear seat.
- child safety seat tether anchors located in the rear at all 3 seating positions.
- child safety seat LATCH system located at the rear outboard seating positions, behind the rear seat backrest.

When installing new safety belt buckles and/or retractor assemblies, use only the replacement parts specified in the Ford Customer Service Division Master Parts and Accessories Catalog.

Safety Belt Retractor Pretensioners

The front outboard safety belt retractors use a safety belt pretensioner system. This works in conjunction with the front air bag system mounted in the steering wheel and instrument panel. The pretensioner is a pyrotechnic device that removes excess webbing slack from the safety belt. When the front air bags are deployed, the pretensioner deploys in the retractor, removing excess slack from the lap and shoulder safety belt. The pretensioners are activated when the restraints control module (RCM) detects a frontal impact force exceeding a programmed limit. If the vehicle is involved in a collision that results in deployment of the front air bags and safety belt pretensioners, a new driver and passenger seat belt system (including safety belt buckle and pretensioners or safety belt retractor and pretensioners, safety belt retractors, safety belts, buckles and height adjusters), must be installed.

For additional information, refer to Section 501-20B .

Dual Locking Mode Retractors

NOTE: When replacing a dual locking mode retractor, the retractor should be checked to make sure it is not in the automatic locking retractor (ALR) mode after installation in the stowed position.

All continuous-loop, 3-point retractor systems, except the driver position, are equipped with the dual locking mode system.

The emergency locking retractor (ELR) mode will allow the occupant freedom of movement, locking tight only on hard braking, hard cornering, or an impact of approximately 8 km/h (5 mph). The ELR mode helps to reduce the forward movement of the driver and passengers. The ELR mode is continuously in operation at all seating positions.

The ALR portion of this system does not allow the occupant freedom of movement. The ALR mode is used when locking a child seat in an outboard seating position or when a tight belt fit is desired. The ALR mode is automatically engaged when the webbing is fully extracted from the retractor and then allowed to retract. As the webbing is retracted back onto the spool, an audible clicking sound is made indicating the retractor is in ALR mode and the webbing will not pull back out of the retractor. To disengage the ALR mode, let the webbing retract back onto the spool. The ALR mode is disengaged when the webbing is free to move out and back into the retractor.

Safety Belt Extension Assembly

In certain cases, the safety belt may be too short even when it is fully extended. About 20 cm (8 inches) can be added to the belt length by using a safety belt extension (611C22). Safety belt extensions are available through the dealership parts department at no cost. Safety belt extensions are only available with black webbing. There is one extension assembly available for the front and rear seating positions.

Use only extensions manufactured by the same supplier as the safety belt. Manufacturer identification is located at the end of the webbing on the label. Also, use the safety belt extension only if the safety belt is too short for you when fully extended. Do not use the extension to change the fit of the shoulder belt across the torso.

Safety Belt Warning System Driver Safety Belt

The driver safety belt incorporates a safety belt warning indicator switch (10B924), warning indicator and chime. The warning indicator and chime are reminders to fasten the safety belt.

- If the driver safety belt is not buckled before the ignition key is turned to the ON position, the safety belt warning light illuminates for 1 to 2 minutes and the warning chime sounds for 4 to 8 seconds.
- If the safety belt is buckled while the warning indicator is on and the chime is sounding, the warning light and warning chime turn off.
- If the safety belt is buckled before the key is turned to the ON position, the warning indicator will come on for 4 to 8 seconds with no chime.

Belt Minder

The Belt Minder feature is a supplemental warning to the safety belt warning function. This feature provides additional reminders to the driver that the safety belt is unbuckled by intermittently sounding a chime and illuminating the safety belt warning lamp in the instrument cluster.

If...	Then...
The driver safety belt is not buckled before the vehicle has reached at least 5 km/h (3 mph) and 1-2 minutes have elapsed since the ignition switch has been turn to ON...	The Belt Minder feature is activated the safety belt warning light illuminates and the warning chime sounds for 6 seconds every 30 seconds, repeating for approximately 5 minutes or until safety belt is buckled.
The driver safety belt is buckled while the safety belt indicator light is illuminated and the safety belt warning chime is sounding...	The Belt Minder feature will not activate.
The driver safety belt is buckled before the ignition switch is turned to the ON position...	The Belt Minder feature will not activate.

Child Safety Seat Tether Anchors

⚠ WARNING: The child safety seat tether anchor/bolt MUST be securely tightened to specification. Otherwise, the child safety seat may not be correctly secured and the child could be injured if the vehicle is involved in a collision or stops suddenly.

Child safety seat tether anchors are located in the rear at both seating locations. If a child safety seat was in use during a collision, inspect the tether anchor and seat backrest frame for damage. Install a new tether anchor or seat backrest frame if necessary. For additional information, refer to Child Safety Seat Tether Anchor in this section.

Lower Anchors and Tethers for Children (LATCH)

The lower anchors and tethers for children (LATCH) system is a standardized and uniform attachment system for installing child safety seats in passenger vehicles. LATCH- equipped child safety seats have two lower attachments that connect to the vehicle portion of the LATCH system.

The vehicle portion of the system consists of 2 attachment points (6-mm wires) bolted to the floor pan at both second row outboard seating positions. The attachment points protrude from the biteline between the seat cushion and seat backrest.

If a child safety seat was in use during a collision, inspect the vehicle portion of the system for damage. If any of the attachment points (6-mm wires) are damaged, a new one must be installed. See the appropriate removal and installation procedure in this section for service.

Safety Belt System

Printable View (19 KB)

Inspection and Verification

1. Verify the customer's original concern by operating the active restraint system to duplicate the condition.

2. Inspect to determine if any of the following mechanical or electrical concerns apply:

   Visual Inspection Chart

Mechanical	Electrical
• Inspect the safety belt webbing for integrity • Safety belt buckle and tongue assembly • Safety belt retractor	• Open fuse. • Bare, broken or disconnected wire. • Connector not tightly engaged. • Safety belt warning indicator lamp burned out or broken.

3. If the inspection reveals an obvious concern(s) that can be readily identified, service as required. With the exception of removing a twist from the safety belt webbing, do not attempt to repair a component of the safety belt system; new components must be installed.

4. If the concern remains after the inspection, determine the symptom. GO to Symptom Chart .

5. To check the active restraint system for correct operation, carry out the appropriate Functional Test(s).

Symptom Chart

SYMPTOM CHART

Component Test

Carry out the appropriate Functional Test(s) as determined in Inspection and Verification.

Functional Test I (Buckle and Tongue)

The safety belt buckle and tongue assembly must operate freely during the latching and unlatching function. Fasten the safety belt by inserting the tongue (male portion) into the buckle (female portion).

1. Verify the following during the latching sequence:
   - Tongue insertion is not hindered by excessive effort.
   - A click is heard when the buckle latches the tongue.

2. Verify the system integrity by forcefully pulling on the belt webbing.

3. Unlatch the belt by fully depressing the buckle release button, and allowing the belt to release and retract.

4. Verify the following during the unlatching process:
   - Push-button depression does not require excessive effort.
   - Tongue can be removed easily from the buckle.

5. Repeat the above steps 3 times.

6. If the inspection reveals an obvious concern(s) that can be readily identified, service as required. Do not attempt to carry out any repair on the buckle and tongue assembly. If a concern exists with either component, a new safety belt buckle and safety belt and retractor assembly must be installed.

Functional Test II (Retractor)

The safety belt and retractor assembly must be freely operational for extraction and retraction of the safety belt webbing between full extension and in-vehicle stowed positions.

1. Extract and retract the safety belt between the full extension and stowed positions.

2. Verify the retractor operates without excessive effort or binding.

3. Install a new safety belt buckle retractor and tongue assembly if no obvious concerns are noticed and the complaint has been verified.

Functional Test III (System Road Test Inspection)

1. **NOTE:** If the RH or the rear safety belts are to be tested, a passenger must be used.

   Fasten the safety belts and proceed to a safe area.

2. Attain a speed of 8 km/h (5 mph).

3. ⚠ **WARNING: The driver and passenger must be prepared to brace themselves if the retractor does not lock.**

   Test the safety belts.

   1. Grasp the shoulder harness and prepare to lean forward.
   2. ⚠ **WARNING: The maximum brake application should be on dry concrete or equivalent hard surface, NEVER on wet pavement or gravel.**

      ⚠ **WARNING: The driver and passenger must be prepared to brace themselves in the event the retractor does not lock.**

      Make a maximum brake application without a skid.
   3. **NOTE:** Do not jerk on the safety belt webbing when carrying out this test. Lean forward slightly when the brake application is made.

4. The safety belts should lock up with minimum webbing extension.

5. If there is a lockup of both shoulder straps, the safety belt assemblies are functioning correctly.

Should either or both retractors fail to lock up at the 8 km/h (5 mph) speed, repeat the test at a constant 24 km/h (15 mph) speed. (This test must be carried out with a RH front or rear passenger if the RH front or rear safety belts are to be tested).

6. **⚠ CAUTION: Before installing a new safety belt assembly, inspect the mounting area for damage and distortion. If the retractor of a new safety belt assembly has been bolted into a damaged or distorted mounting area, the retractor could be warped and may not function. If this is the case, remove the retractor and return the sheet metal to the original configuration and install another complete safety belt assembly.**

   If either or both retractors do not lock up at the 24 km/h (15 mph) test, return the vehicle for service of malfunctioning safety belts.

Functional Test IV (Automatic Locking Retractor)

⚠ WARNING: After any vehicle collision, the safety belt system at all outboard seating positions (except driver, which has no "automatic locking retractor" feature) must be checked by a qualified technician to verify that the "automatic locking" feature for child seats is still functioning properly, in addition to other checks for correct safety belt system function. A safety belt and retractor assembly must be replaced if the safety belt assembly's "automatic locking retractor" feature or any other safety belt function is not operating properly when checked according to the procedures in the workshop manual. Failure to replace the safety belt and retractor assembly could increase the risk of injury in collisions.

1. Position the seat back into the FULL UP position.
2. Position the height adjuster in the FULL DOWN or UP position.
3. Latch the seat belt buckle and tongue assembly.
4. Pull the shoulder belt out until the automatic locking retractor (ALR) feature is activated.
5. Release the shoulder belt and allow it to retract until it stops.
6. Pull on the shoulder belt to check that the belt has remained in the ALR mode. If the belt is not locked, install a new safety belt and retractor assembly.
7. Unlatch the safety belt tongue from the buckle and allow the safety belt to retract to its stowed position.
8. Pull the shoulder belt to verify the retractor assembly has converted automatically out of the ALR mode. If the shoulder belt remains locked in the stowed position, install a new safety belt and retractor assembly.

Safety Belt Cleaning

Printable View (9 KB)

1. **WARNING: Do not bleach or re-dye the webbing, as the webbing may weaken.**

   Clean the safety belt webbing only with a mild soap solution recommended for cleaning upholstery or carpets. Follow the instructions provided with the soap.

Safety Belt Maintenance

Printable View (10 KB)

⚠ WARNING: All safety belt assemblies include retractors, buckles, front seat belt buckle support assemblies (slide bar), shoulder belt height adjuster, child safety seat tether bracket assemblies, if equipped, and attaching hardware should be inspected after any collision. New belt assemblies should be installed unless a qualified technician finds the assemblies show no damage and operate correctly. Belt assemblies not in use during a collision should also be inspected. New safety belt assemblies should be installed if either damage or incorrect operation is noted.

1. The safety belt assemblies should be periodically inspected to make sure that they have not become damaged and that they remain in correct operating condition, particularly if they have been subjected to severe stress.

2. Before installing the new safety belt assembly; the safety belt retaining areas must be inspected for damage and distortion. If the retaining points are damaged and distorted, the sheet metal must be reworked back to its original shape and structural integrity.

3. Install the new safety belt(s) using the appropriate instructions. Carry out the Functional Test Procedure. For additional information, refer to Safety Belt System in this section.

Replacement of the Weld Nut and Reinforcement

Printable View (9 KB)

1. **NOTE:** If the safety belt anchor nuts or reinforcements are stripped or missing, a new nut/reinforcement plate must be installed.

   Expose the suspect anchor point.

2. Drill out two 8-mm (5/16-inch) diameter access holes adjacent to the weld nut clearance hole.

3. Thread a length of copper welding wire through the clearance hole and position to secure the weld nut and washer.

4. Use MIG wire feed welder and plug weld a M10 weld nut and standard washer in place at the two 8-mm (5/16-inch) holes.

5. Metal finish as necessary.

6. Install the restraint system.

7. Carry out the Functional Test. For additional information, refer to Safety Belt System in this section.

Safety Belt Shoulder Height Adjuster With Stripped Weld Nuts

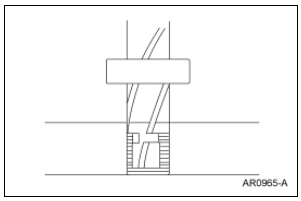
Printable View (86 KB)

Special Tool(s)

ST1657-A	D-Ring Installation Kit 100-F012 (134-00018) or equivalent
 ST1181-A	Safety Belt Bolt Bit 501-010 (T77L-2100-A) or equivalent

1. Remove the shoulder safety belt height adjuster. For additional information, refer to Safety Belt Shoulder Height Adjuster in this section.

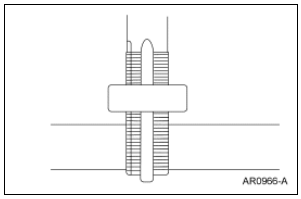
2. Use the half-inch drill provided in the D-Ring Installation Kit to drill out the damaged threads in the upper pillar structure.



AR0965-A

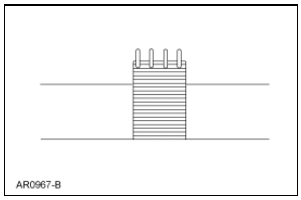
3. **NOTE:** After each rotation, back off the tap slightly to remove the new cuttings and be sure to blow out any chips before proceeding.

   Apply a suitable lubricant to the M14 x 1.5 tap provided in the D-Ring Installation Kit and tap new threads.



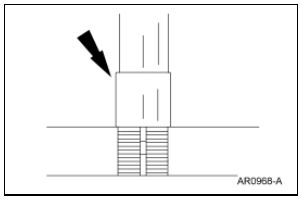
AR0966-A

4. Use a threaded insert (Part of #N807170-S190) provided in the D-Ring Installation Kit and screw it into the retapped hole until it is slightly below the surface.



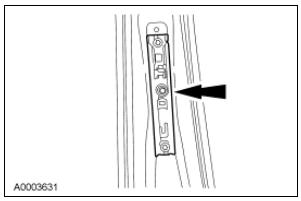
AR0967-B

5. Use a hammer to lightly tap the installation tool provided in the D-Ring Installation Kit several times to seat the insert keys.

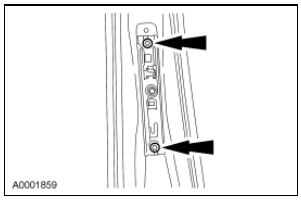


6. **NOTE:** If the shoulder safety belt height adjuster bolts are stripped, install a new height adjuster.

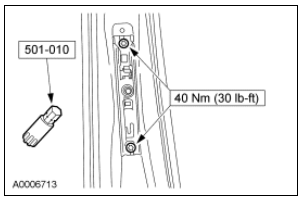
   Insert the shoulder safety belt height adjuster in the opening of the upper B-pillar structure, making sure the shoulder belt height adjuster knob on the shoulder safety belt height adjuster is positioned above the D-ring attachment nut. (The tab is located at the top and is to be inserted in the hole provided in the B-pillar structure.)



7. Hand tighten the height adjuster bolts until they are snug.

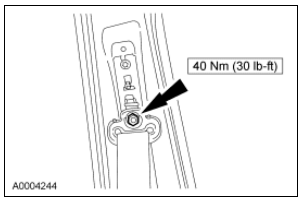


8. Using the special tool, tighten the height adjuster bolts.



9. **NOTE:** Make sure the D-ring rotates freely.

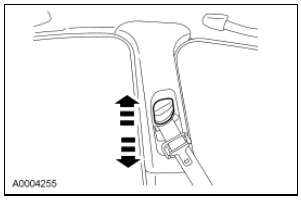
   Install the safety belt D-ring and tighten the nut.



10. **NOTE:** Position the safety belt D-ring to its highest point before installing B-pillar trim.

    Install the B-pillar trim.

11. Operate the front seat shoulder strap adjuster. Make sure it travels from top to bottom and locks correctly in each position.



12. Check the restraint system for correct operation.

Safety Belt Procedure After a Collision

Printable View (10 KB)

⚠ WARNING: All safety belt assemblies include retractors, buckles, front seat belt buckle support assemblies (slide bar), if equipped, shoulder belt height adjuster, if equipped, child safety seat tether bracket assemblies, if equipped, and attaching hardware should be inspected after any collision. All belt assemblies should be installed new unless a qualified technician finds the assemblies show no damage and operate correctly. Belt assemblies not in use during a collision should also be inspected. New safety belt assemblies should be installed if either damage or incorrect operation is noted.

NOTE: The driver and front passenger seat belt system (including belt and retractor assembly, buckles, and height adjusters) must be replaced if the vehicle is involved in a collision that results in deployment of the front air bags and safety belt pretensioners.

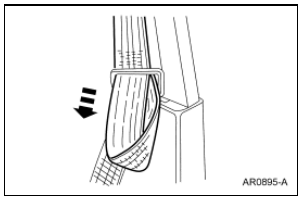
1. Before installing a new safety belt assembly, the safety belt attaching areas must be inspected for damage and distortion. If the attaching points are damaged and distorted, the sheet metal must be worked back to its original shape and structural integrity.

2. Install the new safety belt(s). For additional information, refer to the procedure in this section. Carry out the Functional Test. For additional information, refer to Safety Belt System in this section.

Safety Belt Tongue Rotated on Belt

Printable View (26 KB)

1. Grasp the belt tongue and pull the belt webbing down to form a loop through the slot in the tongue.



2. Rotate and fold the belt webbing over itself within the slot to remove the twist.

3. Pull the excess belt webbing back through the slot in the belt tongue.

4. Pull the excess belt webbing through the slot.

5. The safety belt tongue should face inward when completed.

Front Safety Belt Buckle

Printable View (11 KB)

Removal and Installation

⚠ WARNING: All safety belt assemblies including retractors, buckles, belt tension sensor (BTS), if equipped, front seat belt buckle support assemblies (slide bar), if equipped, shoulder belt height adjusters, if equipped, child safety seat tether bracket assemblies, if equipped, and attaching hardware should be inspected after any collision. Ford recommends new safety belt assemblies be installed unless a qualified technician finds the assemblies show no damage and operate correctly. Safety belt assemblies not in use during a collision should also be inspected and new assemblies installed if either damage or incorrect operation is noted.

The Automatic Locking Retractor (ALR) feature of the safety belt retractor must be checked by a qualified technician to verify that the ALR feature for a child seat is functioning properly, in addition to other checks for proper safety belt system function. A belt and retractor assembly must be replaced if the safety belt assembly's "automatic locking retractor" feature or any other safety belt function is not operating properly when inspected according to the functional inspection procedures in the workshop manual. Failure to replace the belt and retractor assembly could increase the risk of injury in collisions.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

NOTE: If a seat equipped with a supplemental restraint system (SRS) component is being serviced, the SRS must be depowered.

NOTE: The air bag warning lamp illuminates when the restraint control module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. **⚠ CAUTION: Use care when handling the seat and track assembly. Dropping the assembly or sitting on a seat not secured in the vehicle may result in damaged components.**

   Remove the affected seat from the vehicle and depower the system. For additional information, refer to Section 501-10 .

2. Disconnect the safety belt buckle electrical connector.

3. Remove the bolt and the safety belt buckle.
   - To install, tighten to 40 Nm (30 lb-ft).

4. To install, reverse the removal procedure.

5. Install the affected seat and repower the system. For additional information, refer to Section 501-10 .

6. Check the active restraint system for correct operation. For additional information, refer to Safety Belt System in this section.

Front Safety Belt Retractor and Pretensioner

Printable View (14 KB)

Removal and Installation

⚠ WARNING: All safety belt assemblies including retractors, buckles, belt tension sensor (BTS), if equipped, front seat belt buckle support assemblies (slide bar), if equipped, shoulder belt height adjusters, if equipped, child safety seat tether bracket assemblies, if equipped, and attaching hardware should be inspected after any collision. Ford recommends new safety belt assemblies be installed unless a qualified technician finds the assemblies show no damage and operate correctly. Safety belt assemblies not in use during a collision should also be inspected and new assemblies installed if either damage or incorrect operation is noted.

The Automatic Locking Retractor (ALR) feature of the safety belt retractor must be checked by a qualified technician to verify that the ALR feature for a child seat is functioning properly, in addition to other checks for proper safety belt system function. A belt and retractor assembly must be replaced if the safety belt assembly's "automatic locking retractor" feature or any other safety belt function is not operating properly when inspected according to the functional inspection procedures in the workshop manual. Failure to replace the belt and retractor assembly could increase the risk of injury in collisions.

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

NOTE: The air bag warning lamp illuminates when the restraint control module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. Depower the SRS. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .

2. Remove the upper and lower B-pillar trim panels. For additional information, refer to Section 501-05 .

3. Remove the nut and the safety belt D-ring.
   - To install, tighten to 40 Nm (30 lb-ft).

4. Remove the safety belt anchor nut and safety belt anchor from the seat.
   - To install, tighten to 40 Nm (30 lb-ft).

5. Remove the seat side trim panel safety belt anchor cover.

6. Remove the safety belt retractor lower bolt and the safety belt retractor.
   - To install, tighten to 40 Nm (30 lb-ft).

7. To install, reverse the removal procedure.

8. Repower the SRS. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .

Safety Belt Shoulder Height Adjuster

Printable View (11 KB)

Removal and Installation

⚠ WARNING: All safety belt assemblies including retractors, buckles, belt tension sensor (BTS), if equipped, front seat belt buckle support assemblies (slide bar), if equipped, shoulder belt height adjusters, if equipped, child safety seat tether bracket assemblies, if equipped, and attaching hardware should be inspected after any collision. Ford recommends new safety belt assemblies be installed unless a qualified technician finds the assemblies show no damage and operate correctly. Safety belt assemblies not in use during a collision should also be inspected and new assemblies installed if either damage or incorrect operation is noted.

The Automatic Locking Retractor (ALR) feature of the safety belt retractor must be checked by a qualified technician to verify that the ALR feature for a child seat is functioning properly, in addition to other checks for proper safety belt system function. A belt and retractor assembly must be replaced if the safety belt assembly's "automatic locking retractor" feature or any other safety belt function is not operating properly when inspected according to the functional inspection procedures in the workshop manual. Failure to replace the belt and retractor assembly could increase the risk of injury in collisions.

NOTE: The passenger side safety belt shoulder height adjuster is shown, the driver side is similar.

1. Remove the upper B-pillar trim panel. For additional information, refer to Section 501-05 .

2. Remove the nut and the safety belt D-ring.
   - To install, tighten to 40 Nm (30 lb-ft).

3. Remove the height adjuster bolts.
   - To install, tighten to 40 Nm (30 lb-ft).

4. **NOTE:** Rotate the safety belt shoulder height adjuster downward to release the lower tab.

   Remove the safety belt shoulder height adjuster.

5. To install, reverse the removal procedure.

6. Check the active restraint system for correct operation. For additional information, refer to Safety Belt System in this section.

Safety Belt System Exploded View, Rear

Rear Safety Belt Retractor

Printable View (11 KB)

Removal and Installation

⚠ WARNING: All safety belt assemblies including retractors, buckles, belt tension sensor (BTS), if equipped, front seat belt buckle support assemblies (slide bar), if equipped, shoulder belt height adjusters, if equipped, child safety seat tether bracket assemblies, if equipped, and attaching hardware should be inspected after any collision. Ford recommends new safety belt assemblies be installed unless a qualified technician finds the assemblies show no damage and operate correctly. Safety belt assemblies not in use during a collision should also be inspected and new assemblies installed if either damage or incorrect operation is noted.

The Automatic Locking Retractor (ALR) feature of the safety belt retractor must be checked by a qualified technician to verify that the ALR feature for a child seat is functioning properly, in addition to other checks for proper safety belt system function. A belt and retractor assembly must be replaced if the safety belt assembly's "automatic locking retractor" feature or any other safety belt function is not operating properly when inspected according to the functional inspection procedures in the workshop manual. Failure to replace the belt and retractor assembly could increase the risk of injury in collisions.

1. Remove the rear seat bolster. For additional information, refer to Section 501-10 .
2. Remove the rear quarter trim panel. For additional information, refer to Section 501-05 .
3. Remove the rear safety belt retractor anchor bolt.
   - To install, tighten to 40 Nm (30 lb-ft).
4. Remove the bolt and D-ring.
   - To install, tighten to 40 Nm (30 lb-ft).
5. Remove the bolt and the rear safety belt retractor.
   - To install, tighten to 40 Nm (30 lb-ft).
6. To install, reverse the removal procedure.
7. Check the active restraint system for correct operation. For additional information, refer to Safety Belt System in this section.

Rear Center Safety Belt Retractor

Printable View (10 KB)

Removal and Installation

⚠ WARNING: All safety belt assemblies including retractors, buckles, belt tension sensor (BTS), if equipped, front seat belt buckle support assemblies (slide bar), if equipped, shoulder belt height adjusters, if equipped, child safety seat tether bracket assemblies, if equipped, and attaching hardware should be inspected after any collision. Ford recommends new safety belt assemblies be installed unless a qualified technician finds the assemblies show no damage and operate correctly. Safety belt assemblies not in use during a collision should also be inspected and new assemblies installed if either damage or incorrect operation is noted.

The Automatic Locking Retractor (ALR) feature of the safety belt retractor must be checked by a qualified technician to verify that the ALR feature for a child seat is functioning properly, in addition to other checks for proper safety belt system function. A belt and retractor assembly must be replaced if the safety belt assembly's "automatic locking retractor" feature or any other safety belt function is not operating properly when inspected according to the functional inspection procedures in the workshop manual. Failure to replace the belt and retractor assembly could increase the risk of injury in collisions.

1. Using a suitable tool, release the mini-buckle.
2. Remove the package tray trim panel. For additional information, refer to Section 501-05 .
3. Remove the bolt and the rear center safety belt retractor assembly.
   - To install, tighten to 40 Nm (30 lb-ft).
4. To install, reverse the removal procedure.
5. Check the active restraint system for correct operation. For additional information, refer to Safety Belt System in this section.

Rear Safety Belt Buckle

Printable View (10 KB)

Removal and Installation

⚠ WARNING: All safety belt assemblies including retractors, buckles, belt tension sensor (BTS), if equipped, front seat belt buckle support assemblies (slide bar), if equipped, shoulder belt height adjusters, if equipped, child safety seat tether bracket assemblies, if equipped, and attaching hardware should be inspected after any collision. Ford recommends new safety belt assemblies be installed unless a qualified technician finds the assemblies show no damage and operate correctly. Safety belt assemblies not in use during a collision should also be inspected and new assemblies installed if either damage or incorrect operation is noted.

The Automatic Locking Retractor (ALR) feature of the safety belt retractor must be checked by a qualified technician to verify that the ALR feature for a child seat is functioning properly, in addition to other checks for proper safety belt system function. A belt and retractor assembly must be replaced if the safety belt assembly's "automatic locking retractor" feature or any other safety belt function is not operating properly when inspected according to the functional inspection procedures in the workshop manual. Failure to replace the belt and retractor assembly could increase the risk of injury in collisions.

1. Using a suitable tool, release the mini-buckle.

2. Remove the rear seat cushion. For additional information, refer to Section 501-10 .

3. Remove the anchor nut and the rear safety belt buckle assembly.
   - To install, tighten to 48 Nm (35 lb-ft).

4. To install, reverse the removal procedure.

5. Check the active restraint system for correct operation. For additional information, refer to Safety Belt System in this section.

Child Safety Seat Tether Anchor

Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS)

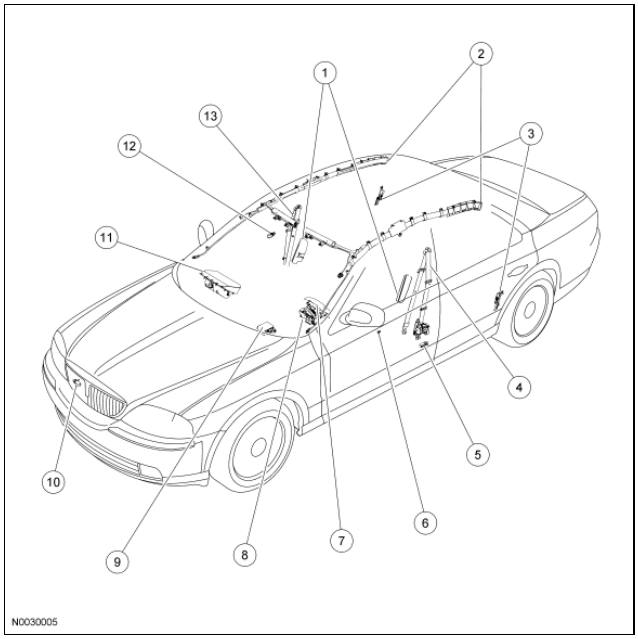
Printable View (128 KB)

The air bag supplemental restraint system (SRS) is designed to provide increased collision protection for front seat occupants in addition to that provided by the 3-point safety belt system. The SRS will also provide increased collision protection for the rear occupants when equipped with optional side air curtains. Safety belt use is necessary to obtain the best occupant protection and to receive the full advantage of the SRS.

This vehicle line contains dual-stage deployment (advanced restraint system) driver and front passenger air bag modules. These vehicles are also equipped with seat side air bag modules and optional side air curtain modules.

Vehicles equipped with side air curtain modules are also equipped with seat side thorax air bag modules. Vehicles that are not equipped with side air curtain modules are equipped with seat side air bag modules. Seat side air bag modules and seat side thorax air bag modules deploy from the outboard front seat backrest upon a side impact. Side air curtain modules deploy from the headliner, protecting the first and second row outboard occupants during a side impact.

Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) Components



Item	Part Number	Description
1	611D11/611D10	Seat side air bag modules
2	042D94/042D95	Side air curtain modules (if equipped)
3	14B345	Side impact sensors second row, C-pillar
4	611B08	Passenger safety belt retractor pretensioner
5	14B345	Side impact sensor driver, first row, B-pillar
6	14B416	Seat position sensor
7	043B13	Driver air bag module
8	14A664	Clockspring
9	14B321	Restraints control module

10	14B004	Front impact severity sensor
11	044A74	Passenger air bag module
12	14B345	Side impact sensor passenger, first row, B-pillar
13	611B09	Driver safety belt retractor pretensioner

Driver Air Bag Module

NOTE: References to the driver air bag module must not be confused with the driver seat side air bag components of the supplemental restraint system (SRS).

The driver air bag module:

- is steering wheel mounted.
- will deploy upon receiving a flow of current from the restraints control module (RCM).
- has no subassemblies.

Clockspring

The clockspring:

- is mounted on the steering column, behind the steering wheel.
- provides a continuous electrical path from the driver air bag module to the restraints control module (RCM).

Seat Side Air Bag Modules and Seat Side Thorax Air Bag Modules

⚠ **CAUTION: When installing a seat side air bag module or a seat side thorax air bag module always make sure the correct module is being installed. Seat side air bag modules and seat side thorax air bag modules are not interchangeable. The electrical connectors are different between the modules. DO NOT damage or alter the electrical connectors.**

NOTE: When installing a new side air bag module or a new side thorax air bag module after deployment, refer to Section 501-10 for additional information.

This vehicle is equipped with a seat side air bag module or a seat side thorax air bag module. The modules are not interchangeable. The electrical connectors are keyed differently between the modules. **DO NOT** damage or alter the electrical connectors in any way.

A specific seat side air bag wiring harness is used for a seat side air bag module, with a unique, specific seat side air bag wiring harness used for a seat side thorax air bag module. The electrical connectors to the module and to the body main wiring harness are keyed differently on a seat side air bag wiring harness than those used on a seat side thorax air bag wiring harness. The seat side air bag wiring harness and the seat side thorax air bag wiring harness are not interchangeable.

Seat Side Air Bag Modules

The seat side air bag module is a carryover component used on prior model year vehicles. A seat side air bag module provides combined protection of the head area and thorax area (between the neck and abdomen) of the body. A seat side air bag module is physically larger than a seat side thorax air bag module. Although a seat side air bag module and a seat side thorax air bag module are similarly mounted to the front seat backrests, **the modules are not interchangeable.** Vehicles equipped with a seat side air bag module will not be equipped with side air curtain modules.

The seat side air bag module:

- will deploy upon receiving a flow of current from the restraints control module (RCM) initiated by the side impact sensor and internal RCM circuitry.
- is installed as an assembly.
- is mounted in the front seat backrests.
- is not interchangeable with a seat side thorax air bag module.

Seat Side Thorax Air Bag Modules

The seat side thorax air bag module is a new component being introduced on this vehicle. A seat side thorax air bag module provides protection of the thorax area (between the neck and abdomen) of the body, working in conjunction with the head protection provided by a side air curtain module. A seat side thorax air bag module is physically smaller than a seat side air bag module. Although a seat side thorax air bag module and a seat side air bag module are similarly mounted to the front seat backrests, **the modules are not interchangeable.** Vehicles equipped with seat side thorax air bag modules will also be equipped with side air curtain modules.

The seat side thorax air bag module:

- will deploy upon receiving a flow of current from the restraints control module (RCM) initiated by the side impact sensors and internal RCM circuitry.
- is installed as an assembly.
- is mounted in the front seat backrests.
- is used in conjunction with a side air curtain.
- is not interchangeable with a seat side air bag module.

Side Air Curtain Module

⚠ WARNING: The side air curtain must be installed in the vehicle using new torque-prevailing type U-nuts, part number W520822. Use of this U-nut is mandatory so as to reduce the risk of loss of fastener effectiveness. Failure to follow these instructions can result in personal injury in the event of a side air curtain deployment.

⚠ WARNING: Anytime the side air curtain has deployed, the headliner, and all A-, B-, and C-pillar upper trim panels and attaching hardware must be replaced along with any other damaged components and hardware. Failure to do so can result in personal injury in the event of a side air curtain deployment.

NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

The side air curtain module:

- will deploy upon receiving a flow of current from the restraints control module (RCM) initiated by the side impact sensors and internal RCM circuitry.
- is installed as an assembly.
- is mounted above the headliner.
- attaches from the A-pillar frame to the C-pillar frame.
- cannot be interchanged from side to side.

Side Air Curtain Bridge Resistor

NOTE: Do not deactivate the side air curtain module circuit by removing the bridge resistor from the electrical connector.

If the side air curtain bridge resistor is removed, an open circuit fault will be generated by the restraints control module (RCM).

If a restraint system diagnostic tool is installed at the side air curtain electrical connector, a low-resistance fault will be generated.

The side air curtain bridge resistors:

- are equipped on vehicles without side air curtain modules.
- must not be removed in the deactivation procedure.
- are located on the driver side of the vehicle on the 14401 wiring harness. For additional information, refer to Wiring Diagrams Cell 151 for side air curtain bridge resistor locations.

Occupant Classification Sensor

NOTE: It is necessary to rezero the OCS system when a front passenger seat cushion is disassembled, a new trim cover installed or an OCS service kit is installed. A diagnostic tool is used to trigger the active command to carry out rezeroing of the OCS system.

NOTE: The OCS is found only on the front passenger seat and is not equipped on all vehicles. A white tag having the letters OCS will appear under the front of the passenger seat to identify a seat equipped with an occupant classification sensor.

The seat OCS system is found only on the front passenger seat. The front passenger seat OCS system is comprised of a silicone gel-filled bladder mounted in the seat cushion, a pressure sensor that is mounted to the seat frame and an electronic control unit which is also mounted to the seat frame. Pressure is applied to the OCS bladder when weight of any occupant or object in the front passenger seat is present. The pressure is then transferred through a tube, is sensed by the OCS pressure sensor, then electronically communicated to the OCS electronic control unit. Based on programed limits, the OCS electronic control unit will inform the restraints control module (RCM), via a High Speed Controller Area Network (CAN), of the necessary information. The RCM uses this information in determining if the passenger air bag module or passenger seat side air bag module is to be deployed in the event of a deployable collision. The OCS system components (seat cushion foam pad, bladder with pressure sensor and electronic control unit) are calibrated to each other and are serviced as an assembly. **OCS system components are not to be installed separately.** If installing a new OCS system, OCS system component or seat cushion foam pad, a new OCS system service kit (seat cushion foam pad, bladder with pressure sensor and electronic control unit) must be installed as an assembly.

Passenger Air Bag Module

NOTE: References to the passenger air bag module must not be confused with the passenger seat side air bag components of the supplemental restraint system (SRS).

The passenger air bag module:

- will deploy upon receiving a flow of current from the restraints control module (RCM) initiated by the front impact severity sensor and internal RCM circuitry.
- is installed as an assembly.
- is mounted in the passenger side of the instrument panel.

Safety Belt Pretensioners

As part of the supplemental restraint system (SRS), the safety belt retractors are equipped with pretensioners. The safety belt retractor pretensioners rotate the safety belt retractors to remove excess slack from the safety belt webbing. The pretensioners are activated by the restraints control module (RCM) when the module detects a frontal impact event exceeding a programmed limit.

Safety Belt Switch

As part of the supplemental restraint system (SRS), the driver and passenger safety belt buckles are equipped with a belt buckle connect switch. The safety belt switches indicate to the restraints control module (RCM) whether the safety belt buckles are connected or disconnected.

The safety belt switches are also used for the driver safety belt warning system and the driver and passenger belt minder. For additional information, refer to Section 501-20A .

Seat Position Sensor

The seat track position sensor is a Hall-effect sensor located on the driver seat track. Based on programmed limits, the seat track position sensor will inform the restraints control module (RCM) of the driver seat position. The RCM uses this information in determining the deployment rate of the dual-stage driver air bag module

Restraints Control Module (RCM)

⚠ WARNING: The restraints control module (RCM) orientation is critical for correct air bag supplemental restraint system (SRS) operation. If a vehicle equipped with an SRS system has been involved in a collision in which the center tunnel area has been damaged, inspect the mounting and bracket for deformation. If damaged, the RCM must be replaced whether or not the air bags have deployed. In addition, make sure the area of the RCM mounting is restored to its original condition.

NOTE: When installing a new restraints control module (RCM), always make sure the correct RCM is being installed. If an incorrect RCM is installed, erroneous DTCs will result.

The restraints control module (RCM) is mounted on the center tunnel under the instrument panel. The RCM carries out the following functions:

- supplies current flow to the inflators to deploy the air bags in the event of a deployable crash.
- activates the safety belt retractor pretensioners to remove slack from the safety belt.
- monitors the air bag supplemental restraint system (SRS) for faults.
- illuminates the air bag indicator if a fault is detected.
- flashes the air bag indicator to indicate the lamp fault code (LFC) detected.
- communicates through the data link connector (DLC) the current or historical diagnostic trouble codes (DTCs).
- signals the instrument cluster module to activate a chime if the air bag indicator is not available and another SRS fault exists.
- contains an internal safing sensor which is not serviced separately.
- records deployment event data.

The RCM monitors the SRS for possible faults. If a fault is detected while the ignition switch is in the RUN

position, the RCM will illuminate the air bag indicator located in the instrument cluster.

When the ignition is cycled (turned off and then on), the air bag indicator will remain lit for 6 seconds and then go out. If an SRS fault exists, the air bag indicator will then flash the 2-digit LFC. The air bag indicator will flash the LFC 3 times, then it will remain illuminated for the rest of the key cycle. The RCM will also communicate the current and historical DTCs through the (DLC), using a diagnostic tool. If the air bag indicator does not function, and the system detects a fault condition, the RCM will signal the instrument cluster module to activate an audible chime. The chime is a series of 5 sets of 5 tone bursts. If the chime is heard, the SRS and the air bag indicator require repair.

LFCs are prioritized. If 2 or more faults occur at the same time, the fault having the highest priority will be displayed first. After that fault has been corrected, the next highest priority fault will be displayed.

The RCM includes a backup power supply. This feature provides sufficient current to deploy the front air bags and safety belt pretensioners in the event that the ignition circuit is damaged or lost in a collision before the RCM determines that air bag deployment is required. The backup power supply will deplete its stored energy approximately one minute after the battery ground cable is disconnected.

Electrical System

The electrical system that supports the air bag supplemental restraint system (SRS):

- receives power from the battery through the ignition circuit.
- provides the electrical path from the restraints control module (RCM) to the SRS components.
- provides the electrical ground path for the air bag indicator.
- provides the electrical path from the RCM to the data link connector (DLC).
- provides the electrical ground path from the instrument cluster to the RCM.

Impact Sensors

⚠ WARNING: The restraints control module (RCM) orientation is critical for correct system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) has been involved in a collision in which the vehicle center tunnel area has been damaged, inspect the RCM mounting and bracket for deformation. If damaged, the RCM must be replaced whether or not the air bags have deployed. In addition, make sure the area of the RCM mounting is restored to its original condition.

All vehicles will have a front impact severity sensor located behind the front radiator grille. In addition, there are 2 side impact sensors located on the driver and passenger side near the B-pillars. In addition to the B-pillar side impact sensors there are 2 additional side impact sensors mounted near the driver and passenger C-pillars when the vehicle is equipped with driver and passenger side air curtain modules. The RCM is mounted on the center tunnel under the instrument panel. Mounting orientation is critical for correct operation of all impact sensors.

Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS)

Printable View (29 KB)

Refer to Wiring Diagrams Cell 46 for schematic and connector information.

Special Tool(s)

ST1137-A	FLUKE 73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

Restraint System Diagnostic Tool Warning

⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards.

Diagnosing Customer Concerns Without Hard DTCs

If a lamp fault code (LFC) is reported by the customer but is not present when the vehicle comes in for service, follow the Diagnostic Instruction procedures in this section to identify the intermittent DTC.

Once the DTC is known, read the Normal Operation section of the pinpoint test for the DTC involved.

- Follow the deactivation or depowering procedure in this section.
- Determine the location of components involved in creating the DTC.
- Carry out a thorough visual inspection of:
  - components.
  - connectors.
  - splices and wiring harnesses.
  - insulation on conductors.

Refer to the Possible Causes section of the pinpoint test for the DTC involved, which lists the common concerns that relate to the DTC. Concerns are listed according to priority.

Diagnosing Customer Concerns with Hard DTCs

Most Supplemental Restraint System (SRS) diagnostic procedures will require deactivation and reactivation or depowering and repowering of the system. Deactivation and reactivation requires the disconnection of most SRS components and the installation of restraint system diagnostic tools. Depowering and repowering requires disconnecting of the battery and removal of the restraints control module (RCM) fuse. This reduces

the risk of inadvertent deployment of SRS components while diagnostic procedures are being carried out.

Restraint system diagnostic tools are required for the diagnosis and testing of the SRS. It is not acceptable to short-circuit the air bag module connections with a jumper wire. If a jumper wire is used to short-circuit the air bag module connections, a lamp fault code (LFC) will be displayed.

Prove Out Procedure

Turn the ignition switch from the OFF to the ON position and visually monitor the air bag indicator with all SRS components connected or restraint system diagnostic tools installed. The air bag indicator will light continuously for approximately 6 seconds and then turn off. If an SRS fault is present, the air bag indicator will:

- fail to light.
- remain lit continuously.
- flash.

The flashing might not occur until approximately 30 seconds after the ignition switch has been turned from the OFF to the ON position. This is the time required for the restraints control module (RCM) to complete the testing of the SRS. If the air bag indicator is inoperative and an SRS fault exists, a chime will sound in a pattern of 5 sets of 5 beeps. If this occurs, the air bag indicator will need to be repaired before diagnosis can continue.

Glossary

Secondary Air Bag Warning

The secondary air bag warning is an audible fault format that consists of 5 sets of 5 tone bursts, with each set of 5 tone bursts separated by a 5 second quiet period. One tone burst cycle will consist of one second ON and one second OFF. This series of 5 activations is repeated every 30 minutes.

Air Bag/Pretensioner Restraint System Diagnostic Tools

Air bag/pretensioner restraint system diagnostic tools are used to simulate the equivalent resistance of an air bag module or safety belt pretensioner during certain diagnostic procedures.

Disconnect the Component

Disconnect the component means to disconnect the component vehicle harness connector, not to remove the component. Do not reconnect a disconnected component unless instructed to do so.

Deactivate the System

Deactivate the system means to carry out a deactivation procedure. For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Depower the System

Depower the system means to disconnect the battery and remove the restraints control module (RCM) fuse. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

Prove Out the System

Prove out the system means to turn the ignition switch from the OFF to the ON position, and to visually monitor the air bag indicator with the air bag modules and safety belt pretensioners or restraint system diagnostic tools installed. For additional information, refer to Prove Out Procedure in this section.

Reactivate the System

Reactivate the system means to carry out the reactivation procedure. For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Repower the System

Repower the system means to remove any restraint system diagnostic tools that may have been installed, turn the ignition ON, install the RCM fuse, and connect the battery ground cable. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

Reconnect the System

Reconnect the system means to reconnect all system components. For additional information, refer to Air Bag System Reconnect Checklist in this section.

Install a New Component

Install a new component means to remove the existing component and install a new authorized part obtained from Ford Customer Service Division.

Verify the System

Verify the system means to prove out the system with restraint system diagnostic tools installed in place of the SRS components.

Air Bag Reconnect Checklist

The checklist below should be completed following diagnosis or repair of any air bag system concern:

- All restraint system diagnostic tools removed?
- All in-seat harness connectors connected?
- All air bag modules connected?
- Safety belt pretensioner connectors connected?
- Restraints control module (RCM) connected?
- All sensors (front and side impact sensors) connected?
- Battery connected?

Special Tool(s)

ST2332-A	Worldwide Diagnostic System (WDS) Vehicle Communication Module (VCM) with appropriate adapters, or equivalent diagnostic tool

The symptom chart can be used to help locate supplemental restraint system (SRS) concerns if no diagnostic trouble codes (DTCs) are retrieved and the listed symptoms are observed. Whether or not the listed symptoms are observed, always carry out the following:

1. Retrieve all DTCs stored in the restraints control module (RCM) memory. For additional information, refer to Retrieve/Clear Continuous DTCs in this section.

2. Run the On-Demand Self Test to determine what DTCs are currently being sensed by the RCM. Refer to On-Demand Self Test in this section.

3. If the stored DTCs are different than the current DTCs, always repair the current DTCs first.

4. If memory displays different continuous DTCs than the On-Demand Self Test, carry out in the following order:

- On-Demand Self Test
- Memory (Retrieve/Clear Continuous DTCs)

A DTC can indicate several concerns. The DTCs are to assist in system diagnosis and are not to be considered definitive. Always refer to the pinpoint test corresponding to the DTC to determine where the concern lies and to repair the concern correctly.

The SRS diagnostics can be divided into 3 sections:

- diagnostic test modes
- PID/data monitor and record
- active command modes

Diagnostic Test Modes

Two menu options are available under the diagnostic test modes:

- Retrieve/Clear Continuous DTCs
- On-Demand Self Test

Retrieve/Clear Continuous DTCs

During vehicle operation, the restraints control module (RCM) will detect and store both intermittent and hard failure DTCs in nonvolatile memory. The DTC strategy employed by the RCM incorporates a time-out scheme for determining when a concern exists in the system. This requires a concern to exist for up to 1 minute in the system before the RCM will detect it. For the RCM to determine that a concern no longer exists, the concern must be absent for up to 1 minute. The actual detection time-outs vary with each DTC. The DTCs can be retrieved with a diagnostic tool using the retrieve/clear continuous DTCs option. Any DTCs stored in the RCM will be displayed on the diagnostic tool along with a brief description of the DTC. If no DTCs are present, the diagnostic tool will display a SYSTEM PASSED message. This option can also be used to clear DTCs from the RCM memory, as long as the concern no longer exists. Once 128 key cycles have been recorded since the concern was last detected, the DTC will automatically be removed from memory.

To retrieve or clear DTCs, follow these steps:

5. Connect the diagnostic tool to the data link connector (DLC).

6. Turn the ignition switch to the ON position.

7. Follow the manufacturer's instructions for the diagnostic tool being used.

8. **NOTE:** Before proceeding with the clearing operation, make note of the DTCs displayed. Once cleared, DTCs cannot be retrieved.

   All continuous DTCs will be displayed on the screen.

9. Clear the DTCs. After clearing the DTCs, cycle the key OFF, then ON.
   - Continuous DTCs that have been cleared will **not** re-occur as "Continuous" in the same key cycle. Only new DTCs which were **not** present before clearing can occur as "Continuous" after clearing.

On-Demand Self Test

The On-Demand Self Test option is used to verify that no electrical concerns exist with the air bag SRS. Upon entering the self-test, the restraints control module (RCM) will make an electrical check of each electrical component in the system. If a concern is detected, a DTC is displayed on the diagnostic tool with a brief description of the DTC. Concerns detected during the self-test are not stored in memory, unless the same concern was also detected during normal vehicle operation. The self-test should always be run after any repair to verify that the repair was successful.

To run the On-Demand Self Test, follow these steps:

1. Connect the diagnostic tool to the data link connector (DLC).

2. Turn the ignition switch to the ON position.

3. Follow the manufacturer's instructions for the diagnostic tool being used.

4. The RCM will run the On-Demand Self Test and display on-demand DTCs (reflecting hard system concerns) on the screen.

Bit-Mapped Diagnostic Trouble Codes (DTCs)

Many of the continuous and on-demand DTCs that can be present in the RCM are bit-mapped DTCs that

utilize PIDs (flagged faults). Bit-mapped DTCs are conceptually different from the previous style of DTCs. Previously, DTCs identified a specific concern for a given component and pointed to a particular diagnostic path. In the diagnostic path, PIDs are sometimes used to determine the root cause. Bit-mapped DTCs do not identify the specific concern. A bit-mapped DTC identifies the component(s) in which the concern exists. The next level (PIDs or flagged faults) identifies the specific concern.

A diagnostic tool must be used to view the PIDs (flagged faults) of a bit-mapped DTC. Once a diagnostic tool has retrieved a bit-mapped DTC, the diagnostic tool will provide the option to "FLAG" that DTC. When the option to "FLAG" the DTC is available, it must be carried out to identify the specific concern that is present. When the option to "FLAG" the DTC has been carried out, the diagnostic tool will then display the PIDs (flagged faults) for that DTC, including the status or state that exists (on-demand DTC) or existed (continuous DTC).

To view and flag bit-mapped DTCs, follow these steps:

1. Connect the diagnostic tool to the data link connector (DLC).
2. Turn the ignition switch to the ON position.
3. Follow the manufacturer's instructions for the diagnostic tool being used.
4. Carry out an On-Demand Self Test or retrieve continuous DTCs.
5. Select the DTC and the "FLAG" option on the diagnostic tool.
6. The diagnostic tool will display PIDs for the DTC. Record all flagged faults.

PID/Data Monitor and Record

The PID/Data Monitor and Record option allows the diagnostic tool operator to read the state of several parameter IDs (PIDs) to aid in diagnosing the system. PIDs are real time measurements of parameters such as voltages, resistances, etc., calculated by the restraints control module (RCM) and sent to the diagnostic tool for display. Many of the PIDs supported by the RCM are calculated periodically and are, therefore, not true real time readings.

To retrieve PIDs, follow these steps:

1. Connect the diagnostic tool to the data link connector (DLC).
2. Turn the ignition switch to the ON position.
3. Follow the manufacturer's instructions for the diagnostic tool being used.
4. Record all PIDs that are to be retrieved and initiate PID retrieval. PIDs are updated continuously on the display.

Active Commands

Instrument Cluster Module

These commands allow the technician to verify the operation of instrument cluster module components and

sub-systems.

Restraints Control Module

These commands allow the technician to verify operation of the supplemental restraint system (SRS) indicator lamps.

Lamp Fault Codes

When the restraints control module (RCM) detects a system fault, it will cause the air bag indicator to flash a coded sequence: a lamp fault code (LFC). The code is 2 digits. The first digit is flashed with a 0.5 second interval between pulses. There is a 2 second pause before the second digit is flashed, which also has a 0.5 second interval between pulses. There is a 5 second pause between each display of an LFC.

A LFC is flashed 5 times after which the air bag indictor will remain lit for the remainder of the key-on cycle. If there are multiple LFCs, only the LFC with the highest priority will flash.

Diagnostic Trouble Codes (DTCs)

While the lamp fault codes (LFCs) are an indication of a general concern in the passive restraints system, the diagnostic trouble codes (DTCs) are more specific. The DTCs can be retrieved from the restraints control module (RCM) with a diagnostic tool via the data link connector (DLC).

Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table

DTC [a]	LFC [b]	Description	Action To Take
	Continuous	The Air Bag Indicator is Illuminated Continuously, RCM Disconnected or Inoperative, Loss of Battery Feed, or Loss of Signal Ground	Go To Pinpoint Test A .
B1231	13	Crash Data Memory Full	Install a new RCM and impact sensors. REFER to Inspection and Repair After a Supplemental Restraint System (SRS) Deployment .
B1317	Continuous	Battery Voltage High	CHECK battery voltage; to be below 16 volts. REFER to Section 414-01 .
B1318	Continuous	Battery Voltage Low	CHECK battery voltage; to be above 9.0 volts. REFER to Section 414-01 .
B1342	12	RCM Is Faulted	Install a new RCM.
B1869	NONE Continuous lamp Secondary air bag warning sounds if another fault is present	Lamp Air Bag Warning Indicator Circuit Open or Short to Ground	Go To Pinpoint Test B .
B1870	NONE Secondary air bag	Air Bag Warning Indicator Circuit Short to Battery	Go To Pinpoint Test C .

	warning sounds if another fault is present		
B1891	53	Air Bag Tone Warning Indicator Circuit Short to Battery	Go To Pinpoint Test D .
B1892	53	Air Bag Tone Warning Indicator Circuit Open or Short to Ground	Go To Pinpoint Test E .
B1921	14	Air Bag Diagnostic Monitor Ground Circuit Open	Go To Pinpoint Test F .
B2292	33	Restraint System Safety Belt Pretensioner Fault (Driver Pretensioner Circuit Fault)	Go To Pinpoint Test G .
B2292	34	Restraint System Safety Belt Pretensioner Fault (Passenger Pretensioner Circuit Fault)	Go To Pinpoint Test G .
B2293	19	Restraint System Air Bag Fault (Driver Front Air Bag Circuit Fault)	Go To Pinpoint Test H .
B2293	21	Restraint System Air Bag Fault (Passenger Front Air Bag Circuit Fault)	Go To Pinpoint Test H .
B2294	24	Restraint System Curtain Fault (Driver Side Air Curtain Circuit Fault)	Go To Pinpoint Test I .
B2294	25	Restraint System Curtain Fault (Passenger Side Air Curtain Circuit Fault)	Go To Pinpoint Test I .
B2295	22	Restraint System Side Air Bag Fault (Driver Seat Side Air Bag Circuit Fault)	Go To Pinpoint Test J .
B2295	23	Restraint System Side Air Bag Fault (Passenger Seat Side Air Bag Circuit Fault)	Go To Pinpoint Test J .
B2296	42	Restraint System Impact Sensor Fault (Front Impact Severity Sensor Circuit Fault)	Go To Pinpoint Test K .
B2296	43	Restraint System Impact Sensor Fault (Driver Side Front Row Impact Sensor Circuit Fault)	Go To Pinpoint Test K .
B2296	45	Restraint System Impact Sensor Fault (Driver Side Second Row Impact Sensor Circuit Fault)	Go To Pinpoint Test K .
B2296	44	Restraint System Impact Sensor Fault (Passenger Side Front Row Impact Sensor Circuit Fault)	Go To Pinpoint Test K .
B2296	46	Restraint System Impact Sensor Fault (Passenger Side Second Row Impact Sensor Circuit Fault)	Go To Pinpoint Test K .
B2434	51	Driver Safety Belt Buckle Switch Circuit Short To Ground	Go To Pinpoint Test L .
B2435	51	Driver Safety Belt Buckle Switch Circuit Resistance Out Of Range	Go To Pinpoint Test M .
B2438	52	Passenger Safety Belt Buckle Switch Circuit Short To Ground	Go To Pinpoint Test N .

B2439	52	Passenger Safety Belt Buckle Switch Circuit Resistance Out Of Range	Go To Pinpoint Test O .
B2477	Continuous	Module Configuration Error	INSTALL a new RCM.
B2691	51	Driver Safety Belt Buckle Switch Circuit Fault	Go To Pinpoint Test P .
B2692	52	Passenger Safety Belt Buckle Switch Circuit Fault	Go To Pinpoint Test Q .
C1414	15	Incorrect Module Design Level	Go To Pinpoint Test R .
C1947	49	Driver Seat Track Position Sensor Circuit Short to Ground	Go To Pinpoint Test S .
C1948	49	Driver Seat Track Position Sensor Circuit Resistance Out Of Range	Go To Pinpoint Test T .
C1981	49	Driver Seat Track Position Sensor Circuit Fault	Go To Pinpoint Test U .
		No Communication with the Restraints Control Module.	Go To Pinpoint Test V .

[a] DTC: Diagnostic trouble code, retrieved using diagnostic tool.
[b] LFC: Lamp fault code, flashed on air bag indicator.

Inspection and Verification

1. Verify the customer concern by checking the air bag indicator in the instrument cluster. For additional information, refer to Prove Out the System in this section.

2. Visually inspect for obvious signs of mechanical and electrical damage using the following chart.

Visual Inspection Chart

Mechanical	Electrical
• Damaged restraints control module (RCM) bracket • Damaged front impact severity sensor or bracket • Damaged side impact sensor or bracket	• Open fuse(s) • Damaged wiring harness • Loose or corroded connectors • Circuitry open/shorted • Damaged shorting bars

3. If the concern is not visually evident, use the diagnostic tool to retrieve diagnostic trouble codes (DTCs) and carry out the on-demand self test.

4. If the on-demand self test is passed and no DTCs are retrieved, GO to Symptom Chart .

5. If DTCs are retrieved, refer to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table.

Restraint System Diagnostic Tool Warning

⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards.

Pinpoint Test A: The Air Bag Warning Indicator Is Illuminated Continuously RCM Disconnected or Inoperative, Loss of Battery Feed, or Loss of Signal Ground

Normal Operation

NOTE: During normal operation, the air bag indicator will illuminate continuously for 6 seconds after the ignition switch is placed to the ON or START position and after 5 cycles of a lamp fault code (LFC), if a fault exists. Be sure to cycle the ignition switch and look for a 6 second indicator prove-out without LFCs.

The restraints control module (RCM) will communicate diagnostic trouble codes (DTCs) to the diagnostic tool through the data link connector (DLC). If the diagnostic tool displays NO COMMUNICATION when retrieving continuous DTCs, Go To Pinpoint Test V to troubleshoot the system.

Possible Causes

An air bag indicator that is illuminated continuously can be caused by one of the following:

- damaged ignition circuit.
- RCM disconnected from the vehicle harness.
- a loss of RCM signal ground.
- a faulted RCM.
- damaged wiring, terminals, or connectors.
- a loss of RCM battery feed.
- a faulted instrument cluster

PINPOINT TEST A: THE AIR BAG WARNING INDICATOR IS ILLUMINATED CONTINUOUSLY RCM DISCONNECTED OR INOPERATIVE, LOSS OF BATTERY FEED, OR LOSS OF SIGNAL GROUND

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
A1 CHECK FOR CONTINUOUS OR ON-DEMAND SELF TEST DTCs	
⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards. **⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.** **⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.** **⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment.** **NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.** **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs.	**Yes** If continuous DTCs were retrieved, GO to A2 . If on-demand DTCs were retrieved, GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** GO to A2 .

• Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Were any continuous or on-demand self test DTCs retrieved?**	
A2 CHECK THE RCM CONNECTION	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Connect: RCM C310a. • **Is RCM C310a fully connected and the connector locking tab engaged?**	**Yes** GO to A3 . **No** CONNECT C310a and ENGAGE the locking tab. GO to A7 .
A3 CHECK CIRCUIT 15-JA10A (GN/OG) FOR AN OPEN	
• Disconnect: RCM C310a. • Deactivate the system. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Key in ON position. • Measure the voltage between RCM C310a pin 12, circuit 15-JA10A (GN/OG), harness side and ground.  A0039638 • **Is the voltage between 9 and 16 volts?**	**Yes** GO to A4 . **No** REPAIR circuit 15-JA10A (GN/OG). GO to A7 .
A4 CHECK CIRCUIT 31-JA10 (BK/RD) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between RCM C310a pin 16, circuit 31-JA10 (BK/RD), harness side and ground.  A0039639 • **Is the resistance less than 5 ohms?**	**Yes** GO to A5 . **No** REPAIR circuit 31-JA10 (BK/RD). GO to A7 .
A5 CHECK CIRCUIT 31S-JA14 (BK/GN) FOR AN OPEN	
• Disconnect: Instrument Cluster C220a. • Measure the resistance between instrument cluster module C220a pin 22, circuit 31S-JA14 (BK/GN), harness side and RCM C310a pin 19, circuit 31S-JA14 (BK/GN), harness side.	**Yes** GO to A6 . **No** REPAIR circuit 31S-JA14 (BK/GN). GO to A7 .

 A0057054 • **Is the resistance less than 5 ohms?**	
A6 CHECK THE INDICATOR LAMP OPERATION (DRIVE LAMP OFF)	
• Connect: Instrument Cluster C220a. • Key in ON position. • Connect a fused jumper between the RCM C310a pin 19, circuit 31S-JA14 (BK/GN), harness side and ground.  A0049155 • **Is the indicator lamp off?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to A7 . **No** REPAIR or INSTALL a new instrument cluster module. REFER to Section 413-01 . GO to A7 .
A7 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step A1. • **Were any continuous DTCs retrieved during Step A1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. If previously directed to deactivate the system, REACTIVATE the system. REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.

Pinpoint Test B: DTC B1869 Lamp Air Bag Warning Indicator Circuit Open or Short to Ground

Normal Operation

If the restraints control module (RCM) detects an open or short to ground on the air bag warning indicator circuit, it will store diagnostic trouble code (DTC) B1869 in memory.

Possible Causes

An open air bag indicator circuit can be caused by:

- damaged wiring, terminals, or connectors.
- a faulted RCM.
- an instrument cluster module internal concern.

PINPOINT TEST B: DTC B1869 LAMP AIR BAG WARNING INDICATOR CIRCUIT OPEN OR SHORT TO GROUND

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
B1 CHECK FOR A HARD OR INTERMITTENT DTC	
⚠ **WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards.** ⚠ **WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.** ⚠ **WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.** ⚠ **WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1869 retrieved during the on-demand self test?**	**Yes** If the air bag indicator lamp **does** illuminate,GO to B2 . If the air bag indicator **does not** illuminate,GO to B4 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to B5 .
B2 CHECK THE INDICATOR LAMP OPERATION (DRIVE LAMP OFF)	
• Deactivate the system. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: RCM C310a. • Key in ON position. • Connect a fused jumper between the RCM C310a pin 19, circuit 31S-JA14 (BK/GN), harness side and ground.	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to B6 . **No** GO to B3 .

 A0049155 • **Is the indicator lamp off?**	
B3 CHECK CIRCUIT 31S-JA14 (BK/GN) FOR AN OPEN	
• Key in OFF position. • Disconnect: Instrument Cluster Module C220a. • Disconnect: RCM C310a. • Measure the resistance between instrument cluster module C220a pin 22, circuit 31S-JA14 (BK/GN), harness side and RCM C310a pin 19, circuit 31S-JA14 (BK/GN), harness side.  A0057054 • **Is the resistance less than 5 ohms?**	**Yes** REPAIR or INSTALL a new instrument cluster module. REFER to Section 413-01 . GO to B6 . **No** REPAIR circuit 31S-JA14 (BK/GN). GO to B6 .
B4 CHECK THE INDICATOR LAMP OPERATION (DRIVE LAMP ON)	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310a. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Key in ON position. • **Is the indicator lamp on?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to B6 . **No** REPAIR circuit 31S-JA14 (BK/GN). GO to B6 .
B5 CHECK FOR AN INTERMITTENT FAULT	
• Key in OFF position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1869 retrieved during the on-demand self test?**	**Yes** GO to B2 . **No** CHECK for causes of intermittent open or short to ground on circuit 31S-JA14 (BK/GN). ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to B6 .
B6 CHECK FOR ADDITIONAL DTCs	

• Refer to the continuous DTCs recorded during Step B1. • **Were any continuous DTCs retrieved during Step B1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction. **No** RECONNECT the system. If previously directed to deactivate the system, REACTIVATE the system. REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.

Pinpoint Test C: DTC B1870 Air Bag Warning Indicator Circuit Short to Battery

Normal Operation

If the restraints control module detects a short to battery on the air bag warning indicator circuit, it will store diagnostic trouble code (DTC) B1870 in memory. If any other DTCs are detected with this DTC active, the secondary air bag warning will be activated.

Possible Causes

An air bag indicator circuit short to battery can be caused by:

- damaged wiring, terminals, or connectors.
- a faulted RCM.

PINPOINT TEST C: DTC B1870 AIR BAG INDICATOR CIRCUIT SHORT TO BATTERY

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
C1 CHECK FOR A HARD OR INTERMITTENT DTC	
⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt	**Yes** GO to C2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to C4 .

pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ **WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1870 retrieved during the on-demand self test?**	
C2 CHECK CIRCUIT 31S-JA14 (BK/GN) FOR A SHORT TO BATTERY	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Instrument Cluster Module C220a. • Disconnect: RCM C310a. • Disconnect: RCM C310b. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Key in ON position. • Measure the voltage between C220a pin 22, circuit 31S-JA14 (BK/GN), harness side and ground.  • **Is the voltage less than 0.2 volt?**	**Yes** GO to C3 . **No** REPAIR circuit 31S-JA14 (BK/GN). GO to C5 .
C3 CHECK THE RCM	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Connect: RCM C310a. • Connect: RCM C310b.	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to C5 . **No** REPAIR or INSTALL a new instrument

• Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **NOTE:** DTC B1869 should be retrieved when carrying out the on-demand self test due to an open on circuit 31S-JA14 (BK/GN), DTC B1870 should not be retrieved at this time. • **Was DTC B1870 retrieved during the on-demand self test?**	cluster module. REFER to Section 413-01 . GO to C5 .
C4 CHECK FOR AN INTERMITTENT FAULT	
• Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1870 retrieved during the on-demand self test?**	**Yes** CHECK for causes of intermittent short to battery on circuit 31S-JA14 (BK/GN). REPAIR any intermittent concerns found. If an intermittent concern **was** found and repaired, GO to C5 . If an intermittent concern **was not** found and repaired, GO to C2 . **No** CHECK for causes of intermittent short to battery on circuit 31S-JA14 (BK/GN). ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. ACTIVATE other systems in the same wire bundle. REPAIR any intermittent concerns found. GO to C5 .
C5 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step C1. • **Were any continuous DTCs retrieved during Step C1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.

Pinpoint Test D: DTC B1891 Air Bag Tone Warning Indicator Circuit Short to Battery

Normal Operation

The restraints control module (RCM) monitors its connection to the instrument cluster module at C310a pin 22. This connection is used to signal a chime if the air bag indicator is inoperative and another SRS fault exists. If the RCM detects a short to battery on the connection to the instrument cluster module, it will store

diagnostic trouble code (DTC) B1891 in memory.

Possible Causes

An air bag tone warning circuit short to battery or ignition can be caused by:

- damaged wiring, terminals, or connectors.
- a damaged or inoperative instrument cluster module.
- a faulted RCM.

PINPOINT TEST D: DTC B1891 AIR BAG TONE WARNING INDICATOR CIRCUIT SHORT TO BATTERY

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
D1 CHECK FOR A HARD OR INTERMITTENT DTC	
⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards. **⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.** **⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.** **⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment.** **NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.** **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1891 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to D2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to D4 .
D2 CHECK THE AIR BAG TONE WARNING INDICATOR CIRCUIT FOR A SHORT TO BATTERY	

• Key in OFF position. • Deactivate the system. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: RCM C310a. • Disconnect: Instrument Cluster Module C220a. • Key in ON position. • Measure the voltage between RCM C310a pin 22, circuit 8-GE52 (WH/BK), harness side and ground.  A0049254 • **Is the voltage less than 0.2 volt?**	**Yes** GO to D3 . **No** REPAIR circuit 8-GE52 (WH/BK). GO to D5 .
D3 CHECK THE AIR BAG TONE WARNING INDICATOR CIRCUIT	
• Key in OFF position. • Connect: RCM C310a. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **NOTE:** DTC 1892 should be retrieved when carrying out the on-demand self test due to an open circuit 8-GE52 (WH/BK), DTC 1891 should not be retrieved at this time. • **Was DTC B1891 retrieved during the on-demand self test?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to D5 . **No** INSTALL a new instrument cluster module. REFER to Section 413-01 . GO to D5 .
D4 CHECK FOR AN INTERMITTENT FAULT	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1891 retrieved during the on-demand self test?**	**Yes** GO to D2 . **No** CHECK for causes of intermittent short to voltage on circuit 8-GE52 (WH/BK). ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to D5 .
D5 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step D1. • **Were any continuous DTCs retrieved during Step D1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No**

	RECONNECT the system. If previously directed to deactivate the system, REACTIVATE the system. REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.

Pinpoint Test E: LFC 53/DTC B1892 Air Bag Tone Warning Indicator Circuit Short to Ground or Open

Normal Operation

The restraints control module (RCM) monitors its connection to the instrument cluster module at C310a pin 22. This connection is used to signal a chime if the air bag indicator is inoperative and another SRS fault exists. If the RCM detects a short to ground or open on the connection to the cluster, it will store diagnostic trouble code (DTC) B1892 in memory and flash lamp fault code (LFC) 53 (or a higher priority code if one exists) on the air bag indicator.

Possible Causes

An air bag tone warning indicator circuit short to ground or open can be caused by:

- damaged wiring, terminals, or connectors.
- a damaged or inoperative instrument cluster module.
- a faulted RCM.

PINPOINT TEST E: LFC 53/DTC B1892 AIR BAG TONE WARNING INDICATOR CIRCUIT SHORT TO GROUND OR OPEN

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
E1 CHECK FOR A HARD OR INTERMITTENT DTC	
⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards. **⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.** **⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to E2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to E5 .

pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1892 retrieved during the on-demand self test?**	
E2 CHECK THE AIR BAG TONE WARNING INDICATOR CIRCUIT FOR A GROUND SHORT	
• Key in OFF position. • Deactivate the system. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: RCM C310a. • Disconnect: Instrument Cluster Module C220a. • Measure the resistance between RCM C310a pin 22, circuit 8-GE52 (WH/BK), harness side and RCM C310a pin 16, circuit 31-JA10 (BK/RD), harness side.  A0049256 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to E3 . **No** REPAIR circuit 8-GE52 (WH/BK). GO to E6 .
E3 CHECK THE AIR BAG TONE WARNING INDICATOR CIRCUIT FOR AN OPEN	
• Measure the resistance between RCM C310a pin 22, circuit 8-GE52 (WH/BK), harness side and instrument cluster module C220a pin 18, circuit 8-GE52 (WH/BK), harness side.  A0057056 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to E4 . **No** REPAIR circuit 8-GE52 (WH/BK). GO to E6 .

E4 CHECK THE AIR BAG TONE WARNING INDICATOR	
• Connect: Instrument Cluster Module C220a. • Key in ON position. • Measure the voltage at RCM C310a pin 22, circuit 8-GE52 (WH/BK).  A0049254 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to E6 . **No** INSTALL a new instrument cluster module. REFER to Section 413-01 . GO to E6 .
E5 CHECK FOR AN INTERMITTENT FAULT	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1892 retrieved during the on-demand self test?**	**Yes** CHECK for causes of intermittent short to ground or open on circuit 8-GE52 (WH/BK). REPAIR any intermittent concerns found. If an intermittent concern **was** found and repaired, GO to E6 . If an intermittent concern **was not** found and repaired, GO to E2 . **No** CHECK for causes of intermittent short to ground or open on circuit 8-GE52 (WH/BK). ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to E6 .
E6 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step E1. • **Were any continuous DTCs retrieved during Step E1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. If previously directed to deactivate the system, REACTIVATE the system. REFER to Supplemental Restraint

	System (SRS) Deactivation and Reactivation in this section. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.

Pinpoint Test F: LFC 14/DTC B1921 Air Bag Diagnostic Monitor Ground Circuit Open

Normal Operation

⚠ WARNING: The tightening torque of the restraints control module (RCM) retaining bolts is critical for correct air bag supplemental restraint system (SRS) operation. Refer to Restraints Control Module (RCM) in this section for correct torque values.

NOTE: A resistance difference as low as 10 ohms may set the LFC.

The restraints control module (RCM) monitors the resistance between the ground connections at the mounting bracket and the reference ground at C310a pin 16, circuit 31-JA10 (BK/RD). If the RCM detects a difference in resistance, it will store diagnostic trouble code (DTC) B1921 in memory and flash lamp fault code (LFC) 14 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A resistance difference between the RCM bracket ground and harness ground can be caused by:

- RCM or RCM bracket not securely mounted.
- damaged wiring, terminals, or connectors.
- a faulted RCM.

PINPOINT TEST F: LFC 14/DTC B1921 AIR BAG DIAGNOSTIC MONITOR CIRCUIT OPEN

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
F1 CHECK FOR A HARD OR INTERMITTENT DTC	
⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector.	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to F2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to F5 .

Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ **WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1921 retrieved during the on-demand self test?**	
F2 INSPECT THE RCM MOUNTING, MOUNTING BRACKET AND MOUNTING SURFACE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Inspect the RCM retainers and RCM bracket mounting bolts and make sure they are fully seated and tightened correctly. • Remove the RCM. Refer to Restraints Control Module (RCM) in this section. • Visually inspect the RCM, mounting bracket and mounting surface for damage, corrosion or dirt. • **Was a significant amount of corrosion or dirt found, or was the RCM mounting bracket attached to the mounting surface incorrectly or were the RCM bolts not fully seated and tightened correctly?**	**Yes** CLEAN and TIGHTEN the bolts. REPAIR the mounting surface as necessary. REINSTALL the RCM and mounting bracket to the mounting surface. GO to F6 . **No** GO to F3 .
F3 INSTALL THE RCM AND CARRY OUT THE ON-DEMAND SELF TEST	
• Clean the RCM mounting surfaces and bolts. • Install the RCM. Refer to Restraints Control Module (RCM) in this section. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1921 retrieved during the on-demand self test?**	**Yes** GO to F4 . **No** CHECK for causes of intermittent high resistance on circuit 31-JA10 (BK/RD) or the chassis ground. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to F6 .
F4 CHECK GROUND CIRCUIT 31-JA10 (BK/RD) FOR HIGH RESISTANCE	

• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Measure the resistance between RCM C310a pin 16, circuit 31-JA10 (BK/RD), harness side and the RCM case ground.  • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to F6 . **No** REPAIR circuit 31-JA10 (BK/RD). GO to F6 .
F5 CHECK FOR AN INTERMITTENT FAULT	
• Key in OFF position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1921 retrieved during the on-demand self test?**	**Yes** GO to F2 . **No** CHECK for causes of intermittent high resistance on circuit 31-JA10 (BK/RD) or the chassis ground. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to F6 .
F6 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step F1. • **Were any continuous DTCs retrieved during Step F1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.

Pinpoint Test G: LFC 33 and 34/DTC B2292 Restraint System Safety Belt Pretensioner Fault

Normal Operation

The restraints control module (RCM) checks all of the safety belt pretensioners for faults. If the RCM detects one of the following faults on any of the safety belt pretensioner circuits, it will store diagnostic trouble code (DTC) B2292 in memory and flash, depending on the fault indicator, either lamp fault code (LFC) 33 or 34 depending on the fault (or higher priority code if one exists) on the air bag indicator.

Fault Conditions

The RCM monitors for the following fault conditions:

- low resistance.
- high resistance or circuit open.
- circuit short to voltage.
- circuit short to ground.

Possible Causes

A safety belt pretensioner fault can be caused by:

- damaged wiring, terminals, or connectors.
- a faulted pretensioner.
- a faulted RCM.

PINPOINT TEST G: LFC 33 AND 34/DTC B2292 RESTRAINT SYSTEM SAFETY BELT PRETENSIONER FAULT

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
G1 CHECK FOR A HARD OR INTERMITTENT DTC	
⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards. **⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.** **⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.** **⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment.** **NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.** **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Flag/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2292/Record All Flagged Faults. • **Was DTC B2292 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to G2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to G18 .

G2 CHECK THE PRETENSIONER	
• Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: The Affected Safety Belt Retractor Pretensioner Electrical Connector C323 (Driver) Or C303 (Passenger). • Connect: Restraint System Diagnostic Tool 418-F088 to the Affected Safety Belt Retractor Pretensioner Electrical Connector C323 (Driver) Or C303 (Passenger). • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2292 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. Using the flagged faults recorded in the Step G1, GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded, multiple faults exist and the entire pinpoint test must be carried out. For driver safety belt retractor pretensioner (DF_PRT) with a low resistance (LOWRES) fault, GO to G3 . For DF_PRT with an open circuit (O_CIR) fault, GO to G4 . For DF_PRT with a short to battery (STB) fault, GO to G6 . For DF_PRT with a short to ground (STG) fault, GO to G8 . For passenger safety belt retractor pretensioner (PF_PRT) with a low resistance (LOWRES) fault, GO to G10 . For PF_PRT with an open circuit (O_CIR) fault, GO to G11 . For PF_PRT with a short to battery (STB) fault, GO to G13 . For PF_PRT with a short to ground (STG) fault, GO to G15 . **No** INSTALL a new driver or passenger safety belt retractor pretensioner. REFER to Section 501-20A . GO to G19 .
G3 CHECK THE DRIVER SAFETY BELT PRETENSIONER CIRCUIT 30S-JA33 (RD/BU) AND CIRCUIT 31S-JA33 (BK/BU) FOR LOW RESISTANCE	

• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Safety Belt Pretensioner Restraint System Diagnostic Tool. • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 32, circuit 31S-JA33 (BK/BU), and pin 31, circuit 30S-JA33 (RD/BU), harness side.  A0041018 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to G17 . **No** REPAIR circuit 31S-JA33 (BK/BU) and circuit 30S-JA33 (RD/BU). GO to G19 .
G4 CHECK CIRCUIT 30S-JA33 (RD/BU) FOR AN OPEN	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Safety Belt Pretensioner Restraint System Diagnostic Tool. • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 31, circuit 30S-JA33 (RD/BU), harness side and driver safety belt retractor pretensioner C323 pin 3, circuit 30S-JA33 (RD/BU), harness side.  A0057057 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to G5 . **No** REPAIR circuit 30S-JA33 (RD/BU). GO to G19 .
G5 CHECK CIRCUIT 31S-JA33 (BK/BU) FOR AN OPEN	
• Measure the resistance between RCM C310b pin 32, circuit 31S-JA33 (BK/BU), harness side and driver safety belt retractor pretensioner C323 pin 1, circuit 31S-JA33 (BK/BU), harness side.  A0083709	**Yes** GO to G17 . **No** REPAIR circuit 31S-JA33 (BK/BU). GO to G19 .

• **Is the resistance less than 0.5 ohm?**	
G6 CHECK CIRCUIT 30S-JA33 (RD/BU) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Deactivate the system. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: Driver Safety Belt Pretensioner Restraint System Diagnostic Tool. • Disconnect: RCM C310b. • Key in ON position. • Measure the voltage between RCM C310b pin 31, circuit 30S-JA33 (RD/BU), harness side and ground.  A0041022 • **Is the voltage less than 0.2 volt?**	**Yes** GO to G7 . **No** REPAIR circuit 30S-JA33 (RD/BU). GO to G19 .
G7 CHECK CIRCUIT 31S-JA33 (BK/BU) FOR A SHORT TO VOLTAGE	
• Measure the voltage between RCM C310b pin 32, circuit 31S-JA33 (BK/BU), harness side and ground.  A0041023 • **Is the voltage less than 0.2 volt?**	**Yes** GO to G17 . **No** REPAIR circuit 31S-JA33 (BK/BU). GO to G19 .
G8 CHECK CIRCUIT 30S-JA33 (RD/BU) FOR A SHORT TO GROUND	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Safety Belt Pretensioner Restraint System Diagnostic Tool. • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 31, circuit 30S-JA33 (RD/BU), harness side and ground.	**Yes** GO to G9 . **No** REPAIR circuit 30S-JA33 (RD/BU). GO to G19 .

 A0041024 • **Is the resistance greater than 1,000,000 ohms?**	
G9 CHECK CIRCUIT 31S-JA33 (BK/BU) FOR A SHORT TO GROUND	
• Measure the resistance between RCM C310b pin 32, circuit 31S-JA33 (BK/BU), harness side and ground.  A0041025 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to G17 . **No** REPAIR circuit 31S-JA33 (BK/BU). GO to G19 .
G10 CHECK THE PASSENGER SAFETY BELT PRETENSIONER CIRCUIT 30S-JA34 (RD/BK) AND CIRCUIT 31S-JA34 (BK/RD) FOR LOW RESISTANCE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310b. • Disconnect: Passenger Safety Belt Pretensioner Restraint System Diagnostic Tool. • Measure the resistance between RCM C310b pin 34, circuit 31S-JA34 (BK/RD), and pin 33, circuit 30S-JA34 (RD/BK), harness side.  A0041026 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to G17 . **No** REPAIR circuit 30S-JA34 (RD/BK) and circuit 31S-JA34 (BK/RD). GO to G19 .
G11 CHECK CIRCUIT 30S-JA34 (RD/BK) FOR AN OPEN	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310b. • Disconnect: Passenger Safety Belt Pretensioner Restraint System Diagnostic Tool. • Measure the resistance between RCM C310b pin 33, circuit 30S-JA34 (RD/BK), harness side and passenger	**Yes** GO to G12 . **No** REPAIR circuit 30S-JA34 (RD/BK). GO to G19 .

safety belt retractor pretensioner C303 pin 3, circuit 30S-JA34 (RD/BK), harness side.  • **Is the resistance less than 0.5 ohm?**	
G12 CHECK CIRCUIT 31S-JA34 (BK/RD) FOR AN OPEN	
• Measure the resistance between RCM C310b pin 34, circuit 31S-JA34 (BK/RD), harness side and passenger safety belt retractor pretensioner C303 pin 1, circuit 31S-JA34 (BK/RD), harness side.  • **Is the resistance less than 0.5 ohm?**	**Yes** GO to G17 . **No** REPAIR circuit 31S-JA34 (BK/RD). GO to G19 .
G13 CHECK CIRCUIT 30S-JA34 (RD/BK) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Deactivate the system. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: RCM C310b. • Disconnect: Passenger Safety Belt Pretensioner Restraint System Diagnostic Tool. • Key in ON position. • Measure the voltage between RCM C310b pin 33, circuit 30S-JA34 (RD/BK), harness side and ground.  • **Is the voltage less than 0.2 volt?**	**Yes** GO to G14 . **No** REPAIR circuit 30S-JA34 (RD/BK). GO to G19 .
G14 CHECK CIRCUIT 31S-JA34 (BK/RD) FOR A SHORT TO VOLTAGE	

• Measure the voltage between RCM C310b pin 34, circuit 31S-JA34 (BK/RD), harness side and ground.  • **Is the voltage less than 0.2 volt?**	**Yes** GO to G17 . **No** REPAIR circuit 31S-JA34 (BK/RD). GO to G19 .
G15 CHECK CIRCUIT 30S-JA34 (RD/BK) FOR A SHORT TO GROUND	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310b. • Disconnect: Passenger Safety Belt Pretensioner Restraint System Diagnostic Tool. • Measure the resistance between RCM C310b pin 33, circuit 30S-JA34 (RD/BK), harness side and ground.  • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to G16 . **No** REPAIR circuit 30S-JA34 (RD/BK). GO to G19 .
G16 CHECK CIRCUIT 31S-JA34 (BK/RD) FOR A SHORT TO GROUND	
• Measure the resistance between RCM C310b pin 34, circuit 31S-JA34 (BK/RD), harness side and ground.  • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to G17 . **No** REPAIR circuit 31S-JA34 (BK/RD). GO to G19 .
G17 CONFIRM THE RCM FAULT	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Key in OFF position. • Connect: Restraint System Diagnostic Tools.	**Yes** If a **"?"** was flagged by the diagnostic tool CARRY OUT the entire pinpoint test. INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to G19 .

• Connect: RCM C310b. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2292/Record All Flagged Faults. • **Was DTC B2292 retrieved during the on-demand self test?**	**No** CHECK for causes of the intermittent fault at or near the affected safety belt retractor pretensioner electrical connector. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found.GO to G19 .
G18 CHECK FOR AN INTERMITTENT FAULT	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: The Affected Safety Belt Retractor Pretensioner Electrical Connector C323 (Driver) Or C303 (Passenger). • Connect: Restraint System Diagnostic Tool 418-F088 to the Affected Safety Belt Retractor Pretensioner Electrical Connector C323 (Driver) Or C303 (Passenger). • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2292/Record All Flagged Faults. • **Was DTC B2292 retrieved during the on-demand self test?**	**Yes** CHECK for causes of the intermittent fault at or near the affected safety belt retractor pretensioner electrical connector. REPAIR any intermittent concern found. If an intermittent concern **was** found and repaired, GO to G19 . If an intermittent concern **was not** found and repaired, USE the flagged faults recorded and GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded, multiple faults exist and the entire pinpoint test must be carried out. For driver safety belt pretensioner (DF_PRT) with a low resistance (LOWRES) fault, GO to G3 . For DF_PRT with an open circuit (O_CIR) fault, GO to G4 . For DF_PRT with a short to battery (STB) fault, GO to G6 . For DF_PRT with a short to ground (STG) fault, GO to G8 . For passenger safety belt pretensioner (PF_PRT) with a low resistance (LOWRES) fault, GO to G10 . For PF_PRT with an open circuit (O_CIR) fault, GO to G11 . For PF_PRT with a short to battery (STB) fault, GO to G11 . For PF_PRT with a short to ground

	(STG) fault, GO to G15 . **No** CHECK for causes of the intermittent fault at or near the affected safety belt retractor pretensioner electrical connector. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to G19 .
G19 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step G1. • **Were any continuous DTCs retrieved during Step G1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. If previously directed to deactivate the system, REACTIVATE the system. REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.

Pinpoint Test H: LFC 19 and 21/DTC B2293 Restraint System - Air bag Fault

Normal Operation

The restraints control module (RCM) checks all of the front air bag circuits for faults. If the RCM detects one of the following faults on any of the front air bag circuits, it will store diagnostic trouble code (DTC) B2293 in memory, and depending on the fault, flash either lamp fault code (LFC) 19 or 21 depending on the fault (or higher priority code if one exists) on the air bag indicator.

Fault Conditions

The RCM monitors for the following fault conditions:

- low resistance.
- high resistance or circuit open.
- circuit short to voltage.
- circuit short to ground.

Possible Causes

A driver air bag fault can be caused by:

- damaged wiring, terminals, or connectors.
- a faulty clockspring.
- a faulty driver air bag module.
- a faulted RCM.

A passenger air bag fault can be caused by:

- damaged wiring, terminals, or connectors.
- a faulty passenger air bag module.
- a faulted RCM.

PINPOINT TEST H: LFC 19 AND 21/DTC B2293 RESTRAINT SYSTEM - AIR BAG FAULT

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
H1 CHECK FOR A HARD OR INTERMITTENT DTC	
⚠ **WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards.** ⚠ **WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.** ⚠ **WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.** ⚠ **WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Flag/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2293/Record All Flagged Faults. • **Was DTC B2293 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to H2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to H38 .
H2 CHECK THE DRIVER AND PASSENGER AIR BAG MODULES	

• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • If the flagged fault was reported for the driver air bag module: ♦ Remove the driver air bag module. Refer to Driver Air Bag Module in this section. ♦ Connect restraint system diagnostic tools 418-F395 (2 required) to the driver air bag module squib 1 and squib 2 connectors. • If the flagged fault was reported for the passenger air bag module: ♦ Disconnect the passenger air bag module C256. ♦ Connect restraint system diagnostic tool 418-F403 to passenger air bag module C256. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2293 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. Using the flagged faults recorded in the step H1, GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded, multiple faults exist and the entire pinpoint test must be carried out. For driver air bag module squib 1 (D_ABAG) with a short to ground (STG) fault, GO to H3 . For driver air bag module squib 1 (D_ABAG) with a short to battery (STB) fault, GO to H5 . For driver air bag module squib 1 (D_ABAG) with an open circuit (O_CIR) fault, GO to H7 . For driver air bag module squib 1 (D_ABAG) with a low resistance (LOWRES) fault, GO to H11 . For passenger air bag module squib 1 (P_ABAG) with a short to ground (STG) fault, GO to H14 . For passenger air bag module squib 1 (P_ABAG) with a short to battery (STB) fault, GO to H15 . For passenger air bag module squib 1 (P_ABAG) with an open circuit (O_CIR) fault, GO to H16 . For passenger air bag module squib 1 (P_ABAG) with a low resistance (LOWRES) fault, GO to H18 . For driver air bag module squib 2 (D_ABAG2) with a short to ground (STG) fault, GO to H20 . For driver air bag module squib 2 (D_ABAG2) with a short to battery (STB) fault, GO to H22 .

	For driver air bag module squib 2 (D_ABAG2) with an open circuit (O_CIR) fault, GO to H24 . For driver air bag module squib 2 (D_ABAG2) with a low resistance (LOWRES) fault, GO to H28 . For passenger air bag module squib 2 (P_ABAG2) with a short to ground (STG) fault, GO to H31 . For passenger air bag module squib 2 (P_ABAG2) with a short to battery (STB) fault, GO to H32 . For passenger air bag module squib 2 (P_ABAG2) with an open circuit (O_CIR) fault, GO to H33 . For passenger air bag module squib 2 (P_ABAG2) with a low resistance (LOWRES) fault, GO to H35 . **No** If a flagged fault of **"?"** was recorded in Step H1, multiple faults exist and the entire pinpoint test must be carried out. If a fault was flagged against driver air bag module in Step H1, INSTALL a new driver air bag module. REFER to Driver Air Bag Module in this section. GO to H39 . If a fault was flagged against passenger air bag module in Step H1, INSTALL a new passenger air bag module. REFER to Passenger Air Bag Module in this section. GO to H39 .
H3 CHECK CIRCUIT 30S-JA8 (RD/OG) AND CIRCUIT 31S-JA8 (BK/OG) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310a. • Disconnect: Driver Air Bag Module Squib 1 Restraint System Diagnostic Tool.	**Yes** GO to H37 . **No** GO to H4 .

• Measure the resistance between RCM C310a pin 1, circuit 30S-JA8 (RD/OG), harness side and ground; and between RCM C310a pin 2, circuit 31S-JA8 (BK/OG), harness side and ground.  A0041212 • **Are the resistances greater than 1,000,000 ohms?**	
H4 CHECK CIRCUIT 30S-JA8 (RD/OG) AND CIRCUIT 31S-JA8 (BK/OG) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE CLOCKSPRING	
• Disconnect: Clockspring C218a. • Measure the resistance between RCM C310a pin 1, circuit 30S-JA8 (RD/OG), harness side and ground; and between RCM C310a pin 2, circuit 31S-JA8 (BK/OG), harness side and ground.  A0041212 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to H39 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA8 (RD/OG) or circuit 31S-JA8 (BK/OG). GO to H39 .
H5 CHECK CIRCUIT 30S-JA8 (RD/OG) AND CIRCUIT 31S-JA8 (BK/OG) FOR A SHORT TO VOLTAGE BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	
• Key in OFF position. • Deactivate the system. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: Driver Air Bag Module Squib 1 Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Key in ON position. • Measure the voltage between RCM C310a pin 1, circuit 30S-JA8 (RD/OG), harness side and ground; and between RCM C310a pin 2, circuit 31S-JA8 (BK/OG), harness side and ground.	**Yes** GO to H37 . **No** GO to H6 .

 A0041263 • **Are the voltages less than 0.2 volt?**	
H6 CHECK CIRCUIT 30S-JA8 (RD/OG) AND CIRCUIT 31S-JA8 (BK/OG) FOR A SHORT TO VOLTAGE BETWEEN THE RCM AND THE CLOCKSPRING	
• Key in OFF position. • Disconnect: Clockspring C218a. • Key in ON position. • Measure the voltage between RCM C310a pin 1, circuit 30S-JA8 (RD/OG), harness side and ground; and between RCM C310a pin 2, circuit 31S-JA8 (BK/OG), harness side and ground.  A0041263 • **Are the voltages less than 0.2 volt?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to H39 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA8 (RD/OG) or 31S-JA8 (BK/OG). GO to H39 .
H7 CHECK CIRCUIT 30S-JA8 (RD/OG) AND CIRCUIT 31S-JA8 (BK/OG) FOR AN OPEN BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Air Bag Module Squib 1 Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Measure the resistance between RCM C310a pin 1, circuit 30S-JA8 (RD/OG), harness side and driver air bag module squib 1, circuit 30S-JA8 (GY/OG), harness side.  A0048570 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to H9 . **No** GO to H8 .
H8 CHECK CIRCUIT 30S-JA8 (RD/OG) FOR AN OPEN BETWEEN THE RCM AND THE CLOCKSPRING	

• Disconnect: Clockspring C218a. • Measure the resistance between RCM C310a pin 1, circuit 30S-JA8 (RD/OG), harness side and clockspring C218a pin 4, circuit 30S-JA8 (RD/OG), harness side.  A0049601 • **Is the resistance less than 0.5 ohm?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to H39 . **No** REPAIR circuit 30S-JA8 (RD/OG). GO to H39 .
H9 CHECK CIRCUIT 31S-JA8 (BK/OG) FOR AN OPEN BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	
• Measure the resistance between RCM C310a pin 2, circuit 31S-JA8 (BK/OG), harness side and driver air bag module squib 1, circuit 31S-JA8 (GY/WH), harness side.  A0048571 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to H37 . **No** GO to H10 .
H10 CHECK CIRCUIT 31S-JA8 (BK/OG) FOR AN OPEN BETWEEN THE RCM AND THE CLOCKSPRING	
• Disconnect: Clockspring C218a. • Measure the resistance between RCM C310a pin 2, circuit 31S-JA8 (BK/OG), harness side and clockspring C218a pin 3, circuit 31S-JA8 (BK/OG), harness side.  A0049602 • **Is the resistance less than 0.5 ohm?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to H39 . **No** REPAIR circuit 31S-JA8 (BK/OG). GO to H39 .
H11 CHECK CIRCUIT 30S-JA8 (RD/OG) AND CIRCUIT 31S-JA8 (BK/OG) FOR LOW RESISTANCE BETWEEN THE DRIVER AIR BAG MODULE AND THE RCM	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Air Bag Module Squib 1 Restraint System Diagnostic Tool.	**Yes** GO to H37 . **No** GO to H12 .

• Measure the resistance between driver air bag module squib 1, circuit 30S-JA8 (GY/OG) and circuit 31S-JA8 (GY/WH), harness side.  A0030492 • **Is the resistance greater than 10,000 ohms?**	
H12 MEASURE RESISTANCE BETWEEN RCM CIRCUIT 30S-JA8 (RD/OG) AND CIRCUIT 31S-JA8 (BK/OG)	
• Disconnect: RCM C310a. • Measure the resistance between RCM C310a pin 1, circuit 30S-JA8 (RD/OG), and pin 2, circuit 31S-JA8 (BK/OG), component side.  A0041266 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to H13 . **No** GO to H37 .
H13 CHECK CIRCUIT 30S-JA8 (RD/OG) AND CIRCUIT 31S-JA8 (BK/OG) FOR LOW RESISTANCE BETWEEN THE CLOCKSPRING AND THE RCM	
• Connect: RCM C310a. • Disconnect: Clockspring C218a. • Measure the resistance between clockspring C218a pin 4, circuit 30S-JA8 (RD/OG) and pin 3, circuit 31S-JA8 (BK/OG), harness side.  A0029872 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to H39 . **No** REPAIR circuit 30S-JA8 (RD/OG) and circuit 31S-JA8 (BK/OG). GO to H39 .
H14 CHECK CIRCUIT 30S-JA11 (RD/WH) AND CIRCUIT 31S-JA11 (BK/WH) FOR A SHORT TO	

GROUND BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Measure the resistance between RCM C310a pin 3, circuit 30S-JA11 (RD/WH), harness side and ground; and between RCM C310a pin 4, circuit 31S-JA11 (BK/WH), harness side and ground.  A0041267 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to H37 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA11 (RD/WH) or 31S-JA11 (BK/WH). GO to H39 .
H15 CHECK CIRCUIT 30S-JA11 (RD/WH) AND CIRCUIT 31S-JA11 (BK/WH) FOR A SHORT TO VOLTAGE BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	
• Key in OFF position. • Deactivate the system. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: Passenger Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Key in ON position. • Measure the voltage between RCM C310a pin 3, circuit 30S-JA11 (RD/WH), harness side and ground; and between RCM C310a pin 4, circuit 31S-JA11 (BK/WH), harness side and ground.  A0041268 • **Are the voltages less than 0.2 volt?**	**Yes** GO to H37 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA11 (RD/WH) or circuit 31S-JA11 (BK/WH). GO to H39 .
H16 CHECK CIRCUIT 30S-JA11 (RD/WH) FOR AN OPEN BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	

• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Measure the resistance between RCM C310a pin 3, circuit 30S-JA11 (RD/WH), harness side and passenger air bag module C256 pin 3, circuit 30S-JA11 (RD/WH), harness side.  • **Is the resistance less than 0.5 ohm?**	**Yes** GO to H17 . **No** REPAIR circuit 30S-JA11 (RD/WH). GO to H39 .
H17 CHECK CIRCUIT 31S-JA11 (BK/WH) FOR AN OPEN BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	
• Measure the resistance between RCM C310a pin 4, circuit 31S-JA11 (BK/WH), harness side and passenger air bag module C256 pin 4, circuit 31S-JA11 (BK/WH), harness side.  • **Is the resistance less than 0.5 ohm?**	**Yes** GO to H37 . **No** REPAIR circuit 31S-JA11 (BK/WH). GO to H39 .
H18 CHECK CIRCUIT 30S-JA11 (RD/WH) AND CIRCUIT 31S-JA11 (BK/WH) FOR LOW RESISTANCE BETWEEN THE PASSENGER AIR BAG MODULE AND THE RCM	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Air Bag Module Restraint System Diagnostic Tool. • Measure the resistance between passenger air bag module C256 pin 3, circuit 30S-JA11 (RD/WH), and pin 4, circuit 31S-JA11 (BK/WH), harness side.	**Yes** GO to H37 . **No** GO to H19 .

 A0029872 • **Is the resistance greater than 10,000 ohms?**	
H19 MEASURE THE RESISTANCE BETWEEN RCM CIRCUITS 30S-JA11 (RD/WH) AND CIRCUIT 31S-JA11 (BK/WH)	
• Disconnect: RCM C310a. • Measure the resistance between RCM C310a pin 3, circuit 30S-JA11 (RD/WH), and pin 4, circuit 31S-JA11 (BK/WH), component side.  A0041271 • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR circuit 30S-JA11 (RD/WH) and circuit 31S-JA11 (BK/WH). GO to H39 . **No** GO to H37 .
H20 CHECK CIRCUIT 30S-JA48 (RD/GN) AND CIRCUIT 31S-JA48 (BK/GN) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310a. • Disconnect: Driver Air Bag Module Squib 2 Restraint System Diagnostic Tool. • Measure the resistance between the RCM C310a pin 5, circuit 30S-JA48 (RD/GN), harness side and ground; and between the RCM C310a pin 6, circuit 31S-JA48 (BK/GN), harness side and ground.  A0041272 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to H37 . **No** GO to H21 .

H21 CHECK CIRCUIT 30S-JA48 (RD/GN) AND CIRCUIT 31S-JA48 (BK/GN) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE CLOCKSPRING	
• Disconnect: Clockspring C218a. • Measure the resistance between the RCM C310a pin 5, circuit 30S-JA48 (RD/GN), harness side and ground; and between the RCM C310a pin 6, circuit 31S-JA48 (BK/GN), harness side and ground.  A0041272 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to H39 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA48 (RD/GN) or 31S-JA48 (BK/GN). GO to H39 .
H22 CHECK CIRCUIT 30S-JA48 (RD/GN) AND CIRCUIT 31S-JA48 (BK/GN) FOR A SHORT TO VOLTAGE BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	
• Key in OFF position. • Deactivate the system. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: Driver Air Bag Module Squib 2 Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Key in ON position. • Measure the voltage between the RCM C310a pin 5, circuit 30S-JA48 (RD/GN), harness side and ground; and between the RCM C310a pin 6, circuit 31S-JA48 (BK/GN), harness side and ground.  A0041273 • **Are the voltages less than 0.2 volt?**	**Yes** GO to H37 . **No** GO to H23 .
H23 CHECK CIRCUIT 30S-JA48 (RD/GN) AND CIRCUIT 31S-JA48 (BK/GN) FOR A SHORT TO VOLTAGE BETWEEN THE RCM AND THE CLOCKSPRING	
• Key in OFF position. • Disconnect: Clockspring C218a. • Key in ON position. • Measure the voltage between the RCM C310a pin 5, circuit 30S-JA48 (RD/GN), harness side and ground; and between the RCM C310a pin 6, circuit 31S-JA48	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to H39 . **No** Due to the shorting bar feature in the

(BK/GN), harness side and ground.  A0041273 • **Are the voltages less than 0.2 volt?**	electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA48 (RD/GN) or 31S-JA48 (BK/GN). GO to H39 .
H24 CHECK CIRCUIT 30S-JA48 (RD/GN) FOR AN OPEN BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Air Bag Module Squib 2 Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Measure the resistance between the RCM C310a pin 5, circuit 30S-JA48 (RD/GN), harness side and the driver air bag module squib 2, circuit 30S-JA48 (RD/BK), harness side.  A0049606 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to H26 . **No** GO to H25 .
H25 CHECK CIRCUIT 30S-JA48 (RD/GN) FOR AN OPEN BETWEEN THE RCM AND THE CLOCKSPRING	
• Disconnect: Clockspring C218a. • Measure the resistance between the RCM C310a pin 5, circuit 30S-JA48 (RD/GN), harness side and the clockspring C218a pin 2, circuit 30S-JA48 (RD/GN), harness side.  A0049603 • **Is the resistance less than 0.5 ohm?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to H39 . **No** REPAIR circuit 30S-JA48 (RD/GN). GO to H39 .
H26 CHECK CIRCUIT 31S-JA48 (BK/GN) FOR AN OPEN BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	

• Measure the resistance between the RCM C310a pin 6, circuit 31S-JA48 (BK/GN), harness side and the driver air bag module squib 2, circuit 31S-JA48 (GN/OG), harness side.  A0049605 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to H37 . **No** GO to H27 .
H27 CHECK CIRCUIT 31S-JA48 (BK/GN) FOR AN OPEN BETWEEN THE RCM AND THE CLOCKSPRING	
• Disconnect: Clockspring C218a. • Measure the resistance between the RCM C310a pin 6, circuit 31S-JA48 (BK/GN), harness side and the clockspring C218a pin 1, circuit 31S-JA48 (BK/GN), harness side.  A0049604 • **Is the resistance less than 0.5 ohm?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to H39 . **No** REPAIR circuit 31S-JA48 (BK/GN). GO to H39 .
H28 CHECK FOR LOW RESISTANCE ON CIRCUITS 30S-JA48 (RD/GN) AND 31S-JA48 (BK/GN) BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Air Bag Module Squib 2 Restraint System Diagnostic Tool. • Measure the resistance between the driver air bag module squib 2, circuit 30S-JA48 (RD/BK), harness side and circuit 31S-JA48 (GN/OG), harness side.  A0030495 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to H37 . **No** GO to H29 .
H29 MEASURE THE RESISTANCE BETWEEN THE RCM CIRCUIT 30S-JA48 (RD/GN) AND CIRCUIT 31S-JA48 (BK/GN)	

• Disconnect: RCM C310a. • Measure the resistance between the RCM C310a pin 5, circuit 30S-JA48 (RD/GN), component side and pin 6, circuit 31S-JA48 (BK/GN), component side.  A0041276 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to H30 . **No** GO to H37 .
H30 CHECK FOR LOW RESISTANCE ON CIRCUIT 30S-JA48 (RD/GN) AND CIRCUIT 31S-JA48 (BK/GN) BETWEEN THE DRIVER AIR BAG MODULE AND THE CLOCKSPRING	
• Connect: RCM C310a. • Disconnect: Clockspring C218a. • Measure the resistance between the clockspring C218a pin 1, circuit 30S-JA48 (RD/GN), harness side and pin 2, circuit 31S-JA48 (BK/GN), harness side.  A0029882 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to H39 . **No** REPAIR circuit 30S-JA48 (RD/GN) and circuit 31S-JA48 (BK/GN). GO to H39 .
H31 CHECK CIRCUIT 30S-JA32 (RD/YE) AND CIRCUIT 31S-JA32 (BK/YE) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Measure the resistance between the RCM C310a pin 13, circuit 30S-JA32 (RD/YE), harness side and ground; and between the RCM C310a pin 14, circuit 31S-JA32 (BK/YE), harness side and ground.	**Yes** GO to H37 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA32 (RD/YE) or circuit 31S-JA32 (BK/YE). GO to H39 .

 A0041277 • **Are the resistances greater than 1,000,000 ohms?**	
H32 CHECK CIRCUIT 30S-JA32 (RD/YE) AND CIRCUIT 31S-JA32 (BK/YE) FOR A SHORT TO VOLTAGE BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	
• Key in OFF position. • Deactivate the system. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: Passenger Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Key in ON position. • Measure the voltage between the RCM C310a pin 13, circuit 30S-JA32 (RD/YE), harness side and ground; and between the RCM C310a pin 14, circuit 31S-JA32 (BK/YE), harness side and ground.  A0041278 • **Are the voltages less than 0.2 volt?**	**Yes** GO to H37 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA32 (RD/YE) or circuit 31S-JA32 (BK/YE). GO to H39 .
H33 CHECK CIRCUIT 30S-JA32 (RD/YE) FOR AN OPEN BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Measure the resistance between the RCM C310a pin 13, circuit 30S-JA32 (RD/YE), harness side and the passenger air bag module C256 pin 1, circuit 30S-JA32 (RD/YE), harness side.	**Yes** GO to H34 . **No** REPAIR circuit 30S-JA32 (RD/YE). GO to H39 .

 A0050603 • **Is the resistance less than 0.5 ohm?**	
H34 CHECK CIRCUIT 31S-JA32 (BK/YE) FOR AN OPEN BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	
• Measure the resistance between the RCM C310a pin 14, circuit 31S-JA32 (BK/YE), harness side and the passenger air bag module C256 pin 2, circuit 31S-JA32 (BK/YE), harness side.  A0050604 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to H37 . **No** REPAIR circuit 31S-JA32 (BK/YE). GO to H39 .
H35 CHECK FOR LOW RESISTANCE ON CIRCUIT 30S-JA32 (RD/YE) AND CIRCUIT 31S-JA32 (BK/YE) BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Air Bag Module Restraint System Diagnostic Tool. • Measure the resistance between the passenger air bag module C256 pin 1, circuit 30S-JA32 (RD/YE), harness side and pin 2, circuit 31S-JA32 (BK/YE), harness side.  A0029882 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to H37 . **No** GO to H36 .
H36 MEASURE THE RESISTANCE BETWEEN THE RCM CIRCUIT 30S-JA32 (RD/YE) AND CIRCUIT 31S-JA32 (BK/YE)	

• Disconnect: RCM C310a. • Measure the resistance between the RCM C310a pin 13, circuit 30S-JA32 (RD/YE), component side and pin 14, circuit 31S-JA32 (BK/YE), component side.  A0041281 • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR circuit 30S-JA32 (RD/YE) and circuit 31S-JA32 (BK/YE). GO to H39 . **No** GO to H37 .
H37 CONFIRM THE RCM FAULT	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded • Key in OFF position. • Connect: Restraint System Diagnostic Tools. • Connect: RCM C310a. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2293/Record All Flagged Faults. • **Was DTC B2293 retrieved during the on-demand self test?**	**Yes** If a **"?"** was flagged by the diagnostic tool, CARRY OUT the entire pinpoint test. INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to H39 . **No** CHECK for causes of the intermittent fault at or near the affected air bag module connector. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to H39 .
H38 CHECK FOR AN INTERMITTENT FAULT	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • If the flagged fault was reported for the driver air bag module: ♦ Remove the driver air bag module. Refer to Driver Air Bag Module in this section. ♦ Connect restraint system diagnostic tools 418-F395 (2 required) to the driver air bag module squib 1 and squib 2 connectors. • If the flagged fault was reported for the passenger air bag module: ♦ Disconnect the passenger air bag module C256.	**Yes** CHECK for causes of the intermittent fault at or near the affected air bag module connector. REPAIR any intermittent concerns found. If an intermittent concern **was** found and repaired, GO to H39 . If an intermittent concern **was not** found and repaired, USE the flagged faults recorded and GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded

♦ Connect restraint system diagnostic tool 418-F403 to passenger air bag module C256. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2293/Record All Flagged Faults. • **Was the DTC B2293 retrieved during the on-demand self test?**	multiple faults exist and the entire pinpoint test must be carried out. For driver air bag module squib 1 (D_ABAG) with a short to ground (STG) fault, GO to H3 . For driver air bag module squib 1 (D_ABAG) with a short to battery (STB) fault, GO to H5 . For driver air bag module squib 1 (D_ABAG) with an open circuit (O_CIR) fault, GO to H7 . For driver air bag module squib 1 (D_ABAG) with a low resistance (LOWRES) fault, GO to H11 . For passenger air bag module squib 1 (P_ABAG) with a short to ground (STG) fault, GO to H14 . For passenger air bag module squib 1 (P_ABAG) with a short to battery (STB) fault, GO to H15 . For passenger air bag module squib 1 (P_ABAG) with an open circuit (O_CIR) fault, GO to H16 . For passenger air bag module squib 1 (P_ABAG) with a low resistance (LOWRES) fault, GO to H18 . For driver air bag module squib 2 (D_ABAG2) with a short to ground (STG) fault, GO to H20 . For driver air bag module squib 2 (D_ABAG2) with a short to battery (STB) fault, GO to H22 . For driver air bag module squib 2 (D_ABAG2) with an open circuit (O_CIR) fault, GO to H24 . For driver air bag module squib 2 (D_ABAG2) with a low resistance (LOWRES) fault, GO to H28 . For passenger air bag module squib 2 (P_ABAG2) with a short to ground (STG) fault, GO to H31 .

	For passenger air bag module squib 2 (P_ABAG2) with a short to battery (STB) fault, GO to H32 . For passenger air bag module squib 2 (P_ABAG2) with an open circuit (O_CIR) fault, GO to H33 . For passenger air bag module squib 2 (P_ABAG2) with a low resistance (LOWRES) fault, GO to H35 . **No** CHECK for causes of the intermittent fault at or near the affected air bag module connector. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to H39 .
H39 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step H1. • **Were any continuous DTCs retrieved during Step H1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. If previously directed to deactivate the system, REACTIVATE the system. REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.

Pinpoint Test I: LFC 24 and 25/DTC B2294 Restraint System Side Air Curtain Module Fault

Normal Operation

The restraints control module (RCM) checks all side air curtain module circuits for faults. If the RCM detects one of the following faults on any of the side air curtain module circuits, it will store diagnostic trouble code (DTC) B2294 in memory and flash, depending on the fault, either lamp fault code (LFC) 24 or 25 depending on the fault (or higher priority code if one exists) on the air bag indicator.

Fault Conditions

The RCM monitors for the following fault conditions:

- low resistance.
- circuit open.
- circuit short to voltage.
- circuit short to ground.

Possible Causes

A side air curtain module fault can be caused by:

- damaged wiring, terminals, or connectors.
- a faulty side air curtain module.
- a faulted RCM.
- a faulty side air curtain bridge resistor

PINPOINT TEST I: LFC 24 AND 25/DTC B2294 RESTRAINT SYSTEM SIDE AIR CURTAIN MODULE FAULT

NOTE: Side air curtain bridge resistor connectors and side air curtain module connectors are similar in appearance, the difference is in the way the connectors are keyed.

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
I1 CHECK FOR A HARD OR INTERMITTENT DTC	
⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards. **⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.** **⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Flag/Record Continuous DTCs.	**Yes** **Vehicles with side air curtain modules** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test.GO to I3 . **Vehicles without side air curtain modules** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test.GO to I2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to I17 .

• Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag B2294/Record All Flagged Faults. • **Was DTC B2294 retrieved during the on-demand self test?**	
I2 CHECK THE SIDE AIR CURTAIN MODULE BRIDGE RESISTOR	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver and Passenger Side Air Curtain Bridge Resistor. • Transfer the driver side air curtain bridge resistor to the passenger side and passenger side air curtain bridge resistor to the driver side. • Connect: Driver and Passenger Side Air Curtain Bridge Resistor. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2294/Record All Flagged Faults. • **Did the flagged fault transfer between the driver side and passenger side?**	**Yes** INSTALL a new side air curtain bridge resistor. GO to I18 . **No** Using the flagged faults recorded in Step I1, GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded in Step I1, multiple faults exist and the entire pinpoint test must be carried out. For driver side air curtain module (DFCURTN) with a short to battery (STB) fault, GO to I4 . For driver side air curtain module (DFCURTN) with a short to ground (STG) fault, GO to I5 . For driver side air curtain module (DFCURTN) with an open circuit (O_CIR) fault, GO to I6 . For driver side air curtain module (DFCURTN) with a low resistance (LOWRES) fault, GO to I8 . For passenger side air curtain module (PFCURTN) with a short to battery (STB) fault, GO to I10 . For passenger side air curtain module (PFCURTN) with a short to ground (STG) fault, GO to I11 . For passenger side air curtain module (PFCURTN) with an open circuit (O_CIR) fault, GO to I12 . For passenger side air curtain module (PFCURTN) with a low resistance (LOWRES) fault, GO to I14 .

I3 CHECK THE DRIVER AND PASSENGER SIDE AIR CURTAIN MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: The Affected Side Air Curtain Module C9006 (Driver) or C9007 (Passenger). • Connect: Restraint System Diagnostic Tool 501-097 to the Affected Side Air Curtain Module C9006 (Driver) or C9007 (Passenger). • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2294/Record All Flagged Faults. • **Was DTC B2294 retrieved during the on-demand self test?**	**Yes** Using the flagged faults recorded in Step I1, GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded in Step I1, multiple faults exist and the entire pinpoint test must be carried out. For driver side air curtain module (DFCURTN) with a short to battery (STB) fault, GO to I4 . For driver side air curtain module (DFCURTN) with a short to ground (STG) fault, GO to I5 . For driver side air curtain module (DFCURTN) with an open circuit (O_CIR) fault, GO to I6 . For driver side air curtain module (DFCURTN) with a low resistance (LOWRES) fault, GO to I8 . For passenger side air curtain module (PFCURTN) with a short to battery (STB) fault, GO to I10 . For passenger side air curtain module (PFCURTN) with a short to ground (STG) fault, GO to I11 . For passenger side air curtain module (PFCURTN) with an open circuit (O_CIR) fault, GO to I12 . For passenger side air curtain module (PFCURTN) with a low resistance (LOWRES) fault, GO to I14 . **No** If a flagged fault of **"?"** was recorded in Step I1, multiple faults exist and the entire pinpoint test must be carried out. If a fault was flagged against the driver side air curtain module in Step I1, INSTALL a new driver side air curtain module. REFER to Side Air

	Curtain Module in this section. GO to I18 . If a fault was flagged against the passenger side air curtain module in Step I1, INSTALL a new passenger side air curtain module. REFER to Side Air Curtain Module in this section. GO to I18 .
I4 CHECK CIRCUIT 30S-JA50 (RD/BK) AND CIRCUIT 31S-JA50 (BK/RD) FOR A SHORT TO BATTERY BETWEEN THE RCM AND THE DRIVER SIDE AIR CURTAIN MODULE	
• Key in OFF position. • Deactivate the system. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: RCM C310b. • Disconnect: Driver Side Air Curtain Module Restraint System Diagnostic Tool (with Side Air Curtain Modules). • Disconnect: Driver Side Air Curtain Bridge Resistor (without Side Air Curtain Modules). • Key in ON position. • Measure the voltage between RCM C310b pin 3, circuit 30S-JA50 (RD/BK), harness side and ground; and between RCM C310b pin 4, circuit 31S-JA50 (BK/RD), harness side and ground.  A0048593 • **Are the voltages less than 0.2 volt?**	**Yes** GO to I16 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA50 (RD/BK) or circuit 31S-JA50 (BK/RD). GO to I18 .
I5 CHECK CIRCUIT 30S-JA50 (RD/BK) AND CIRCUIT 31S-JA50 (BK/RD) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE DRIVER SIDE AIR CURTAIN MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310b. • Disconnect: Driver Side Air Curtain Module Restraint System Diagnostic Tool (with Side Air Curtain Modules). • Disconnect: Driver Side Air Curtain Bridge Resistor (without Side Air Curtain Modules).	**Yes** GO to I16 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA50 (RD/BK) or circuit 31S-JA50 (BK/RD). GO to I18 .

• Measure the resistance between RCM C310b pin 3, circuit 30S-JA50 (RD/BK), harness side and ground; and between RCM C310b pin 4 circuit 31S-JA50 (BK/RD), harness side and ground.  A0048594 • **Are the resistances greater than 1,000,000 ohms?**	
I6 CHECK CIRCUIT 30S-JA50 (RD/BK) FOR AN OPEN BETWEEN THE RCM AND THE DRIVER SIDE AIR CURTAIN MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310b. • Disconnect: Driver Side Air Curtain Module Restraint System Diagnostic Tool (with Side Air Curtain Modules). • Disconnect: Driver Side Air Curtain Bridge Resistor (without Side Air Curtain Modules). • Vehicles without side air curtain modules, measure the resistance between RCM C310b pin 3, circuit 30S-JA50 (RD/BK), harness side and driver side air curtain bridge resistor C2283 pin 2, circuit 30S-JA50 (RD/BK), harness side.  A0057067 • Vehicles with side air curtain modules, measure the resistance between RCM C310b pin 3, circuit 30S-JA50 (RD/BK), harness side and driver side air curtain module C9006 pin 1, circuit 30S-JA50 (RD/BK), harness side.  A0080245 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to I7 . **No** REPAIR circuit 30S-JA50 (RD/BK). GO to I18 .
I7 CHECK CIRCUIT 31S-JA50 (BK/RD) FOR AN OPEN BETWEEN THE RCM AND THE DRIVER SIDE AIR	

CURTAIN MODULE	
• Vehicles without side air curtain modules, measure the resistance between RCM C310b pin 4, circuit 31S-JA50 (BK/RD), harness side and driver side air curtain bridge resistor C2283 pin 1, circuit 31S-JA50 (BK/RD), harness side.  A0057068 • Vehicles with side air curtain modules, measure the resistance between RCM C310b pin 4, circuit 31S-JA50 (BK/RD), harness side and driver side air curtain module C9006 pin 2, circuit 31S-JA50 (BK/RD), harness side.  A0080246 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to I16 . **No** REPAIR circuit 31S-JA50 (BK/RD). GO to I18 .
I8 CHECK FOR LOW RESISTANCE ON CIRCUIT 30S-JA50 (RD/BK) AND CIRCUIT 31S-JA50 (BK/RD) BETWEEN THE DRIVER SIDE AIR CURTAIN MODULE AND THE RCM	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Side Air Curtain Module Restraint System Diagnostic Tool (with Side Air Curtain Modules). • Disconnect: Driver Side Air Curtain Bridge Resistor (without Side Air Curtain Modules). • Vehicles without side air curtain modules, measure the resistance between driver side air curtain bridge resistor C2283 pin 1, circuit 31S-JA50 (BK/RD), and C2283 pin 2, circuit 30S-JA50 (RD/BK), harness side.  A0029687 • Vehicles with side air curtain modules, measure the	**Yes** GO to I16 . **No** GO to I9 .

resistance between driver side air curtain module C9006 pin 2, circuit 31S-JA50 (BK/RD), and C9006 pin 1, circuit 30S-JA50 (RD/BK), harness side.  A0080247 • **Is the resistance greater than 10, 000 ohms?**	
I9 MEASURE RESISTANCE BETWEEN RCM CIRCUIT 30S-JA50 (RD/BK) AND CIRCUIT 31S-JA50 (BK/RD)	
• Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 3, circuit 30S-JA50 (RD/BK), and pin 4, circuit 31S-JA50 (BK/RD), component side.  A0048575 • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR circuit 30S-JA50 (RD/BK) and circuit 31S-JA50 (BK/RD). GO to I18 . **No** GO to I16 .
I10 CHECK CIRCUIT 30S-JA51 (RD/BU) AND CIRCUIT 31S-JA51 (BK/BU) FOR A SHORT TO BATTERY BETWEEN THE RCM AND THE PASSENGER SIDE AIR CURTAIN MODULE	
• Key in OFF position. • Deactivate the system. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: RCM C310b. • Disconnect: Passenger Side Air Curtain Module Restraint System Diagnostic Tool (with Side Air Curtain Modules). • Disconnect: Passenger Side Air Curtain Bridge Resistor (without Side Air Curtain Modules). • Key in ON position. • Measure the voltage between RCM C310b pin 5, circuit 30S-JA51 (RD/BU), harness side and ground; and between RCM C310b pin 6, circuit 31S-JA51 (BK/BU), harness side and ground.	**Yes** GO to I16 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA51 (RD/BU) or circuit 31S-JA51 (BK/BU). GO to I18 .

 A0048595 • **Are the voltages less than 0.2 volt?**	
I11 CHECK CIRCUIT 30S-JA51 (RD/BU) AND CIRCUIT 31S-JA51 (BK/BU) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE PASSENGER SIDE AIR CURTAIN MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310b. • Disconnect: Passenger Side Air Curtain Module Restraint System Diagnostic Tool (with Side Air Curtain Modules). • Disconnect: Passenger Side Air Curtain Bridge Resistor (without Side Air Curtain Modules). • Measure the resistance between RCM C310b pin 5, circuit 30S-JA51 (RD/BU), harness side and ground; and between RCM C310b pin 6, circuit 31S-JA51 (BK/BU), harness side and ground.  A0048596 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to I16 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA51 (RD/BU) or circuit 31S-JA51 (BK/BU). GO to I18 .
I12 CHECK CIRCUIT 30S-JA51 (RD/BU) FOR AN OPEN BETWEEN THE RCM AND THE PASSENGER SIDE AIR CURTAIN MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310b. • Disconnect: Passenger Side Air Curtain Module Restraint System Diagnostic Tool (with Side Air Curtain Modules). • Disconnect: Passenger Side Air Curtain Bridge Resistor (without Side Air Curtain Modules). • Vehicles without side air curtain modules, measure the resistance between RCM C310b pin 5, circuit 30S-JA51 (RD/BU), harness side and passenger side air curtain bridge resistor C2284 pin 2, circuit 30S-JA51 (RD/BU), harness side.	**Yes** GO to I13 . **No** REPAIR circuit 30S-JA51 (RD/BU). GO to I18 .

 A0057205 • Vehicles with side air curtain modules, measure the resistance between RCM C310b pin 5, circuit 30S-JA51 (RD/BU), harness side and passenger side air curtain module C9007 pin 1, circuit 30S-JA51 (RD/BU), harness side.  A0080248 • **Is the resistance less than 0.5 ohm?**	
I13 CHECK CIRCUIT 31S-JA51 (BK/BU) FOR OPEN BETWEEN THE RCM AND THE PASSENGER SIDE AIR CURTAIN MODULE	
• Vehicles without side air curtain modules, measure the resistance between RCM C310b pin 6, circuit 31S-JA51 (BK/BU), harness side and passenger side air curtain bridge resistor C2284 pin 1, circuit 31S-JA51 (BK/BU), harness side.  A0057206 • Vehicles without side air curtain modules, measure the resistance between RCM C310b pin 6, circuit 31S-JA51 (BK/BU), harness side and passenger side air curtain module C9007 pin 2, circuit 31S-JA51 (BK/BU), harness side.  A0080249 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to I16 . **No** REPAIR circuit 31S-JA51 (BK/BU). GO to I18 .
I14 CHECK FOR LOW RESISTANCE ON CIRCUIT 30S-JA51 (RD/BU) AND CIRCUIT 31S-JA51 (BK/BU) BETWEEN THE PASSENGER SIDE AIR CURTAIN MODULE AND THE RCM	

• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Side Air Curtain Module Restraint System Diagnostic Tool (with Side Air Curtain Modules). • Disconnect: Passenger Side Air Curtain Bridge Resistor (without Side Air Curtain Modules). • Vehicles without side air curtain modules, measure the resistance between passenger side air curtain bridge resistor C2284 pin 2, circuit 30S-JA51 (RD/BU), and C2284 pin 1, circuit 31S-JA51 (BK/BU), harness side.  A0029687 • Vehicles with side air curtain modules, measure the resistance between passenger side air curtain module C9007 pin 1, circuit 30S-JA51 (RD/BU), and C9007 pin 2, circuit 31S-JA51 (BK/BU), harness side.  A0080247 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I16 . **No** GO to I15 .
I15 MEASURE RESISTANCE BETWEEN RCM CIRCUIT 30S-JA51 (RD/BU) AND CIRCUIT 31S-JA51 (BK/BU)	
• Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 5, circuit 30S-JA51 (RD/BU), and pin 6, circuit 31S-JA51 (BK/BU), component side.  A0048599 • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR circuit 30S-JA51 (RD/BU) and circuit 31S-JA51 (BK/BU).GO to I18 . **No** GO to I16 .
I16 CONFIRM THE RCM FAULT	
• Key in OFF position. • Connect: Restraint System Diagnostic Tools (with Side Air Curtain Modules).	**Yes** If a **"?"** was flagged by the diagnostic tool, CARRY OUT the entire pinpoint test.

• Connect: Side Air Curtain Bridge Resistors (without Side Air Curtain Modules). • Connect: RCM C310b. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: DTC B2294/Record All Flagged Faults. • **Was DTC B2294 retrieved during the on-demand self test?**	INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to I18 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to I18 .
I17 CHECK FOR AN INTERMITTENT FAULT	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: The Affected Side Air Curtain Module C9006 (Driver) or C9007 (Passenger). • Connect: Restraint System Diagnostic Tool 501-097 to the Affected Side Air Curtain Module C9006 (Driver) or C9007 (Passenger). • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2294/Record All Flagged Faults. • **Was DTC B2294 retrieved during on-demand self test?**	**Yes** CHECK for causes of the intermittent fault at or near the affected side air curtain module connector. REPAIR any intermittent concerns found. If an intermittent concern **was** found and repaired, GO to I18 . If an intermittent concern **was not** found and repaired, USE the flagged faults recorded and GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded, multiple faults exist and the entire pinpoint test must be carried out. For driver side air curtain module (DFCURTN) with a short to battery (STB) fault, GO to I4 . For driver side air curtain module (DFCURTN) with a short to ground (STG) fault, GO to I5 . For driver side air curtain module (DFCURTN) with an open circuit (O_CIR) fault, GO to I6 . For driver side air curtain module (DFCURTN) with a low resistance (LOWRES) fault, GO to I8 . For passenger side air curtain module (PFCURTN) with a short to battery (STB) fault, GO to I10 . For passenger side air curtain module (PFCURTN) with a short to ground (STG) fault, GO to I11 .

	For passenger side air curtain module (PFCURTN) with an open circuit (O_CIR) fault, GO to I12 . For passenger side air curtain module (PFCURTN) with a low resistance (LOWRES) fault, GO to I14 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to I18 .
I18 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step I1. • **Were any continuous DTCs retrieved during Step I1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. If previously directed to deactivate the system, REACTIVATE the system. REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.

Pinpoint Test J: LFC 22 and 23/DTC B2295 Restraint System Side Air Bag Fault

Normal Operation

The restraints control module (RCM) checks all of the seat side air bag circuits for faults. If the RCM detects one of the following faults on any of the seat side air bag circuits, it will store diagnostic trouble code (DTC) B2295 in memory and flash either lamp fault code (LFC) 22 or 23 depending on the fault (or higher priority code if one exists) on the air bag indicator.

Fault Conditions

The RCM monitors for the following fault conditions:

- low resistance.
- high resistance or circuit open.
- circuit short to battery.
- circuit short to ground.

Possible Causes

A seat side air bag status fault can be caused by:

- wiring, terminals, or connectors.
- a faulty seat side air bag module.
- a faulted RCM.

PINPOINT TEST J: LFC 22 AND 23/DTC B2295 RESTRAINT SYSTEM SIDE AIR BAG FAULT

NOTE: Seat side air bag module connectors shown, seat side thorax air bag module connectors similar.

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
J1 CHECK FOR A HARD OR INTERMITTENT DTC	
⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test.	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to J2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to J26 .

• Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2295/Record All Flagged Faults. • **Was DTC B2295 retrieved during the on-demand self test?**	
J2 CHECK THE DRIVER AND PASSENGER SEAT SIDE AIR BAG MODULES	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: The Affected Seat Side Air Bag Module/Seat Side Thorax Air Bag Module C367/C3226 (Driver) or C337/C3227 (Passenger). • Connect: The Affected Seat Side Air Bag Module Restraint System Diagnostic Tool 418-133 or Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool 501-097. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2295/Record All Flagged Faults. • **Was DTC B2295 retrieved during the on-demand self test?**	**Yes** Using the flagged faults recorded in Step J1, GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded in Step J1, multiple faults exist and the entire pinpoint test must be carried out. For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a short to battery (STB) fault, GO to J3 . For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a short to ground (STG) fault, GO to J4 . For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with an open circuit (O_CIR) fault, GO to J5 . For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a low resistance (LOWRES) fault, GO to J7 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a short to battery (STB) fault, GO to J9 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a short to ground (STG) fault, GO to J10 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with an open circuit (O_CIR) fault, GO to J11 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a low resistance (LOWRES) fault, GO to J13 . **No** Using the flagged faults recorded in Step J1,

	GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded in Step J1, multiple faults exist and the entire pinpoint test must be carried out. For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a short to battery (STB) fault, GO to J15 . For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a short to ground (STG) fault, GO to J16 . For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with an open circuit (O_CIR) fault, GO to J17 . For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a low resistance (LOWRES) fault, GO to J19 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a short to battery (STB) fault, GO to J20 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a short to ground (STG) fault, GO to J21 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with an open circuit (O_CIR) fault, GO to J22 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a low resistance (LOWRES) fault, GO to J24 .
J3 CHECK CIRCUITS 30S-JA37 (RD/GN) AND 31S-JA37 (BK/GN) FOR A SHORT TO BATTERY BETWEEN THE RCM AND DRIVER SEAT SIDE AIR BAG MODULE	
• Key in OFF position. • Deactivate the system. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: RCM C310b.	**Yes** GO to J25 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar.

• Disconnect: Driver Seat Side Air Bag Module or Driver Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Key in ON position. • Measure the voltage between RCM C310b pin 1, circuit 30S-JA37 (RD/GN), harness side and ground; and between RCM C310b pin 2, circuit 31S-JA37 (BK/GN), harness side and ground.  A0041282 • **Are the voltages less than 0.2 volt?**	REPAIR circuit 30S-JA37 (RD/GN) or 31S-JA37 (BK/GN). GO to J27 .
J4 CHECK CIRCUITS 30S-JA37 (RD/GN) AND 31S-JA37 (BK/GN) FOR A SHORT TO GROUND BETWEEN THE RCM AND DRIVER SEAT SIDE AIR BAG MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310b. • Disconnect: Driver Seat Side Air Bag Module or Driver Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Measure the resistance between RCM C310b pin 1, circuit 30S-JA37 (RD/GN), harness side and ground; and between RCM C310b pin 2, circuit 31S-JA37 (BK/GN), harness side and ground.  A0041283 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to J25 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA37 (RD/GN) or 31S-JA37 (BK/GN). GO to J27 .
J5 CHECK CIRCUIT 30S-JA37 (RD/GN) FOR A OPEN BETWEEN THE RCM AND DRIVER SEAT SIDE AIR BAG MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310b. • Disconnect: Driver Seat Side Air Bag Module or Driver Seat Side Thorax Air Bag Module	**Yes** GO to J6 . **No** REPAIR circuit 30S-JA37 (RD/GN). GO to J27 .

Restraint System Diagnostic Tool. • Measure the resistance between RCM C310b pin 1, circuit 30S-JA37 (RD/GN), harness side and driver seat side air bag module wiring harness C316 pin 2, circuit 30S-JA37 (RD/GN), harness side.  A0041284 • **Is the resistance less than 0.5 ohm?**	
J6 CHECK CIRCUIT 31S-JA37 (BK/GN) FOR AN OPEN BETWEEN THE RCM AND DRIVER SEAT SIDE AIR BAG MODULE	
• Measure the resistance between RCM C310b pin 2, circuit 31S-JA37 (BK/GN), harness side and driver seat side air bag wiring harness C316 pin 1, circuit 31S-JA37 (BK/GN), harness side.  A0041285 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to J25 . **No** REPAIR circuit 31S-JA37 (BK/GN). GO to J27 .
J7 CHECK FOR LOW RESISTANCE ON CIRCUITS 30S-JA37 (RD/GN) AND BETWEEN 31S-JA37 (BK/GN) THE DRIVER SEAT SIDE AIR BAG MODULE AND RCM	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Seat Side Air Bag Module or Driver Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Measure the resistance between driver seat side air bag wiring harness C316 pin 2, circuit 30S-JA37 (RD/GN), harness side and pin 1, circuit 31S-JA37 (BK/GN), harness side.	**Yes** GO to J25 . **No** GO to J8 .

 A0029887 • **Is the resistance greater than 10,000 ohms?**	
J8 CHECK FOR LOW RESISTANCE BETWEEN RCM CIRCUITS 30S-JA37 (RD/GN) AND 31S-JA37 (BK/GN)	
• Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 1, circuit 30S-JA37 (RD/GN), component side and pin 2, circuit 31S-JA37 (BK/GN), component side.  A0041286 • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR circuit 30S-JA37 (RD/GN) and circuit 31S-JA37 (BK/GN). GO to J27 . **No** GO to J25 .
J9 CHECK CIRCUITS 30S-JA38 (RD/BK) AND 31S-JA38 (BK/RD) FOR A SHORT TO BATTERY BETWEEN THE RCM AND PASSENGER SEAT SIDE AIR BAG MODULE	
• Key in OFF position. • Deactivate the system. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: RCM C310b. • Disconnect: Passenger Seat Side Air Bag Module or Passenger Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Key in ON position. • Measure the voltage between RCM C310b pin 21, circuit 30S-JA38 (RD/BK), harness side and ground; and between RCM C310b pin 22, circuit 31S-JA38 (BK/RD), harness side and ground.	**Yes** GO to J25 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA38 (RD/BK) or circuit 31S-JA38 (BK/RD). GO to J27 .

 A0041287 • **Are the voltages less than 0.2 volt?**	
J10 CHECK CIRCUITS 30S-JA38 (RD/BK) AND 31S-JA38 (BK/RD) FOR A SHORT TO GROUND BETWEEN THE RCM AND PASSENGER SEAT SIDE AIR BAG MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310b. • Disconnect: Passenger Seat Side Air Bag Module or Passenger Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Measure the resistance between RCM C310b pin 22, circuit 30S-JA38 (RD/BK), harness side and ground; and between RCM C310b pin 22, circuit 31S-JA38 (BK/RD), harness side and ground.  A0041288 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to J25 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA38 (RD/BK) or circuit 31S-JA38 (BK/RD). GO to J27 .
J11 CHECK CIRCUIT 30S-JA38 (RD/BK) FOR AN OPEN BETWEEN THE RCM AND PASSENGER SEAT SIDE AIR BAG MODULE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310b. • Disconnect: Passenger Seat Side Air Bag Module or Passenger Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Measure the resistance between RCM C310b pin 21, circuit 30S-JA38 (RD/BK), harness side and passenger seat side air bag wiring harness C314 pin 2, circuit 30S-JA38 (RD/BK), harness side.	**Yes** GO to J12 . **No** REPAIR circuit 30S-JA38 (RD/BK). GO to J27 .

 A0041290 • **Is the resistance less than 0.5 ohm?**	
J12 CHECK CIRCUIT 31S-JA38 (BK/RD) FOR AN OPEN BETWEEN THE RCM AND PASSENGER SEAT SIDE AIR BAG MODULE	
• Measure the resistance between RCM C310b pin 22, circuit 31S-JA38 (BK/RD), harness side and passenger seat side air bag wiring harness C314 pin 1, circuit 31S-JA38 (BK/RD), harness side.  A0041289 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to J25 . **No** REPAIR circuit 31S-JA38 (BK/RD). GO to J27 .
J13 CHECK FOR LOW RESISTANCE ON CIRCUITS 30S-JA38 (RD/BK) AND 31S-JA38 (BK/RD) BETWEEN THE PASSENGER SEAT SIDE AIR BAG MODULE AND RCM	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Seat Side Air Bag Module or Passenger Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Measure the resistance between passenger seat side air bag wiring harness C314 pin 2, circuit 30S-JA38 (RD/BK), harness side and pin 1, circuit 31S-JA38 (BK/RD), harness side.  A0029887 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to J25 . **No** GO to J14 .
J14 CHECK FOR LOW RESISTANCE BETWEEN RCM CIRCUITS 30S-JA38 (RD/BK) AND 31S-JA38 (BK/RD)	

• Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 21, circuit 30S-JA38 (RD/BK), component side and pin 22, circuit 31S-JA38 (BK/RD), component side.  A0041291 • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR circuit 30S-JA38 (RD/BK) and circuit 31S-JA38 (BK/RD). GO to J27 . **No** GO to J25 .
J15 CHECK CIRCUITS 30S-JA37 (RD/GN) AND 31S-JA37 (BK/GN) FOR A SHORT TO BATTERY IN THE DRIVER SEAT SIDE AIR BAG WIRING HARNESS	
• Key in OFF position. • Deactivate the system. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: RCM C310b. • Disconnect: Driver Seat Side Air Bag Module C367 or Driver Seat Side Thorax Air Bag Module C3226. • For additional information to access driver seat side air bag module C367 or driver seat side thorax air bag module C3226, refer to Side Air Bag Module in this section. • Disconnect: Driver Seat Side Air Bag Module or Driver Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Position the driver seat in the vehicle. **Do not** reactivate the system at this time. • Connect: Driver Seat Side Air Bag Wiring Harness C316. • Connect: Driver Seat Connectors. • Key in ON position. • Measure the voltage between RCM C310b pin 1, circuit 30S-JA37 (RD/GN), harness side and ground; and between RCM C310b pin 2, circuit 31S-JA37 (BK/GN), harness side and ground.	**Yes** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. CHECK for causes of the intermittent fault in circuit 31S-JA38 (BK/RD) or circuit 30S-JA38 (RD/BK) at or near passenger seat side air bag wiring harness C316 or in the driver seat side air bag harness. ATTEMPT to recreate the hard fault by flexing the wiring harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to J27 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA37 (RD/GN) or 31S-JA37 (BK/GN) between C367 or C3226 and C316. GO to J27 .

 A0041282 • **Are the voltages less than 0.2 volt?**	
J16 CHECK CIRCUITS 30S-JA37 (RD/GN) AND 31S-JA37 (BK/GN) FOR A SHORT TO GROUND IN THE DRIVER SEAT SIDE AIR BAG WIRING HARNESS	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310b. • Disconnect: Driver Seat Side Air Bag Module C367 or Driver Seat Side Thorax Air Bag Module C3226. • For additional information to access driver seat side air bag module C367 or C3226, refer to Side Air Bag Module in this section. • Disconnect: Driver Seat Side Air Bag Module or Driver Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Position the driver seat in the vehicle. **Do not** repower the system at this time. • Connect: Driver Seat Side Air Bag Wiring Harness C316. • Connect: Driver Seat Connectors. • Measure the resistance between RCM C310b pin 1, circuit 30S-JA37 (RD/GN), harness side and ground; and between RCM C310b pin 2, circuit 31S-JA37 (BK/GN), harness side and ground.  A0041283 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** INSTALL a new driver seat side air bag module or driver seat side thorax air bag module. GO to J27 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA37 (RD/GN) or 31S-JA37 (BK/GN) between C367 or C3226 and C316. GO to J27 .
J17 CHECK CIRCUIT 30S-JA37 (RD/GN) FOR AN OPEN IN THE DRIVER SEAT SIDE AIR BAG WIRING HARNESS	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Seat Side Air Bag Module C367 or Driver Seat Side Thorax Air Bag	**Yes** GO to J18 . **No** REPAIR circuit 30S-JA37 (RD/GN). GO to J27 .

Module C3226. • For additional information to access driver seat side air bag module C367 or driver seat side thorax air bag module C3226, refer to Side Air Bag Module in this section. • Measure the resistance between driver seat side air bag wiring harness C316 pin 2, circuit 30S-JA37 (RD/GN), harness side and driver seat side air bag module C367 or driver seat side thorax air bag module C3226 pin 2, circuit 30S-JA37 (RD/GN), harness side.  A0060477 • **Is the resistance less than 0.5 ohm?**	
J18 CHECK CIRCUIT 31S-JA37 (BK/GN) FOR AN OPEN IN THE DRIVER SEAT SIDE AIR BAG WIRING HARNESS	
• Measure the resistance between driver seat side air bag wiring harness C316 pin 1, circuit 31S-JA37 (BK/GN), harness side and driver seat side air bag module C367 or driver seat side thorax air bag module C3226 pin 1, circuit 31S-JA37 (BK/GN), harness side.  A0060476 • **Is the resistance less than 0.5 ohm?**	**Yes** INSTALL a new driver seat side air bag module or driver seat side thorax air bag module. GO to J27 . **No** REPAIR circuit 31S-JA37 (BK/GN). GO to J27 .
J19 CHECK FOR LOW RESISTANCE ON CIRCUITS 30S-JA37 (RD/GN) AND 31S-JA37 (BK/GN) IN THE DRIVER SEAT SIDE AIR BAG WIRING HARNESS	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Seat Side Air Bag Module C367 or Driver Seat Side Thorax Air Bag Module C3226. • For additional information to access driver seat side air bag module C367 or driver seat side thorax air bag module C3226, refer to Side Air Bag Module in this section.	**Yes** INSTALL a new driver seat side air bag module or driver seat side thorax air bag module. GO to J27 . **No** REPAIR circuits 30S-JA37 (RD/GN) and 31S-JA37 (BK/GN) between C367 or C3226 and C316. GO to J27 .

• Disconnect: Driver Seat Side Air Bag Module or Driver Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Position the driver seat in the vehicle. **Do not** repower the system at this time. • Connect: Driver Seat Side Air Bag Wiring Harness C316. • Connect: Driver Seat Connectors. • Measure the resistance between driver seat side air bag module C367 or driver seat side thorax air bag module C3226 pin 2, circuit 30S-JA37 (RD/GN), harness side and pin 1, circuit 31S-JA37 (BK/GN), harness side.  A0030495 • **Is the resistance greater than 10,000 ohms?**	
J20 CHECK CIRCUITS 30S-JA38 (RD/BK) AND 31S-JA38 (BK/RD) FOR A SHORT TO BATTERY IN THE PASSENGER SEAT SIDE AIR BAG WIRING HARNESS	
• Key in OFF position. • Deactivate the system. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: RCM C310b. • Disconnect: Passenger Seat Side Air Bag Module C337 or Passenger Seat Side Thorax Air Bag Module C3227. • For additional information to access passenger seat side air bag module C337 or passenger seat side thorax air bag module C3227, refer to Side Air Bag Module in this section. • Disconnect: Passenger Seat Side Air Bag Module or Passenger Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Position the passenger seat in the vehicle. **Do not** reactivate the system at this time. • Connect: Passenger Seat Side Air Bag Wiring Harness C314. • Connect: Passenger Seat Connectors. • Key in ON position. • Measure the voltage between RCM C310b pin 21, circuit 30S-JA38 (RD/BK), harness side and ground; and between RCM C310b pin 22, circuit 31S-JA38 (BK/RD), harness side and ground.	**Yes** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. CHECK for causes of the intermittent fault in circuit 31S-JA38 (BK/RD) or circuit 30S-JA38 (RD/BK) at or near passenger seat side air bag wiring harness C314 or in the driver seat side air bag harness. ATTEMPT to recreate the hard fault by flexing the wiring harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to J27 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA38 (RD/BK) or 31S-JA38 (BK/RD) between C337 or C3227 and C314. GO to J27 .

 A0041287 • **Are the voltages less than 0.2 volt?**	
J21 CHECK CIRCUITS 30S-JA38 (RD/BK) AND 31S-JA38 (BK/RD) FOR A SHORT TO GROUND IN THE PASSENGER SEAT SIDE AIR BAG WIRING HARNESS	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310b. • Disconnect: Passenger Seat Side Air Bag Module C337 or Passenger Seat Side Thorax Air Bag Module C3227. • For additional information to access passenger seat side air bag module C337 or passenger seat side thorax air bag module C3227, refer to Side Air Bag Module in this section. • Disconnect: Passenger Seat Side Air Bag Module or Passenger Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Position the passenger seat in the vehicle. **Do not** repower the system at this time. • Connect: Passenger Seat Side Air Bag Wiring Harness C314. • Connect: Passenger Seat Connectors. • Measure the resistance between RCM C310b pin 21, circuit 30S-JA38 (RD/BK), harness side and ground; and between RCM C310b pin 22, circuit 31S-JA38 (BK/RD), harness side and ground.  A0041288 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** INSTALL a new passenger seat side air bag module or passenger seat side thorax air bag module. GO to J27 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bars. REPAIR circuit 30S-JA38 (RD/BK) or 31S-JA38 (BK/RD) between C337 or C3227 and C314. GO to J27 .
J22 CHECK CIRCUIT 30S-JA38 (RD/BK) FOR AN OPEN IN THE PASSENGER SEAT SIDE AIR BAG WIRING HARNESS	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.	**Yes** GO to J23 . **No** REPAIR circuit 30S-JA38 (RD/BK). GO to J27 .

• Disconnect: Passenger Seat Side Air Bag Module C337 or Passenger Seat Side Thorax Air Bag Module C3227. • For additional information to access passenger seat side air bag module C337 or passenger seat side thorax air bag module C3227, refer to Side Air Bag Module in this section. • Measure the resistance between passenger seat side air bag warning harness C314 pin 2, circuit 30S-JA38 (RD/BK), harness side and passenger seat side air bag module C337 or passenger seat side thorax air bag module C3227 pin 2, circuit 30S-JA38 (RD/BK), harness side.  A0060477 • **Is the resistance less than 0.5 ohm?**	
J23 CHECK CIRCUIT 31S-JA38 (BK/RD) FOR AN OPEN IN THE PASSENGER SEAT SIDE AIR BAG WIRING HARNESS	
• Measure the resistance between passenger seat side air bag wiring harness C314 pin 1, circuit 31S-JA38 (BK/RD), harness side and passenger seat side air bag module C337 or passenger seat side thorax air bag module C3227 pin 1, circuit 31S-JA38 (BK/RD), harness side.  A0060476 • **Is the resistance less than 0.5 ohm?**	**Yes** INSTALL a new passenger seat side air bag module or passenger seat side thorax air bag module. GO to J27 . **No** REPAIR circuit 31S-JA38 (BK/RD). GO to J27 .
J24 CHECK FOR LOW RESISTANCE ON CIRCUITS 30S-JA38 (RD/BK) AND 31S-JA38 (BK/RD) IN THE PASSENGER SEAT SIDE AIR BAG WIRING HARNESS	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Seat Side Air Bag Module C337 or Passenger Seat Side Thorax Air Bag Module C3227. • For additional information to access passenger seat side air bag module C337 or passenger seat	**Yes** INSTALL a new passenger seat side air bag module or passenger seat side thorax air bag module. GO to J27 . **No** REPAIR circuits 30S-JA38 (RD/BK) and 31S-JA38 (BK/RD) between C337 or C3227 and C314. GO to J27 .

side thorax air bag module C3227, refer to Side Air Bag Module in this section. • Disconnect: Passenger Seat Side Air Bag Module or Passenger Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Position the passenger seat in the vehicle. **Do not** repower the system at this time. • Connect: Passenger Seat Side Air Bag Warning Harness C314. • Connect: Passenger Seat Connectors. • Measure the resistance between passenger seat side air bag module C337 or passenger seat side thorax air bag module C3227 pin 2, circuit 30S-JA38 (RD/BK), harness side and pin 1, circuit 31S-JA38 (BK/RD), harness side.  A0030495 • **Is the resistance greater than 10,000 ohms?**	
J25 CONFIRM RCM FAULT	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors, and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Key in OFF position. • Connect: RCM C310b. • Connect: The Affected Seat Side Air Bag Module Restraint System Diagnostic Tool 418-133 or Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool 501-097. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2295/Record All Flagged Faults. • **Was DTC B2295 retrieved during the on-demand self test?**	**Yes** If a **"?"** was flagged by the diagnostic tool, CARRY OUT the entire pinpoint test before installing a new RCM. INSTALL a new RCM. REFER to Restraints Control Module (RCM) . GO to J27 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to J27 .
J26 CHECK FOR AN INTERMITTENT FAULT	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.	**Yes** CHECK for causes of the intermittent fault at or near the affected seat side air bag connector. REPAIR any intermittent concerns found.

• Disconnect: The Affected Seat Side Air Bag Module/Seat Side Thorax Air Bag Module C367/C3226 (Driver) or C337/C3227 (Passenger). • Connect: The Affected Seat Side Air Bag Module Restraint System Diagnostic Tool 418-133 or Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool 501-097. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2295/Record All Flagged Faults. • **Was DTC B2295 retrieved during the on-demand self test?**	If an intermittent concern **was** found and repaired, GO to J27 . If an intermittent concern **was not** found and repaired, USE the flagged faults recorded and GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded, multiple faults exist and the entire pinpoint test must be carried out. For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a short to battery (STB) fault, GO to J3 . For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a short to ground (STG) fault, GO to J4 . For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with an open circuit (O_CIR) fault, GO to J5 . For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a low resistance (LOWRES) fault, GO to J7 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a short to battery (STB) fault, GO to J9 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a short to ground (STG) fault, GO to J10 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with an open circuit (O_CIR) fault, GO to J11 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a low resistance (LOWRES) fault, GO to J13 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to J27 .

J27 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step J1. • **Were any continuous DTCs retrieved during Step J1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction. **No** RECONNECT the system. If previously directed to deactivate the system, REACTIVATE the system. REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.

Pinpoint Test K: LFC 42, 43, 44, 45 and 46/DTC B2296 Restraint System - Impact Sensor Fault

Normal Operation

The restraints control module (RCM) checks all of the impact sensor circuits for faults. If the RCM detects one of the following faults on any of the impact sensor circuits, it will store diagnostic trouble code (DTC) B2296 in memory and flash either lamp fault code (LFC) 42, 43, 44, 45 or 46 depending on the fault (or higher priority code if one exists) on the air bag indicator.

Fault Conditions

The RCM monitors for the following fault conditions:

- low resistance.
- high resistance or circuit open.
- circuit short to voltage.
- circuit short to ground.

Possible Causes

A impact sensor fault can be caused by:

- damaged wiring, terminals, or connectors.
- a faulty impact sensor.
- incorrect sensor mounting.
- a faulted RCM.

PINPOINT TEST K: LFC 42, 43, 44, 45 AND 46/DTC B2296 RESTRAINT SYSTEM IMPACT SENSOR FAULT

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take

K1 CHECK FOR A HARD OR INTERMITTENT DTC	
⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Flag/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. If a flagged fault of **"?"** was recorded, multiple faults exist and the entire pinpoint test must be carried out. For first row driver side impact (F_D_SEN) sensor with a mounting/communications (COMM) fault, GO to K2 . For first row driver side impact sensor (F_D_ SEN) with an internal fault (INT) fault, INSTALL a new first row driver side impact sensor. REFER to Side Impact Sensor - First Row, B-Pillar in this section. GO to K54 . For first row passenger side impact sensor (F_P_ SEN) with a mounting/communications (COMM) fault, GO to K12 . For first row passenger side impact sensor (F_P_ SEN) with an internal fault (INT) fault, INSTALL a new first row passenger side impact sensor. REFER to Side Impact Sensor - First Row, B-Pillar in this section. GO to K54 . For second row driver side impact sensor (D_2_SEN) with a mounting/communication (COMM) fault, GO to K22 . For second row driver side impact sensor (D_2_ SEN) with an internal (INT) fault, INSTALL a new second row driver side impact sensor. REFER to Side Impact Sensor - Second Row, C-Pillar in this section. GO to K54 . For second row passenger side impact sensor (P_2_ SEN) with a mounting /communications (COMM) fault, GO to K32 . For second row passenger side impact sensor (P_2_SEN) with an internal (INT) fault, INSTALL a new second row passenger side impact sensor. REFER to Side Impact Sensor

	Second Row, C-Pillar in this section. GO to K54 . For front impact severity sensor (FNT_SEN) with a mounting/communications (COMM) fault, GO to K42 . For front impact severity sensor (FNT_SEN) with an internal fault (INT) fault, INSTALL a new front impact severity sensor. REFER to Front Impact Severity Sensor in this section. GO to K54 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to K53 .
K2 INSPECT THE FIRST ROW DRIVER SIDE IMPACT SENSOR MOUNTING, AND MOUNTING SURFACE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Access the first row driver side impact sensor. For additional information, refer to Side Impact Sensor First Row, B-Pillar in this section. • Inspect the first row driver side impact sensor for: ♦ loose electrical connector. ♦ loose sensor mounting bolt. • Remove the first row driver side impact sensor. • Visually inspect the first row driver side impact sensor, alignment tabs, electrical connector, and mounting surface for damage, corrosion or dirt. • **Was a significant amount of corrosion or dirt found, or was the first row driver side impact sensor attached to the mounting surface incorrectly or was the impact sensor bolt not fully seated and tightened correctly?**	**Yes** CLEAN and TIGHTEN the bolt. REPAIR the mounting surface as necessary. REINSTALL the first row driver side impact sensor. GO to K54 . **No** GO to K3 .
K3 INSTALL THE FIRST ROW DRIVER SIDE IMPACT SENSOR AND CARRY OUT THE ON-DEMAND SELF TEST	
• Clean and repair the mounting surface as necessary. • Clean the first row driver side impact sensor mounting bolt. • Install the first row driver side impact sensor. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.	**Yes** GO to K4 . **No** Fault corrected. GO to K54 .

• Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	
K4 CHECK THE FIRST ROW DRIVER SIDE IMPACT SENSOR GROUND CIRCUIT 9-JA39 (BN) FOR HIGH RESISTANCE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: First Row Driver Side Impact Sensor C3209. • Measure the resistance between first row driver side impact sensor C3209 pin 1, circuit 9-JA39 (BN), harness side and the first row driver side impact sensor case ground. • **Is the resistance less than 100 ohms?**	**Yes** GO to K6 . **No** GO to K5 .
K5 CLEAN THE FIRST ROW DRIVER SIDE IMPACT SENSOR MOUNTING SURFACE AND CARRY OUT THE ON-DEMAND SELF TEST	
• Remove the first row driver side impact sensor. • Clean and repair the mounting surface as necessary. • Clean the first row driver side impact sensor mounting bolt. • Install the first row driver side impact sensor. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** GO to K6 . **No** Fault corrected. GO to K54 .
K6 CHECK CIRCUIT 7-JA39 (YE) AND CIRCUIT 9-JA39 (BN) FOR A SHORT TO VOLTAGE BETWEEN THE FIRST ROW DRIVER SIDE IMPACT SENSOR AND THE RCM	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310a.	**Yes** GO to K7 . **No** REPAIR circuit 7-JA39 (YE) or circuit 9-JA39 (BN). GO to K54 .

• Disconnect: RCM C310b. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Measure the voltage between first row driver side impact sensor C3209 pin 1, circuit 9-JA39 (BN), harness side and ground; and between pin 2, circuit 7-JA39 (YE), harness side and ground.  A0058374 • **Are the voltages less than 0.2 volt?**	
K7 CHECK CIRCUIT 7-JA39 (YE) AND CIRCUIT 9-JA39 (BN) FOR A SHORT TO GROUND BETWEEN THE FIRST ROW DRIVER SIDE IMPACT SENSOR AND THE RCM	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Measure the resistance between first row driver side impact sensor C3209 pin 1, circuit 9-JA39 (BN), harness side and ground; and between pin 2, circuit 7-JA39 (YE), harness side and ground.  A0058373 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to K8 . **No** REPAIR circuit 7-JA39 (YE) or circuit 9-JA39 (BN). GO to K54 .
K8 CHECK CIRCUIT 7-JA39 (YE) FOR AN OPEN BETWEEN THE RCM AND THE FIRST ROW DRIVER SIDE IMPACT SENSOR	
• Measure the resistance between RCM C310b pin 27, circuit 7-JA39 (YE), harness side and first row driver side impact sensor C3209 pin 2, circuit 7-JA39 (YE), harness side.	**Yes** GO to K9 . **No** REPAIR circuit 7-JA39 (YE). GO to K54 .

 A0060503 • **Is the resistance less than 0.5 ohm?**	
K9 CHECK CIRCUIT 9-JA39 (BN) FOR AN OPEN BETWEEN THE RCM AND FIRST ROW DRIVER SIDE IMPACT SENSOR	
• Measure the resistance between RCM C310b pin 28, circuit 9-JA39 (BN), harness side and first row driver side impact sensor C3209 pin 1, circuit 9-JA39 (BN), harness side.  A0060504 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to K10 . **No** REPAIR circuit 9-JA39 (BN). GO to K54 .
K10 CHECK CIRCUIT 7-JA39 (YE) FOR A SHORT TO CIRCUIT 9-JA39 (BN) BETWEEN THE RCM AND THE FIRST ROW DRIVER SIDE IMPACT SENSOR	
• Measure the resistance between first row driver side impact sensor C3209 pin 2, circuit 7-JA39 (YE), harness side and pin 1, circuit 9-JA39 (BN), harness side.  A0058377 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to K11 . **No** REPAIR circuit 7-JA39 (YE) and circuit 9-JA39 (BN). GO to K54 .
K11 CHECK THE FIRST ROW DRIVER SIDE IMPACT SENSOR	
• Connect: RCM C310a. • Connect: RCM C310b. • Install a known good first row driver side impact sensor. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test.	**Yes** INSTALL the original first row driver side impact sensor. GO to K52 . **No** Fault corrected. GO to K54 .

• Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Were any faults flagged against the first row driver side impact sensor?**	
K12 INSPECT THE FIRST ROW PASSENGER SIDE IMPACT SENSOR MOUNTING, AND MOUNTING SURFACE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Access the first row passenger side impact sensor. For additional information, refer to Side Impact Sensor First Row, B-Pillar in this section. • Inspect the first row passenger side impact sensor for: ♦ loose electrical connector. ♦ loose sensor mounting bolt. • Remove the first row passenger side impact sensor. • Visually inspect the first row passenger side impact sensor, alignment tabs, electrical connector, and mounting surface for damage, corrosion or dirt. • **Was a significant amount of corrosion or dirt found, or was the passenger side impact sensor attached to the mounting surface incorrectly or was the sensor bolt not fully seated and tightened correctly?**	**Yes** CLEAN and TIGHTEN the bolt. REPAIR the mounting surface and electrical connections as necessary. REINSTALL the first row passenger side impact sensor. GO to K54 . **No** GO to K13 .
K13 INSTALL THE FIRST ROW PASSENGER SIDE IMPACT SENSOR AND CARRY OUT THE ON-DEMAND SELF TEST	
• Clean and repair the mounting surface as necessary. • Clean the first row passenger side impact sensor mounting bolt. • Install the first row passenger side impact sensor. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** GO to K14 . **No** Fault corrected. GO to K54 .
K14 CHECK THE FIRST ROW PASSENGER SIDE IMPACT SENSOR GROUND CIRCUIT 9-JA40	

(BN/WH) FOR HIGH RESISTANCE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: First Row Passenger Side Impact Sensor C3211. • Measure the resistance between first row passenger side impact sensor C3211 pin 1, circuit 9-JA40 (BN/WH), harness side and first row passenger side impact sensor case ground. • **Is the resistance less than 100 ohms?**	**Yes** GO to K16 . **No** GO to K15 .
K15 CLEAN FIRST ROW PASSENGER SIDE IMPACT SENSOR MOUNTING SURFACE AND CARRY OUT ON-DEMAND SELF TEST	
• Remove the first row passenger side impact sensor. • Clean and repair the mounting surface as necessary. • Clean the first row passenger side impact sensor mounting bolts. • Install the first row passenger side impact sensor. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** GO to K16 . **No** Fault corrected. GO to K54 .
K16 CHECK CIRCUIT 7-JA40 (YE/VT) AND CIRCUIT 9-JA40 (BN/WH) FOR A SHORT TO BATTERY BETWEEN THE FIRST ROW PASSENGER SIDE IMPACT SENSOR AND THE RCM	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310a. • Disconnect: RCM C310b. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Measure the voltage between first row passenger side impact sensor C3211 pin 2, circuit 7-JA40	**Yes** GO to K17 . **No** REPAIR circuit 7-JA40 (YE/VT) or circuit 9-JA40 (BN/WH). GO to K54 .

(YE/VT), harness side and ground; and between pin 1, circuit 9-JA40 (BN/WH), harness side and ground.  A0058374 • **Are the voltages less than 0.2 volt?**	
K17 CHECK CIRCUIT 7-JA40 (YE/VT) AND CIRCUIT 9-JA40 (BN/WH) FOR A SHORT TO GROUND BETWEEN THE FIRST ROW PASSENGER SIDE IMPACT SENSOR AND THE RCM	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Measure the resistance between first row passenger side impact sensor C3211 pin 2, circuit 7-JA40 (YE/VT), harness side and ground; and between pin 1, circuit 9-JA40 (BN/WH), harness side and ground.  A0058373 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to K18 . **No** REPAIR circuit 7-JA40 (YE/VT) or circuit 9-JA40 (BN/WH). GO to K54 .
K18 CHECK CIRCUIT 7-JA40 (YE/VT) FOR AN OPEN BETWEEN THE RCM AND THE FIRST ROW PASSENGER SIDE IMPACT SENSOR	
• Measure the resistance between RCM C310b pin 29, circuit 7-JA40 (YE/VT), harness side and first row passenger side impact sensor C3211 pin 2, circuit 7-JA40 (YE/VT), harness side.  A0060505 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to K19 . **No** REPAIR circuit 7-JA40 (YE/VT). GO to K54 .

K19 CHECK CIRCUIT 9-JA40 (BN/WH) FOR AN OPEN BETWEEN THE RCM AND THE FIRST ROW PASSENGER SIDE IMPACT SENSOR	
• Measure the resistance between RCM C310b pin 30, circuit 9-JA40 (BN/WH), harness side and first row passenger side impact sensor C3211 pin 1, circuit 9-JA40 (BN/WH), harness side.  A0060506 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to K20 . **No** REPAIR circuit 9-JA40 (BN/WH). GO to K54 .
K20 CHECK CIRCUIT 7-JA40 (YE/VT) FOR A SHORT TO CIRCUIT 9-JA40 (BN/WH) BETWEEN THE RCM AND THE FIRST ROW PASSENGER SIDE IMPACT SENSOR	
• Measure the resistance between first row passenger side impact sensor C3211 pin 2, circuit 7-JA40 (YE/VT), harness side pin 1, circuit 9-JA40 (BN/WH), harness side.  A0058373 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to K21 . **No** REPAIR short between circuit 7-JA40 (YE/VT) and circuit 9-JA40 (BN/WH). GO to K54 .
K21 CHECK THE FIRST ROW PASSENGER SIDE IMPACT SENSOR	
• Connect: RCM C310a. • Connect: RCM C310b. • Install a known good first row passenger side impact sensor. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Were any faults flagged against the first row passenger side impact sensor?**	**Yes** INSTALL the original first row passenger side impact sensor. GO to K52 . **No** Fault corrected. GO to K54 .

K22 INSPECT THE SECOND ROW DRIVER SIDE IMPACT SENSOR MOUNTING, AND MOUNTING SURFACE	

• Key in OFF position.
• Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
• Access the second row side impact sensor. For additional information, refer to Side Impact Sensor Second Row, C-Pillar in his section.
• Inspect the second row driver side impact sensor for:
  • a loose electrical connector.
  • a loose sensor mounting bolt.
  • a loose sensor mounting bracket.
• Remove the second row driver side impact sensor.
• Visually inspect the second row driver side impact sensor, electrical connector, mounting bracket and mounting surface for damage, corrosion or dirt.
• **Was a significant amount of corrosion or dirt found, or was the second row driver side impact sensor mounting bracket attached to the mounting surface incorrectly or was the second row driver side impact sensor bolt not fully seated and tightened correctly?**
	Yes
	CLEAN and TIGHTEN the bolt. REPAIR the mounting surface as necessary. REINSTALL the second row driver side impact sensor. GO to K54 .
	
	No
	GO to K23 .

K23 INSTALL THE SECOND ROW DRIVER SIDE IMPACT SENSOR AND CARRY OUT THE ON-DEMAND SELF TEST	
• Clean and repair the mounting surface as necessary. • Clean the second row driver side impact sensor mounting bolt. • Install the second row driver side impact sensor. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** GO to K24 . **No** Fault corrected. GO to K54 .
K24 CHECK THE SECOND ROW DRIVER SIDE IMPACT SENSOR GROUND CIRCUIT 9-JA41 (BN) FOR HIGH RESISTANCE	
• Key in OFF position.	**Yes** GO to K26 .

• Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Second Row Driver Side Impact Sensor Connector. • Measure the resistance between second row driver side impact sensor connector pin 1, circuit 9-JA41 (BN), harness side and the second row driver side impact sensor case ground. • **Is the resistance less than 100 ohms?**	**No** GO to K25 .
K25 CLEAN THE SECOND ROW DRIVER SIDE IMPACT SENSOR MOUNTING SURFACE AND CARRY OUT THE ON-DEMAND SELF TEST	
• Remove the second row driver side impact sensor. • Clean and repair the mounting surface as necessary. • Clean the second row driver side impact sensor mounting bolt. • Install the second row driver side impact sensor. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** GO to K26 . **No** Fault corrected. GO to K54 .
K26 CHECK CIRCUIT 7-JA41 (YE) AND CIRCUIT 9-JA41 (BN) FOR A SHORT TO BATTERY BETWEEN THE SECOND ROW DRIVER SIDE IMPACT SENSOR AND THE RCM	
• Key in ON position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310a. • Disconnect: RCM C310b. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Measure the voltage between second row driver side impact sensor connector pin 2, circuit 7-JA41 (YE), harness side and ground; and between pin 1, circuit 9-JA41 (BN), harness side and ground.	**Yes** GO to K27 . **No** REPAIR circuit 7-JA41 (YE) or circuit 9-JA41 (BN). GO to K54 .

 A0058374 • **Are the voltages less than 0.2 volt?**	
K27 CHECK CIRCUIT 7-JA41 (YE) AND CIRCUIT 9-JA41 (BN) FOR A SHORT TO GROUND BETWEEN THE SECOND ROW DRIVER SIDE IMPACT SENSOR AND THE RCM	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Measure the resistance between second row driver side impact sensor connector pin 1, circuit 9-JA41 (BN), harness side and ground; and between pin 2, circuit 7-JA41 (YE), harness side and ground.  A0058373 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to K28 . **No** REPAIR circuit 7-JA41 (YE) or circuit 9-JA41 (BN). GO to K54 .
K28 CHECK CIRCUIT 7-JA41 (YE) FOR AN OPEN BETWEEN THE RCM AND THE SECOND ROW DRIVER SIDE IMPACT SENSOR	
• Measure the resistance between RCM C310b pin 13, circuit 7-JA41 (YE), harness side and second row driver side impact sensor connector pin 2, circuit 7-JA41 (YE), harness side.  A0060507 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to K29 . **No** REPAIR circuit 7-JA41 (YE). GO to K54 .
K29 CHECK CIRCUIT 9-JA41 (BN) FOR AN OPEN BETWEEN THE RCM AND THE SECOND ROW DRIVER SIDE IMPACT SENSOR	

• Measure the resistance between RCM C310b pin 14, circuit 9-JA41 (BN), harness side and second row driver side impact sensor connector pin 1, circuit 9-JA41 (BN), harness side.  A0060508 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to K30 . **No** REPAIR circuit 9-JA41 (BN). GO to K54 .
K30 CHECK CIRCUIT 7-JA41 (YE) FOR A SHORT TO CIRCUIT 9-JA41 (BN) BETWEEN THE RCM AND SECOND ROW DRIVER SIDE IMPACT SENSOR	
• Measure the resistance between second row driver side impact sensor connector pin 2, circuit 7-JA41 (YE), harness side and pin 1, circuit 9-JA41 (BN), harness side.  A0058377 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to K31 . **No** REPAIR circuit 7-JA41 (YE) or circuit 9-JA41 (BN). GO to K54 .
K31 CHECK THE SECOND ROW DRIVER SIDE IMPACT SENSOR	
• Connect: RCM C310a. • Connect: RCM C310b. • Install a known good second row driver side impact sensor. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Were any faults flagged against the second row driver side impact sensor?**	**Yes** INSTALL the original second row driver side impact sensor. GO to K52 . **No** Fault corrected. GO to K54 .
K32 INSPECT THE SECOND ROW PASSENGER SIDE IMPACT SENSOR MOUNTING, MOUNTING BRACKET AND MOUNTING SURFACE	
• Key in OFF position.	**Yes** CLEAN, TIGHTEN the bolt or REPAIR the

• Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Access the second row passenger side impact sensor. For additional information, refer to Side Impact Sensor Second Row, C-Pillar in this section. • Inspect the second row passenger side impact sensor for: ♦ loose electrical connector. ♦ loose sensor mounting bolt. • Remove the second row passenger side impact sensor. • Visually inspect the second row passenger side impact sensor, alignment tabs, electrical connector, and mounting surface for damage, corrosion or dirt. • **Was a significant amount of corrosion or dirt found, or was the second row passenger side impact sensor mounting bracket attached to the mounting surface incorrectly or were the impact sensor bolts not fully seated and tightened correctly?**	mounting surface as necessary. REINSTALL the second row passenger side impact sensor. GO to K54 . **No** GO to K33 .
K33 INSTALL THE SECOND ROW PASSENGER SIDE IMPACT SENSOR AND CARRY OUT THE ON-DEMAND SELF TEST	
• Clean and repair the mounting surface as necessary. • Clean the second row passenger side impact sensor mounting bolt. • Install the second row passenger side impact sensor. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** GO to K34 . **No** Fault corrected. GO to K54 .
K34 CHECK THE SECOND ROW PASSENGER SIDE IMPACT SENSOR GROUND CIRCUIT 9-JA43 (BN/WH) FOR HIGH RESISTANCE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.	**Yes** GO to K36 . **No** GO to K35 .

• Disconnect: Second Row Passenger Side Impact Sensor Connector. • Measure the resistance between second row passenger side impact sensor connector pin 1, circuit 9-JA43 (BN/WH), harness side and the second row passenger side impact sensor case ground. • **Is the resistance less than 100 ohms?**	
K35 CLEAN THE SECOND ROW PASSENGER SIDE IMPACT SENSOR MOUNTING SURFACE AND CARRY OUT THE ON-DEMAND SELF TEST	
• Remove the second row passenger side impact sensor. • Clean and repair the mounting surface as necessary. • Clean the second row passenger side impact sensor mounting bolt. • Install the second row passenger side impact sensor. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** GO to K36 . **No** Fault corrected. GO to K54 .
K36 CHECK CIRCUIT 7-JA43 (YE/VT) AND CIRCUIT 9-JA43 (BN/WH) FOR A SHORT TO VOLTAGE BETWEEN THE SECOND ROW PASSENGER SIDE IMPACT SENSOR AND THE RCM	
• Key in ON position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310a. • Disconnect: RCM C310b. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Measure the voltage between second row passenger side impact sensor connector pin 2, circuit 7-JA43 (YE/VT), harness side and ground; and between pin 1, circuit 9-JA43 (BN/WH), harness side and ground.	**Yes** GO to K37 . **No** REPAIR circuit 7-JA43 (YE/VT) or circuit 9-JA43 (BN/WH). GO to K54 .

 A0058374 • **Are the voltages less than 0.2 volt?**	
K37 CHECK CIRCUIT 7-JA43 (YE/VT) AND CIRCUIT 9-JA43 (BN/WH) FOR A SHORT TO GROUND BETWEEN THE SECOND ROW PASSENGER SIDE IMPACT SENSOR AND THE RCM	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Measure the resistance between second row passenger side impact sensor connector pin 2, circuit 7-JA43 (YE/VT), harness side and ground; and between pin 1, circuit 9-JA43 (BN/WH), harness side and ground.  A0058373 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to K38 . **No** REPAIR circuit 7-JA43 (YE/VT) or circuit 9-JA43 (BN/WH). GO to K54 .
K38 CHECK CIRCUIT 7-JA43 (YE/VT) FOR AN OPEN BETWEEN THE RCM AND THE SECOND ROW PASSENGER SIDE IMPACT SENSOR	
• Measure the resistance between RCM C310b pin 15, circuit 7-JA43 (YE/VT), harness side and second row passenger side impact sensor connector pin 2, circuit 7-JA43 (YE/VT), harness side.  A0060509 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to K39 . **No** REPAIR circuit 7-JA43 (YE/VT). GO to K54 .
K39 CHECK CIRCUIT 9-JA43 (BN/WH) FOR AN OPEN BETWEEN THE RCM AND THE SECOND ROW PASSENGER SIDE IMPACT SENSOR	

• Measure the resistance between RCM C310b pin 16, circuit 9-JA43 (BN/WH), harness side and second row passenger side impact sensor connector pin 1, circuit 9-JA43 (BN/WH), harness side.  A0060510 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to K40 . **No** REPAIR circuit 9-JA43 (BN/WH). GO to K54 .
K40 CHECK CIRCUIT 7-JA43 (YE/VT) FOR A SHORT TO CIRCUIT 9-JA43 (BN/WH) BETWEEN THE RCM AND THE SECOND ROW PASSENGER SIDE IMPACT SENSOR	
• Measure the resistance between second row passenger side impact sensor connector pin 2, circuit 7-JA43 (YE/VT), harness side and pin 1, circuit 9-JA43 (BN/WH), harness side.  A0058377 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to K41 . **No** REPAIR circuit 7-JA43 (YE/VT) and circuit 9-JA43 (BN/WH). GO to K54 .
K41 CHECK THE SECOND ROW PASSENGER SIDE IMPACT SENSOR	
• Connect: RCM C310a. • Connect: RCM C310b. • Install a known good second row passenger side impact sensor. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Were any faults flagged against the second row passenger side impact sensor?**	**Yes** INSTALL the original second row passenger side impact sensor. GO to K52 . **No** Fault corrected. GO to K54 .
K42 INSPECT THE FRONT IMPACT SEVERITY SENSOR MOUNTING, MOUNTING BRACKET AND MOUNTING SURFACE	

• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Access the front impact severity sensor. For additional information, refer to Front Impact Severity Sensor in this section. • Inspect the front impact severity sensor for: ♦ loose electrical connector. ♦ loose sensor mounting bolt. • Remove the front impact severity sensor. • Visually inspect the front impact severity sensor, alignment tabs, electrical connector, and mounting surface for damage, corrosion or dirt. • **Was a significant amount of corrosion or dirt found, or was the front impact severity sensor mounting bracket attached to the mounting surface incorrectly or were the front impact severity sensor bolts not fully seated and tightened correctly?**	**Yes** CLEAN, TIGHTEN bolt or REPAIR the mounting surface as necessary. REINSTALL the front impact severity sensor. GO to K54 . **No** GO to K43 .
K43 INSTALL THE FRONT IMPACT SEVERITY SENSOR AND CARRY OUT THE ON-DEMAND SELF TEST	
• Clean and repair the mounting surface as necessary. • Clean the front impact severity sensor mounting bolt. • Install the front impact severity sensor. Refer to Front Impact Severity Sensor . • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** GO to K44 . **No** Fault corrected. GO to K54 .
K44 CHECK THE FRONT IMPACT SEVERITY SENSOR GROUND CIRCUIT 9-JA49 (BN) FOR HIGH RESISTANCE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Front Impact Severity Sensor C177. • Measure the resistance between front impact severity sensor C177 pin 1, circuit 9-JA49 (BN), harness side and front impact severity sensor case	**Yes** GO to K46 . **No** GO to K45 .

ground. • **Is the resistance less than 100 ohms?**	
K45 CLEAN THE FRONT IMPACT SEVERITY SENSOR MOUNTING SURFACE AND CARRY OUT THE ON-DEMAND SELF TEST	
• Remove the front impact severity sensor. Refer to Front Impact Severity Sensor . • Clean and repair the mounting surface as necessary. • Clean the front impact severity sensor mounting bolt. • Install the front impact severity sensor. Refer to Front Impact Severity Sensor . • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** GO to K46 . **No** Fault corrected. GO to K54 .
K46 CHECK CIRCUIT 7-JA49 (YE) AND CIRCUIT 9-JA49 (BN) FOR A SHORT TO VOLTAGE BETWEEN THE RCM AND THE FRONT IMPACT SEVERITY SENSOR	
• Key in ON position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310a. • Disconnect: RCM C310b. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Measure the voltage resistance between front impact severity sensor C177 pin 2, circuit 7-JA49 (YE), harness side and ground; and between front impact severity sensor C177 pin 1, circuit 9-JA49 (BN), harness side and ground.  • **Are the voltages less than 0.2 volt?**	**Yes** GO to K47 . **No** REPAIR circuit 7-JA49 (YE) or circuit 9-JA49 (BN). GO to K54 .

K47 CHECK CIRCUIT 7-JA49 (YE) AND CIRCUIT 9-JA49 (BN) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE FRONT IMPACT SEVERITY SENSOR	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Measure the resistance between front impact severity sensor C177 pin 2, circuit 7-JA49 (YE), harness side and ground; and between front impact severity sensor C177 pin 1, circuit 9-JA49 (BN), harness side and ground.  A0058373 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to K48 . **No** REPAIR circuit 7-JA49 (YE) or circuit 9-JA49 (BN). GO to K54 .
K48 CHECK CIRCUIT 7-JA49 (YE) FOR AN OPEN BETWEEN THE RCM AND THE FRONT IMPACT SEVERITY SENSOR	
• Measure the resistance between RCM C310b pin 19, circuit 7-JA49 (YE), harness side and front impact severity sensor C177 pin 2, circuit 7-JA49 (YE), harness side.  A0060511 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to K49 . **No** REPAIR circuit 7-JA49 (YE). GO to K54 .
K49 CHECK CIRCUIT 9-JA49 (BN) FOR AN OPEN BETWEEN THE RCM AND THE FRONT IMPACT SEVERITY SENSOR	
• Measure the resistance between RCM C310b pin 20, circuit 9-JA49 (BN), harness side and front impact severity sensor C177 pin 1, circuit 9-JA49 (BN), harness side.	**Yes** GO to K50 . **No** REPAIR circuit 9-JA49 (BN). GO to K54 .

 A0060512 • **Is the resistance less than 0.5 ohm?**	
K50 CHECK CIRCUIT 7-JA49 (YE) FOR A SHORT TO CIRCUIT 9-JA49 (BN) BETWEEN THE RCM AND THE FRONT IMPACT SEVERITY SENSOR	
• Measure the resistance between C177 pin 2, circuit 7-JA49 (YE), harness side and the front impact severity sensor C177 pin 1, circuit 9-JA49 (BN), harness side.  A0060479 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to K51 . **No** REPAIR circuits 7-JA49 (YE) and circuit 9-JA49 (BN). GO to K54 .
K51 CHECK THE FRONT IMPACT SEVERITY SENSOR	
• Connect: RCM C310a. • Connect: RCM C310b. • Install a known good front impact severity sensor. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Were any faults flagged against the front impact severity sensor?**	**Yes** INSTALL the original front impact severity sensor. GO to K52 . **No** Fault corrected. GO to K54 .
K52 CONFIRM THE RCM FAULT	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors, and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Key in OFF position. • Connect: Impact Sensors. • Connect: RCM C310a. • Connect: RCM C310b.	**Yes** If a **"?"** was flagged by the diagnostic tool, CARRY OUT the entire pinpoint test. INSTALL a new RCM. GO to K54 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any

• Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	intermittent concerns found. GO to K54 .
K53 CHECK FOR AN INTERMITTENT FAULT	
• Key in OFF position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is now present. The fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. If a flagged fault of **"?"** was recorded, multiple faults exist and the entire pinpoint test must be carried out. For first row driver side impact (F_D_SEN) sensor with a mounting/communications (COMM) fault, GO to K2 . For first row driver side impact sensor (F_D_ SEN) with an internal fault (INT) fault, INSTALL a new first row driver side impact sensor. REFER to Side Impact Sensor - First Row, B-Pillar in this section. GO to K54 . For first row passenger side impact sensor (F_P_ SEN) with a mounting/communications (COMM) fault, GO to K12 . For first row passenger side impact sensor (F_P_ SEN) with an internal fault (INT) fault, INSTALL a new first row passenger side impact sensor. REFER to Side Impact Sensor - First Row, B-Pillar in this section. GO to K54 . For second row driver side impact sensor (D_2_SEN) with a mounting/communication (COMM) fault, GO to K22 . For second row driver side impact sensor (D_2_ SEN) with an internal (INT) fault, INSTALL a new second row driver side impact sensor. REFER to Side Impact Sensor - Second Row, C-Pillar in this section. GO to K54 .

	For second row passenger side impact sensor (P_2_ SEN) with a mounting /communications (COMM) fault, GO to K32 . For second row passenger side impact sensor (P_2_SEN) with an internal (INT) fault, INSTALL a new second row passenger side impact sensor. REFER to Side Impact Sensor - Second Row, C-Pillar in this section. GO to K54 . For front impact severity sensor (FNT_SEN) with a mounting/communications (COMM) fault, GO to K42 . For front impact severity sensor (FNT_SEN) with an internal fault (INT) fault, INSTALL a new front impact severity sensor. REFER to Front Impact Severity Sensor in this section. GO to K54 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to K54 .
K54 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step K1. • **Were any continuous DTCs retrieved during Step K1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.

Pinpoint Test L: LFC 51/DTC B2434 Driver Safety Belt Buckle Switch Circuit Short to Ground

Normal Operation

The restraints control module (RCM) checks the driver safety belt buckle switch circuits for faults. If the RCM detects a short to ground fault, it will store diagnostic trouble code (DTC) B2434 in memory and flash lamp fault code (LFC) 51 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A driver safety belt buckle switch open circuit fault can be caused by:

- wiring, terminals, or connectors.
- a faulty driver safety belt buckle switch.
- a faulted RCM.

PINPOINT TEST L: LFC 51/DTC B2434 DRIVER SAFETY BELT BUCKLE SWITCH CIRCUIT SHORT TO GROUND

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
L1 CHECK FOR A HARD OR INTERMITTENT DTC	
⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2434 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and DTC is no longer retrieved during the on-demand self test. GO to L2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to L6 .
L2 CHECK CIRCUIT 8-JA54 (WH) FOR A SHORT TO GROUND BETWEEN THE RCM AND DRIVER SEAT	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Seat C315. • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 25, circuit 8-JA54 (WH), harness side and ground.	**Yes** GO to L3 . **No** REPAIR circuit 8-JA54 (WH) in the body wiring harness. GO to L7 .

 A0041580 • **Is the resistance greater than 1,000,000 ohms?**	
L3 CHECK CIRCUIT 8-JA54 (WH) FOR A SHORT TO GROUND BETWEEN THE DRIVER SAFETY BELT BUCKLE SWITCH AND GROUND	
• Connect: Driver Seat C315. • Disconnect: Driver Safety Belt Buckle Switch C3065. • Measure the resistance between driver safety belt buckle switch C3065 pin 1, circuit 8-JA54 (WH), harness side and ground.  A0030636 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to L4 . **No** REPAIR circuit 8-JA54 (WH) in the seat wiring harness. GO to L7 .
L4 CHECK THE DRIVER SAFETY BELT BUCKLE SWITCH	
• Connect: RCM C310b. • Install a known good driver safety belt buckle. Refer to Section 501-20A . • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2434 retrieved during the on-demand self test?**	**Yes** GO to L5 . **No** Fault corrected. GO to L7 .
L5 CONFIRM RCM FAULT	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors, and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Reinstall the original driver safety belt buckle switch. Refer to Section 501-20A . • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS)	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) . GO to L7 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to L7 .

Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2434 retrieved during the on-demand self test?**	
L6 CHECK FOR AN INTERMITTENT FAULT	
• Key in OFF position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2434 retrieved during the on-demand self test?**	**Yes** GO to L2 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to L7 .
L7 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step L1. • **Were any continuous DTCs retrieved during Step L1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction. **No** RECONNECT the system. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.

Pinpoint Test M: LFC 51/DTC B2435 Driver Safety Belt Buckle Switch Circuit Resistance Out of Range

Normal Operation

The restraints control module (RCM) checks the driver safety belt buckle switch circuits for faults. If the RCM detects a current out of range fault, it will store diagnostic trouble code (DTC) B2435 in memory and flash lamp fault code (LFC) 51 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A driver safety belt buckle switch current out of range fault can be caused by:

- wiring, terminals, or connectors.
- a faulty driver safety belt buckle switch.
- a faulted RCM.

PINPOINT TEST M: LFC 51/DTC B2435 DRIVER SAFETY BELT BUCKLE SWITCH CIRCUIT RESISTANCE OUT OF RANGE

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
M1 CHECK FOR A HARD OR INTERMITTENT DTC	
⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards. **⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.** **⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.** **⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2435 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and DTC is no longer retrieved during the on-demand self test. GO to M2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to M8 .
M2 CHECK CIRCUIT 8-JA54 (WH) FOR AN OPEN BETWEEN THE RCM AND DRIVER SEAT	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Driver Seat C315. • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 25, circuit 8-JA54 (WH), harness side and driver seat C315 pin 11, circuit 8-JA54 (WH), harness side.	**Yes** GO to M3 . **No** REPAIR circuit 8-JA54 (WH) in the body wiring harness. GO to M9 .

 A0063171 • **Is the resistance less than 0.5 ohm?**	
M3 CHECK CIRCUIT 31-JA54 (BK/YE) FOR AN OPEN BETWEEN AND DRIVER SEAT AND GROUND	
• Measure the resistance between C315 pin 4, circuit 31-JA54 (BK/YE), harness side and ground.  A0063172 • **Is the resistance less than 5 ohms?**	**Yes** GO to M4 . **No** REPAIR circuit 31-JA54 (BK/YE) in the body wiring harness. GO to M9 .
M4 CHECK CIRCUIT 8-JA54 (WH) FOR AN OPEN BETWEEN THE DRIVER SEAT AND DRIVER SAFETY BELT BUCKLE SWITCH	
• Disconnect: Driver Safety Belt Buckle Switch C3065. • Measure the resistance between driver seat C315 pin 11, circuit 8-JA54 (WH), harness side and driver safety belt buckle switch C3065 pin 1, circuit 8-JA54 (WH), harness side.  A0063173 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to M5 . **No** REPAIR circuit 8-JA54 (WH) in the seat wiring harness. GO to M9 .

• Refer to the continuous DTCs recorded during Step M1. • **Were any continuous DTCs retrieved during Step M1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC)

	Priority Table in this section for pinpoint test direction. **No** RECONNECT the system. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.

Pinpoint Test N: LFC 52/DTC B2438 Passenger Safety Belt Buckle Switch Circuit Short to Ground

Normal Operation

The restraints control module (RCM) checks the passenger safety belt buckle switch circuits for faults. If the RCM detects a short to ground fault, it will store diagnostic trouble code (DTC) B2438 in memory and flash lamp fault code (LFC) 52 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A passenger safety belt buckle switch open circuit fault can be caused by:

- wiring, terminals, or connectors.
- a faulty passenger safety belt buckle switch.
- a faulted RCM.

PINPOINT TEST N: LFC 52/DTC B2438 PASSENGER SAFETY BELT BUCKLE SWITCH CIRCUIT SHORT TO GROUND

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take

Pinpoint Test Q: LFC 52/DTC B2692 Passenger Safety Belt Buckle Switch Circuit Fault

Normal Operation

The restraints control module (RCM) checks the passenger safety belt buckle switch circuits for faults. If the RCM detects an open circuit or a short to voltage fault, it will store diagnostic trouble code (DTC) B2692 in memory and flash lamp fault code (LFC) 52 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A passenger safety belt buckle switch short to battery fault can be caused by:

- wiring, terminals, or connectors.

- a faulty passenger safety belt buckle switch.
- a faulty RCM.

PINPOINT TEST Q: LFC 52/DTC B2692 PASSENGER SAFETY BELT BUCKLE SWITCH CIRCUIT FAULT

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
Q1 CHECK FOR A HARD OR INTERMITTENT DTC	
⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2692 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and DTC is no longer retrieved during the on-demand self test. GO to Q2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to Q7 .
Q2 CHECK CIRCUIT 8-JA55 (WH/BK) FOR A SHORT TO BATTERY BETWEEN THE PASSENGER SAFETY BELT BUCKLE AND RCM	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Passenger Seat Side Air Bag Module C337 or Passenger Seat Side Thorax Air Bag Module C3227. • Connect: Restraint System Diagnostic Tool 418-133 to Passenger Seat Side Air Bag Module C337 or Restraint System Diagnostic Tool 501-097 to Passenger Seat Side Thorax Air Bag Module C3227. • Disconnect: RCM C310b. • Disconnect: Passenger Safety Belt Buckle Switch C3066.	**Yes** GO to Q3 . **No** REPAIR circuit 8-JA55 (WH/BK). GO to Q8 .

• Key in ON position. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Measure the voltage between passenger safety belt buckle switch C3066 pin 1, circuit 8-JA55 (WH/BK), harness side and ground.  A0057209 • **Is the voltage less than 0.2 volt?**	
Q3 CHECK CIRCUIT 8-JA55 (WH/BK) FOR AN OPEN BETWEEN THE PASSENGER SAFETY BELT BUCKLE SWITCH AND RCM	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Measure the resistance between passenger safety belt buckle switch C3066 pin 1, circuit 8-JA55 (WH/BK), harness side and RCM C310b pin 26, circuit 8-JA55 (WH/BK).  A0057212 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to Q4 . **No** REPAIR circuit 8-JA55 (WH/BK) in the seat wiring harness. GO to Q8 .
Q4 CHECK CIRCUIT 31-JA55 (BK/RD) FOR AN OPEN	
• Measure the resistance between the passenger buckle switch C3066 pin 2, circuit 31-JA55 (BK/RD), harness side and ground.  A0057208 • **Is the resistance less than 5 ohms?**	**Yes** GO to Q5 . **No** REPAIR circuit 31-JA55 (BK/RD). GO to Q8 .
Q5 CHECK THE PASSENGER SAFETY BELT BUCKLE SWITCH	
• Connect: RCM C310b. • Install a known good passenger safety belt buckle. Refer to Section 501-20A . • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and	**Yes** GO to Q6 . **No** Fault corrected. GO to Q8 .

Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2692 retrieved during the on-demand self test?**	
Q6 CONFIRM RCM FAULT	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors, and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Reinstall the original passenger safety belt buckle switch. Refer to Section 501-20A . • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2692 retrieved during the on-demand self test?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) . GO to Q8 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to Q8 .
Q7 CHECK FOR AN INTERMITTENT FAULT	
• Key in OFF position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2692 retrieved during the on-demand self test?**	**Yes** GO to Q2 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to Q8 .
Q8 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step Q1. • **Were any continuous DTCs retrieved during Step Q1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction. **No** RECONNECT the system. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system.

	CLEAR all DTCs.

Pinpoint Test R: LFC15/DTC C1414 Incorrect Vehicle ID

Normal Operation

Hard Wire Vehicle ID

The RCM monitors the electrical condition at pins 20 and 21 to detect the vehicle identification code. The RCM compares the pin state with a preprogrammed code. If the RCM detects an unexpected condition at either of these pins, it will store diagnostic trouble code (DTC) C1414 in memory and flash lamp fault code (LFC) 15 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

An incorrect vehicle identification code can be caused by:

- incorrect RCM for vehicle.
- wiring, terminals, or connectors.

PINPOINT TEST R: DTC C1414 INCORRECT VEHICLE ID

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
R1 CHECK FOR A HARD OR INTERMITTENT DTC	
⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test.	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test.GO to R2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to R5 .

• **Was DTC C1414 retrieved during the on-demand self test?**	
R2 CHECK VEHICLE IDENTIFICATION NO. 1	
NOTE: For this vehicle application, RCM C310a pin 20 should be grounded and pin 21 should have no wire attached. • Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310a. • Disconnect: RCM C310b. • Measure the resistance between RCM C310a pin 20, circuit JA-310A (BK/RD), harness side and ground. • **Is the resistance less than 5 ohms?**	**Yes** GO to R3 . **No** REPAIR the circuit. GO to R6 .
R3 CHECK VEHICLE IDENTIFICATION NO. 2	
NOTE: For this vehicle application, RCM C310a pin 20 should be grounded and pin 21 should have no wire attached. • Inspect RCM C310a harness side. Make sure there is no wire attached to pin cavity 21. • **Does cavity 21 contain a wire?**	**Yes** DETERMINE the cause of incorrect vehicle harness configuration. REPAIR as necessary.GO to R6 . **No** GO to R4 .
R4 CHECK THE RCM PART NUMBER	
• Check the part number on the RCM against the part number listed in the master parts catalog. • **Did the part number on the RCM match the part number listed in the master parts catalog?**	**Yes** INSTALL a new RCM with the same part number. Refer to Restraints Control Module (RCM) in this section.GO to R6 . **No** INSTALL a new RCM with the correct part number. REFER to Restraints Control Module (RCM) .GO to R6 .
R5 CHECK FOR AN INTERMITTENT FAULT	
• Key in OFF position. • Enter the following diagnostic mode on the diagnostic tool: Retrieved/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC C1414 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test.GO to R2 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. ACTIVATE other systems in the same wire harness. REPAIR any intermittent concerns found. GO to R6 .
R6 CHECK FOR ADDITIONAL DTCs	

• Refer to the continuous DTCs recorded during Step R1. • **Were any additional DTCs retrieved during Step R1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. If previously directed to deactivate the system, REACTIVATE the system. REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.

Pinpoint Test S: LFC 49/DTC C1947 Seat Track Position Sensor Circuit Short To Ground

Normal Operation

The restraints control module (RCM) monitors the driver seat track position sensor circuits. If the RCM detects a short to ground, it will store diagnostic trouble code (DTC) C1947 in memory and flash lamp fault code (LFC) 49 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A driver seat track position sensor short to ground fault can be caused by:

- damaged wiring, terminals, or connectors.
- a faulty driver seat track position sensor.
- a faulted RCM.

PINPOINT TEST S: LFC 49/DTC C1947 SEAT TRACK POSITION SENSOR CIRCUIT SHORT TO GROUND

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
S1 CHECK FOR A HARD OR INTERMITTENT DTC	
⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING:	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and DTC is no longer retrieved during the on-demand self test. GO to S2 . **No**

The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ **WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC C1947 retrieved during the on-demand self test?**	This is an intermittent fault. The fault condition is not present at this time. GO to S5 .
S2 CHECK CIRCUIT 7-JA53 (YE/RD) AND CIRCUIT 9-JA53 (BN/RD) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE DRIVER SEAT	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310b. • Disconnect: Seat Track Position Sensor C3207. • Measure the resistance between RCM C310b pin 23, circuit 7-JA53 (YE/RD), harness side and ground; and between pin 24, circuit 9-JA53 (BN/RD), harness side and ground.  • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to S3 . **No** REPAIR circuit 7-JA53 (YE/RD) or circuit 9-JA53 (BN/RD). GO to S6 .
S3 CHECK THE SEAT TRACK POSITION SENSOR	
• Connect: RCM C310b. • Install a known good seat track position sensor. Refer to Seat Position Sensor in this section. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test.	**Yes** GO to S4 . **No** Fault corrected. GO to S6 .

• **Was DTC C1947 retrieved during the on-demand self test?**	
S4 CONFIRM THE RCM FAULT	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors, and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Reinstall the original seat track position sensor. Refer to Seat Position Sensor in this section. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self-Test. • **Was DTC C1947 retrieved during the on-demand self test?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to S6 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to S6 .
S5 CHECK FOR AN INTERMITTENT FAULT	
• Key in OFF position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC C1947 retrieved during the on-demand self test?**	**Yes** GO to S2 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to S6 .
S6 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step S1. • **Were any continuous DTCs retrieved during Step S1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.

Pinpoint Test T: LFC 49/DTC C1948 Seat Track Position Sensor Circuit Resistance Out Of Range

NOTE: Due to the seat track position sensor being a hall-effect type sensor, this pinpoint test will be diagnosing a current out of range fault instead of the current DTC definition for a resistance out of range fault.

Normal Operation

The restraints control module (RCM) monitors the driver seat track position sensor circuits. If the RCM detects a current out of range condition, it will store diagnostic trouble code (DTC) C1948 in memory and flash lamp fault code (LFC) 49 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A seat track sensor circuit resistance out of range fault can be caused by:

- damaged wiring, terminals, or connectors.
- a faulty driver seat track position sensor.
- a faulted RCM.

PINPOINT TEST T: LFC 49/DTC C1948 SEAT TRACK POSITION SENSOR CIRCUIT RESISTANCE OUT OF RANGE

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
T1 CHECK FOR A HARD OR INTERMITTENT DTC	
⚠ **WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards.** ⚠ **WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.** ⚠ **WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.** ⚠ **WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test.	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and DTC is no longer retrieved during the on-demand self test. GO to T2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to T8 .

• **Was DTC C1948 retrieved during the on-demand self test?**	
T2 CHECK CIRCUIT 7-JA53 (YE/RD) FOR AN OPEN	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310b. • Disconnect: Driver Seat C315. • Measure the resistance between RCM C310b pin 23, circuit 7-JA53 (YE/RD), harness side and driver seat C315 pin 2, circuit 7-JA53 (YE/RD), harness side.  • **Is the resistance less than 0.5 ohm?**	**Yes** GO to T3 . **No** REPAIR circuit 7-JA53 (YE/RD). GO to T9 .
T3 CHECK CIRCUIT 9-JA53 (BN/RD) FOR AN OPEN	
• Measure the resistance between RCM C310b pin 24, circuit 9-JA53 (BN/RD), harness side and driver seat C315 pin 3, circuit 9-JA53 (BN/RD), harness side.  • **Is the resistance less than 0.5 ohm?**	**Yes** GO to T4 . **No** REPAIR circuit 9-JA53 (BN/RD). GO to T9 .
T4 CHECK CIRCUIT 7-JA53 (YE/RD) FOR AN OPEN	
• Disconnect: Seat Track Position Sensor C3207. • Measure the resistance between seat track position sensor C3207 pin 2, circuit 7-JA53 (YE/RD), harness side and driver seat C315 pin 2, circuit 7-JA53 (YE/RD), harness side.  • **Is the resistance less than 0.5 ohm?**	**Yes** GO to T5 . **No** REPAIR circuit 7-JA53 (YE/RD). GO to T9 .
T5 CHECK CIRCUIT 9-JA53 (BN/RD) FOR AN OPEN	

• Measure the resistance between seat track position sensor C3207 pin 3, circuit 9-JA53 (BN/RD), harness side and driver seat C315 pin 1, circuit 9-JA53 (BN/RD), harness side.  • **Is the resistance less than 0.5 ohm?**	**Yes** GO to T6 . **No** REPAIR circuit 7-JA53 (YE/RD). GO to T9 .
T6 CHECK THE SEAT TRACK POSITION SENSOR	
• Connect: RCM C310b. • Install a known good seat track position sensor. Refer to Seat Position Sensor in this section. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC C1948 retrieved during the on-demand self test?**	**Yes** GO to T7 . **No** Fault corrected. GO to T9 .
T7 CONFIRM THE RCM FAULT	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors, and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Reinstall the original seat track position sensor. Refer to Seat Position Sensor in this section. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC C1948 retrieved during the on-demand self test?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to T9 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to T9 .
T8 CHECK FOR AN INTERMITTENT FAULT	
• Key in OFF position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC C1948 retrieved during the on-demand self test?**	**Yes** GO to T2 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the

	wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to T9 .
T9 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step T1. • **Were any continuous DTCs retrieved during Step T1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.

Pinpoint Test U: LFC 49/DTC C1981 Seat Track Position Sensor Circuit Fault

Normal Operation

The restraints control module (RCM) monitors the driver seat track position sensor circuits. If the RCM detects an open or short to battery, it will store diagnostic trouble code (DTC) C1981 in memory and flash lamp fault code (LFC) 49 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A driver seat track position sensor open circuit or short to battery fault can be caused by:

- damaged wiring, terminals, or connectors.
- a faulty seat track position sensor.
- a faulted RCM.

PINPOINT TEST U: LFC 49/DTC C1981 SEAT TRACK POSITION SENSOR CIRCUIT FAULT

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
U1 CHECK FOR A HARD OR INTERMITTENT DTC	
⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards. **⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and DTC is no longer retrieved during the on-demand self test. GO to U2 . **No**

deployment, which can result in personal injury. ⚠ **WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.** ⚠ **WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC C1981 retrieved during the on-demand self test?**	This is an intermittent fault. The fault condition is not present at this time. GO to U7 .
U2 CHECK CIRCUIT 7-JA53 (YE/RD) AND CIRCUIT 9-JA53 (BN/RD) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310b. • Disconnect: Driver Seat Position Sensor C3207. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Key in ON position. • Measure the voltage between driver seat position sensor C3207, circuit 7-JA53 (YE/RD), harness side and ground, and between circuit 9-JA53 (BN/RD), harness side and ground.  A0030671 • **Are the voltages less than 0.2 volt?**	**Yes** GO to U3 . **No** REPAIR circuit 7-JA53 (YE/RD) or circuit 9-JA53 (BN/RD). GO to U8 .
U3 CHECK CIRCUIT 7-JA53 (YE/RD) FOR AN OPEN	
• Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.	**Yes** GO to U4 . **No** REPAIR circuit 7-JA53 (YE/RD). GO

• Key in OFF position. • Measure the resistance between RCM C310b pin 23, circuit 7-JA53 (YE/RD), harness side and driver seat C3207 pin 2, circuit 7-JA53 (YE/RD), harness side.  A0048716 • **Is the resistance less than 0.5 ohm?**	to U8 .
U4 CHECK CIRCUIT 9-JA53 (BN/RD) FOR AN OPEN	
• Measure the resistance between RCM C310b pin 24, circuit 9-JA53 (BN/RD), harness side and driver seat C3207 pin 1, circuit 9-JA53 (BN/RD), harness side.  A0048717 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to U5 . **No** REPAIR circuit 9-JA53 (BN/RD). GO to U8 .
U5 CHECK THE SEAT TRACK POSITION SENSOR	
• Connect: RCM C310b. • Install a known good seat track position sensor. Refer to Seat Position Sensor in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC C1981 retrieved during the on-demand self test?**	**Yes** GO to U6 . **No** Fault corrected. GO to U8 .
U6 CONFIRM THE RCM FAULT	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors, and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Install the original seat track position sensor. Refer to Seat Position Sensor in this section. • Repower the system. **Do not** prove out the system at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test.	**Yes** INSTALL a new RCM. REFER to Driver Air Bag Module in this section. GO to U8 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to U8 .

• **Was DTC C1981 retrieved during the on-demand self test?**	
U7 CHECK FOR AN INTERMITTENT FAULT	
• Key in OFF position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC C1981 retrieved during the on-demand self test?**	**Yes** GO to U2 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to U8 .
U8 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step U1. • **Were any continuous DTCs retrieved during Step U1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. If previously directed to deactivate the system, REACTIVATE the system. REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.

Pinpoint Test V: No Communication With The Restraints Control Module (RCM)

Normal Operation

The diagnostic tool communicates with the restraints control module (RCM) monitors through the data link connector (DLC) C251 pin 7, 4-EE10 (GY/BK).

Possible Causes

A no communication fault with the RCM can be caused by:

- damaged wiring, terminals, or connectors.
- a faulty data link connector (DLC).
- a faulted RCM.

PINPOINT TEST V: NO COMMUNICATION WITH THE RESTRAINTS CONTROL MODULE (RCM)

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough Inspection and Verification before proceeding with the Pinpoint Test.

Test Step	Result / Action to Take
V1 CHECK THE RCM C310a PIN 11 FOR DAMAGE	
⚠ **WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards.** ⚠ **WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.** ⚠ **WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.** ⚠ **WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Depower the system. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310a. • Inspect the RCM C310a, harness side and RCM C310a, component side, pin 11 for damage. • **Are RCM C310a and RCM C310a pin 11 OK?**	**Yes** GO to V2 . **No** REPAIR RCM C310a or RCM C310a pin 11 as necessary. RETEST the communication to the RCM. RECONNECT the system. If previously directed to deactivate the system, REACTIVATE the system. REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. REPOWER the system. REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.
V2 CHECK THE DLC C251 PIN 7 FOR DAMAGE	
• Inspect the DLC C251 and DLC C251 pin 7 for damage.  A0030459 • **Are DLC C251 and DLC C251 pin 7 OK?**	**Yes** GO to V3 . **No** REPAIR DLC C251 or DLC C251 pin 7 as necessary. RETEST the communication to the RCM. RECONNECT the system. If previously directed to deactivate the system, REACTIVATE the system. REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. REPOWER the system.

	REFER to Supplemental Restraint System (SRS) Depowering and Repowering in this section. PROVE OUT the system. CLEAR all DTCs.
V3 CHECK THE IGNITION CIRCUIT 15-JA10A (GN/OG) FOR AN OPEN	
• Deactivate the system. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Key in ON position. • Measure the voltage between RCM C310a pin 12, circuit 15-JA10A (GN/OG), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to V4 . **No** REPAIR circuit 15-JA10A (GN/OG). RETEST the communication to the RCM. REACTIVATE the system. REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V4 CHECK THE GROUND CIRCUIT 31-JA10 (BK/RD) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between RCM C310a pin 16, circuit 31-JA10 (BK/RD), harness side and a sheet metal ground near the RCM.  • **Is the resistance less than 5 ohms?**	**Yes** GO to V5 . **No** REPAIR circuit 31-JA10 (BK/RD). RETEST the communication to the RCM. REACTIVATE the system. REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V5 CHECK CIRCUIT 4-EE1 (GY/RD) AND 4-EE10 (GY/BK) FOR AN OPEN	
• Measure the resistance between RCM C310a pin 11, circuit 4-EE1 (GY/RD), harness side and the DLC C251 pin 7, circuit 4-EE10 (GY/BK), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to V6 . **No** REPAIR circuit 4-EE1 (GY/RD) or circuit 4-EE10 (GY/BK). RETEST the communication to the RCM. REACTIVATE the system. REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V6 CONFIRM THE RCM FAULT	

NOTE: Make sure the safety belt pretensioner restraint system diagnostic tools, sensor electrical connectors, and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Connect: RCM C310a. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Did the diagnostic tool communicate with the RCM?**	**Yes** Fault corrected. REACTIVATE the system. REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL a new RCM. RETEST the communication to the RCM. REACTIVATE the system. REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Air Bag Disposal Deployed

Printable View (9 KB)

1. **WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.**

   Dispose of the deployed air bag modules and safety belt pretensioners in the same manner as any other part to be scrapped.

Air Bag Disposal Driver, Undeployed, Scrapped Vehicle

Printable View (149 KB)

Remote Deployment

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Remote deployment is to be carried out outdoors with all personnel at least 6.1 meters (20 feet) away to ensure personal safety. Due to the loud report which occurs when the air bag is deployed, hearing protection is required.

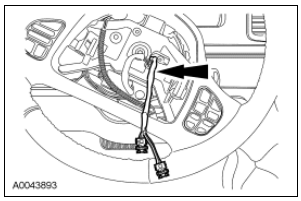
⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

NOTE: A typical driver air bag disposal is shown that is similar for all vehicles.

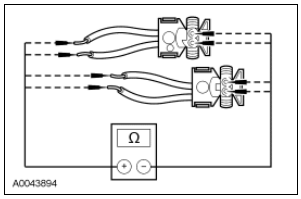
1. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

2. Remove the driver air bag module from the vehicle. For additional information, refer to Driver Air Bag Module in this section.

3. Cut the clockspring wire harness. Remove the sheathing over the wires.

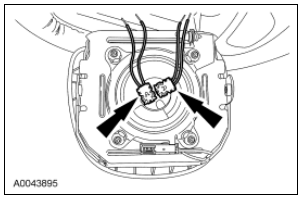


4. Strip the insulation from all 4 wires. Carry out an ohms check from the stripped end of each wire to the connector end. If any of the 4 wires reads more than 0.5 ohm use another connector.

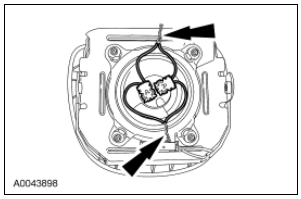


5. ⚠ **CAUTION: The clockspring electrical connectors are unique and cannot be reversed when connected to the driver air bag module. Match the electrical connector key to the keyway in the driver air bag module. Do not force the electrical connectors into the driver air bag module.**

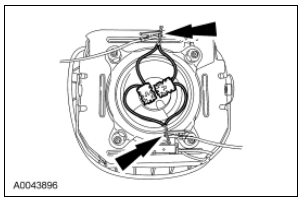
   Match the driver air bag module electrical connector key to the keyway in the driver air bag module. Connect the 2 driver air bag module electrical connectors to the driver air bag module.



6. Twist together 1 wire from each pair.



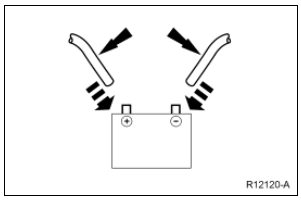
7. Obtain 2 wires (20 gauge minimum) at least 6.1 meters (20 feet) long and attach one end of each wire to each twisted splice.



8. Place the air bag module on a flat surface in an open outdoor area with the trim cover and air bag facing up.

9. Remain at least 6.1 meters (20 feet) away from the air bag module.

10. Deploy the air bag module by touching the other ends of the 2 wires to the terminals of a 12-volt battery.



11. To allow for cooling, wait at least 10 minutes before approaching the deployed air bag.

12. Dispose of the deployed air bag module in the same manner as any other part to be scrapped.

Air Bag Disposal Passenger, Undeployed, Scrapped Vehicle

Printable View (89 KB)

Remote Deployment

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module or safety belt retractor/pretensioner assembly. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover or deployment door pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Remote deployment is to be carried out outdoors with all personnel at least 6.1 meters (20 feet) away to ensure personal safety. Due to the loud report which occurs when the air bag is deployed, hearing protection is required.

⚠ WARNING: Do not place the driver or passenger air bag module with the trim cover or deployment door facing down, as the forces of the deploying air bag could cause it to ricochet and cause personal injury.

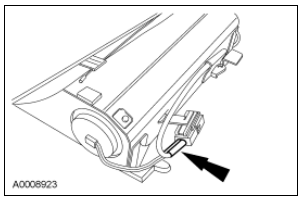
⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

NOTE: A typical passenger air bag disposal is shown that is similar for all vehicles.

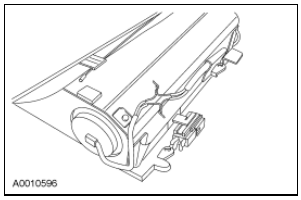
1. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

2. Remove the passenger air bag from the vehicle. For additional information, refer to Passenger Air Bag Module in this section.

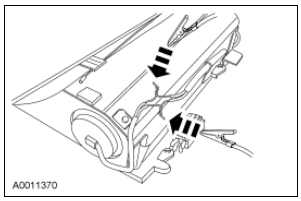
3. Cut and strip all 4 wires at the air bag electrical connector.



4. Twist together 1 wire from each pair.



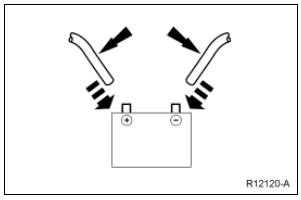
5. Obtain 2 wires (20 gauge minimum) at least 6.1 meters (20 feet) long and attach one end of each wire to each twisted splice.



6. Place the air bag module on a flat surface in an open outdoor area with the trim cover facing upward.

7. Remain at least 6.1 meters (20 feet) away from the air bag module.

8. Deploy the air bag module by touching the other ends of the 2 wires to the terminals of a 12-volt battery.



9. To allow for cooling, wait at least 10 minutes before approaching the deployed air bag.

10. Dispose of the deployed air bag module in the same manner as any other part to be scrapped.

Air Bag Disposal Side Air Curtain, Undeployed, Scrapped Vehicle

Printable View (47 KB)

Deactivation

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Remote deployment is to be carried out outdoors with all personnel at least 6.1 meters (20 feet) away to ensure personal safety. Due to the loud report which occurs when the air bag is deployed, hearing protection is required.

NOTE: A typical side air curtain disposal is shown that is similar for all vehicles.

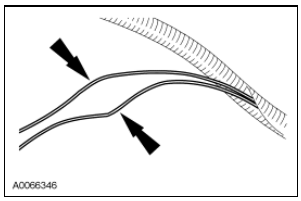
NOTE: The side air curtain module deployment for a scrapped vehicle will occur in its installed position in the vehicle.

NOTE: LH side shown, RH side similar.

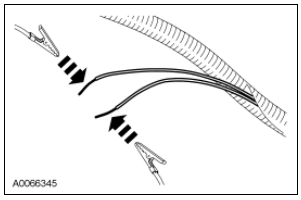
1. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

2. Access the side air curtain electrical connector. For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation .

3. Cut and strip the wires near the component side electrical connector.

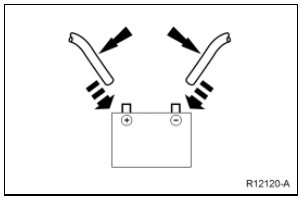


4. Obtain 2 wires (20 gauge minimum) at least 9.1 meters (30 feet) long and attach one end of each wire to the stripped wires on the side air curtain module.



5. Remain at least 6.1 meters (20 feet) away from the vehicle.

6. Deploy the side air curtain module by touching the other ends of the 2 wires to the terminals of a 12-volt battery.



7. To allow for cooling, wait at least 10 minutes before approaching the deployed side air curtain module.

8. Dispose of the deployed side air curtain module in the same manner as any other part to be scrapped.

Air Bag Disposal Side, Undeployed, Scrapped Vehicle

Printable View (50 KB)

Remote Deployment

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module or safety belt retractor/pretensioner assembly. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover or deployment door pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

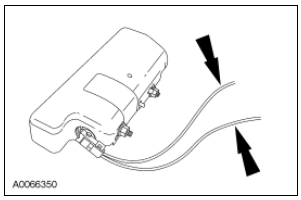
⚠ WARNING: Remote deployment is to be carried out outdoors with all personnel at least 6.1 meters (20 feet) away to ensure personal safety. Due to the loud report which occurs when the air bag is deployed, hearing protection is required.

⚠ WARNING: Do not place the side air bag module with the tear seam facing down or the attaching studs facing upward, as the forces of the deploying air bag can cause it to ricochet and cause personal injury.

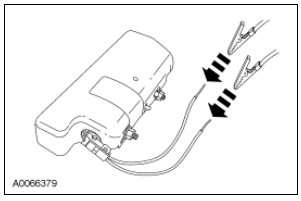
1. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

2. Remove the side air bag from the vehicle. For additional information, refer to Side Air Bag Module in this section.

3. Cut and strip the wires and connect the connector to the air bag module.



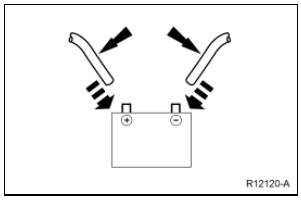
4. Obtain 2 wires (20 gauge minimum) at least 6.1 meters (20 feet) long and attach one end of each wire to the connector pins on the air bag module.



5. Place the air bag module on a flat surface in an open outdoor area with the tear seam facing upward and the attaching studs facing downward.

6. Remain at least 6.1 meters (20 feet) away from the air bag module.

7. Deploy the side air bag module by touching the other ends of the 2 wires to the terminals of a 12-volt battery.



8. To allow for cooling, wait at least 10 minutes before approaching the deployed air bag.

9. Dispose of the deployed side air bag module in the same manner as any other part to be scrapped.

Air Bag Disposal Undeployed, Inoperative

Printable View (44 KB)

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

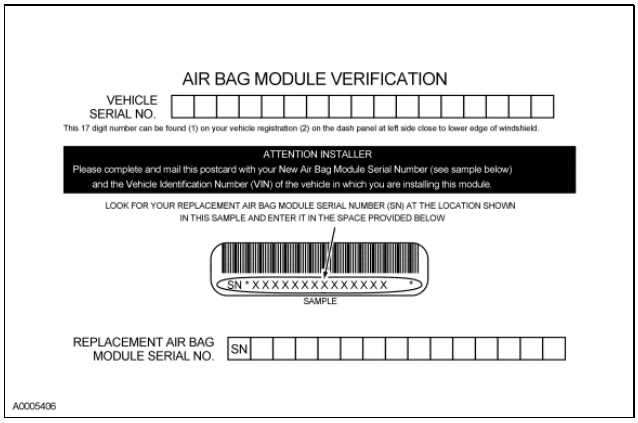
⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover or deployment door pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

NOTE: All inoperative air bag modules and safety belt pretensioners have been placed on the Mandatory Return List. All discolored or damaged air bag modules must be treated the same as any inoperative live air bag being returned.

1. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

2. Remove the inoperative component from the vehicle. For additional information, refer to the appropriate air bag procedure in this section.



3. **NOTE:** When installing a new air bag module, a prepaid return postcard is provided with the replacement air bag module. The serial number for the new part and the vehicle identification number (VIN) must be recorded and sent to Ford Motor Company.

   If installing a new air bag module, record the necessary information and return the inoperative air bag module to Ford Motor Company.

Inspection and Repair After a Supplemental Restraint System (SRS) Deployment

Printable View (10 KB)

⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: Deployable devices (such as air bag modules, pretensioners) may deploy alone or in various combinations depending on the impact event.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1. When any deployable device or combination of devices are deployed and/or the restraints control module (RCM) has the diagnostic trouble code (DTC) B1231 (Crash Data Memory Full) in memory, the repair of the vehicle's supplemental restraint system (SRS) is to include the removal of all deployed devices and the installation of new deployable devices, the removal and installation of new impact sensors, and the removal and installation of a new restraint control module (RCM).

2. When any damage to the impact sensor mounting points or mounting hardware has occurred, repair or install new mounting points and mounting hardware as needed.

3. When the driver air bag module has deployed, a new clockspring must be installed.

4. Inspect the entire vehicle for damage, including the following components:
   - Steering column
   - Instrument panel knee bolsters and mounting points
   - Instrument panel braces and brackets
   - Instrument panel and mounting points
   - Seats and seat mounting points
   - Safety belts, safety belt buckles and safety belt retractors. For additional information, refer to Section 501-20A
   - SRS wiring, wiring harnesses and connectors

5. After carrying out the review and inspection of the entire vehicle for damage, repair or install new components as needed.

Safety Belt Pretensioner Disposal Deployed

Printable View (9 KB)

1. **WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.**

   Dispose of the deployed safety belt pretensioner in the same manner as any other part to be scrapped.

Safety Belt Pretensioner Disposal Undeployed, Inoperative

Printable View (10 KB)

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: Carry a live safety belt retractor pretensioner or safety belt buckle pretensioner so as to keep fingers and clothing away from moveable parts. This will reduce the risk of injury in the event of an accidental deployment.

NOTE: All inoperative safety belt buckle pretensioners and safety belt retractor pretensioners have been placed on the Mandatory Return List. All damaged safety belt buckle pretensioners and safety belt retractor pretensioners must be treated the same as any inoperative live safety belt buckle pretensioner or safety belt retractor pretensioner being returned.

1. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

2. Remove the inoperative safety belt buckle pretensioner or safety belt retractor pretensioner from the vehicle. For additional information, refer to Section 501-20A .

3. Package and return the inoperative safety belt buckle pretensioner or safety belt retractor pretensioner to Ford Motor Company.

Safety Belt Pretensioner Disposal Undeployed, Scrapped Vehicle

Printable View (61 KB)

Remote Deployment

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: Carry a live safety belt retractor/pretensioner assembly so as to keep fingers and clothing away from moveable parts. This will reduce the risk of injury in the event of an accidental deployment.

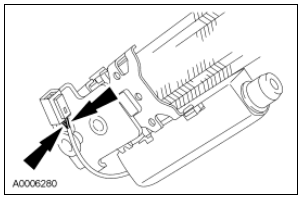
⚠ WARNING: Remote deployment is to be carried out outdoors with all personnel at least 6.1 meters (20 feet) away to ensure personal safety. Due to the loud report which occurs when the safety belt pretensioner is deployed, hearing protection is required.

⚠ WARNING: Do not position the safety belt retractor/pretensioner assembly so that moveable parts contact the support surface, as the forces of the deploying pretensioner can cause it to ricochet and cause personal injury.

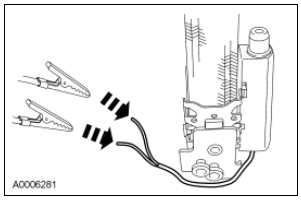
1. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

2. Remove the safety belt retractor/pretensioner assembly from the vehicle. For additional information, refer to Section 501-20A .

3. Cut off the electrical connector and strip 25 mm (1 inch) of insulation off the wires.



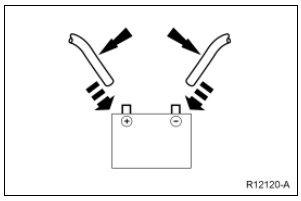
4. Obtain 2 wires (20 gauge minimum) at least 6.1 meters (20 feet) long and attach one end of each wire to the safety belt pretensioner wires.



5. Position the safety belt retractor/pretensioner assembly on a flat surface in an open outdoor area so that moveable parts do not contact the support surface.

6. Remain at least 6.1 meters (20 feet) away from the safety belt retractor/pretensioner assembly.

7. Deploy the safety belt pretensioner by touching the other ends of the 2 wires to the terminals of a 12-volt battery.



8. To allow for cooling, wait at least 10 minutes before approaching the deployed safety belt pretensioner retractor/pretensioner assembly.

9. Dispose of the deployed safety belt retractor/pretensioner assembly in the same manner as any other part to be scrapped.

Supplemental Restraint System (SRS) Deactivation and Reactivation

Printable View (452 KB)

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F395 (014-R1079)
 ST2512-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F403
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (014-R1076)
 ST2507-A	Diagnostic Tool, Restraint System (4 Req'd) 501-097

Deactivation

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

All vehicles

1. Turn all vehicle accessories OFF.
2. Turn the ignition switch to OFF.

3. Remove the RH kick panel cover and remove the restraints control module fuse F2.05 (10A) from the central junction box (CJB). For additional information, refer to the Wiring Diagram Manual.

4. Turn the ignition ON and visually monitor the air bag indicator for at least 30 seconds. The air bag indicator will remain lit continuously (no flashing) if the correct RCM fuse has been removed. If the air bag indicator does not remain lit continuously, remove the correct RCM fuse before proceeding.

5. Turn the ignition OFF.

6. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

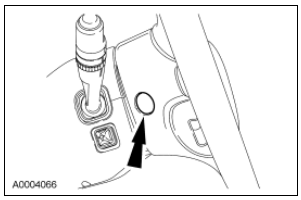
   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

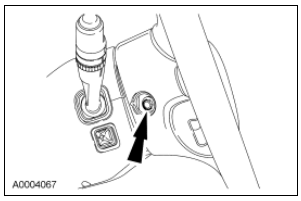
   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least 1 minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable (14301) and wait at least 1 minute. For additional information, refer to Section 414-01 .

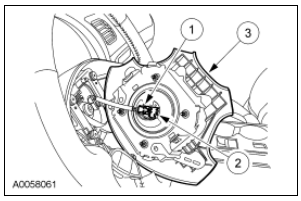
7. Remove the 2 steering wheel plugs (1 shown).



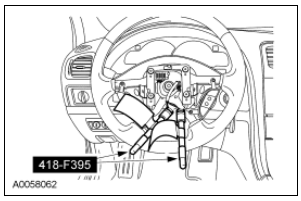
8. Remove the 2 driver air bag module bolts (1 shown).



9. Disconnect and remove the driver air bag module.
   1. Squeeze the tabs and disconnect the driver air bag module electrical connector.
   2. Squeeze the tabs and disconnect the driver air bag module electrical connector.
   3. Remove the driver air bag module.



10. Attach the restraint system diagnostic tools to the clockspring electrical connectors at the top of the steering column.

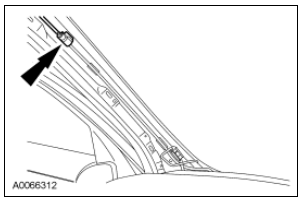


Vehicles with side air curtains

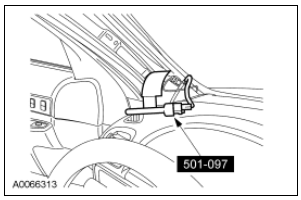
NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

11. Remove the A-pillar trim panel. For additional information, refer to Section 501-05 .

12. Disconnect the driver side air curtain module electrical connector.



13. Attach the restraint system diagnostic tool to the vehicle harness side of the driver side air curtain module electrical connector.



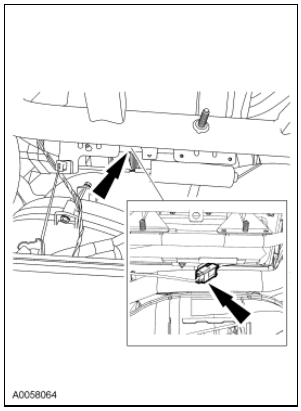
All vehicles

14. Remove the glove compartment. For additional information, refer to Section 501-05 .

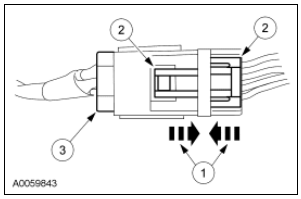
15. **NOTE:** The inset view of the illustration is looking up into the instrument panel from underneath.

    NOTE: The passenger air bag module electrical connector is located in front of the cross-car beam attached by a pin-type retainer to a bracket on the back of the passenger air bag module.

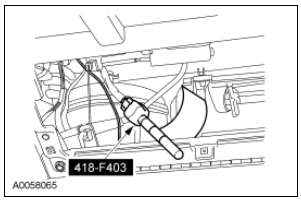
    Locate the passenger air bag module electrical connector.



16. Disconnect the passenger air bag module.
    1. Push the passenger air bag module electrical connector together.
    2. Push down, pivoting the electrical connector and release the electrical connector retainer.
    3. Pull out, disconnecting the vehicle harness end of the connector from the component end.



17. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger air bag module electrical connector.

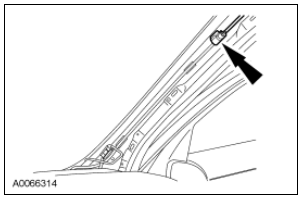


Vehicles with side air curtains

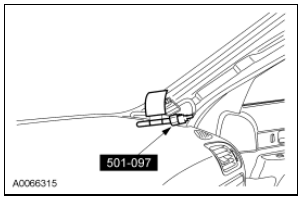
NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

18. Remove the A-pillar trim panel. For additional information, refer to Section 501-05 .

19. Disconnect the passenger side air curtain module electrical connector.

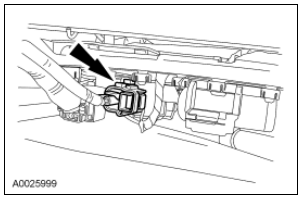


20. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger side air curtain module electrical connector.



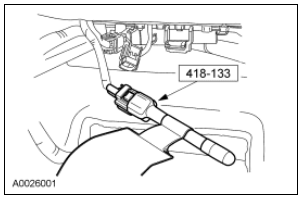
All vehicles

21. From under the passenger seat, release the tab and disconnect the passenger seat side air bag or passenger seat side thorax air bag electrical connector.



Vehicles without side air curtains

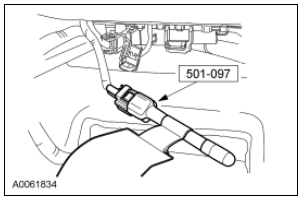
22. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger seat side air bag electrical connector.



Vehicles with side air curtains

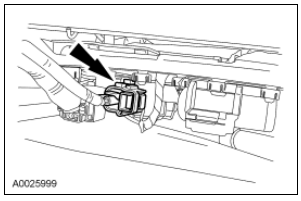
NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

23. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger seat side thorax air bag electrical connector.



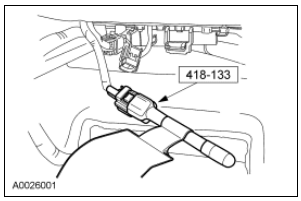
All vehicles

24. From under the driver seat, release the tab and disconnect the driver seat side air bag or driver seat side thorax air bag electrical connector.



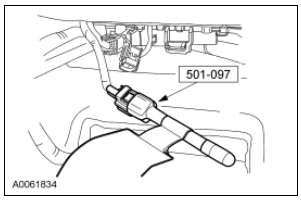
Vehicles without side air curtains

25. Attach the restraint system diagnostic tool to the vehicle harness side of the driver seat side air bag electrical connector.



Vehicles with side air curtains

26. Attach the restraint system diagnostic tool to the vehicle harness side of the driver seat side thorax air bag electrical connector.



All vehicles

27. Install the RCM fuse F2.05 to the CJB.

28. Connect the battery ground cable. For additional information, refer to Section 414-01 .

Reactivation

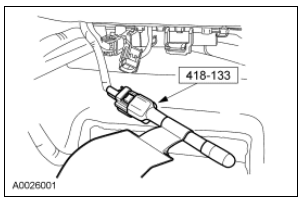
All vehicles

1. Remove the RCM fuse F2.05 from the CJB.

2. Disconnect the battery ground cable and wait at least 1 minute.

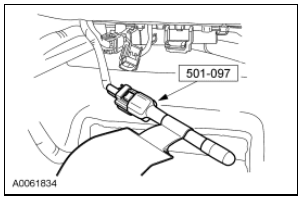
Vehicles without side air curtains

3. Remove the restraint system diagnostic tool from the vehicle harness side of the driver seat side air bag electrical connector.



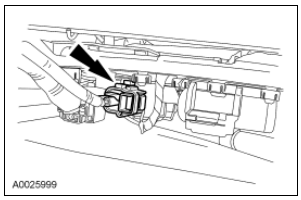
Vehicles with side air curtains

4. Remove the restraint system diagnostic tool from the vehicle harness side of the driver seat side thorax air bag electrical connector.



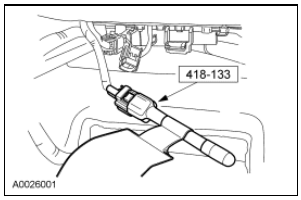
All vehicles

5. Connect the driver seat side air bag or driver seat side thorax air bag electrical connector.



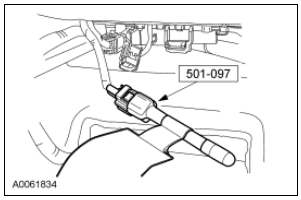
Vehicles without side air curtains

6. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger seat side air bag electrical connector.



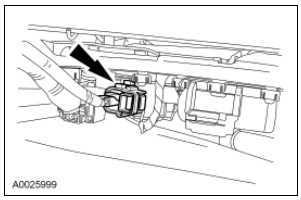
Vehicles with side air curtains

7. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger seat side thorax air bag electrical connector.



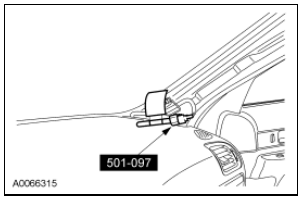
All vehicles

8. Connect the passenger seat side air bag or passenger seat side thorax air bag electrical connector.

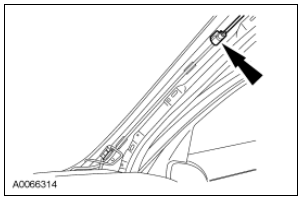


Vehicles with side air curtains

9. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger side air curtain module electrical connector.



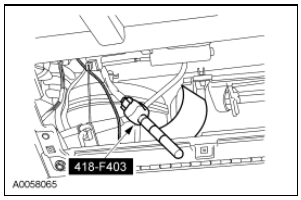
10. Connect the passenger side air curtain module electrical connector.



11. Install the A-pillar trim panel. For additional information, refer to Section 501-05 .

All vehicles

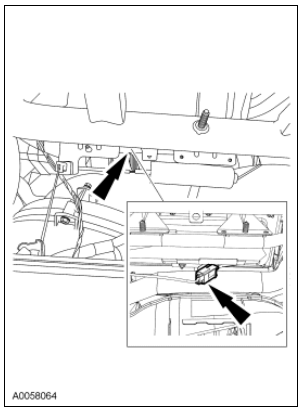
12. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger air bag module electrical connector.



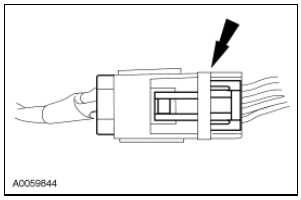
13. **NOTE:** The inset view of the illustration is looking up into the instrument panel from underneath.

    NOTE: The passenger air bag module electrical connector is located in front of the cross-car beam attached by a pin-type retainer to a bracket on the back of the passenger air bag module.

    Locate the passenger air bag module electrical connector.



14. Connect the passenger air bag module.

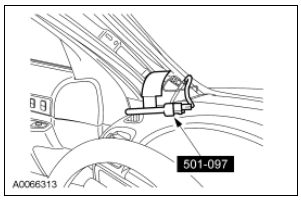


15. Install the glove compartment. For additional information, refer to Section 501-05 .

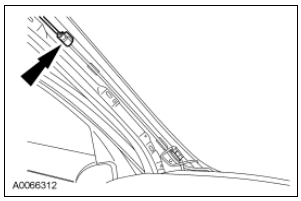
Vehicles with side air curtains

NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

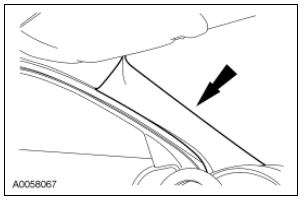
16. Remove the restraint system diagnostic tool from the vehicle harness side of the driver side air curtain module electrical connector.



17. Connect the driver side air curtain module electrical connector.

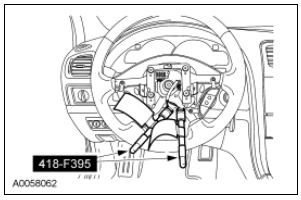


18. Install the A-pillar trim panel. For additional information, refer to Section 501-05 .



All vehicles

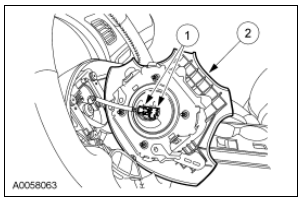
19. Remove the restraint system diagnostic tools from the clockspring electrical connectors at the top of the steering column.



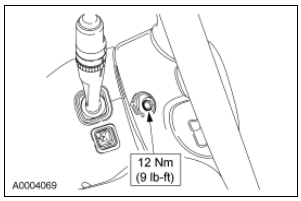
20. ⚠ **CAUTION: The clockspring electrical connectors are unique and cannot be reversed when connected to the driver air bag module. Match the electrical connector key to the keyway in the driver air bag module. Do not force the electrical connectors into the driver air bag module.**

Connect and position the driver air bag module.

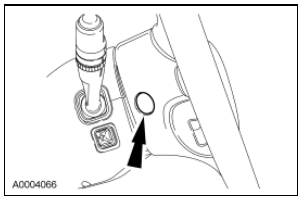
1. Connect the driver air bag module electrical connectors.
2. Position the driver air bag module to the steering wheel.



21. Install the 2 driver air bag module bolts (1 shown).



22. Install the 2 steering wheel plugs (1 shown).



23. Turn the ignition switch from OFF to ON.

24. Install the restraints control module fuse F2.05 (10A) to the CJB and install the RH kick panel cover.

25. ⚠ **WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.**

    Connect the battery ground cable.

26. Prove out the supplemental restraint system (SRS) as follows:
    Turn the ignition key from ON to OFF. Wait 10 seconds, then turn the key back to ON and visually monitor the air bag indicator with the air bag modules installed. The air bag indicator will light continuously for approximately 6 seconds and then turn off. If an air bag supplemental restraint system (SRS) fault is present, the air bag indicator will either:
    - fail to light.
    - remain lit continuously.
    - flash.

    The flashing might not occur until approximately 30 seconds after the ignition switch has been turned from the OFF to the ON position. This is the time required for the restraints control module (RCM) to complete the testing of the SRS. If the air bag indicator is inoperative and a SRS fault exists, a chime will sound in a pattern of 5 sets of 5 beeps. If this occurs, the air bag indicator and any SRS fault discovered must be diagnosed and repaired.
    Clear all continuous DTCs from the restraints control module using a scan tool.

Supplemental Restraint System (SRS) Depowering and Repowering

Printable View (13 KB)

Depowering Procedure

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the supplemental restraint system (SRS) must be depowered.**

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1. Turn all vehicle accessories OFF.

2. Turn the ignition switch to OFF.

3. Remove the RH kick panel cover and remove the restraints control module fuse F2.05 (10A) from the central junction box (CJB). For additional information, refer to the Wiring Diagram Manual.

4. Turn the ignition ON and visually monitor the air bag indicator for at least 30 seconds. The air bag indicator will remain lit continuously (no flashing) if the correct RCM fuse has been removed. If the air bag indicator does not remain lit continuously, remove the correct RCM fuse before proceeding.

5. Turn the ignition OFF.

6. **⚠ WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least 1 minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least 1 minute. For additional information, refer to Section 414-00 .

Repowering Procedure

1. ⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

   Make sure all restraint system diagnostic tool(s) that may have been installed during the repair have been removed from the vehicle and all SRS components are connected.

2. Turn the ignition switch from OFF to ON.

3. Install the restraints control module fuse F2.05 (10A) to the CJB and install the RH kick panel cover.

4. ⚠ **WARNING: Be sure that nobody is in the vehicle and that there is nothing blocking or set in front of any air bag module when the battery ground cable is connected.**

   Connect the battery ground cable.

5. Prove out the supplemental restraint system (SRS) as follows:
   Turn the ignition key from ON to OFF. Wait 10 seconds, then turn the key back to ON and visually monitor the air bag indicator with the air bag modules installed. The air bag indicator will light continuously for approximately 6 seconds and then turn off. If an air bag supplemental restraint system (SRS) fault is present, the air bag indicator will either:
   - fail to light.
   - remain lit continuously.
   - flash.

   The flashing might not occur until approximately 30 seconds after the ignition switch has been turned from the OFF to the ON position. This is the time required for the restraints control module (RCM) to complete the testing of the SRS. If the air bag indicator is inoperative and a SRS fault exists, a chime will sound in a pattern of 5 sets of 5 beeps. If this occurs, the air bag indicator and any SRS fault discovered must be diagnosed and repaired.
   Clear all continuous DTCs from the restraints control module using a scan tool.

Weld Nut Repair Missing Weld Nut

Printable View (60 KB)

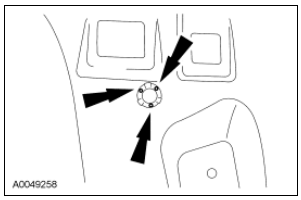
⚠ CAUTION: Installing a J-nut in place of a weld nut is not a recommended repair.

NOTE: C-pillar repair shown, others similar.

1. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

2. Remove the component from where the weld nut is to be repaired. Refer to the appropriate removal and installation procedure in this section.

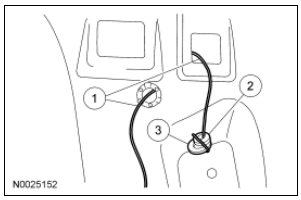
3. Drill 3 equally spaced 5/64-in (1.75-mm) holes in close proximity to where the weld nut face will be plug welded back to the sheet metal.



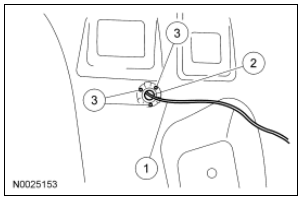
4. Obtain the appropriate 6-mm (0.24-in) or 8-mm (0.32-in) weld nut.

5. Obtain the appropriate 6-mm (0.24-in) by 1.0 or 8-mm (0.32-in) by 1.25 grounding screw (self-tapping).

6. Set up for the positioning of the weld nut.
    1. Route a sufficient length of wire through the weld nut clearance hole and back out an adjacent access hole.
    2. Position a weld nut, shoulder end up, onto the wire.
    3. Position a flat washer onto the wire and secure it so it cannot be pulled off.



7. Plug weld the weld nut into position.
    1. Pull the welding wire back through the clearance hole, allowing the weld nut and flat washer to follow the welding wire through and stop against the sheet metal.
    2. Make sure the weld nut shoulder is aligned through the clearance hole in the sheet metal.
    3. With the weld nut firmly held in position, plug weld the weld nut at the 3 holes drilled previously.



8. Metal finish as required.
9. Verify the nut is securely in place.
10. Install the component with the previously obtained screw.
11. Tighten the attaching screws to specification. For additional information, refer to Specifications in this section.

Weld Nut Repair Stripped Weld Nut

Printable View (8 KB)

1. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

2. Remove the component from where the weld nut is to be repaired. Refer to the appropriate removal and installation procedure in this section.

3. Inspect the weld nut and surrounding area for repair.
   - If there is not enough clearance for a larger bolt stud to go through or a larger bolt head to turn, then a threaded insert will have to be installed. Follow the instructions with the thread insert repair kit.

4. If a 6 mm weld nut is stripped, drill out the hole using a letter "H" or 0.26-in (6.5-mm) drill bit. Then tap, using an 8 mm by 1.25 bit.
   - Do not oversize a 6-mm weld nut by more than 8 mm.

5. If an 8-mm weld nut is stripped, drill the hole using a letter "R" or 0.3990 in (9.75-mm) drill bit. Then tap, using a 10-mm by 1.50 bit.
   - Do not oversize an 8-mm weld nut by more than 10 mm.

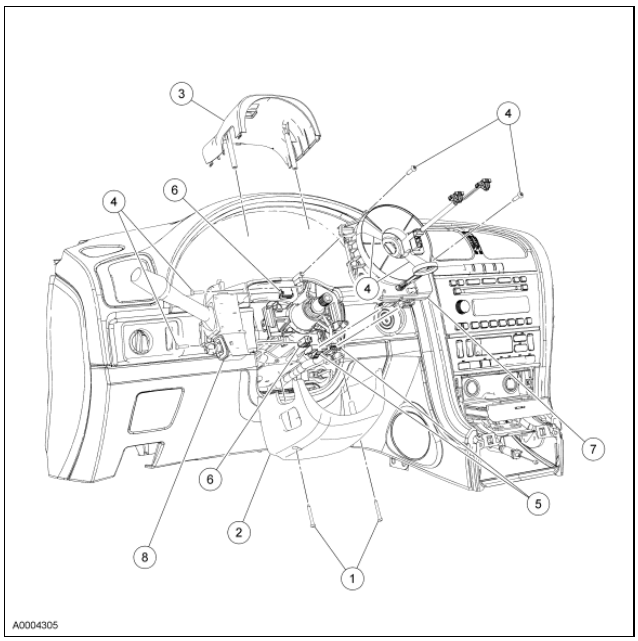
6. Obtain the appropriate oversized screw.

7. Install the attaching screw(s) to the component.

8. Tighten the attaching screws to specification. For additional information, refer to Specifications in this section.

Clockspring

Printable View (277 KB)



Item	Part Number	Description
1	W504246-S	Lower steering column shroud screws
2	3530	Lower steering column shroud
3	3530	Upper steering column shroud
4	W390345-S	Clockspring and multifunction switch screws (4 required)
5		Clockspring electrical connectors (part of 14401)
6		Multifunction switch electrical connector (part of 14401)
7	14A664	Clockspring
8	13K359	Multifunction switch

Removal

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: Air bag modules with discolored or damaged trim covers must be replaced, not repainted.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

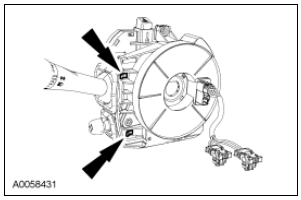
NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. Make sure the road wheels are in the straight-ahead position.
2. Tilt the steering column all the way down and extend it all the way out.
3. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
4. Remove the driver air bag module. For additional information, refer to Driver Air Bag Module in this section.
5. Remove the steering wheel. For additional information, refer to Section 211-04 .
6. Remove the screws and the instrument panel lower steering column cover.
7. Remove the instrument panel upper steering column cover.
8. **NOTE:** If the clockspring is to be reinstalled, do not allow the clockspring to turn from its removal position.

   Apply 2 strips of masking tape across the clockspring to prevent accidental rotation when the clockspring is removed.
9. **NOTE:** Remove the clockspring and multifunction switch as an assembly.

   Disconnect the 2 clockspring lower electrical connectors, the multifunction switch electrical connector and remove the clockspring and multifunction switch assembly.
10. Remove the 2 multifunction switch screws.
11. Remove the 2 clockspring screws and the clockspring assembly.
12. Release the tabs and slide the multifunction switch out of the clockspring.



Installation

1. ⚠ **WARNING: Incorrect centralization may result in premature component failure. If in doubt when centralizing the clockspring, repeat the centralizing procedure. Failure to follow this instruction may result in personal injury.**

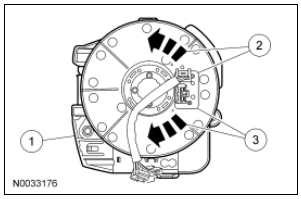
   ⚠ **CAUTION: Make sure the road wheels are in the straight-ahead position.**

   NOTE: A new clockspring is supplied in a centralized position and held there with a key.

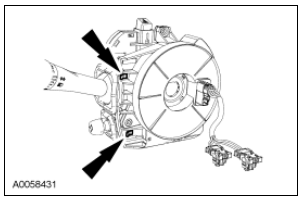
   If the clockspring has rotated out of center, follow these steps to center the clockspring.

   1. Hold the clockspring outer housing stationary.
   2. ⚠ **CAUTION: Overturning will destroy the clockspring. The internal ribbon wire acts as the stop and can be broken from its internal connection.**

      While turning the rotor counterclockwise, carefully feel for the ribbon wire to run out of length and feel for a slight resistance. Stop turning at this point.
   3. Turn the clockspring clockwise approximately 2-1/2 turns. This is the center point of the clockspring.
   - Do not allow the rotor to turn from this position.

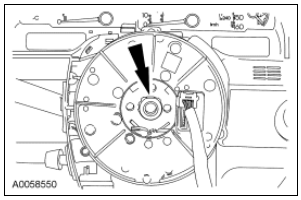


2. Align the multifunction switch to the clockspring and slide the 2 together.
   - Make sure the tabs are interlocked.



3. **NOTE:** Slight turning of the clockspring rotor is allowable for alignment purposes to the steering column.

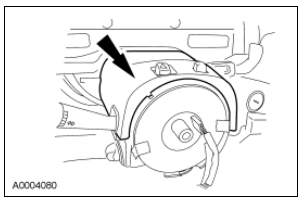
   With the flat of the clockspring aligned to the flat of the steering column, slide the clockspring onto the steering column.



4. Connect the 2 clockspring lower electrical connectors and the multifunction switch electrical connector.

5. Install the 2 multifunction switch screws.

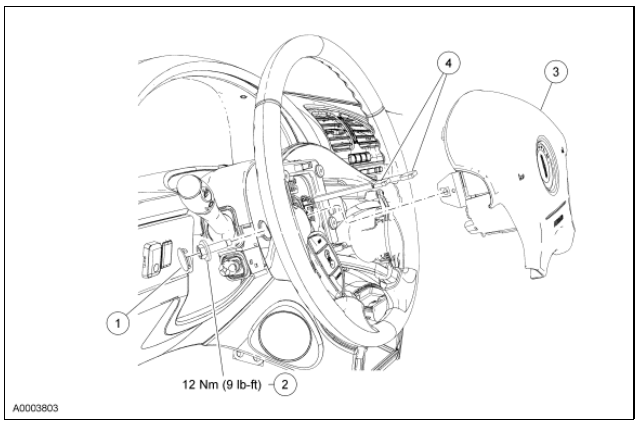
6. Install the 2 clockspring screws.
7. For vehicles receiving a new clockspring, remove the retaining pin.
8. For vehicles reusing the clockspring that was removed, remove the tape.
9. Install the instrument panel upper steering column cover.



10. Install the instrument panel lower steering column cover and screws.
11. Install the steering wheel. For additional information, refer to Section 211-04 .
12. Install the driver air bag module. For additional information, refer to Driver Air Bag Module in this section.
13. Repower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

Driver Air Bag Module

Printable View (114 KB)



Item	Part Number	Description
1	3L518	Steering wheel back cover plugs (2 required)
2	W705342-S	Driver air bag module (2 required)
3	54043B13	Driver air bag module
4		Driver air bag module electrical connectors (part of 14A664)

Removal and Installation

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: Air bag modules with discolored or damaged trim covers must be replaced, not repainted.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

2. Remove the 2 steering wheel back cover plugs

3. Remove the 2 driver air bag module bolts.
   - To install, tighten to 12 Nm (9 lb-ft).

4. Remove the driver air bag module from the steering wheel.

5. **NOTE:** Label the driver air bag module squib number on the driver air bag module electrical connectors before disconnecting.

   Disconnect the driver air bag module electrical connectors at the clockspring and remove the air bag module.

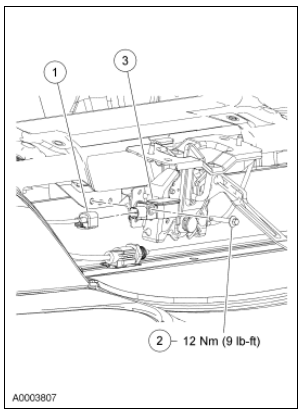
6. ⚠ **CAUTION: The clockspring electrical connectors are unique and cannot be reversed when connected to the driver air bag module. Match the electrical connector key to the keyway in the driver air bag module. Do not force the electrical connectors into the driver air bag module.**

   To install, reverse the removal procedure

7. Repower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

Front Impact Severity Sensor

Printable View (61 KB)



Item	Part Number	Description
1		Front impact severity sensor electrical connector (part of 14290)
2	W707305-S	Front impact severity sensor bolt
3	14B006	Front impact severity sensor

Removal

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Vehicle sensor orientation is critical for correct system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) is involved in a collision, inspect the sensor mounting bracket and wiring pigtail for deformation. Replace and correctly position the sensor or any other damaged supplemental restraint system (SRS) components whether or not the air bag is deployed.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
2. Disconnect the front impact sensor electrical connector.
3. Remove the front impact severity sensor bolt.
4. Remove the front impact severity sensor.

Installation

1. **NOTE:** Make sure the mounting bracket and front impact severity sensor mating surfaces are clean and free or foreign material.

   NOTE: Align the locator tabs of the front impact severity sensor to the openings in the mounting bracket sheet metal

   Install the front impact severity sensor.

2. ⚠ **WARNING: The tightening torque of the air bag front impact severity sensor retaining bolt is critical for correct system operation.**

   Install the front impact severity sensor bolt.

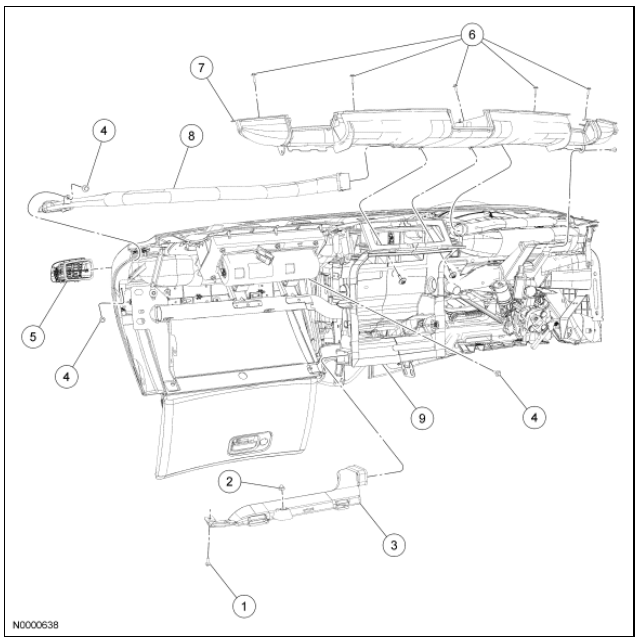
   - Tighten to 12 Nm (9 lb-ft).

3. Connect the front impact severity sensor electrical connector.

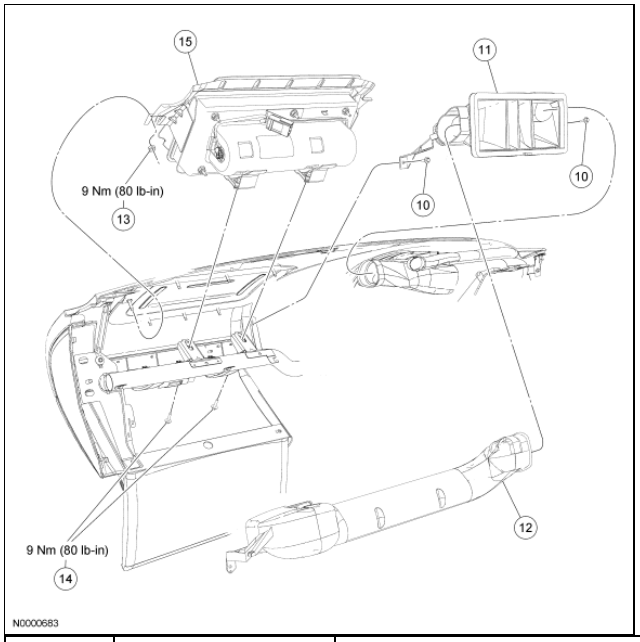
4. Repower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

Passenger Air Bag Module

Printable View (282 KB)



Item	Part Number	Description
1	W705314-S	Heater duct screw
2		Courtesy light socket
3		Floor heater duct
4	W704874-S	A/C duct screws (3 required)
5	19893	A/C register
6	W705314-S	Defrost nozzle screws (8 required)
7	18490	Defrost nozzle
8	19E630	Demister duct
9	19C698	A/C plenum chamber



Item	Part Number	Description
10		A/C junction duct screws (2 required)
11	19B680B	A/C junction duct assembly
12	19B680	A/C register duct
13		Passenger air bag module nuts (8 required)
14		Passenger air bag module bolts (2 required)
15	54044A74	Passenger air bag module

Removal and Installation

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live air bag module with the air bag and deployment door pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live air bag module down with the deployment door face down. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: Air bag modules with discolored or damaged deployment doors must be replaced, not repainted.

⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.
2. Remove the instrument panel. For additional information, refer to Section 501-12 .
3. Position the instrument panel face down on the bench. Cover the work area with something clean and nonabrasive to protect the instrument panel.
4. Remove the RH floor duct screw.
5. Remove the RH courtesy lamp socket.
6. Remove the RH floor duct.
7. Remove the RH A/C duct screw near the center of the instrument panel.
8. Remove the 2 screws from the passenger side A/C and demister duct.
9. Remove the passenger side A/C register.
10. Remove the insulator tape (if equipped) and the 8 defroster duct screws.
11. Remove the defroster duct.
12. Remove the demister duct.
13. Remove the plenum chamber. For additional information, refer to Section 412-01 .
14. Remove the 2 A/C center junction duct screws.
15. Remove the center A/C junction duct assembly.
16. Remove the A/C register duct.
17. Remove the 8 passenger air bag module nuts.
    - To install, tighten to 9 Nm (80 lb-in).
18. Remove the 2 passenger air bag module bolts.
    - To install, tighten to 9 Nm (80 lb-in).
19. Disconnect the passenger air bag electrical connector.
20. Remove the passenger air bag module through the back of the instrument panel.
21. **NOTE:** If installing a new passenger air bag module, install new retaining nuts and bolts.

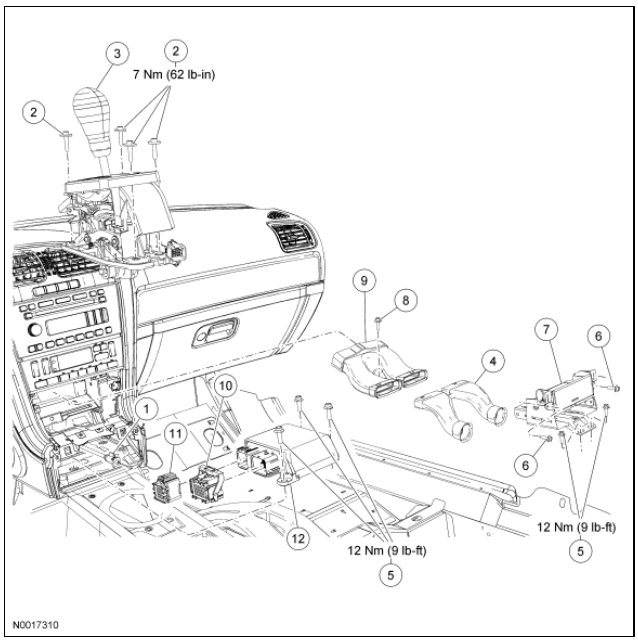
To install, reverse the removal procedure.

22. Install the instrument panel. For additional information, refer to Section 501-12 .

23. Repower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

Restraints Control Module (RCM)

Printable View (225 KB)



Item	Part Number	Description
1	3F719	Shifter interlock cable
2	W705638-S	Shifter assembly bolts (4 required)
3	7210	Shifter assembly
4	19E714	Lower A/C duct
5	W707722-S	Ashtray housing bolts (2 required)
6		Ashtray housing screws (2 required)
7		Ashtray housing
8		Upper A/C duct bolt
9	19E714	Upper A/C duct
10		Large electrical connector (part of 14A005)
11		Small electrical connector (part of 14A005)
12	14B321	Restraints control module (RCM)

Removal and Installation

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: The restraints control module (RCM) orientation is critical for correct air bag supplemental restraint system (SRS) operation. If a vehicle equipped with an SRS system has been involved in a collision in which the center tunnel area has been damaged, inspect the mounting and bracket for deformation. If damaged, the RCM must be replaced whether or not the air bags have deployed. In addition, make sure the area of the RCM mounting is restored to its original condition.

⚠ WARNING: Vehicle sensor orientation is critical for correct system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) is involved in a collision, inspect the sensor

mounting bracket and wiring pigtail for deformation. Replace and correctly position the sensor or any other damaged supplemental restraint system (SRS) components whether or not the air bag is deployed.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

⚠ CAUTION: Electronic modules are sensitive to static electrical charges. If exposed to these charges, damage can result.

NOTE: When installing a new restraints control module (RCM), always make sure the correct RCM is being installed. If an incorrect RCM is installed, erroneous DTCs will result.

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

2. Remove the floor console. For additional information, refer to Section 501-12 .

3. Disconnect the shifter interlock cable from the shifter.

4. **NOTE:** Do not remove the shifter from the vehicle.

   Remove the shifter assembly bolts and position the shifter aside.

   - To install, tighten to 7 Nm (62 lb-in).

5. Remove the lower A/C duct.

6. Remove the 2 ash tray housing lower bolts.
   - To install, tighten to 12 Nm (9 lb-ft).

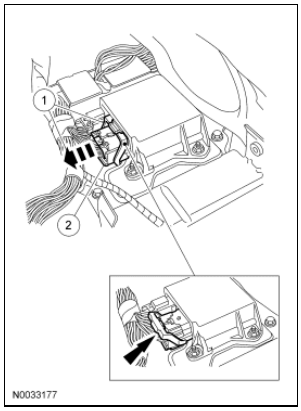
7. Remove the 2 ash tray housing upper screws and remove the housing assembly.

8. Remove the upper A/C duct bolt and remove the duct.

9. **NOTE:** The instrument panel has been removed for clarity.

   Disengage the large RCM electrical connector position assurance lever.

   1. Pinch the thumb tab and pivot the connector position assurance lever all the way back until it stops.
   2. Pull out and disconnect the RCM electrical connector.



10. Disconnect the large RCM connector.

11. Disconnect the small RCM electrical connector

12. Remove the RCM bolts and remove the RCM.
    - To install, tighten to 12 Nm (9 lb-ft).

13. **⚠ WARNING: The tightening torque of the air bag restraints control module (RCM) retaining bolts is critical for correct system operation.**

    ⚠ CAUTION: Putting the large RCM electrical connector into the RCM on an angle can cause bad electrical connections and damage components.

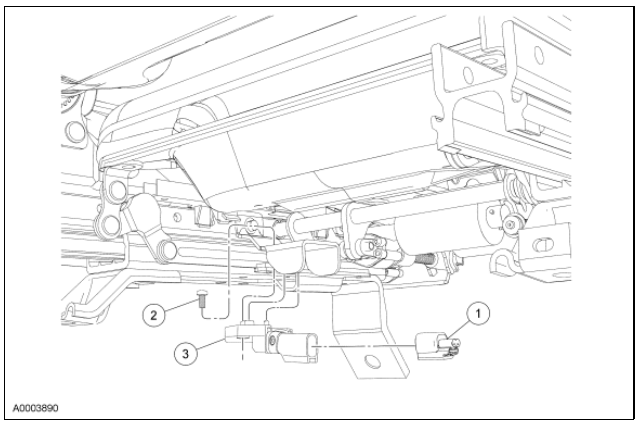
    ⚠ CAUTION: Do not push the large RCM connector on to where the lever pivots and seats itself. Light pressure is needed to get the connector into position on the RCM before using the lever to fully seat the connector.

    To install, reverse the removal procedure.

14. Repower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

Seat Position Sensor

Printable View (106 KB)



Item	Part Number	Description
1		Seat position sensor electrical connector (part of 14B719)
2		Seat position sensor screw
3	14B416	Seat position sensor

Removal and Installation

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. Raise the seat cushion to the full up position and position the seat to access the seat position sensor.

2. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

3. **NOTE:** Make note of the wiring harness routing for installation purposes.

NOTE: The seat track position sensor is mounted at the LH rear of the seat track.

Disconnect the seat position sensor electrical connector.

4. Remove the screw and seat position sensor.
5. **NOTE:** Align the seat position sensor locator tabs to the openings in the bracket.

   NOTE: Route the wire harness as noted during removal.

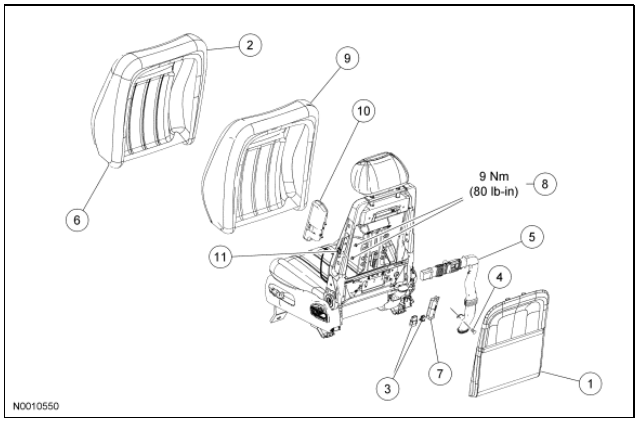
   To install, reverse the removal procedure.

6. Repower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

Side Air Bag Module

Printable View (319 KB)

Removal



Item	Part Number	Description
1	60762	Seat back trim panel
2	64416	Seat back trim cover
3	14C693	Connectors (2 required)
4	807452	Climate control duct pin-type retainer (if equipped)
5	18D512	Climate control duct (if equipped)
6	64416	Seat back trim cover
7	009036	Side air bag module nut cover
8	N620480-S	Side air bag module nuts (2 required)
9	64810	Seat back pad
10	11791	Side air bag module
11	14K155	Side air bag module connector

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live side air bag module with the air bag and tear seam pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live side air bag module down on the cover tear seam. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: Side air bag modules with damaged covers must be replaced.

⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: If a side air bag deployment took place a new seat back pad, trim cover, and side air bag module must be installed. Install a new seat back frame if necessary.

NOTE: When installing a new side air bag after deployment, refer to Section 501-10 for additional information concerning the installation of a new side air bag.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

NOTE: Driver seat shown, passenger seat similar.

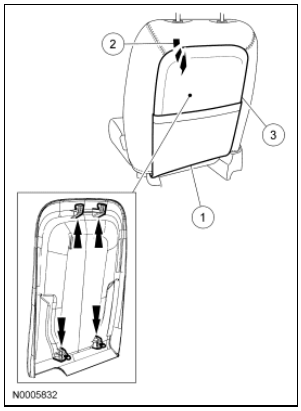
NOTE: Seat side air bag module shown, seat side thorax air bag module similar. For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.

NOTE: Seat with climate control and power lumbar shown, all others similar.

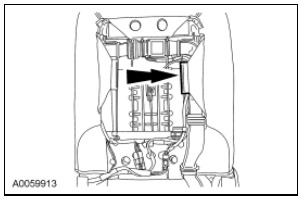
1. Position the affected seat to the full forward and upright position.

2. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

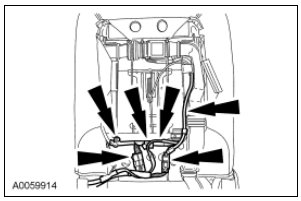
3. Remove the seat back trim panel.
    1. Pull and release the pin-type retainers at the bottom of the seat back trim panel.
    2. While pushing in at the top of the seat back trim panel, slide it down to disengage the J-hooks.
    3. Pull out evenly at the top of the seat back trim panel and remove it.
    4. Inspect the seat back trim panel J-hooks and pin-type retainers for damage.



4. Release the trim cover J-clip over the climate control duct (if equipped).

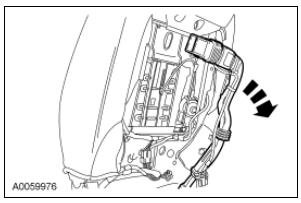


5. Disconnect the electrical connectors and separate all wire harness pin-type retainers from the lower seat back frame.

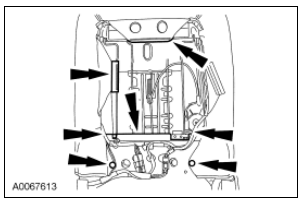


6. If equipped with climate control seats remove the pin-type retainer from the climate control duct.

7. If equipped with climate control seats remove the climate control duct.



8. Detach all the seat back trim cover J-clips and pin-type retainers.

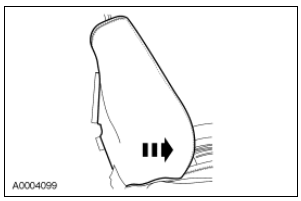


9. Remove the side air bag module nut cover.

10. **NOTE:** If installing a new side air bag module, use new retaining nuts. If the same side air bag module is to be reused then reuse the side air bag module nuts.

    Remove the side air bag module nuts.

11. With one hand on the side air bag module, position the seat back trim cover and pad forward enough to access the side air bag module.



12. Disconnect and remove the side air bag module.

Installation

1. Connect the side air bag module electrical connector.

2. **⚠ WARNING: Inspect the mounting surfaces of the side air bag module for any foreign objects before installing the side air bag module. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.**

   ⚠ WARNING: Inspect the side air bag deployment chute and the side air bag cavity in the seat back pad for any foreign objects. If any foreign objects are found remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

   ⚠ WARNING: Before installing the side air bag module into the deployment chute, check it for damage and foreign objects. If the air bag module is damaged, replace it. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

   ⚠ WARNING: If the air bag cover has separated or the air bag material has been exposed, install a new side air bag module. Do not attempt to repair the air bag module. Failure to do so may result in personal injury, in the event of an air bag deployment

   ⚠ WARNING: Check the side air bag deployment chute for damage. The deployment chute must not be repaired. If there is any damage to the deployment chute, the seat back trim cover and deployment chute must be installed new as a unit.

   ⚠ WARNING: If the air bag deployment chute is not properly positioned, the side air bag may not deploy correctly.

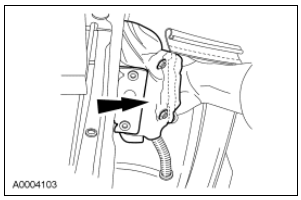
   ⚠ WARNING: Inspect the mounting surfaces of the deployment chute and the seat back frame mounting bracket for any foreign objects, before installing the side air bag module/deployment chute assembly. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

   NOTE: The alignment pin will only allow the side air bag module to be installed to the seat back mounting bracket one way.

   NOTE: Make sure the electrical connector is securely fastened to the side air bag module before installing the air bag module into the deployment chute.

   Position the side air bag module into the deployment chute.

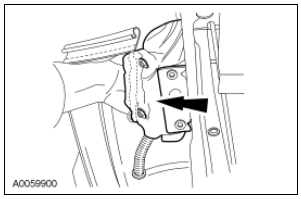
   - Position the side air bag module into the deployment chute with the alignment pin offset to the top and the electrical connector to the bottom of the seat back to properly position the alignment pin correctly when the side air bag module and deployment chute are mounted to the seat back frame mounting bracket.
   - The side air bag module mounting studs must come through the deployment chute stud openings.



3. **NOTE:** The deployment chute should not have any wrinkles or folds where it contacts the seat back frame mounting bracket.

Install the side air bag module onto the front seat back frame mounting bracket and install the nuts.

- Tighten to 9 Nm (80 lb-in).

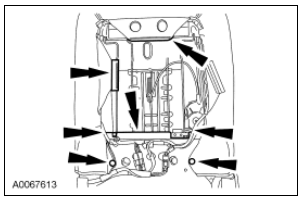


4. Reposition the seat back pad and trim cover to the seat back frame.

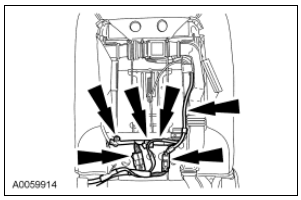
5. **NOTE:** Check that all 3 attaching clips on the side air bag nuts cover are correctly installed around the side air bag mounting bracket

   Attach the side air bag nuts cover.

6. Fasten the seat back trim cover J-clips.

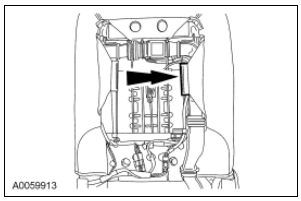


7. Connect the electrical connectors and attach all pin-type retainers to the lower seat back frame.



8. If equipped with climate control seats, install the climate control duct and the pin-type retainer.

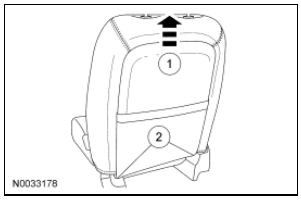
9. Fasten the trim cover J-clip over the climate control duct (if equipped).



10. ⚠ **CAUTION: Inspect the seat back trim panel for damage. If the J-hooks are damaged or the pin-type retainers remained in the seat and the panel boss is cracked, install a new seat back trim panel.**

    Install the seat back trim panel.

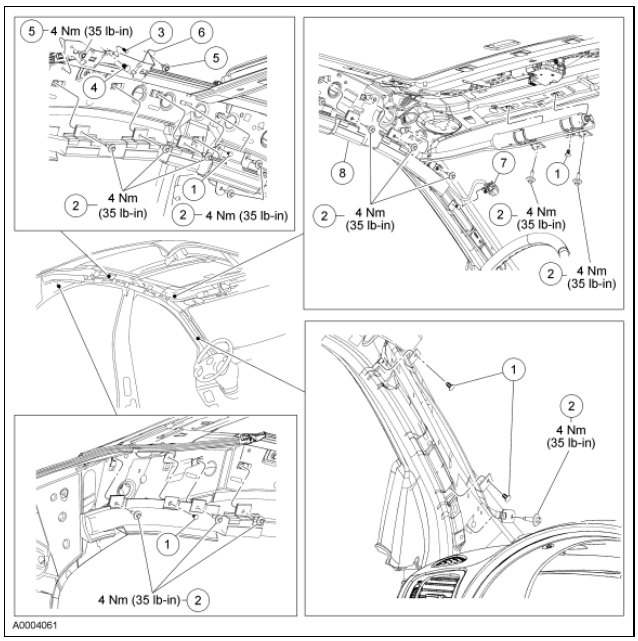
    1. Angle the top of the seat back trim panel inward and up to engage the upper J-hooks to the seat back frame.
    2. While holding the seat back trim panel up, align the pin-type retainers at the bottom of the seat back trim panel and install them into the seat back frame



11. Repower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

Side Air Curtain Module

Printable View (870 KB)



Item	Part Number	Description
1	W705635-S	Pin-type retainers (5 required)
2	W503924-S	Side air curtain retaining screws (13 required)
3		Pin-type retainer (part of 54312A52)
4		Pin-type retainer (part of 54312A52)
5		Screws
6	54312A53	Grab handle bracket
7		Side air curtain module electrical connector (part of 14A005)
8	54042D95	Side air curtain module

Removal

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: To reduce the risk of personal injury from an accidental deployment, always carry or place a live side air curtain module with the curtain and tear seam pointed away from your body. Failure to do so can result in personal injury in the event of a side air curtain deployment.

⚠ WARNING: After deployment, the surface of the side air curtain can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Never probe the connector on the side air curtain module. Doing so can result in side air curtain deployment which can result in personal injury.

⚠ WARNING: Anytime the side air curtain has deployed, the headliner, and all A, B, and C pillar upper trim panels and attaching hardware must be installed new along with any other damaged components and hardware. Failure to do so can result in personal injury in the event of a side air curtain deployment.

⚠ WARNING: Vehicles equipped with side air curtain modules require a specific headliner. When installing a new headliner on a vehicle equipped with side air curtain modules, make sure a headliner for side air curtain modules is being used. The word "AIRBAG" will appear on the headliner where it meets each B-pillar trim panel. Failure to do so can result in personal injury in the event of a side air curtain module deployment.

⚠ WARNING: Before installing a side air curtain module, inspect the roofline for any damage. If necessary, the sheet metal must be reworked to its original condition and structural integrity. All fasteners must be replaced and any foreign objects removed. Failure to do so may result in personal injury in the event of a side air curtain deployment.

⚠ WARNING: The side air curtain must be installed in the vehicle using new torque-prevailing type U-nuts, part number W709759 or W520822. Use of this U-nut is mandatory so as to reduce the risk of loss of fastener effectiveness. Failure to follow these instructions may result in personal injury in the event of a side air curtain deployment.

⚠ WARNING: Inspect the side air curtain module before installation. If the side air curtain module is damaged or the cover has separated and the curtain material has been exposed, a new side air curtain module must be installed. Do not attempt to repair the side air curtain module. Failure to follow these instructions can result in personal injury in the event of a side air curtain module deployment.

⚠ WARNING: To reduce the risk of injury, do not obstruct or place objects in the deployment path of the side air curtain module. Failure to follow these instructions can result in personal injury in the event of a side air curtain module deployment.

⚠ WARNING: Never put any type of fastener or tie strap around any part of the side air curtain module or interior trim panel. This will prevent the side air curtain module from deploying correctly. Failure to do so can result in personal injury in the event of a side air curtain module deployment.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

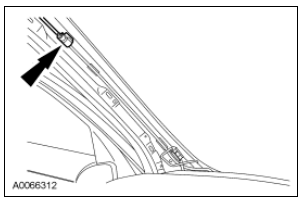
NOTE: Driver side shown, passenger side similar.

1. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

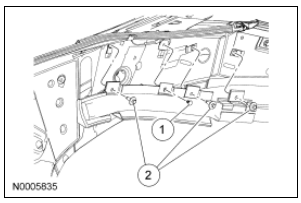
2. **⚠ WARNING: Anytime the side air curtain has deployed, the headliner, and all A-, B-, and C-pillar upper trim panels and attaching hardware must be replaced along with any other damaged components and hardware. Failure to do so may result in personal injury in the event of a side air curtain deployment.**

Remove the headliner. For additional information, refer to Section 501-05 .

3. Disconnect and detach the side air curtain module electrical connector located at the A-pillar.



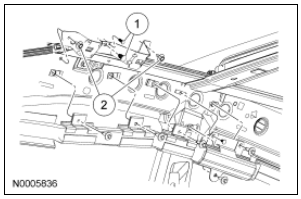
4. Remove the side air curtain module retainers near the C-pillar.
    1. Remove the pin-type retainer.
    2. Remove the 3 screws.



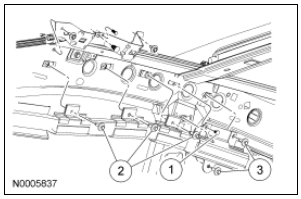
5. **NOTE:** If the side air curtain is being serviced on the passenger side, remove the front row bracket also.

   Remove the grab handle bracket located above the rear door.

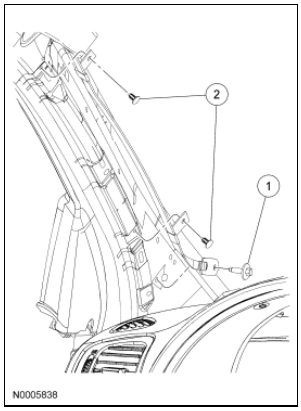
    1. Remove the 2 pin-type retainers.
    2. Remove the 2 screws and the grab handle bracket.



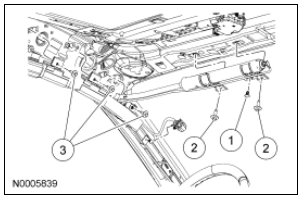
6. Remove the side air curtain module retainers located near the B-pillar.
    1. Remove the pin-type retainer.
    2. Remove the 3 screws.
    3. Remove the 2 screws.



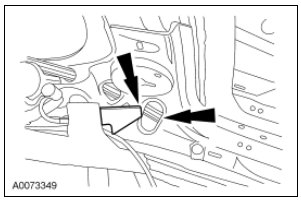
7. Remove the A-pillar tether retainers.
    1. Remove the screw.
    2. Remove the 2 pin-type retainers.



8. Remove the remaining side air curtain module retainers located near the A-pillar.
    1. Remove the side air curtain module canister pin-type retainer.
    2. Remove the 2 side air curtain module canister screws.
    3. Remove the 3 side air bag module screws.



9. Release the side air curtain module alignment ear located through the sheet metal opening at the top of the A-pillar and remove the side air curtain.



Installation

1. **⚠ WARNING: The side air curtain must be installed in the vehicle using new torque-prevailing type U-nuts, part number W709759 or W520822. Use of this U-nut is mandatory so as to reduce the risk of loss of fastener effectiveness. Failure to follow these instructions may result in personal injury in the event of a side air curtain deployment.**

   Remove all U-nut fasteners and install new.

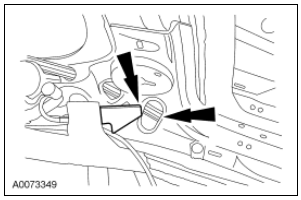
2. **⚠ WARNING: Before installing the side air curtain module, inspect the roofline for any damage. If necessary, the sheet metal must be reworked to its original condition and structural integrity. Install new fasteners and remove any foreign objects. Failure to do so may result in personal injury in the event of a side air curtain deployment.**

   ⚠ WARNING: Before installing the side air curtain module, if the module is damaged or the cover has separated or the side air curtain material has been exposed, install a new side air curtain module. Do not attempt to repair the side air curtain. Failure to follow these instructions could result in personal injury in the event of a side air curtain deployment.

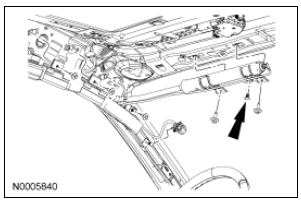
   ⚠ WARNING: Never put any type of fastener or tie strap around any part of the side air curtain module or interior trim panel. This will prevent the side air curtain module from

deploying correctly. Failure to do so can result in personal injury in the event of a side air curtain module deployment.

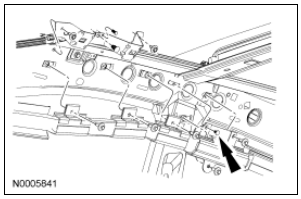
Align and install the side air curtain module alignment ear into the sheet metal opening at the top of the A-pillar.



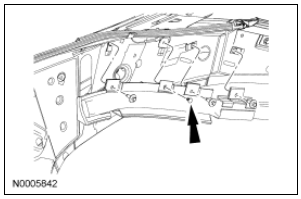
3. Install the side air curtain module canister pin-type retainer.



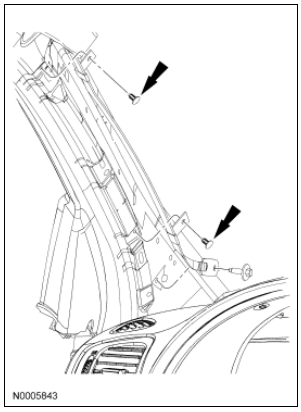
4. Install the side air curtain module pin-type retainer.



5. Install the side air curtain module pin-type retainer.



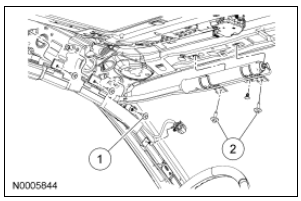
6. Install the 2 A-pillar tether pin-type retainers.



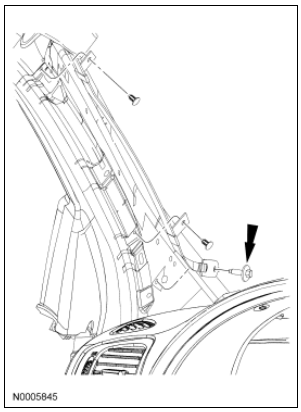
7. Install the side air curtain module screws located near the A-pillar.
    1. Install the side air curtain module screw.

♦ Tighten to 4 Nm (35 lb-in).

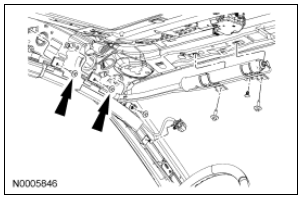
2. Install the 2 side air curtain module canister screws.
   ♦ Tighten to 4 Nm (35 lb-in).



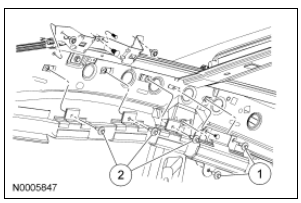
8. Install the A-pillar tether anchor screw.
   • Tighten to 4 Nm (35 lb-in).



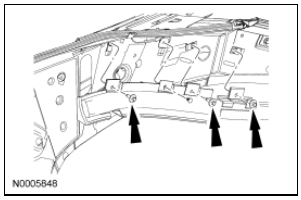
9. Install the 2 side air curtain module screws.
   • Tighten to 4 Nm (35 lb-in).



10. Install the side air curtain module screws located near the B-pillar.
    1. Install the 2 screws.
       ♦ Tighten to 4 Nm (35 lb-in).
    2. Install the 3 screws.
       ♦ Tighten to 4 Nm (35 lb-in).



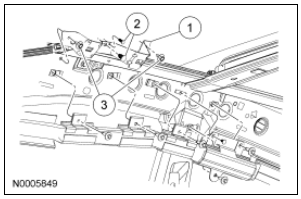
11. Install the 3 side air curtain module screws located near the C-pillar.
    • Tighten to 4 Nm (35 lb-in).



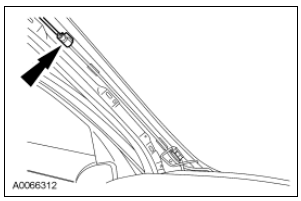
12. **NOTE:** If the side air curtain is being serviced on the passenger side, install the front row bracket also.

    Install the grab handle bracket.

    1. Position the grab handle bracket.
    2. Install the 2 pin-type retainers.
    3. Install the 2 screws.



13. Connect the side air curtain module electrical connector.



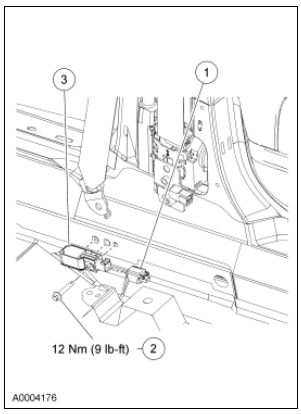
14. ⚠ **WARNING: Anytime the side air curtain has deployed, the headliner, and all A-, B-, and C-pillar upper trim panels and attaching hardware must be replaced along with any other damaged components and hardware. Failure to do so may result in personal injury in the event of a side air curtain deployment.**

    Install the headliner. For additional information, refer to Section 501-05 .

15. Repower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

Side Impact Sensor First Row, B-Pillar

Printable View (64 KB)



Item	Part Number	Description
1		Side impact connector (part of 14A005)
2	W707305-S	Side impact bolt
3	14B345	Side impact sensor

Removal

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Vehicle sensor orientation is critical for correct system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) is involved in a collision, inspect the sensor mounting bracket and wiring pigtail for deformation. Replace and correctly position the sensor or any other damaged supplemental restraint system (SRS) components whether or not the air bag is deployed.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Passenger side shown, driver side similar.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. Remove the front seat on the side with the affected B-pillar side impact sensor and depower the system. For additional information, refer to Section 501-10 .

2. **NOTE:** The B-pillar side impact sensor is located under the carpet on the inboard side of the rocker panel.

   Remove the B-pillar trim panel. For additional information, refer to Section 501-05 .

3. Disconnect the side impact sensor electrical connector.

4. Remove the side impact sensor bolt.

5. Remove the side impact sensor.

Installation

1. **NOTE:** Align the locator tabs of the side impact sensor to the openings in the rocker panel sheet metal.

   Install the B-pillar side impact sensor.

2. ⚠ **WARNING: The tightening torque of the air bag side impact sensor retaining bolt is critical for correct system operation.**

   Install the side impact sensor bolt.

   - Tighten to 12 Nm (9 lb-ft).

3. Connect the side impact sensor electrical connector.

4. Install the B-pillar trim panel. For additional information, refer to Section 501-05 .

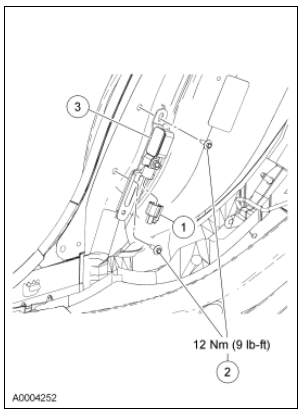
5. Install the front seat on the side with the affected B-pillar side impact sensor . For additional information, refer to Section 501-10 .

6. Repower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

7. Check the active restraint system for correct operation. For additional information, refer to section Section 501-20A .

Side Impact Sensor Second Row, C-Pillar

Printable View (62 KB)



Item	Part Number	Description
1		Side impact sensor connector (part of 14A005)
2	W7077722-S	Side impact sensor bolts (2 required)
3	14B345	Side impact sensor

Removal

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Vehicle sensor orientation is critical for correct system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) is involved in a collision, inspect the sensor mounting bracket and wiring pigtail for deformation. Replace and correctly position the sensor or any other damaged supplemental restraint system (SRS) components whether or not the air bag is deployed.

⚠ WARNING: To reduce the risk of personal injury, do not use any memory saver devices.

NOTE: The air bag warning lamp illuminates when the RCM fuse is removed and the ignition switch is ON. This is normal operation and does not indicate a supplemental restraint system (SRS) fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

NOTE: Passenger side shown, driver side similar.

1. Depower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

2. Remove the rear seat bolster on the side with the affected C-pillar side impact sensor. For additional information, refer to Section 501-10 .

3. Disconnect the side impact sensor electrical connector.

4. Remove the 2 side impact sensor bolts.

5. Remove the side impact sensor.

Installation

1. **NOTE:** Align the locator tab of the second row side impact sensor mounting bracket to the opening in the C-pillar sheet metal.

   Install the C-pillar side impact sensor.

2. ⚠ **WARNING: The tightening torque of the air bag side impact sensor retaining bolts is critical for correct system operation.**

   Install the side impact sensor bolts.

   - Tighten to 12 Nm (9 lb-ft).

3. Connect the side impact sensor electrical connector.

4. Install the rear seat bolster on the side with the affected C-pillar side impact sensor. For additional information, refer to Section 501-10 .

5. Repower the system. For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

6. Check the active restraint system for correct operation. For additional information, refer to Section 501-20A .

Printable View (10 KB)

Torque Specifications

Description	Nm	lb-ft	lb-in
Air conditioning line bracket bolt	10		89
Engine crossmember bolts	103	76	
Engine mount nuts	63	46	
Front/rear control arm cam bolts and nuts	175	129	
Front stabilizer bar link nuts	55	41	
I-brace front bolts	55	41	
I-brace rear bolts	30	22	
I-brace bracket shoulder bolts	30	22	
Radiator crossmember bolts	103	76	
Rear brake line bracket bolt	20	15	
Rear brake line fitting	20	15	
Rear strut bolts	133	98	
Rear subframe bolts	103	76	
Steering gear bolts and nuts	103	76	
Sway brace link nuts	55	41	

Frame and Body Mounting

Printable View (9 KB)

Radiator Support Crossmember

The radiator support crossmember is bolted to the body and is used to:

- aid in structural support.
- provide mounting surfaces for the front of the front suspension control arms.
- provide a mounting point for the front stabilizer bar.
- support the radiator.

Engine Support Crossmember

The engine support crossmember is bolted to the body and is used to:

- aid in structural support.
- provide mounting surfaces for the rear of the front suspension control arms.
- provide a mounting point for the engine isolators.
- provide a mounting point for the underbody stiffener.

Front I-Brace and Bracket Assembly

The I-brace and bracket assemblies are bolted to the body and the engine crossmember and are used to:

- provide support for the engine crossmember.
- stiffen the underbody.

Rear Subframe

The rear subframe is bolted to the body and is used to:

- aid in structural support.
- provide mounting surfaces for the rear suspension bar.
- provide mounting surfaces for the rear axle differential.
- provide a mounting point for the rear stabilizer.

If the rear subframe bushings become worn or damaged a new rear subframe must be installed as a unit. New rear subframe bushings cannot be installed.

Body Misalignment Check

Printable View (10 KB)

⚠ CAUTION: Do not attempt to correct any serious misalignment with 1 pulling/pushing operation. Damage to the structure may occur.

⚠ CAUTION: In case of severe or sharp bends, it may be necessary to use heat. Any attempt to cold-straighten a severely bent bracket may cause ruptures of the welds. It may also cause cracks in the bent part. Never heat the area to more than 650°C (1,202°F). Always use temperature-indicating crayons when applying heat to any part.

NOTE: All measurements should be made from the bare metal; remove the trim and bumper covers as necessary.

1. Repair the badly damaged areas before taking measurements for underbody alignment.

2. To check the underbody alignment, take the measurements between opposite reference points, such as crease lines or weld joints.

3. Monitor the upper body structure for excessive stress or movement while making any corrections to the underbody structure. Remove the windshield glass and rear window glass to prevent breakage. For additional information, refer to Section 501-11 .

Underbody Misalignment Check

Printable View (80 KB)

1. The dimensions of the underbody must be restored to provide the correct front and rear wheel alignment geometry.

2. All the dimensions are measured between the centers of the existing holes in the underbody unless otherwise specified.

3. Inspect all underbody structural members for cracks, twists or bends. Check all welded connections for cracks. Inspect the support brackets for looseness. Carry out any necessary repairs or install new components as necessary.

4. The X axis is referenced from the front of the vehicle. The Y axis is referenced from the center line of the vehicle.

   Underbody Dimensions

Dimension	X axis mm(in)	Y axis mm(in)
1	2,044.59 mm (80.49 in)	614 mm (24.17 in)
2	2,164 mm (85.19 in)	273 mm (10.74 in)
3	3,258 mm (128.26 in)	224 mm (8.81 in)
4	3,275 mm (128.73 in)	675 mm (26.57 in)
5	4,150 mm (163.38 in)	365 mm (14.37 in)
6	4,490 mm (176.77 in)	240 mm (9.44 in)
7	5,100 mm (200.78 in)	500 mm (19.68)
8	5,250 mm (206.69 in)	50 mm (1.96)
9	2,044.59 mm (80.49 in)	614 mm (24.17 in)
10	2,164 mm (85.19 in)	273 mm (10.74 in)
11	3,258 mm (128.26 in)	224 mm (8.81 in)
12	3,725 mm (146.65 in)	675 mm (26.57 in)
13	4,150 mm (163.38 in)	365 mm (14.37 in)
14	4,490 mm (176.77 in)	240 mm (9.44 in)
15	5,100 mm (200.78 in)	500 mm (19.68 in)
16	1,118 mm (44.01 in)	
17	1,825 mm (71.85 in)	
18	1,990 mm (78.34 in)

Engine Crossmember

Printable View (22 KB)

Special Tool(s)

 ST2333-A	Three Bar Engine Support Kit 303-F072

Removal and Installation

⚠ CAUTION: Suspension fasteners are critical parts because they affect the performance of vital components and systems and their failure can result in major repair expense. A new part with the same part number must be installed if installation is necessary. Do not use a new part of lesser quality or substitute design. Torque values must be used as specified during reassembly to make sure of correct retention of these parts.

NOTE: New control arm cam bolts and nuts must be installed whenever they are removed from the lower control arm.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Using the special tool, support the engine.

3. Remove the front tire and wheel assemblies. For additional information, refer to Section 204-04 .

4. **NOTE:** When installing, loosely install the front bolts and then the rear bolts. With the vehicle at curb height, tighten the bolts to the specifications.

   Remove the LH I-brace 2 front bolts.

   - To install, tighten to 55 Nm (41 lb-ft).

5. Remove the LH I-brace 2 rear bolts.
   - To install, tighten to 30 Nm (22 lb-ft).

6. **NOTE:** When installing, loosely install the front bolts and then the rear bolts. With the vehicle at curb height, tighten the bolts to the specifications.

   NOTE: When installing the rear bolts, make sure the insulators (4 per side) are properly installed.

   Remove the RH I-brace 2 front bolts.

   - To install, tighten to 55 Nm (41 lb-ft).

7. Remove the RH I-brace 2 rear bolts.
   - To install, tighten to 30 Nm (22 lb-ft).

8. **NOTE:** When installing, use new steering gear nuts.

Remove the 3 nuts and bolts and position the steering gear aside.

- To install, tighten to 103 Nm (76 lb-ft).

9. **NOTE:** When installing, loosely install the bolts. With the vehicle at curb height, tighten the bolts to the specification.

   NOTE: When installing, use new rear control arm cam bolts and nuts.

   Remove the 2 rear control arm cam bolts and nuts (1 cam bolt and nut per side).

   - To install, tighten to 175 Nm (129 lb-ft).

10. Remove the LH I-brace bracket shoulder bolt.
    - To install, tighten to 30 Nm (22 lb-ft).

11. Remove the LH I-brace bracket.

12. Remove the RH I-brace bracket shoulder bolt.
    - To install, tighten to 30 Nm (22 lb-ft).

13. Remove the RH I-brace bracket.

14. Remove the 2 engine mount nuts.
    - To install, tighten to 63 Nm (46 lb-ft).

15. **NOTE:** When installing, use new engine crossmember bolts.

    Remove the 4 engine crossmember bolts (2 per side) and remove the engine crossmember.

    - To install, tighten to 103 Nm (76 lb-ft).

16. **NOTE:** A front wheel alignment is required when the crossmember or any of the control arm cam bolts and nuts are removed. For additional information, refer to Section 204-00 .

    To install, reverse the removal procedure.

Crossmember

Printable View (14 KB)

Removal and Installation

⚠ CAUTION: Suspension fasteners are critical parts because they affect the performance of vital components and systems and their failure can result in major repair expense. A new part with the same part number must be installed if installation is necessary. Do not use a new part of lesser quality or substitute design. Torque values must be used as specified during reassembly to make sure of correct retention of these parts.

NOTE: New control arm cam bolts and nuts must be installed whenever they are removed from the lower control arm.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Remove the front tire and wheel assemblies. For additional information, refer to Section 204-04 .

3. Remove the front valance panels.

4. Remove the radiator sight shield.

5. When removing the radiator crossmember, support the radiator.

6. **NOTE:** When installing, loosely install the front bolts and then the rear bolts. With the vehicle at curb height, tighten the bolts to the specifications.

   Remove the LH I-brace 2 front bolts.

   - To install, tighten to 55 Nm (41 lb-ft).

7. Remove the LH I-brace 2 rear bolts.
   - To install, tighten to 30 Nm (22 lb-ft).

8. **NOTE:** When installing, loosely install the front bolts and then the rear bolts. With the vehicle at curb height, tighten the bolts to the specifications.

   NOTE: When installing the rear bolts, make sure the insulators (4 per side) are properly installed.

   Remove the RH I-brace 2 front bolts.

   - To install, tighten to 55 Nm (41 lb-ft).

9. Remove the RH I-brace 2 rear bolts.
   - To install, tighten to 30 Nm (22 lb-ft).

10. Remove the LH I-brace bracket shoulder bolt.
    - To install, tighten to 30 Nm (22 lb-ft).

11. Remove the LH I-brace bracket.

12. Remove the RH I-brace bracket shoulder bolt.
    - To install, tighten to 30 Nm (22 lb-ft).

13. Remove the RH I-brace bracket.

14. **NOTE:** When installing, loosely install the bolts. With the vehicle at curb height, tighten the bolts to the specification.

    NOTE: When installing, use new front control arm cam bolts and nuts.

    Remove the 2 front control arm cam bolts and nuts (1 cam bolt and nut per side).

    - To install, tighten to 175 Nm (129 lb-ft).

15. **NOTE:** When installing, use new sway brace link nuts.

    Remove the 2 sway brace link nuts (1 per side).

    - To install, tighten to 55 Nm (41 lb-ft).

16. Remove the air conditioning (A/C) line bracket bolt.
    - To install, tighten to 10 Nm (89 lb-in).

17. **NOTE:** When installing, use new radiator crossmember bolts.

    Remove the 4 radiator crossmember bolts (2 per side).

    - To install, tighten to 103 Nm (76 lb-ft).

18. **NOTE:** On vehicles with V8 engines, disconnect the block heater cable from the crossmember.

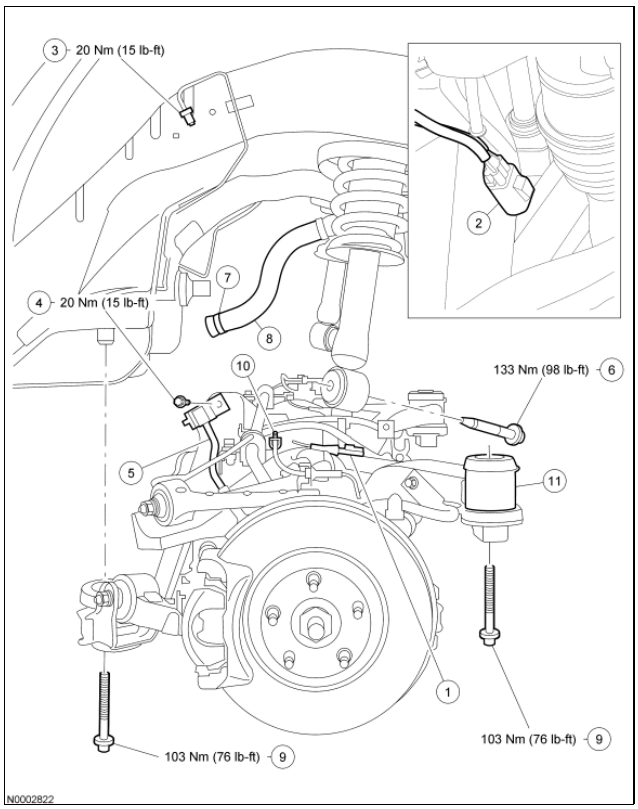
    Remove the radiator crossmember.

19. **NOTE:** A front wheel alignment is required when the crossmember or any of the control arm cam bolts and nuts are removed. For additional information, refer to Section 204-00 .

    To install, reverse the removal procedure.

Rear Subframe

Printable View (171 KB)



Item	Part Number	Description
1	2C190	Anti-lock brake system (ABS) sensor electrical connector (2 required)
2	14A464	Electric parking brake electrical connector
3		Rear brake line fitting (part of 2C287) (2 required)
4	N802191-S	Rear brake line bracket bolt (2 required)
5	2A442	Rear brake line (2 required)
6	W704884-S426	Rear strut bolt (2 required)
7	N808238-S	Fuel filler hose clamp
8	9047	Fuel filler hose
9	W706614-S426	Subframe bolts (4 required)
10		ABS sensor electrical cable locator
11	5D042	Subframe and bushings assembly

Removal and Installation

⚠ WARNING: Use of any other than approved DOT 3 or DOT 4 brake fluid may cause permanent damage to brake components and may render the brakes inoperative. Failure to follow these instructions may result in personal injury.

⚠ WARNING: Brake fluid contains polyglycol ethers and polyglycols. Avoid contact with eyes. Wash hands thoroughly after handling. If brake fluid contacts eyes, flush eyes with running water for 15 minutes. Get medical attention if irritation persists. If taken internally, drink water and induce

vomiting. Get medical attention immediately. Failure to follow these instructions may result in personal injury.

⚠ CAUTION: Brake fluid is harmful to painted and plastic surfaces. If brake fluid is spilled onto a painted or plastic surface, immediately wash it off with water.

⚠ CAUTION: Do not allow the brake master cylinder reservoir to run dry during the bleeding operation. Keep the brake master cylinder reservoir filled with the specified brake fluid. Never reuse the brake fluid that has been drained from the hydraulic system.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Drain the fuel from the fuel tank. For additional information, refer to Section 310-00 .

3. **NOTE:** If a new rear subframe is to be installed, the differential and halfshafts must be removed prior to removal of the rear subframe. For all other procedures, the differential, halfshafts and rear subframe are to be removed as an assembly.

   If installing a new subframe, remove the rear axle differential case. For additional information, refer to Section 205-02 .

4. Remove the drive shaft. For additional information, refer to Section 205-01 .

5. Remove the rear wheel and tire assemblies. For additional information, refer to Section 204-04 .

6. Disconnect the anti-lock brake system (ABS) sensor connector.

7. Disconnect the electric parking brake connector.

8. **NOTE:** Make sure to cap off all fluid lines and hoses.

   NOTE: After the subframe is installed, bleed the brake system. For additional information, refer to Section 206-00 .

   Remove the 2 rear brake line fittings (1 per side).

   - To install, tighten to 20 Nm (15 lb-ft).

9. Remove the rear brake line bracket bolt.
   - To install, tighten to 20 Nm (15 lb-ft).

10. Remove the 2 rear strut bolts (1 per side).
    - To install, tighten to 133 Nm (98 lb-ft).

11. **NOTE:** Make sure to cap off all fluid lines and hoses.

    Remove the hose clamp from the fuel filler hose.

12. **⚠ CAUTION: Prior to the removal of the fuel filler hose, care must be taken to avoid spillage of any residual fuel.**

    Remove the fuel filler hose from the fuel tank.

13. **NOTE:** Paint or mark the position of the subframe to the body for assembly reference.

    Remove the 4 rear subframe bolts (2 per side).

    - To install, tighten to 103 Nm (76 lb-ft).

14. Remove the ABS sensor electrical cable locator.

15. ⚠ **CAUTION: Make sure to not damage the fuel tank when lowering or raising the subframe assembly.**

    NOTE: If installing a new subframe, transfer the park brake assembly. For additional information, refer to Section 206-05 .

    NOTE: If installing a new subframe and bushings assembly, center the subframe on the body mounts.

    NOTE: If installing a new subframe and bushings assembly, transfer all the suspension components and perform a rear wheel alignment. For additional information, refer to Section 204-00 .

    Remove the subframe and bushings assembly.

16. To install, reverse the removal procedure.

Engine

Printable View (9 KB)

NOTE: Specifications show the expected minimum or maximum condition. Refer to the appropriate section in Group 303 for the procedure.

NOTE: If a component fails to meet the specifications, it is necessary to refinish it or install a new component. Wear limits are provided as an aid to determine if the component can be refinished. A new component must be installed when any component fails to meet specifications and cannot be refinished.

NOTE: This section contains information, steps and procedures that may not be specific to your engine.

This section covers general procedures and diagnosis and testing of the engine system, except for exhaust emission control devices, which are covered in the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

The engine incorporates the following features: Refer to the appropriate section in Group 303 for the procedure.

- Crankcase ventilation or breather system
- Exhaust emission control system
- Evaporative emission control system

Some engines incorporate a fail-safe cooling system. Refer to the appropriate section in Group 303 for the procedure.

The engine, fuel system, ignition system, emissions system and exhaust system all affect exhaust emission levels and must be maintained according to the maintenance schedule. Refer to the scheduled Maintenance Guide.

Correct engine identification is required to order parts. Refer to the appropriate section in Group 303 for the procedure.

For complete vehicle and engine identification codes, refer to Section 100-01 .

ST1300-A	12 Volt Master UV Diagnostic Inspection Kit 164-R0756 or equivalent (Leak Detector)
ST1297-A	Vacuum/Pressure Tester 164-R0253 or equivalent

Inspection and Verification

1. Verify the customer concern by operating the engine to duplicate the condition.
2. Visually inspect for obvious signs of mechanical damage. Refer to the following chart.

   Visual Inspection Chart

Mechanical
• Engine coolant leaks • Engine oil leaks • Fuel leaks • Damaged or severely worn parts • Loose mounting bolts, studs and nuts

3. If the inspection reveals obvious concerns that can be readily identified, repair as necessary.
4. If the concerns remain after the inspection, determine the symptoms. GO to Symptom Chart .

Symptom Chart

Symptom Chart

Component Tests

Engine Oil Leaks

NOTE: When diagnosing engine oil leaks, the source and location of the leak must be positively identified prior to repair.

Prior to carrying out this procedure, clean the cylinder block, cylinder heads, valve covers, oil pan and flywheel with a suitable solvent to remove all traces of oil.

Engine Oil Leaks Fluorescent Oil Additive Method

Use the 12 Volt Master UV Diagnostic Inspection Kit to carry out the following procedure for oil leak diagnosis.

1. Clean the engine with a suitable solvent to remove all traces of oil.

2. Add Gasoline Engine Oil Dye 164-R3705 meeting Ford specification ESE-M99C103-B1 or equivalent to the engine oil. Use a minimum 14.8 ml (0.5 ounce) to a maximum 40 ml (1.35 ounce) of fluorescent additive to all engines.

3. Run the engine for 15 minutes. Stop the engine and inspect all seal and gasket areas for leaks using the 12 Volt Master UV Diagnostic Inspection Kit. A clear bright yellow or orange area will identify the leak. For extremely small leaks, several hours may be necessary for the leak to appear.

Leakage Points Underhood

Examine the following areas for oil leakage:

- Valve cover gaskets
- Cylinder head gaskets
- Oil cooler, if equipped
- Oil filter adapter
- Engine front cover
- Oil filter adapter and filter body
- Oil level indicator tube connection
- Oil pressure sensor

Leakage Points Under Engine, With Vehicle on Hoist

- Oil pan gaskets
- Oil pan sealer
- Sump sealer 8 cylinder
- Engine front cover gasket
- Crankshaft front seal
- Crankshaft rear oil seal
- Oil filter adapter and filter body
- Oil cooler, if equipped

Leakage Points With Transmission and Flywheel Removed

- Crankshaft rear oil seal
- Rear main bearing cap parting line
- Flexplate mounting bolt holes (with flexplate installed)
- Pipe plugs at the end of oil passages

Oil leaks at crimped seams in sheet metal parts and cracks in cast or stamped parts can be detected when using the dye method.

Compression Test Compression Gauge Check

1. Make sure the oil in the crankcase is of the correct viscosity and at the correct level and that the battery is correctly charged. Operate the vehicle until the engine is at normal operating temperature. Turn the ignition switch to the OFF position, then remove all the spark plugs.

2. Set the throttle plates in the WIDE-OPEN position.

3. Install a compression gauge such as the Compression Tester in the No. 1 cylinder.

4. Install an auxiliary starter switch in the starting circuit. With the ignition switch in the OFF position, and using the auxiliary starter switch, crank the engine a minimum of 5 compression strokes and record the highest reading. Note the approximate number of compression strokes necessary to obtain the highest reading.

5. Repeat the test on each cylinder, cranking the engine approximately the same number of compression strokes.

Compression Test Test Results

The indicated compression pressures are considered within specification if the lowest reading cylinder is at least 75 percent of the highest reading. For additional information, refer to the Compression Pressure Limit Chart.

COMPRESSION PRESSURE LIMIT CHART

MAXIMUM PRESSURE	MINIMUM PRESSURE	MAXIMUM PRESSURE	MINIMUM PRESSURE	MAXIMUM PRESSURE	MINIMUM PRESSURE	MAXIMUM PRESSURE	MINIMUM PRESSURE

1076 KPA (156 PSI)	807 KPA (117 PSI)	1282 KPA (186 PSI)	965 KPA (140 PSI)	1489 KPA (216 PSI)	1117 KPA (162 PSI)	1696 KPA (246 PSI)	1269 KPA (184 PSI)
1089 KPA (158 PSI)	814 KPA (118 PSI)	1296 KPA (188 PSI)	972 KPA (141 PSI)	1503 KPA (218 PSI)	1124 KPA (163 PSI)	1710 KPA (248 PSI)	1202 KPA (186 PSI)
1103 KPA (160 PSI)	827 KPA (120 PSI)	1310 KPA (190 PSI)	979 KPA (142 PSI)	1517 KPA (220 PSI)	1138 KPA (165 PSI)	1724 KPA (250 PSI)	1289 KPA (187 PSI)
1110 KPA (161 PSI)	834 KPA (121 PSI)	1324 KPA (192 PSI)	993 KPA (144 PSI)	1631 KPA (222 PSI)	1145 KPA (166 PSI)		

If one or more cylinders reads low, squirt approximately one tablespoon of engine oil meeting Ford specification on top of the pistons in the low-reading cylinders. Repeat the compression pressure check on these cylinders.

Compression Test Interpreting Compression Readings

1. If compression improves considerably, piston rings are worn or damaged.

2. If compression does not improve, valves are sticking or not seating correctly.

3. If 2 adjacent cylinders indicate low compression pressures and squirting oil on each piston does not increase compression, the head gasket may be leaking between cylinders. Engine oil or coolant in cylinders could result from this condition.
   Use the Compression Pressure Limit Chart when checking cylinder compression so that the lowest reading is within 75 percent of the highest reading.

Cylinder Leakage Detection

When a cylinder produces a low reading, use of the Engine Cylinder Leak Detection/Air Pressurization Kit will be helpful in pinpointing the exact cause.

The leakage detector is inserted in the spark plug hole, the piston is brought up to dead center on the compression stroke, and compressed air is admitted.

Once the combustion chamber is pressurized, a special gauge included in the kit will read the percentage of leakage. Leakage exceeding 20 percent is excessive.

While the air pressure is retained in the cylinder, listen for the hiss of escaping air. A leak at the intake valve will be heard in the throttle body. A leak at the exhaust valve can be heard at the tailpipe. Leakage past the piston rings will be audible at the positive crankcase ventilation (PCV) connection. If air is passing through a blown head gasket to an adjacent cylinder, the noise will be evident at the spark plug hole of the cylinder into

which the air is leaking. Cracks in the cylinder block or gasket leakage into the cooling system may be detected by a stream of bubbles in the radiator.

Excessive Engine Oil Consumption

Nearly all engines consume oil, which is essential for normal lubrication of the cylinder bore walls and pistons and rings. Determining the level of oil consumption may require testing by recording how much oil is being added over a given set of miles.

Customer driving habits greatly influence oil consumption. Mileage accumulated during towing or heavy loading generates extra heat. Frequent short trips, stop-and-go type traffic or extensive idling, prevent the engine from reaching normal operating temperature. This prevents component clearances from reaching specified operating ranges.

The following diagnostic procedure may be utilized to determine internal oil consumption. Make sure that the concern is related to internal oil consumption, and not external leakage, which also consumes oil. Verify there are no leaks before carrying out the test. Once verified, the rate of internal oil consumption can be tested.

A new engine may require extra oil in the early stages of operation. Internal piston-to-bore clearances and sealing characteristics improve as the engine breaks in. Engines are designed for close tolerances and do not require break-in oils or additives. Use the oil specified in the Owner Guide. Ambient temperatures may determine the oil viscosity specification. Verify that the correct oil is being used for the vehicle in the geographic region in which it is driven.

Basic Pre-checks

1. For persistent complaints of oil consumption, interview the customer to determine the oil consumption characteristics. If possible, determine the brand and grade of oil currently in the oil pan. Look at the oil filter or oil-change station tags to determine if Ford-recommended maintenance schedules have been followed. Make sure that the oil has been changed at the specified mileage intervals. If vehicle mileage is past the first recommended drain interval, the OEM production filter should have been changed.

2. Ask how the most current mileage was accumulated. That is, determine whether the vehicle was driven under the following conditions:
    - Extended idling or curbside engine operation
    - Stop-and-go traffic or taxi operation
    - Towing a trailer or vehicle loaded heavily
    - Frequent short trips (engine not up to normal operating temperature)
    - Excessive throttling or high engine-rpm driving

3. Verify that there are no external leaks. If necessary, review the diagnostic procedure under Engine Oil Leaks in the Diagnosis and Testing portion of this section.

4. Inspect the crankcase ventilation system for:
    - disconnected hoses at the valve cover or throttle body.
    - loose or missing valve cover fill cap.
    - missing or incorrectly seated engine oil level indicator.
    - incorrect or dirty PCV valve.
    - a PCV valve grommet unseated in the valve cover (if so equipped)

5. Inspect for signs of sludge. Sludge affects PCV performance and can plug or restrict cylinder head drainback wells. It can also increase oil pressure by restricting passages and reducing the drainback

capability of piston oil control rings. Sludge can result from either excessive water ingestion in the crankcase or operation at extremely high crankcase temperatures.

6. Inspect the air filter for dirt, sludge or damage. A hole in the filter element will allow unfiltered air to bypass into the air induction system. This can cause premature internal wear (engine dusting), allowing oil to escape past rings, pistons, valves and guides.

7. If the engine is hot or was recently shut down, wait at least 5 minutes to allow the oil to drain back. Ask the customer if this requirement has been followed. Adding oil without this wait period can cause an overfill condition, leading to excessive oil consumption and foaming which may cause engine damage.

8. Make sure the oil level indicator (dipstick) is correctly and fully seated in the indicator tube. Remove the oil level indicator and record the oil level.

Detailed Pre-checks

1. Check the thermostat opening temperature to make sure that the cooling system is operating at the specified temperature. If it is low, internal engine parts are not running at specified internal operating clearances.

2. Verify the spark plugs are not oil saturated. Oil leaking into one or more cylinders will appear as an oil soaked condition on the plug. If a plug is saturated, a compression check may be necessary at the conclusion of the oil consumption test.

Oil Consumption Test

Once all of the previous conditions are met, carry out an oil consumption test.

1. Drain the engine oil and remove the oil filter. Install a new manufacturer-specified oil filter. Make sure the vehicle is positioned on a level surface. Refill the oil pan to a level **one quart (liter) less** than the specified fill level, using manufacturer-specified oil.

2. Run the engine for 3 minutes (if hot) or 10 minutes (if cold). Allow for a minimum 5-minute drainback period and then record the oil level shown on the oil level indicator. Place a mark on the backside of the oil level indicator noting the oil level location.

3. Add the final 1 quart (liter) to complete the normal oil fill. Restart the engine and allow it to idle for 2 minutes. Shut the engine down.

4. After a 5-minute drainback period, record the location of the oil level again. Mark the oil level indicator with the new oil level location. (Note: Both marks should be very close to the MIN-MAX upper and lower limits or the upper and lower holes on the oil level indicator. These marks will exactly measure the engine's use of oil, with a one quart differential between the new marks.) Demonstrate to the customer that the factory-calibrated marks on the dipstick are where the oil should fall after an oil change with the specified fill amount. Explain however, that this may vary slightly between MIN-MAX or the upper and lower holes on the oil level indicator.

5. Record the vehicle mileage.

6. Advise the customer that oil level indicator readings must be taken every 320 km (200 miles) or weekly, using the revised marks as drawn. Remind the customer that the engine needs a minimum 5-minute drainback for an accurate reading and that the oil level indicator must be firmly seated in the tube prior to taking the reading.

7. When the subsequent indicator readings demonstrate a full quart (liter) has been used, record the vehicle mileage. The mileage driven between the 2 readings should not be less than 1,500 miles. The drive cycle the vehicle has been operated under must be considered when making this calculation. It may be necessary to have the customer bring the vehicle in for a periodic oil level indicator reading to closely monitor oil usage.

Post Checks, Evaluation and Corrective Action

1. If test results indicate excessive oil consumption, carry out a cylinder compression test. The cylinder compression test should be carried out with a fully charged battery and all spark plugs removed. See the Compression Test Chart in this section for pressure range limits.

2. Compression should be consistent across all cylinders. For additional information, refer to the Compression Testing portion of this section. If compression tested within the specifications found in this section, the excessive oil consumption may be due to wear on the valve guides, valves or valve seals.

3. A cylinder leak detection test can be carried out using an Engine Cylinder Leak Detection/Air Pressurization Kit. This can help identify valves, piston rings, or worn valve guides/valve stems, inoperative valve stem seals or other related areas as the source of oil consumption.

NOTE: An oil-soaked appearance on the porcelain tips of the spark plugs also indicates excessive oil use. A typical engine with normal oil consumption will exhibit a light tan to brown appearance. See Spark Plug Analysis in this section for details. A single or adjoining, multiple cylinder leak can be traced by viewing the tips.

4. If an internal engine part is isolated as the root cause, determine if the repair will exceed cost limits and proceed with a repair strategy as required.

5. Once corrective action to engine is complete and verifying that all pre-check items were eliminated in the original diagnosis, repeat the Oil Consumption Test as described above and verify consumption results.

Intake Manifold Vacuum Test

Bring the engine to normal operating temperature. Connect the Vacuum/Pressure Tester to the intake manifold. Run the engine at the specified idle speed.

The vacuum gauge should read between 51-74 kPa (15-22 in-Hg) depending upon the engine condition and the altitude at which the test is conducted. Subtract 4.0193 kPa (1 in-Hg) from the specified reading for every 304.8 m (1,000 feet) of elevation above sea level.

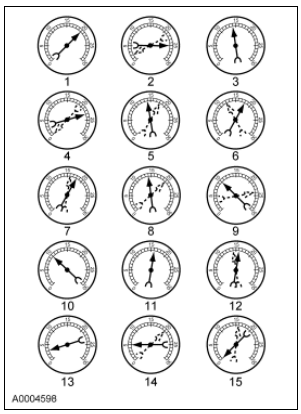
The reading should be steady. If necessary, adjust the gauge damper control (where used) if the needle is fluttering rapidly. Adjust the damper until the needle moves easily without excessive flutter.

Intake Manifold Vacuum Test Interpreting Vacuum Gauge Readings

A careful study of the vacuum gauge reading while the engine is idling will help pinpoint trouble areas. Always conduct other appropriate tests before arriving at a final diagnostic decision. Vacuum gauge readings, although helpful, must be interpreted carefully.

Most vacuum gauges have a normal band indicated on the gauge face.

The following are potential gauge readings. Some are normal; others should be investigated further.



1. NORMAL READING: Needle between 51-74 kPa (15-22 in-Hg) and holding steady.

2. NORMAL READING DURING RAPID ACCELERATION AND DECELERATION: When the engine is rapidly accelerated (dotted needle), the needle will drop to a low reading (not to zero). When the throttle is suddenly released, the needle will snap back up to a higher than normal figure.

3. NORMAL FOR HIGH-LIFT CAMSHAFT WITH LARGE OVERLAP: The needle will register as low as 51 kPa (15 in-Hg) but will be relatively steady. Some oscillation is normal.

4. WORN RINGS OR DILUTED OIL: When the engine is accelerated (dotted needle), the needle drops to 0 kPa (0 in-Hg). Upon deceleration, the needle runs slightly above 74 kPa (22 in-Hg).

5. STICKING VALVES: When the needle (dotted) remains steady at a normal vacuum but occasionally flicks (sharp, fast movement) down and back about 13 kPa (4 in-Hg), one or more valves may be sticking.

6. BURNED OR WARPED VALVES: A regular, evenly-spaced, downscale flicking of the needle indicates one or more burned or warped valves. Insufficient valve clearance will also cause this reaction.

7. POOR VALVE SEATING: A small but regular downscale flicking can mean one or more valves are not seating.

8. WORN VALVE GUIDES: When the needle oscillates over about a 13 kPa (4 in-Hg) range at idle speed, the valve guides could be worn. As engine speed increases, the needle will become steady if guides are responsible.

9. WEAK VALVE SPRINGS: When the needle oscillation becomes more violent as engine rpm is increased, weak valve springs are indicated. The reading at idle could be relatively steady.

10. LATE VALVE TIMING: A steady but low reading could be caused by late valve timing.

11. IGNITION TIMING RETARDING: Retarded ignition timing will produce a steady but somewhat low reading.

12. INSUFFICIENT SPARK PLUG GAP: When spark plugs are gapped too close, a regular, small pulsation of the needle can occur.

13. INTAKE LEAK: A low, steady reading can be caused by an intake manifold or throttle body gasket leak.

14. BLOWN HEAD GASKET: A regular drop of fair magnitude can be caused by a blown head gasket or warped cylinder head-to-cylinder block surface.

15. RESTRICTED EXHAUST SYSTEM: When the engine is first started and is idled, the reading may be normal, but as the engine rpm is increased, the back pressure caused by a clogged muffler, kinked tailpipe or other concerns will cause the needle to slowly drop to 0 kPa (0 in-Hg). The needle then may slowly rise. Excessive exhaust clogging will cause the needle to drop to a low point even if the engine is only idling.

16. When vacuum leaks are indicated, search out and correct the cause. Excess air leaking into the system will upset the fuel mixture and cause concerns such as rough idle, missing on acceleration or burned valves. If the leak exists in an accessory unit such as the power brake booster, the unit will not function correctly. Always fix vacuum leaks.

Oil Pressure Test

1. Disconnect and remove the oil pressure sensor (9278) from the engine.

2. Connect the Engine Oil Pressure Gauge to the oil pressure sender oil galley port.

3. Run the engine until normal operating temperature is reached.

4. Run the engine at the specified rpm and record the gauge reading.

5. The oil pressure should be within specifications; For additional information, refer to the specification chart in the appropriate engine section.

6. If the pressure is not within specification, check the following possible sources:
   - Insufficient oil
   - Oil leakage
   - Worn or damaged oil pump
   - Oil pump screen cover and tube
   - Excessive main bearing clearance
   - Excessive connecting rod bearing clearance
   - VCT system leak
   - Chain tensioner leak

Valve Train Analysis Engine Off, Valve Cover Removed

Check for damaged or severely worn parts and correct assembly. Make sure correct parts are used with the static engine analysis as follows.

Valve Train Analysis Engine Off

- Check for loose mounting bolts on camshaft caps.
- Check valve shim to camshaft gap.

Valve Train Analysis Engine Off, Camshaft Engines

- Check for broken or damaged parts.

Valve Train Analysis Valve Springs

- Check for broken or damaged parts.

Valve Train Analysis Engine Off, Valve Spring Retainer and Valve Spring Retainer Keys

- Check for correct seating of the valve spring retainer key on the valve stem and in valve spring retainer.
- Check for correct seating on the valve stem.

Valve Train Analysis Engine Off, Valves and Cylinder Head

- Check for plugged oil drain back holes.
- Check for worn or damaged valve tips.
- Check for missing or damaged valve stem seals or guide-mounted valve stem seal.
- Check valve tappet shim gap.
- Check for missing or worn valve spring seats.
- Check for plugged oil metering orifice in cylinder head oil reservoir (if equipped).

Static checks (engine off) are to be made on the engine prior to the dynamic procedure.

Valve Train Analysis Engine Off, Camshaft Lobe Lift OHC Engines

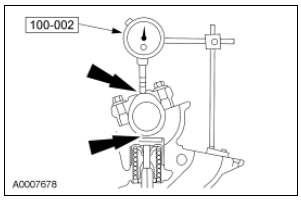
Check the lift of each camshaft lobe in consecutive order and make a note of the readings.

1. Remove the valve covers.

2. Remove the spark plugs.

3. Install the special tool so the rounded tip of indicator is on top of the camshaft lobe and on the same plane as the valve tappet.

4. Rotate the crankshaft using a breaker bar and socket attached to the crankshaft pulley retainer bolt. Rotate the crankshaft until the base circle of the camshaft lobe is reached.



5. Zero the dial indicator. Continue to rotate the crankshaft until the high-lift point of the camshaft lobe is in the fully-raised position (highest indicator reading).

6. To check the accuracy of the original indicator reading, continue to rotate crankshaft until the base circle is reached. The indicator reading should be zero. If zero reading is not obtained, repeat Steps 1 through 6.

7. Install the spark plugs.

8. Install the valve covers.

Valve Train Analysis Engine Off, Valve Tappet

Valve tappet noise can be caused by any of the following:

- excessive valve tappet shim gap
- excessive valve guide wear

Excessive collapsed valve tappet shim gap can be caused incorrect initial adjustment or wear of valve tappet shim face.

For additional information, refer to the valve train shim and gap inspection procedure in the appropriate engine section.

Sprockets

Printable View (36 KB)

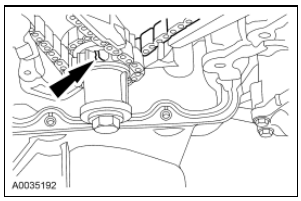
1. **WARNING: To avoid the possibility of personal injury or damage to the vehicle, do not operate the engine with the hood open until the fan blade has been examined for possible cracks and separation. Failure to follow these instructions may result in personal injury.**

   NOTE: Specifications show the expected minimum or maximum condition.

   NOTE: If a component fails to meet the specifications, it is necessary to install a new component or refinish the component. If the component can be refinished, wear limits are provided as an aid to making a decision. If a component fails to meet specifications and cannot be refinished, a new component must be installed.

   Inspect the timing chain/belt and the sprocket.

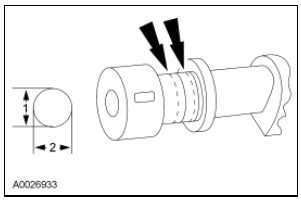
   - Install new components as necessary. Refer to the appropriate section in Group 303 for the procedure.



Camshaft Journal Diameter

Printable View (18 KB)

1. Measure each camshaft journal diameter in 2 directions.
    - If out of specification, install new components as necessary. Refer to the appropriate section in Group 303 for the procedure.



Camshaft End Play OHC Engines

Printable View (40 KB)

Special Tool(s)

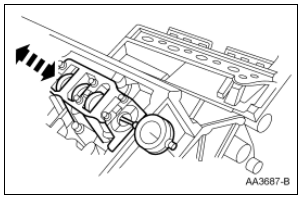
 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent

1. Use a Dial Indicator Gauge with Holding Fixture to measure camshaft end play.

2. Position the camshaft to the rear of the cylinder head.

3. Zero the indicator.

4. Move the camshaft to the front of the cylinder head. Note and record the camshaft end play.
   - If camshaft end play exceeds specifications, install new camshaft and recheck end play. Refer to the appropriate section in Group 303 for the procedure.
   - If camshaft end play exceeds specification after camshaft installation, install a new cylinder head. Refer to the appropriate section in Group 303 for the procedure.



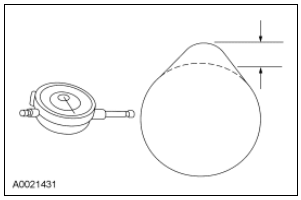
Camshaft Lobe Lift

Printable View (22 KB)

Special Tool(s)

 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent

1. Use a Dial Indicator Gauge with Holding Fixture to measure camshaft intake/exhaust lobe lift.
   - Rotate the camshaft and subtract the lowest indicator reading from the highest indicator reading to figure the camshaft lobe lift.
   - Refer to the appropriate section in Group 303 for the procedure.



Camshaft Runout

Printable View (24 KB)

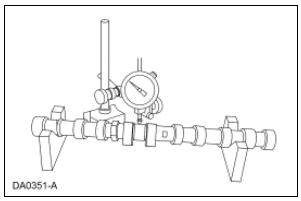
Special Tool(s)

 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent

1. **NOTE:** Camshaft journals must be within specifications before checking runout.

   Use a Dial Indicator Gauge with Holding Fixture to measure the camshaft runout.

   - Rotate the camshaft and subtract the lowest indicator reading from the highest indicator reading.
   - For additional information, refer to the specification chart in the appropriate engine section.
   - If out of specification, install new components as necessary. Refer to the appropriate section in Group 303 for the procedure.



Crankshaft End Play

Printable View (22 KB)

Special Tool(s)

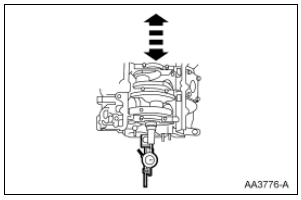
 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent

1. Measure the crankshaft end play. Use a Dial Indicator Gauge with Holding Fixture to measure crankshaft end play.

2. Position the crankshaft to the rear of the cylinder block.

3. Zero the indicator.

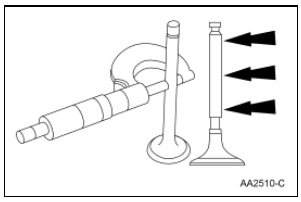
4. Move the crankshaft to the front of the cylinder block. Note and record the crankshaft end play.
   - If crankshaft end play exceeds specifications, install a new crankshaft thrust washer or crankshaft thrust main bearing. Refer to the appropriate section in Group 303 for the procedure.



Valve Stem Diameter

Printable View (18 KB)

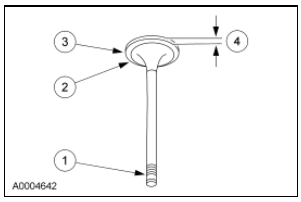
1. Measure the diameter of each intake and exhaust valve stem at the points shown. Verify the diameter is within specification.
    - Refer to the appropriate section in Group 303 for the procedure.
    - If out of specification, install new components as necessary. Refer to the appropriate section in Group 303 for the procedure.



Valve Inspection

Printable View (15 KB)

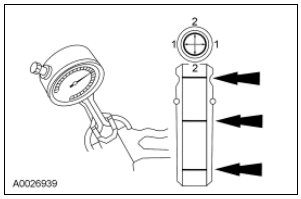
1. Inspect the following valve areas:
    1. The end of the stem for grooves or scoring
    2. The valve face and the edge for pits, grooves or scores
    3. The valve head for signs of burning, erosion, warpage and cracking
    4. The valve margin for wear



Valve Guide Inner Diameter

Printable View (20 KB)

1. Measure the inner diameter of the valve guides in two directions where indicated.
   - Refer to the appropriate section in Group 303 for the procedure.

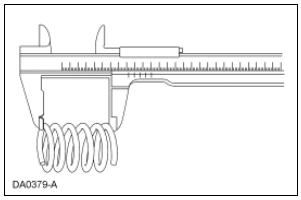


2. If the valve guide is not within specifications, install a new cylinder head assembly.

Valve Spring Free Length

Printable View (17 KB)

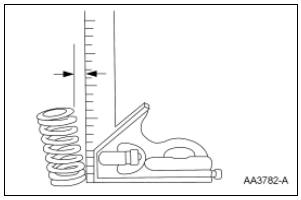
1. Measure the free length of each valve spring.
   - Refer to the appropriate section in Group 303 for the procedure.
   - If out of specification, install new components as necessary. Refer to the appropriate section in Group 303 for the procedure.



Valve Spring Squareness

Printable View (17 KB)

1. Measure the out-of-square on each valve spring.
    - Turn the valve spring and observe the space between the top of the valve spring and the square. Install a new valve spring if out of square. Refer to the appropriate section in Group 303 for the procedure.



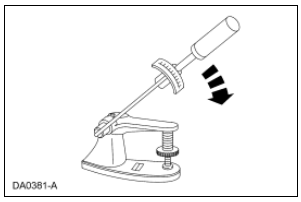
Valve Spring Strength

Printable View (21 KB)

Special Tool(s)

ST1278-A	Pressure Gauge, Valve/Clutch Spring 303-006 (TOOL-6513-DD) or equivalent

1. Use a Valve/Clutch Spring Pressure Gauge to check the valve spring for correct strength at the specified valve spring length.
    - Refer to the appropriate section in Group 303 for the procedure.
    - If out of specification, install new components as necessary. Refer to the appropriate section in Group 303 for the procedure.



DA0381-A

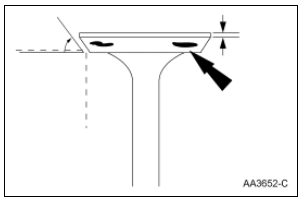
Valve Seat Inspection

Printable View (14 KB)

Valve and Seat Refacing Measurements

⚠ CAUTION: After grinding valves or valve seats, check valve clearance.

1. Check the valve head and seat.
   - Check valve angles.
   - Check margin width.
   - Refer to the appropriate section in Group 303 for the procedure.
   - Be sure margin width is within specification.



2. Inspect for abnormalities on the valve face and seat. Install a new cylinder head assembly if abnormalities are found.

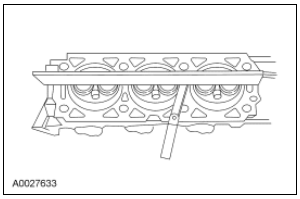
Cylinder Head Distortion

Printable View (22 KB)

Special Tool(s)

ST1246-A	Straight Edge 303-D039 (D83L-4201-A) or equivalent

1. Use a straight edge and a feeler gauge to inspect the cylinder head for flatness. If the cylinder head is distorted, install a new cylinder head.



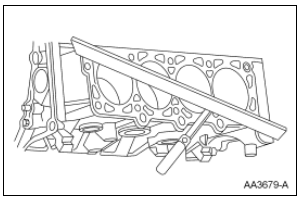
Cylinder Block Distortion

Printable View (35 KB)

Special Tool(s)

ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent
ST1246-A	Straight Edge 303-D039 (D83L-4201-A) or equivalent

1. Use a straight edge and a feeler gauge to inspect the cylinder block for flatness. If the cylinder block is distorted, install a new short block assembly.



AA3679-A

Cylinder Block Core Plug Replacement

Printable View (46 KB)

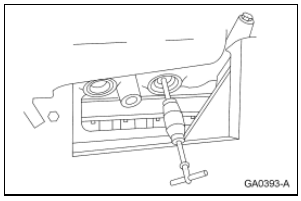
Special Tool(s)

 ST1185-A	Slide Hammer 100-001 (T50T-100-A)

Material

Item	Specification
Threadlock® 262 TA-26 or equivalent	WSK-M2G351-A6

1. Use a slide hammer or tools suitable to remove the cylinder block core plug.



GA0393-A

2. Inspect the cylinder block plug bore for any damage that would interfere with the correct sealing of the plug. If the cylinder block plug bore is damaged, bore for the next oversize plug.

3. **NOTE:** Oversize plugs are identified by the OS stamped in the flat located on the cup side of the plug.

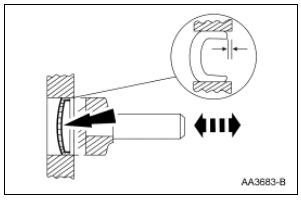
   Coat the cylinder block core plug and bore lightly with Threadlock® 262 and install the cylinder block core plug.

Cup-Type

4. ⚠ **CAUTION: Use care during this procedure so as not to disturb or distort the cup sealing surface.**

   ⚠ **CAUTION: When installed, the flanged edge must be below the chamfered edge of the bore to effectively seal the bore.**

   Use a tool suitable to seat the cup-type cylinder block core plug.

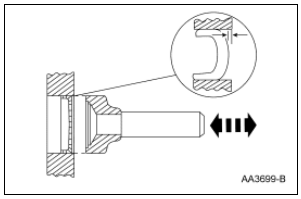


AA3683-B

Expansion-Type

1. ⚠ **CAUTION: Do not contact the crown when installing an expansion-type cylinder block core plug. This could expand the plug before seating and result in leakage.**

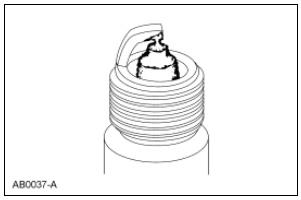
   Use tool suitable to seat the expansion-type cylinder block core plug.



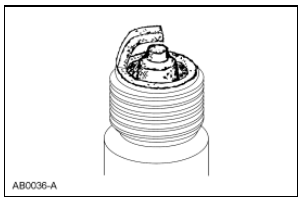
Spark Plug Inspection

Printable View (102 KB)

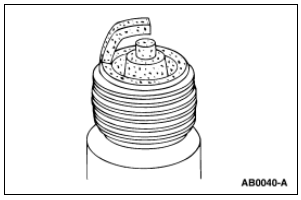
1. Inspect the spark plug for a bridged gap.
   - Check for deposit build-up closing the gap between the electrodes. Deposits are caused by oil or carbon fouling.
   - Clean the spark plug.



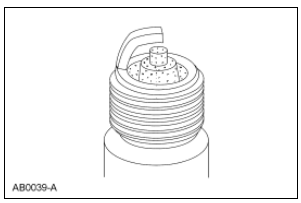
2. Check for oil fouling.
   - Check for wet, black deposits on the insulator shell bore electrodes, caused by excessive oil entering the combustion chamber through worn rings and pistons, excessive valve-to-guide clearance or worn or loose bearings.
   - Correct the oil leak concern.
   - Install a new spark plug.



3. Inspect for carbon fouling. Look for black, dry, fluffy carbon deposits on the insulator tips, exposed shell surfaces and electrodes, caused by a spark plug with an incorrect heat range, dirty air cleaner, too rich a fuel mixture or excessive idling.
   - Install new spark plugs.



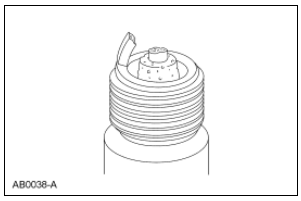
4. Inspect for normal burning.
   - Check for light tan or gray deposits on the firing tip.



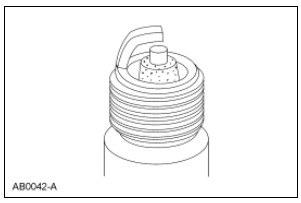
5. Inspect for pre-ignition, identified by melted electrodes and a possibly damaged insulator. Metallic deposits on the insulator indicate engine damage. This may be caused by incorrect ignition timing, wrong type of fuel or the unauthorized installation of a heli-coil insert in place of the spark plug

threads.

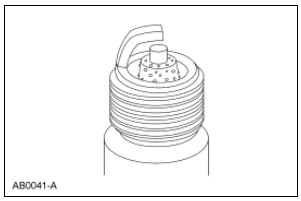
- Install a new spark plug.



6. Inspect for overheating, identified by a white or light gray spots and with bluish-burnt appearance of electrodes. This is caused by engine overheating, wrong type of fuel, loose spark plugs, spark plugs with an incorrect heat range, low fuel pump pressure or incorrect ignition timing.
   - Install a new spark plug.



7. Inspect for fused deposits, identified by melted or spotty deposits resembling bubbles or blisters. These are caused by sudden acceleration.
   - Install new spark plugs.



Exhaust Manifold Cleaning and Inspection

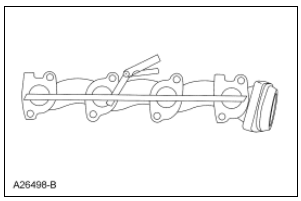
Printable View (24 KB)

Special Tool(s)

ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent
ST1246-A	Straight Edge 303-D039 (D83L-4201-A) or equivalent

1. Clean the exhaust manifold using a suitable solvent. Inspect the manifold for cracks or broken flanges.

2. Place a straight edge across the exhaust manifold flanges and check for warping with a feeler gauge.



Printable View (26 KB)

General Specifications

Item	Specification
Lubricants and Sealants	
SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP or equivalent	WSS-M2C930-A
Motorcraft Premium Gold Engine Coolant VC-7-A (in California, Oregon and New Mexico VC-7-B, in Canada CVC-7-C) or equivalent (yellow color)	WSS-M97B51-A1
Silicone Gasket Remover ZC-30	
Metal Surface Prep ZC-31	
Metal Surface Cleaner ZC-21	WSE-M5B392-A

Main bearing journal diameter	62.968-62.992 mm (2.479-2.480 in)
Main bearing journal maximum taper	
Main bearing journal maximum out-of-round	
Main bearing journal-to-cylinder block clearance	
Connecting rod journal diameter	49.970-49.990 mm (1.967-1.968 in)
Connecting rod journal maximum taper	
Connecting rod journal maximum out-of-round	
Crankshaft maximum end play	0.110-0.232 mm (0.004-0.009 in)
Piston and Connecting Rod	
Piston diameter coded grade 1	88.990-89.010 mm (3.5035-3.5043 in)
Piston diameter coded grade 2	88.998-89.022 mm (3.5039-3.5048 in)
Piston diameter coded grade 3	89.010-89.030 mm (3.5043-3.5051 in)
Piston-to-cylinder bore clearance	0.012-0.022 mm (0.0005-0.0009 in)
Piston ring end gap compression (top, gauge diameter)	0.100-0.250 mm (0.0039-0.0098 in)
Piston ring end gap compression (bottom, gauge diameter)	0.27-0.42 mm (0.0106-0.0165 in)
Piston ring end gap oil ring (steel rail, gauge diameter)	0.15-0.65 mm (0.0059-0.0255 in)
Piston ring end gap compression (top, service limit)	0.50 mm (0.0196 in) max.
Piston ring end gap compression (bottom, service limit)	0.65 mm (0.0255 in) max.
Piston ring end gap oil ring (steel rail, service limit)	0.90 mm (0.0354 in) max.
Piston ring groove width compression (top)	1.230-1.245 mm (0.0484-0.0490 in)
Piston ring groove width compression (bottom)	1.530-1.545 mm (0.0602-0.0608 in)
Piston ring groove width oil ring	3.030-3.055 mm (0.1192-0.1203 in)
Piston ring width	
Piston ring-to-groove clearance	
Piston pin bore diameter	21.017-21.031 mm (0.827-0.828 in)
Piston pin diameter	21.011-21.013 mm (0.8272 in)
Piston pin length	60.51-60.08 mm (2.382-2.365 in)
Piston pin-to-piston fit	

	-0.005 to +0.001 mm (0.0001-0.00003 in)
Piston-to-connecting rod clearance	
Connecting rod-to-pin clearance standard	0.004-0.020 mm (0.0001-0.0007 in)
Connecting rod-to-pin clearance service limit	0.035 mm (0.0013 in)
Connecting rod pin bore diameter	
Connecting rod length (center-to-center)	138.06-138.14 mm (5.435-5.438 in)
Connecting rod maximum allowed bend	0.038 mm (0.0015 in) per 25.0 mm (0.984 in)
Connecting rod maximum allowed twist	0.050 mm (0.0019 in) per 25.0 mm (0.984 in)
Connecting rod bearing bore diameter	
Connecting rod bearing-to-crankshaft clearance	0.028-0.045 mm (0.0011-0.0017 in)
Connecting rod side clearance (assembled to crank) standard	0.100-0.30 mm (0.0039-0.0118 in)
Connecting rod side clearance (assembled to crank) service limit	0.35 mm (0.0137 in) max.

[a] Refer to the procedure in this section.

PSP tube bracket-to-oil pan stud nut	8		71
Radio ignition interference capacitor bolts	10		89
RH upper intake manifold support bracket bolt	10		89
RH upper intake manifold support bracket nuts	6		53
Spark plugs	15	11	
Steering intermediate shaft-to-steering gear bolt	25	18	
Steering intermediate shaft bolt	30	22	
Steering gear nuts	103	76	

Stabilizer link nut	55	41	
Starter studs and bolt	25	18	
Transmission cooler tube bracket bolt	11	8	
Torque converter nuts	35	26	
Timing chain guide bolts	25	18	
Timing chain tensioner bolts	25	18	
Transmission oil cooler tubes	20	15	
Transmission-to-oil pan bolts	45	33	
Transmission cooler tube bracket nut	10		89
Upper intake manifold bolts [a]			
Upper radiator support bracket bolts	10		89
Valve cover studs and bolts [a]			
Variable camshaft timing (VCT) oil filter plug	25	18	
VCT system oil filter bolts	7		62
Upper ball joint nuts	90	66	
Wiring harness conduit-to-valve cover stud bolt nuts	6		53

[a] Refer to the procedure in this section.
[b] Install oil filter until seal makes contact. Tighten an additional 270 degrees.

Engine

Printable View (19 KB)

The 3.0L (4V) (182 CID) is a 60-degree V-6 engine with dual overhead camshafts (DOHC), 4 valves per cylinder and sequential multiport fuel injection (SFI). The engine has:

- an aluminum upper intake manifold.
- a lower intake manifold.
- aluminum cylinder heads.
- a cast aluminum upper cylinder block.

The ignition system is electronic (distributorless) with a single ignition coil located above each spark plug. This high-energy ignition system is required for fast-burn combustion.

A unique 3-stage intake air system that utilizes 2 separate plenums, one for each side of the engine. The plenums can be connected through the operation of 2 special intake manifold tuning (IMT) valves to improve upper rpm power.

Identification

For quick identification refer to the safety certification decal.

- The decal is located on the LH front door lock face panel.
- An engine identification label is also attached to the engine.
- The symbol code on the identification tag identifies each engine for determining parts usage; for instance, engine displacement in liters or cubic inch displacement and model year.

Engine Code Information

The engine code information label is located on the front fender. The label contains, among other information:

- the engine calibration number.
- the engine build date.
- the engine plant code.
- the engine code.

Emission Calibration Label

NOTE: The engine codes and the calibration numbers must be used when making inquiries or ordering parts.

The emission calibration number label is located on the LH side door or LH door post pillar. It identifies:

- the engine calibration number.
- the engine code number.
- the revision level.

These numbers are used to determine if parts are unique to specific engines.

Exhaust Emission Control System

Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Induction System

The fuel needed for burning in the cylinders is provided by a returnless, sequential multiport fuel injection (SFI).

- Fuel is supplied from the vehicle fuel tank by a high-pressure electric fuel pump mounted in the fuel tank.
- The fuel is filtered and sent to the fuel injection supply manifold.
- Fuel pressure is regulated by modulating pump output based upon readings from the fuel pressure sensor, located on the fuel rail.
- Fuel is metered into the intake air stream in accordance with engine by 6 solenoid-operated fuel injectors mounted in the lower intake manifolds.
- The 6 fuel injectors are mounted above the intake valves and connected in series with the fuel pressure regulator.

Crankshaft

The crankshaft is supported on the bottom of the cylinder block by 4 steel-backed, over-plated, aluminum crankshaft main bearings.

To provide smooth engine operation, the piston crankpins are positioned to provide a power impulse every 120 degrees of crankshaft rotation. The spacing provides smooth and quiet operation.

Two sprockets and timing chains connect the crankshaft with the camshafts and provide a 2:1 drive ratio.

Camshaft

The camshafts:

- are supported on 4 bearing inserts.
- thrust loads and end play are limited by a camshaft thrust plate.

Cylinder Head

The spark plug is installed in the center of the fuel/air roof-shaped combustion chamber to ignite the mixture in the combustion chamber. The central location of the spark plug causes the flame front to be evenly spread across the chamber, which also reduces spark knock.

Valve Train

Both camshafts are driven by a shared timing chain, and operate 4 valves per cylinder by means of a selective shim sitting on the top of a tappet. One spring on each valve is used to close the valve. The adjusting shims in the valve tappets can be changed to correct the valve clearance. These are available in 44 different thicknesses. The shim thickness is ink printed on the back of the shim. A high degree of accuracy is required during adjusting to avoid repeated changing of the shims. The camshaft cams run concentrically on the valve tappets. At engine speeds of about 3,000 rpm this causes the tappets to rotate, and they in turn transfer the rotation to the valves. This valve rotation is required because it produces an even valve seating and prevents the valves from wearing in a certain position which could cause them to leak.

Variable Camshaft Timing (VCT)

The VCT system changes camshaft timing dependent on engine speed, load and oil temperature. Oil pressure advances and retards camshaft timing to improve low and high speed engine performance, engine idle quality and exhaust emissions.

Positive Crankcase Ventilation System

The engine is equipped with a positive, closed-type crankcase ventilation system which recycles the crankcase vapors to the throttle body.

Engine Lubrication System

The engine lubrication system is of the force-feed type in which oil is supplied under full pressure to the crankshaft, connecting rod bearings, timing chain tensioners, and VCT solenoids. The flow of oil to the valve tappets and valve train is controlled by a restricting orifice located in the head gaskets.

Oil Pump

The lubrication system is designed to provide optimum oil flow to critical components of the engine through its entire operating range.

The heart of the system is a positive displacement internal gear oil pump. Generically this design is known as a G-rotor pump.

- The oil pump is mounted on the front face of the cylinder block.
- The inner rotor is piloted on the crankshaft post and is driven through the crankshaft.

System pressure is limited by an integral, internally vented relief valve which directs the bypassed oil back to the inlet side of the oil pump.

- Oil pump displacement has been selected to provide adequate volume so there is correct oil pressure both at hot idle and maximum speed.
- Relief valve calibration protects the system from excessive pressure during high viscosity conditions, yet is designed to provide adequate connecting rod bearing lubrication under high temperature and high speed conditions.

Engine Cooling System

The engine is liquid-cooled by a centrifugal coolant pump driven through the front engine accessory drive by the crankshaft.

A thermostat is used to restrict coolant flow until the engine reaches normal operating temperature.

Oil Pan

The oil pan is cast aluminum and is attached to the cylinder block and transmission.

- The oil pan acts as a reservoir holding lubricating oil that is pumped through the engine by the oil pump after start-up.

Drive Belt System

Accessories mounted on the front of the engine are belt-driven by the crankshaft and an automatically tensioned serpentine drive belt is routed over the following components:

- Coolant pump
- A/C compressor
- Generator
- Drive belt tensioner

- Drive belt idler pulleys
- Crankshaft pulley
- Power steering pump pulley

Engine

Printable View (7 KB)

Refer to Section 303-00 for basic mechanical concerns.

Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for driveability concerns.

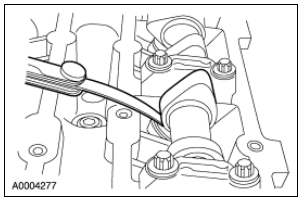
Valve Clearance Check

Printable View (34 KB)

1. Remove the valve covers. For additional information, refer to Valve Cover LH or Valve Cover RH in this section.
2. Remove the spark plugs.
3. **NOTE:** The engine will have to be rotated with the crankshaft pulley bolt to bring each valve to base circle.

   NOTE: The valve clearance must be measured with the camshaft at base circle.

   Measure and record all valve clearances.



4. If the valve clearances are out of specification, refer to Valve Clearance Adjustment in this section.
5. To assemble, reverse the inspection procedure.

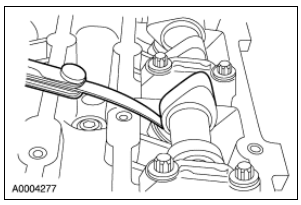
Valve Clearance Adjustment

Printable View (43 KB)

1. Remove the timing chains. For additional information, refer to Timing Drive Components in this section.

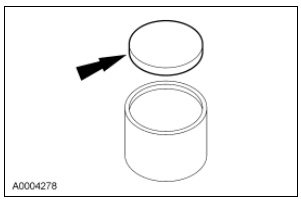
2. **NOTE:** Measure each valve clearance at base circle before removing the camshafts. The shims are not repairable with the camshafts in place. Failure to measure all clearances prior to removing the camshafts will cause unnecessary repetition of the procedure.

   Use a feeler gauge to measure each valve clearance and record its location.



3. Remove the camshafts. For additional information, refer to Valve Train Components Exploded View and Camshafts in this section.

4. Remove the shims.



5. **NOTE:** The shims are marked for thickness; example: 2.22 mm = 222 on shim.

   NOTE: The corrected shims allow the following valve clearances.

   - Intake valve clearance: 0.18-0.22 mm (0.00709-0.00866 in)
   - Exhaust valve clearance: 0.33-0.38 mm (0.0128-0.0148 in)

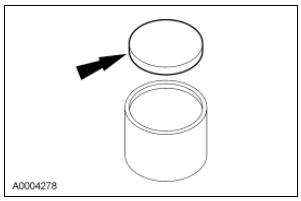
   NOTE: A midrange clearance is the most desirable:

   - Intake: 0.20 mm (0.00787 in)
   - Exhaust: 0.35 mm (0.014 in)

   NOTE: Select shims using this formula: required shim thickness = measured clearance plus the base shim thickness minus most desirable clearance.

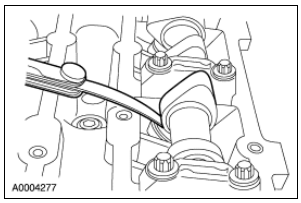
   Select shims and mark the installation location.

6. Install new shims.



7. Install the camshafts. For additional information, refer to Valve Train Components - Exploded View and Camshafts in this section.

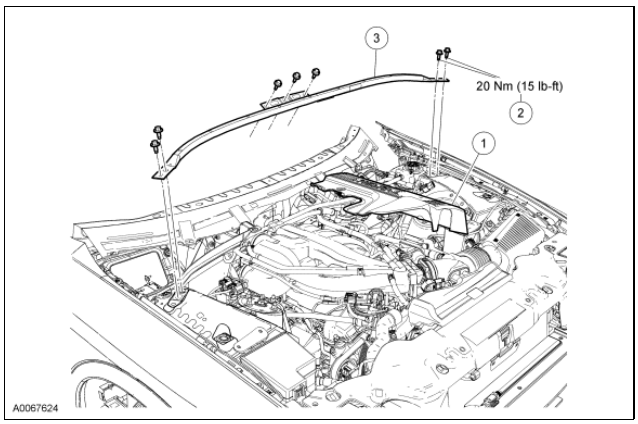
8. Measure the new valve clearances.



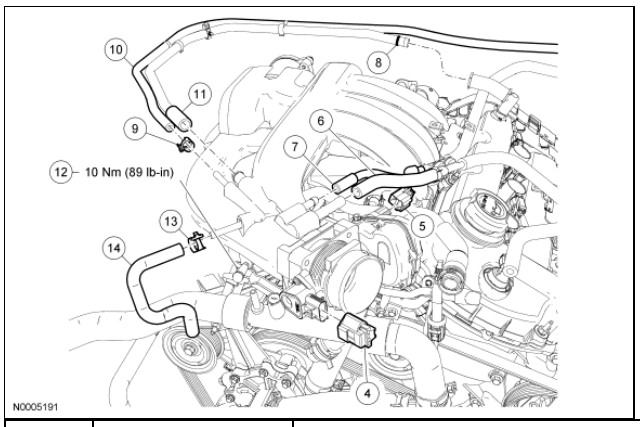
9. Install the timing chains. For additional information, refer to Timing Drive Components in this section.

Upper Intake Manifold

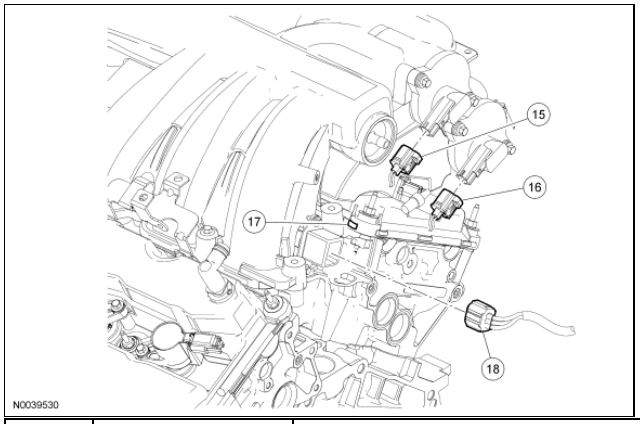
Printable View (637 KB)



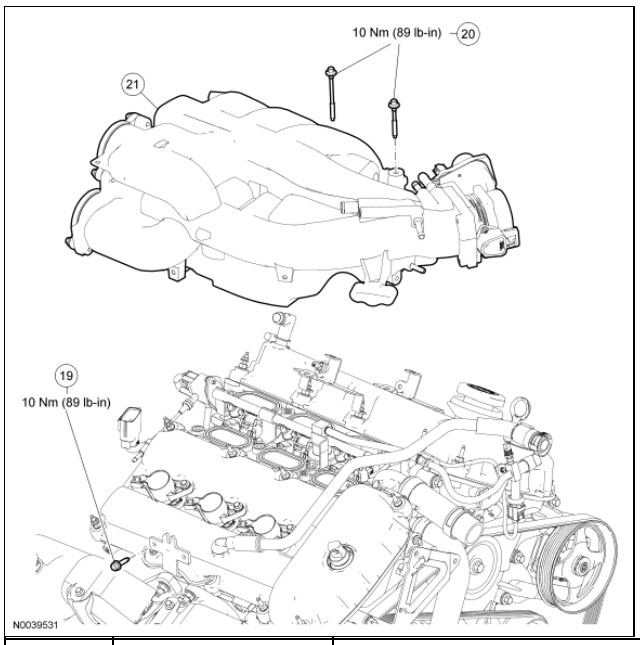
Item	Part Number	Description
1		Engine appearance cover
2	W708009	Cross-vehicle brace bolts (7 required)
3	3B328	Cross-vehicle brace



Item	Part Number	Description
4	14A464	Throttle position (TP) sensor electrical connector
5	14A464	Electronic throttle control electrical connector
6	9C490	Brake booster vacuum hose
7	9D289	Evaporative emissions (EVAP) tube
8	9D289	Positive crankcase ventilation (PCV) tube
9	15161	Coolant hose clamp
10	8906696	Coolant hose
11	9D289	PCV tube
12		Intake manifold support brace bolt
13	15161	Coolant hose clamp
14	8276	Coolant hose



Item	Part Number	Description
15	14A464	Intake manifold tuning valve electrical connector
16	14A464	Intake manifold tuning valve electrical connector
17		Fuel pressure sensor vacuum hose
18	14A464	Fuel pressure sensor electrical connector



Item	Part Number	Description
19	W701719	Intake manifold support brace bolt
20		Intake manifold mounting bolts (4 required)
21	9424	Upper intake manifold

Removal

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .
3. Drain the cooling system. For additional information, refer to Section 303-03 .
4. Remove the air cleaner outlet pipe. For additional information, refer to Section 303-12 .
5. Remove the cowl panel grille. For additional information, refer to Section 501-02 .

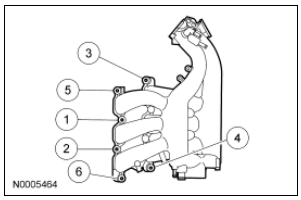
6. Remove the 7 bolts and the cross-vehicle brace.
7. Disconnect the throttle position (TP) sensor and electronic throttle control electrical connectors.
8. Disconnect the brake booster vacuum hose from the upper intake manifold.
9. Disconnect the evaporative emissions (EVAP) and positive crankcase ventilation (PCV) tubes from the upper intake manifold.
10. Disconnect the 2 coolant hoses from the upper intake manifold.
11. Detach the coolant hose and the PCV tube retainer from the upper intake manifold.
12. Disconnect the PCV tube from the PCV valve and position the PCV tube and coolant hose aside.
13. Remove the front upper intake manifold support brace-to-upper intake manifold bolt.
14. Disconnect the 2 intake manifold tuning (IMT) valve electrical connectors.
15. Disconnect the fuel pressure sensor electrical connector and vacuum hose.
16. Remove the RH upper intake manifold support brace-to-upper intake manifold bolt.
17. Remove the 4 upper intake manifold bolts and the upper intake manifold.

Installation

1. **NOTE:** Clean and inspect all sealing surfaces. Inspect and install new gaskets as necessary.

   Position the upper intake manifold and loosely install the 6 bolts.

   - Tighten in the sequence shown to 10 Nm (89 lb-in).



2. Install the RH upper intake manifold support brace-to-upper intake manifold bolt.
   - Tighten to 10 Nm (89 lb-in).
3. Connect the fuel pressure sensor electrical connector and vacuum hose.
4. Connect the 2 IMT valve electrical connectors.
5. Install the front upper intake manifold support brace-to-upper intake manifold bolt.
   - Tighten to 10 Nm (89 lb-in).
6. Position the PCV tube and the coolant hose and attach the PCV tube to the PCV valve.
7. Attach the coolant hose and the PCV tube retainer to the upper intake manifold.
8. Connect the 2 coolant hoses to the upper intake manifold.

9. Connect the EVAP and PCV tubes to the upper intake manifold.
10. Connect the brake booster vacuum hose to the upper intake manifold.
11. Connect the TP sensor and electronic throttle control electrical connectors.
12. Position the cross-vehicle brace and install the 7 bolts.
    - Tighten to 20 Nm (15 lb-ft).
13. Install the cowl panel grill. For additional information, refer to Section 501-02 .
14. Install the air cleaner outlet pipe. For additional information, refer to Section 303-12 .
15. Fill and bleed the cooling system. For additional information, refer to Section 303-03 .
16. Connect the battery ground cable. For additional information, refer to Section 414-01 .

Lower Intake Manifold

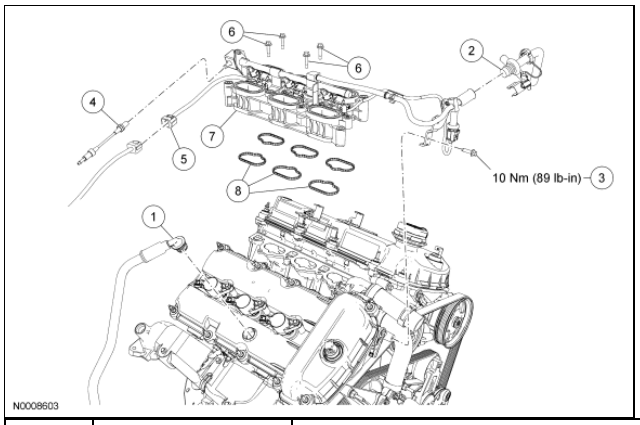
Printable View (225 KB)

Special Tool(s)

ST1147-A	Disconnect Tool, Spring Lock Coupling (1/2 inch) 310-D005 (D87L-9280-B) or equivalent

Material

Item	Specification
SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP	WSS-M2C930-A



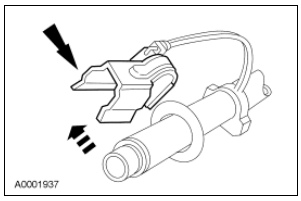
Item	Part Number	Description
1	6758	Crankcase vent tube
2	9J279	Fuel tube
3		Fuel rail bracket bolt
4	9E499	Fuel pressure sensor vacuum tube
5	14A163	Fuel charging wiring harness electrical connector
6	W701520	Lower intake manifold bolts (4 required)
7	9424B	Lower intake manifold
8	9439	Lower intake manifold gaskets (6 required)

Removal

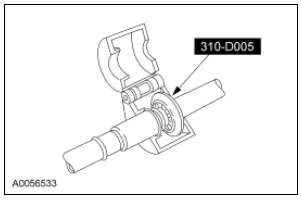
⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited, resulting in possible personal injury.

⚠ WARNING: Fuel in the fuel system remains under high pressure even when the engine is not running. Before repairing or disconnecting any of the fuel system components, the fuel system pressure must be relieved to prevent accidental spraying of fuel, causing personal injury or a fire hazard.

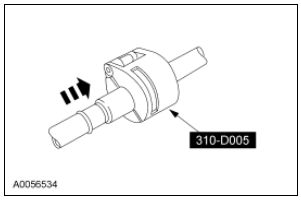
1. Release the fuel system pressure. For additional information, refer to Section 310-00 .
2. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .
3. Remove the upper intake manifold. For additional information, refer to Upper Intake Manifold in this section.
4. Remove the clip.



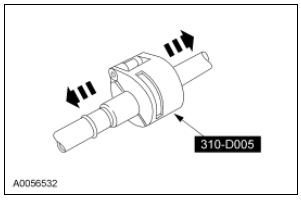
5. Install the special tool.



6. Close the special tool and push it into the open side of the cage.



7. Separate the fitting and remove the special tool.



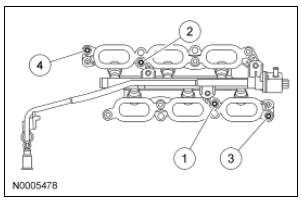
8. Remove the fuel rail bracket bolt.
9. Disconnect the fuel pressure sensor vacuum tube.
10. Disconnect the fuel rail wiring harness electrical connector.
11. Remove the 4 bolts and the lower intake manifold.

Installation

1. **NOTE:** Clean and inspect all sealing surfaces. Inspect and install new gaskets as necessary.

   Position the lower intake manifold and install the bolts.

- Tighten in the sequence shown to 10 Nm (89 lb-in).

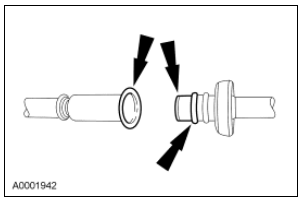


2. Connect the fuel rail wiring harness electrical connector.

3. Connect the fuel pressure sensor vacuum tube.

4. Install the fuel rail bracket bolt.
   - Tighten to 10 Nm (89 lb-in).

5. Connect the spring lock coupling.
   - Clean and inspect both coupling ends.
   - Lubricate the O-rings with clean engine oil.
   - Connect the coupling.
   - Pull on the coupling to make sure it is fully engaged.
   - Install the clip.



6. Install the upper intake manifold. For additional information, refer to Upper Intake Manifold in this section.

7. Connect the battery ground cable. For additional information, refer to Section 414-01 .

Valve Cover LH

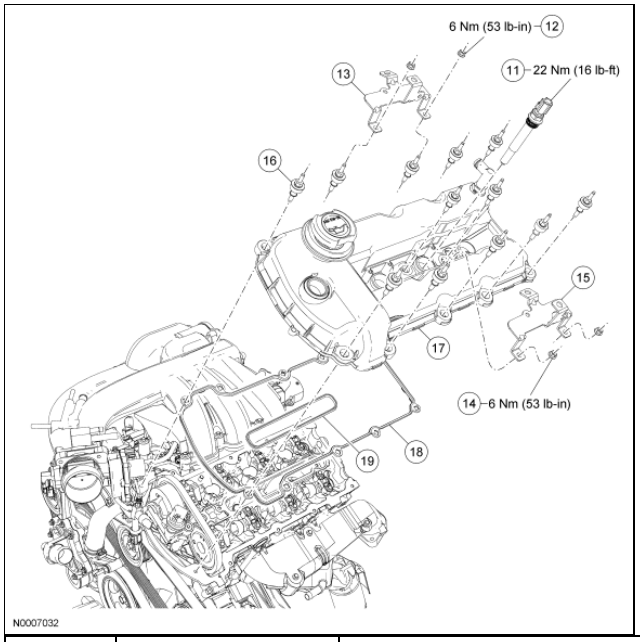
Item	Part Number	Description
1	957072	Positive crankcase ventilation (PCV) tube
2	12A581	Cylinder head temperature (CHT) sensor electrical connector
3	9C490	Hose retaining clip
4		Variable camshaft timing (VCT) solenoid electrical connector (part of 12A581)
5	13A506	Wiring harness retainer
6	13A506	Wiring harness retainer
7	14A163	Wiring harness retainer
8	13A506	Wiring harness retainer
9	W701539	Wiring harness conduit nuts (2 required)
10	14A099	Wiring harness conduit



Item	Part Number	Description
11	6G004	Cylinder head temperature (CHT) sensor
12	W701539	Appearance cover bracket nuts (2 required)
13	9J444	Appearance cover bracket
14	W701539	Appearance cover bracket nuts (2 required)
15	9J444	Appearance cover bracket
16	6C519	LH valve cover stud bolts (12 required)
17	6582	LH valve cover
18	6584	LH valve cover gasket
19	6584	LH valve cover inner gasket

Removal

⚠ CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

1. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .
2. Remove the LH ignition coil-on-plugs. For additional information, refer to Section 303-07A .
3. Disconnect the positive crankcase ventilation (PCV) tube from the PCV valve.
4. Disconnect the cylinder head temperature (CHT) sensor electrical connector.
5. Detach the hose retainer from the engine appearance cover bracket.
   - Position the hoses aside.
6. Disconnect the variable camshaft timing (VCT) solenoid electrical connector.
7. Detach the 4 wiring retainers from the valve cover and the valve cover stud bolts.
8. Remove the 2 nuts and position the wiring harness conduit aside.
9. Remove and discard the CHT sensor.

10. Remove the 4 nuts and the 2 engine appearance cover brackets.

11. Remove the 12 stud bolts and the valve cover.

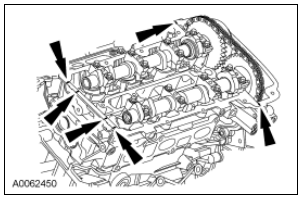
Installation

1. Clean the valve cover, cylinder head and front cover sealing surfaces with silicone gasket remover and metal surface prep. Inspect and install a new gasket as necessary.

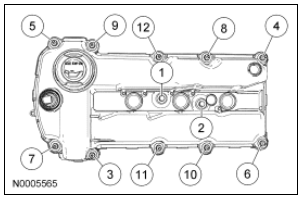
2. **NOTE:** RH shown, LH similar.

   NOTE: The valve cover must be installed and the bolts and stud bolts tightened within 4 minutes of sealant application.

   Apply an 8-mm (0.32-in) bead of silicone gasket sealant to the cylinder head half-round surface and to the front cover-to-cylinder head joint face.



3. Position the LH valve cover and install the 12 stud bolts.
   - Tighten in the sequence shown to 10 Nm (89 lb-in).



4. Position the 2 engine appearance cover brackets and install the 4 nuts.
   - Tighten to 6 Nm (53 lb-in).

5. Install a new CHT sensor.
   - Tighten to 22 Nm (16 lb-ft).

6. Position the wiring harness conduit and install the 2 nuts.
   - Tighten to 6 Nm (53 lb-in).

7. Attach the 4 wiring retainers to the valve cover and the valve cover stud bolts.

8. Connect the VCT solenoid electrical connector.

9. Position the hoses and attach the hose retainer to the engine appearance cover bracket.

10. Connect the CHT sensor electrical connector.

11. Connect the PCV tube to the PCV valve.

12. Install the LH ignition coil-on-plugs. For additional information, refer to Section 303-07A .

13. Connect the battery ground cable. For additional information, refer to Section 414-01 .

11	6584	RH valve cover inner gasket

Removal

⚠ **CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.**

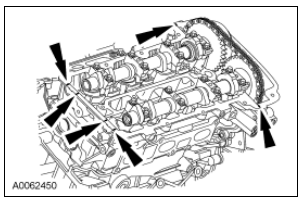
1. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .
2. Remove the RH ignition coil-on-plugs. For additional information, refer to Section 303-07A .
3. Disconnect the crankcase vent tube from the valve cover.
4. Disconnect the variable cam timing (VCT) solenoid electrical connector.
5. Detach the wiring retainer from the valve cover stud bolt.
6. Remove the 2 intake manifold support bracket nuts and position the support bracket aside.
7. Remove the 4 nuts and position the wiring harness conduit aside.
8. Remove the 12 stud bolts and the valve cover.

Installation

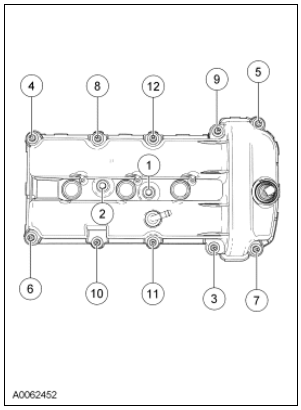
1. Clean the valve cover, cylinder head and front cover sealing surfaces with silicone gasket remover and metal surface prep. Inspect and install a new gasket as necessary.
2. **NOTE:** The valve cover must be installed within 4 minutes of sealant application.

   Apply an 8-mm (0.32-in) bead of silicone gasket sealant to the cylinder head half-round surface and

to the front cover-to-cylinder head joint face.



3. Position the RH valve cover and install the 12 stud bolts.
   - Tighten in the sequence shown to 10 Nm (89 lb-in).



4. Position the wiring harness conduit and install the 4 nuts.
   - Tighten to 6 Nm (53 lb-in).

5. Position the intake manifold support bracket and install the 2 nuts.
   - Tighten to 6 Nm (53 lb-in).

6. Attach the wiring retainer from the valve cover stud bolt.

7. Connect the VCT solenoid electrical connector.

8. Connect the crankcase vent tube to the valve cover.

9. Install the RH ignition coil-on-plugs. For additional information, refer to Section 303-07A .

10. Connect the battery ground cable. For additional information, refer to Section 414-01 .

Lower End Components Exploded View, Crankshaft Pulley and Crankshaft Front Oil Seal

Special Tool(s)

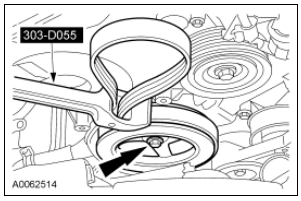
ST1438-A	Strap Wrench 303-D055 (D85L-6000-A)
 ST1184-A	3 Jaw Puller 303-D121
 ST1287-A	Replacer, Crankshaft Damper 303-102 (T74P-6316-B)
 ST2296-A	Installer, Front Cover Seal 303-335 (T88T-6701-A)

Material

Item	Specification
SAE 5W-20 Premium Synthetic Blend Motor Oil X0-5W20-QSP or equivalent	WSS-M2C930-A
Silicone Gasket and Sealant TA-30 or equivalent	WSE-M4G323-A4

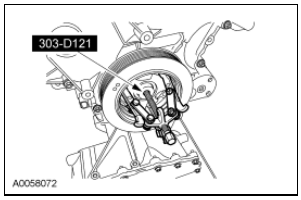
Removal

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the accessory drive belt. For additional information, refer to Section 303-05 .
3. Remove the front center splash shield.
4. Using the special tool to hold the crankshaft pulley, remove and discard the bolt.



5. ⚠ **CAUTION: The special tool must grab the inside of the damper or damage to the damper can occur.**

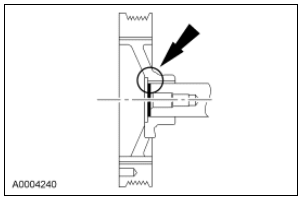
   Using the special tool, remove the crankshaft pulley.



Installation

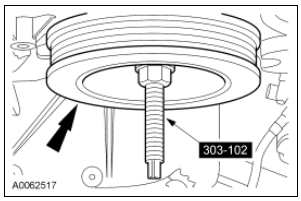
1. Lubricate the front cover and the crankshaft front seal inner lip with clean engine oil.
2. **NOTE:** Sealing surface must be free of dirt and oil.

   Apply silicone gasket and sealant to the end of the keyway slot.

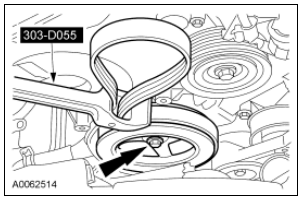


3. **NOTE:** Lubricate the outside diameter sealing surface of the crankshaft pulley with clean engine oil.

   Using the special tool, install the crankshaft pulley.



4. Using the special tool to hold the crankshaft pulley, install a new bolt. Tighten the bolt in 4 stages:
   - Stage 1: Tighten to 120 Nm (89 lb-ft).
   - Stage 2: Loosen one full turn (360 degrees).
   - Stage 3: Tighten to 50 Nm (37 lb-ft).
   - Stage 4: Tighten an additional 90 degrees.



5. Install the front center splash shield.
6. Install the accessory drive belt. For additional information, refer to Section 303-05 .

Crankshaft Front Seal

Printable View (60 KB)

Special Tool(s)

ST1385-A	Remover, Oil Seal 303-409 (T92C-6700-CH)

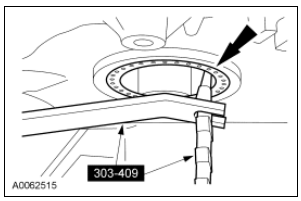
Removal

1. Remove the crankshaft pulley. For additional information, refer to Crankshaft Pulley in this section.
2. ⚠ **CAUTION: Use care not to scratch the crankshaft surface while removing the seal.**

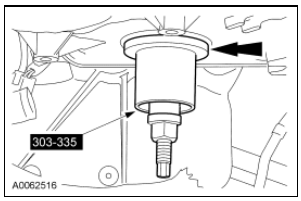
   Using the special tool, remove the crankshaft front seal.



Installation

1. **NOTE:** Clean all sealing surfaces with metal surface cleaner.

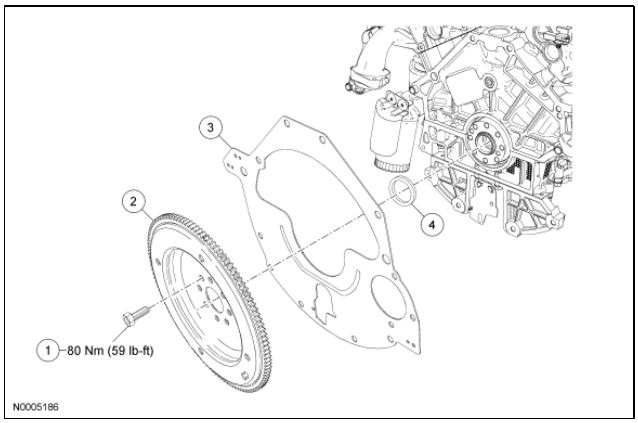
   Apply clean engine oil to the seal before installing the seal.
2. Using the special tool, install the crankshaft front oil seal.



3. Install the crankshaft pulley. For additional information, refer to Crankshaft Pulley in this section.

Lower End Components Exploded View, Flexplate and Crankshaft Rear Oil Seal

Printable View (106 KB)



Item	Part Number	Description
1	6379	Flexplate bolts (8 required)

Material

Item	Specification
SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP or equivalent	WSS-M2C930-A
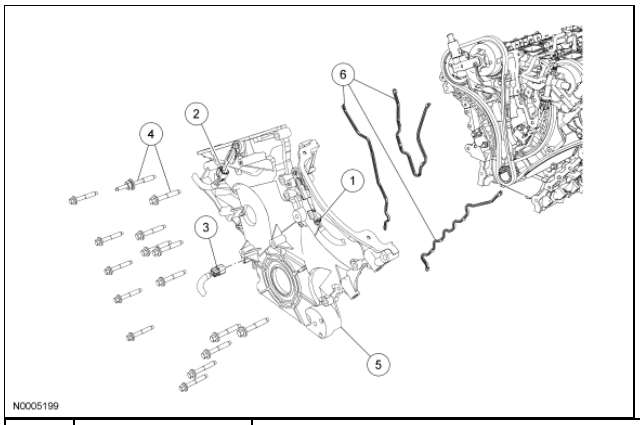
Silicone Gasket Remover ZC-30	
Metal Surface Prep ZC-31	
Silicone Gasket and Sealant TA-30 or equivalent	WSE-M4G323-A4



Item	Part Number	Description
1	14A464	LH camshaft position (CMP) sensor electrical connector
2	14A464	RH camshaft position (CMP) sensor electrical connector
3	14A464	Crankshaft position (CKP) sensor electrical connector
4		Engine front cover fasteners
5	6C086	Engine front cover
6		Engine front cover gaskets (3 required)

Removal

⚠ CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .

3. Drain the cooling system. For additional information, refer to Section 303-03 .

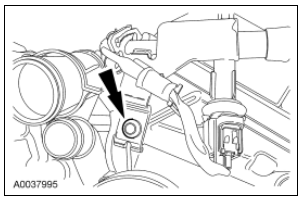
4. Remove the LH and RH valve covers. For additional information, refer to Valve Cover - LH and Valve Cover - RH in this section.

5. Remove the accessory drive belt tensioner and idler pulleys. For additional information, refer to Section 303-05 .

6. Remove the coolant pump. For additional information, refer to Section 303-03 .

7. Disconnect the upper radiator hose.

8. Remove the fuel tube bracket bolt.



9. Disconnect the lower radiator hose.

10. Remove the oil pan. For additional information, refer to Engine Lubrication Components - Exploded View, Oil Pan, Oil Pump, Oil Pump Screen and Pickup Tube and Oil Pan in this section.

11. Remove the power steering pump. For additional information, refer to Section 211-02 .

12. Remove the crankshaft front seal. For additional information, refer to Lower End Components - Exploded View, Crankshaft Pulley and Crankshaft Front Oil Seal and Crankshaft Front Seal in this section.

13. Disconnect the 2 camshaft position (CMP) sensors and the crankshaft position (CKP) sensor electrical connectors.

14. Remove 15 bolts, the stud bolt and the engine front cover.
    - Remove and discard the gaskets.

Installation

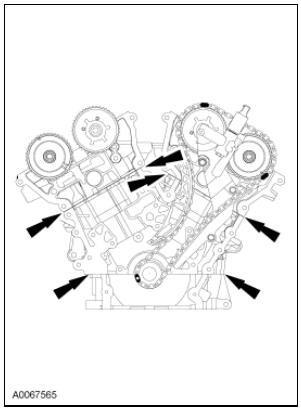
1. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges which make leak paths.**

   Use a plastic scraping tool to remove all traces of sealant.

   - Clean all sealing surfaces with silicone gasket remover and metal surface prep.
   - Install a new gasket on the engine front cover.

2. **NOTE:** The engine front cover must be installed and the bolts tightened within 4 minutes of applying sealant.

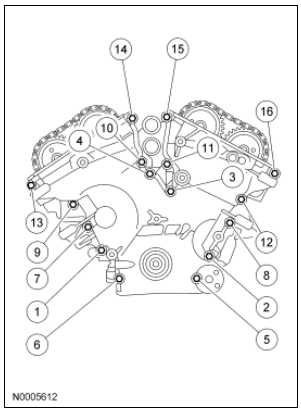
   Apply a 6-mm (0.23-in) diameter dot of silicone gasket and sealer to the cylinder block, the lower cylinder block and the cylinder head mating surfaces.



3. **NOTE:** Number 14 is a stud and washer assembly.

   Position the engine front cover and install the 15 bolts and the stud bolt.

   - Tighten in the sequence shown to 25 Nm (18 lb-ft).



4. Connect the 2 camshaft position (CMP) sensors and the crankshaft position (CKP) sensor electrical connectors.

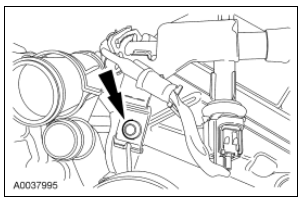
5. Install the crankshaft front seal. For additional information, refer to Lower End Components Exploded View, Crankshaft Pulley and Crankshaft Front Oil Seal and Crankshaft Front Seal in this section.

6. Install the power steering pump. For additional information, refer to Section 211-02 .

7. Install the oil pan. For additional information, refer to Engine Lubrication Components Exploded View, Oil Pan, Oil Pump, Oil Pump Screen and Pickup Tube and Oil Pan in this section.

8. Connect the lower radiator hose.

9. Install the fuel tube bracket bolt.
   - Tighten to 10 Nm (89 lb-in).



10. Connect the upper radiator hose.

11. Install the coolant pump. For additional information, refer to Section 303-03 .

12. Install the accessory drive belt tensioner and idler pulleys. For additional information, refer to Section 303-05 .

13. Install the LH and RH valve covers. For additional information, refer to Valve Cover - LH and Valve Cover - RH in this section.

14. Connect the battery ground cable. For additional information, refer to Section 414-01 .

15. Fill and bleed the cooling system. For additional information, refer to Section 303-03 .

Timing Drive Components

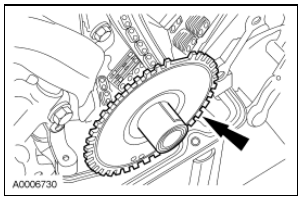
Printable View (1736 KB)

Removal

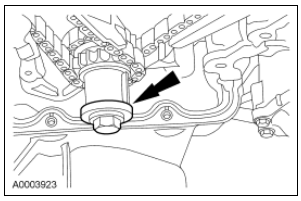
⚠ CAUTION: This pulse wheel is used with several different engines. Install the pulse wheel with the keyway in the slot stamped "20-25-30 DAMB 30 RFF" only. This slot is also marked with an orange paint mark and aligns with the missing tooth in the trigger wheel.

1. Remove the engine front cover. For additional information, refer to Engine Front Cover in this section.

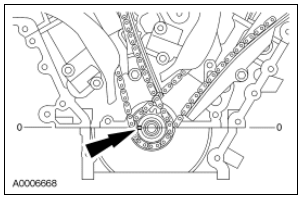
2. Remove the ignition pulse wheel.



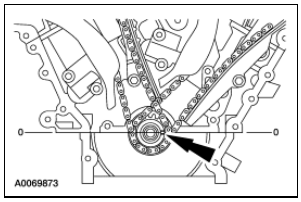
3. Install the crankshaft damper bolt and washer.



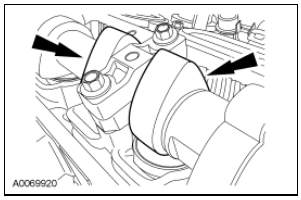
4. Rotate the crankshaft clockwise to position the crankshaft keyway to the 9 o'clock position.



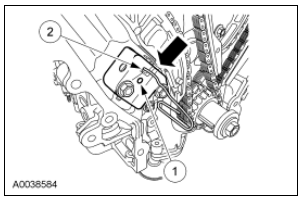
5. Rotate the crankshaft clockwise to position the crankshaft keyway to the 3 o'clock position.



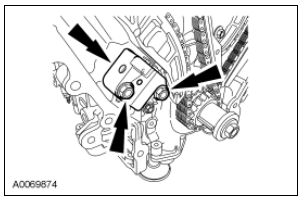
6. Verify that the front 2 intake camshaft lobes are pointing up.



7. Compress the RH timing chain tensioner.
    1. Release the racheting pawl.
    2. Compress the timing chain tensioner and install a stiff wire or paper clip.

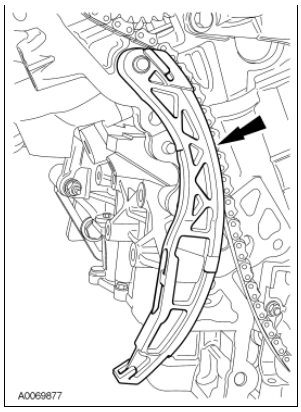


8. Remove the bolts and the RH timing chain tensioner.

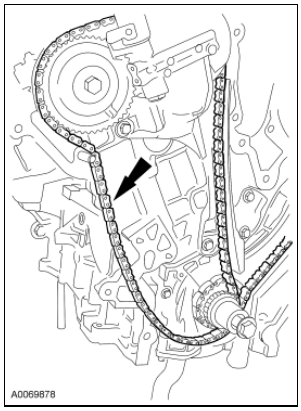


9. ⚠ **CAUTION: If the RH timing chain tensioner arm is to be reused, mark the position to make sure that it is installed on the correct side when reassembled.**

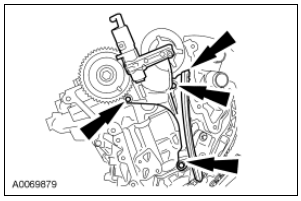
    Remove the RH timing chain tensioner arm.



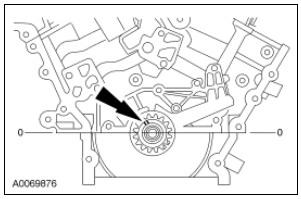
10. Remove the RH timing chain.



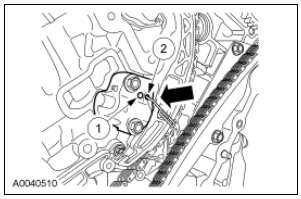
11. Remove the bolts and the RH variable camshaft timing (VCT) solenoid housing assembly.



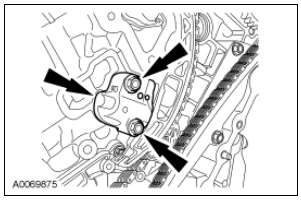
12. Rotate the crankshaft counterclockwise to position the crankshaft keyway to the 11 o'clock position.



13. Compress the LH timing chain tensioner.
    1. Release the racheting pawl.
    2. Compress the timing chain tensioner and install a stiff wire or paper clip.

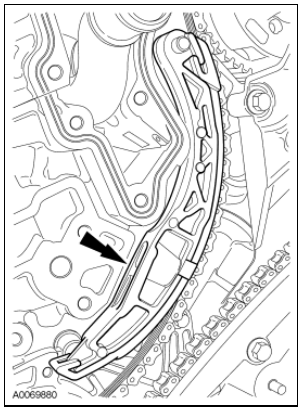


14. Remove the bolts and the LH timing chain tensioner.

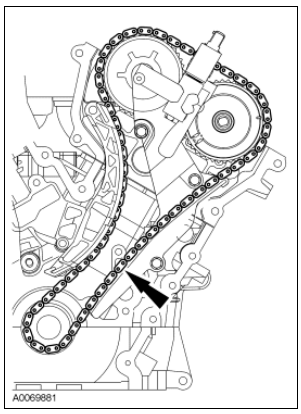


15. ⚠ **CAUTION: If the LH timing chain tensioner arm is to be reused, mark the position to make sure that it is installed on the correct side when reassembled.**

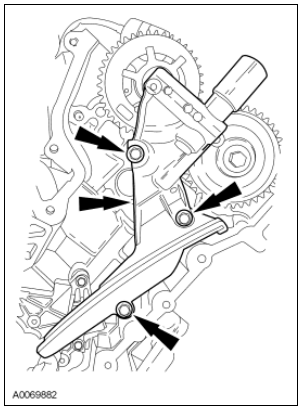
    Remove the LH timing chain tensioner arm.



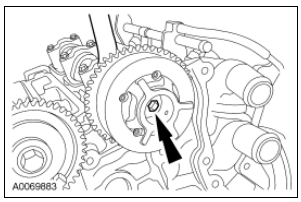
16. Remove the LH timing chain.



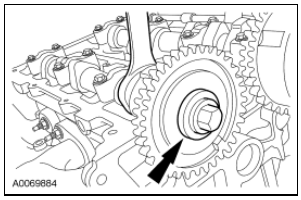
17. Remove the LH VCT solenoid housing assembly.



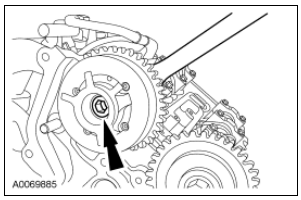
18. Using a wrench on the flats of the camshaft, hold the camshaft in position and remove the bolt and the RH VCT actuator.
    - Discard the bolt.



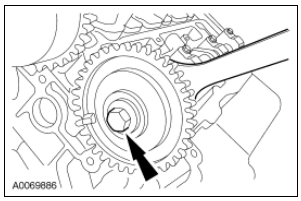
19. Using a wrench on the flats of the camshaft, hold the camshaft in position and remove the bolt and the RH exhaust camshaft sprocket.
    - Discard the bolt.



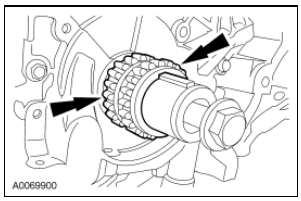
20. Using a wrench on the flats of the camshaft, hold the camshaft in position and remove the bolt and the LH VCT actuator.
    - Discard the bolt.



21. Using a wrench on the flats of the camshaft, hold the camshaft in position and remove the bolt and the LH exhaust camshaft sprocket.
    - Discard the bolt.

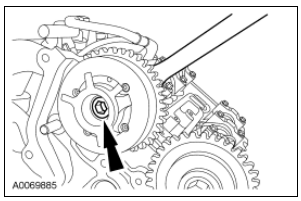


22. Remove the crankshaft sprockets.

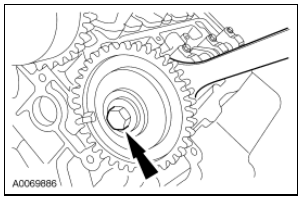


Installation

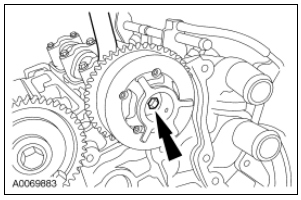
1. Install the LH variable camshaft timing (VCT) actuator and install a new bolt hand-tight. Use a wrench on the flats of the camshaft to hold it in position and tighten the bolt in 2 stages.
    - Stage 1: Tighten the VCT actuator bolt to 20 Nm (15 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.



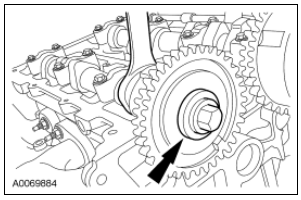
2. Install the LH exhaust camshaft sprocket and install a new bolt hand-tight. Using a wrench on the flats of the camshaft, hold the camshaft in position and tighten the bolt in 2 stages.
    - Stage 1: Tighten the exhaust camshaft sprocket bolt to 20 Nm (15 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.



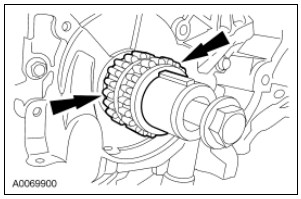
3. Install the RH variable camshaft timing (VCT) actuator and install a new bolt hand-tight. Using a wrench on the flats of the camshaft, hold the camshaft in position and tighten the bolt in 2 stages.
    - Stage 1: Tighten the VCT actuator bolt to 20 Nm (15 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.



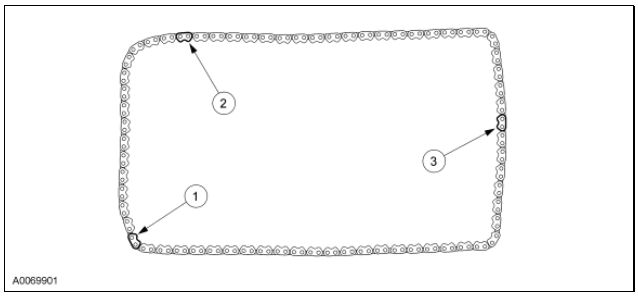
4. Install the RH exhaust camshaft sprocket and install a new bolt hand-tight. Using a wrench on the flats of the camshaft, hold the camshaft in position and tighten the bolt in 2 stages.
    - Stage 1: Tighten the exhaust camshaft sprocket bolt to 20 Nm (15 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.



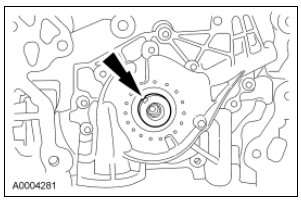
5. With the 2 keyways facing forward, install the crankshaft sprockets.



6. If timing marks in the timing chains are not evident, use a permanent-type marker to mark the crankshaft and camshaft timing marks on the LH and RH timing chains.
    1. Mark any link to use as the exhaust camshaft timing mark.
    2. Starting with the exhaust camshaft timing mark, count 16 links and mark the link as the intake camshaft sprocket timing mark.
    3. Starting with the intake camshaft timing mark, count 25 links and mark the link as the crankshaft sprocket timing mark.

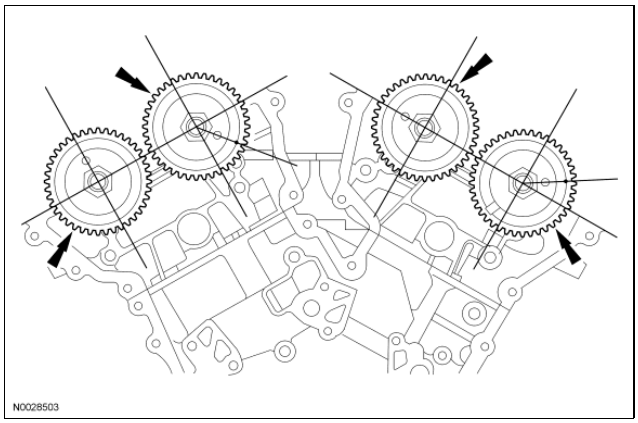


7. Verify that the crankshaft keyway is in the 11 o'clock position.



8. ⚠ **CAUTION: The crankshaft keyway must remain in the 11 o'clock position until the cams are located in the NEUTRAL position, or damage to the valves can occur.**

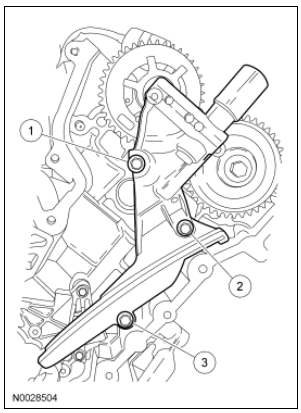
   Rotate the LH and RH intake and exhaust camshafts to locate them in their NEUTRAL positions.



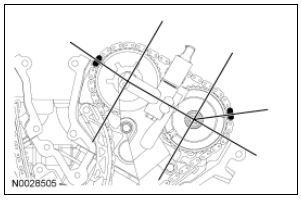
9. **NOTE:** The gold-colored bolt (No. 2 location) must be installed in its original location.

   Install the LH VCT solenoid housing assembly and hand-tighten the bolts.

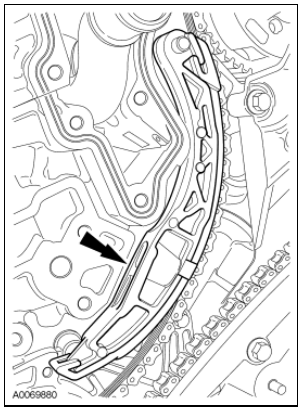
   - Tighten in the sequence shown to 25 Nm (18 lb-ft).



10. Install the LH timing chain, aligning the copper (or marked) link with the marks on the camshaft and crankshaft sprockets.

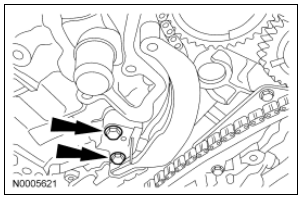


11. Install the LH timing chain tensioner arm.

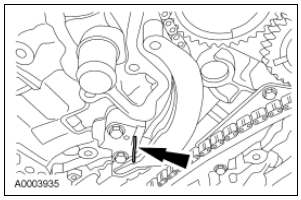


12. **NOTE:** Be sure to position the tensioner so that the tensioner piston is fully engaged in the tensioner arm.

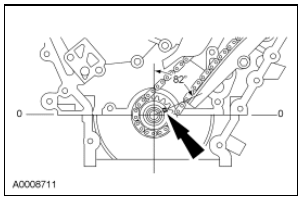
    Install the LH timing chain tensioner and bolts.



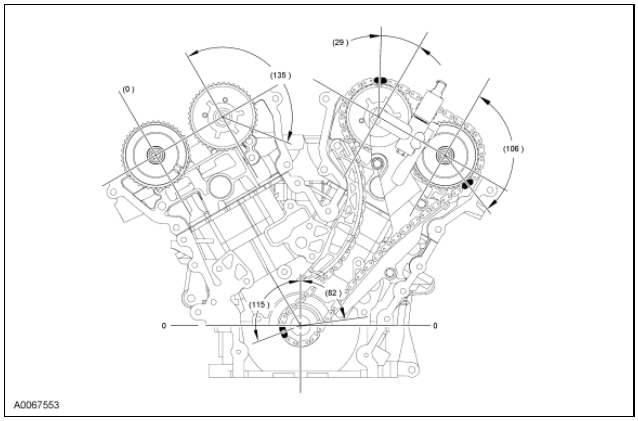
13. Remove the wire or paper clip from the tensioner.



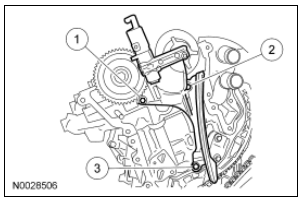
14. Rotate the crankshaft clockwise and position the keyway at the 3 o'clock position for RH timing chain installation.



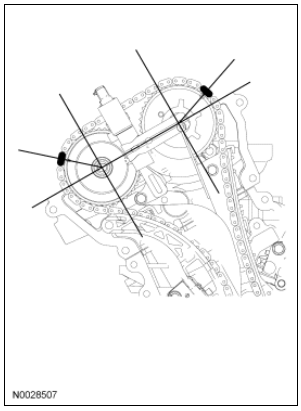
15. Verify that the copper (or marked) links on the LH timing chain are in alignment with the timing marks on the camshaft and crankshaft sprockets.



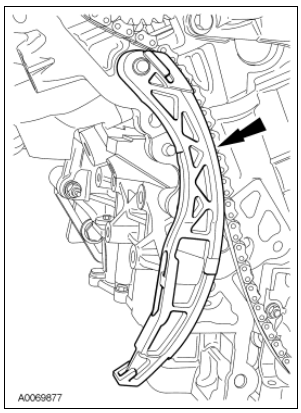
16. Install the RH VCT solenoid housing assembly and hand-tighten the bolts.
    - Tighten in the sequence shown to 25 Nm (18 lb-ft).



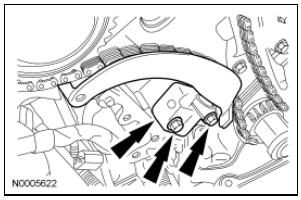
17. Install the RH timing chain, aligning the copper or (marked) links with the marks on the camshaft and crankshaft sprockets.



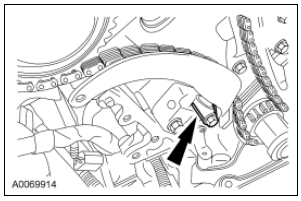
18. Install the RH timing chain tensioner arm.



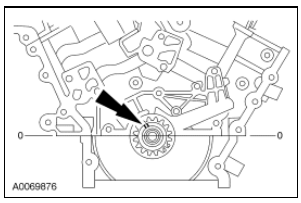
19. Install the RH timing chain tensioner and bolts.



20. Remove the wire or paper clip from the RH timing chain tensioner.



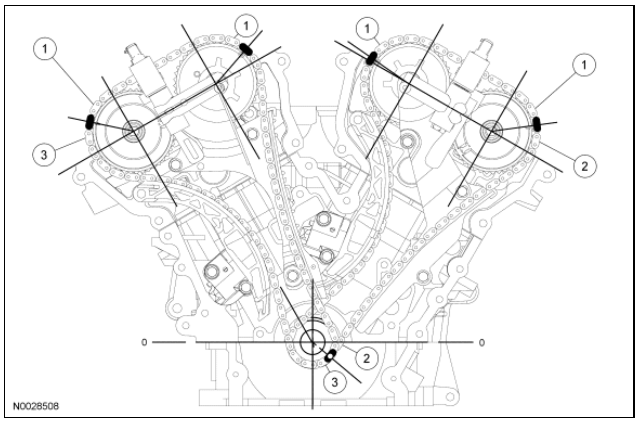
21. Rotate the crankshaft counterclockwise to position the crankshaft keyway to the 11 o'clock position.



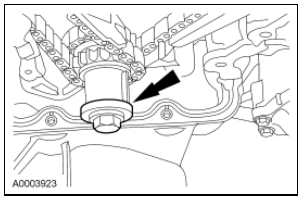
22. ⚠ **CAUTION: Failure to verify correct timing drive component alignment will result in severe engine damage.**

    Verify that the timing component alignment is correct.

    1. There should be 14 chain links between the exhaust and intake camshaft timing marks.
    2. There should be 23 chain links between the camshaft and crankshaft timing marks.
    3. There should be 28 chain links between the camshaft and crankshaft timing marks.

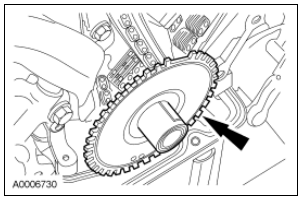


23. Remove the crankshaft damper bolt and washer.



24. ⚠ **CAUTION: This pulse wheel is used with several different engines. Install the pulse wheel with the keyway in the slot stamped "20-25-30 DAMB 30 RFF" only. This slot is also marked with an orange paint mark and aligns with the missing tooth in the trigger wheel.**

    Install the ignition pulse wheel using the orange marked keyway slot and the teeth facing forward.



25. If necessary, install new variable camshaft timing (VCT) system oil filters. For additional information, refer to Variable Camshaft Timing (VCT) System Oil Filter in this section.

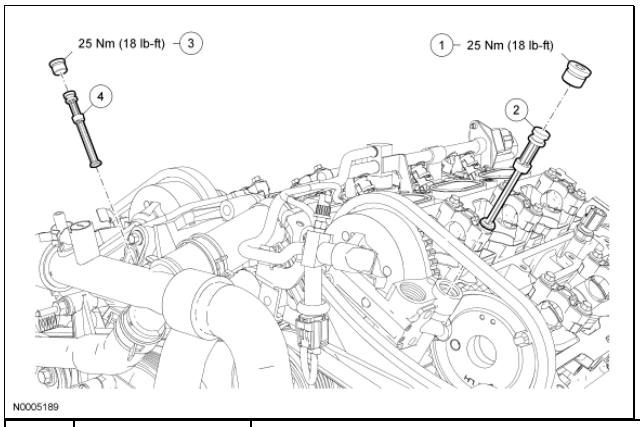
26. Install the engine front cover. For additional information, refer to Engine Front Cover in this section.

Variable Camshaft Timing (VCT) System Oil Filter

Printable View (148 KB)

Material

Item	Specification
SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP or equivalent	WSS-M2C930-A



Item	Part Number	Description
1	6C260	LH variable camshaft timing (VCT) system oil filter plug
2		LH VCT oil filter (part of 6C260)
3	6C260	RH VCT system oil filter plug
4		RH VCT oil filter (part of 6C260)

Removal and Installation

1. Remove the LH and RH valve covers. For additional information, refer to Valve Cover - LH and Valve Cover - RH in this section.

2. Remove the 2 variable camshaft timing (VCT) system oil filter plugs.
   - To install, tighten to 25 Nm (18 lb-ft).

3. Remove the 2 bolts and the LH and RH VCT system oil filters.
   - To install, tighten to 7 Nm (62 lb-in).

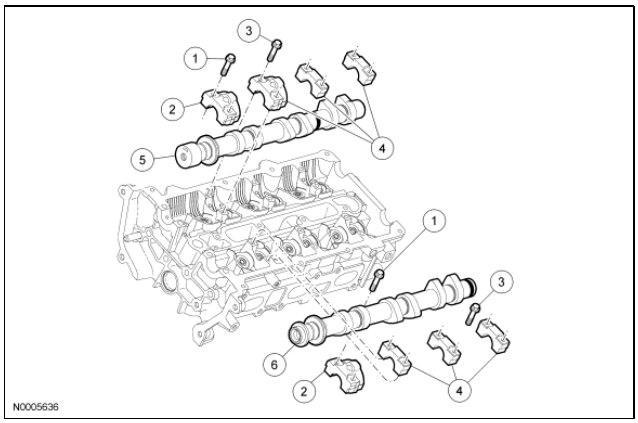
4. **NOTE:** Lubricate the VCT system oil filters with clean engine oil.

   To install, reverse the removal procedure.

Valve Train Components Exploded View Printable View (182 KB)

Camshafts

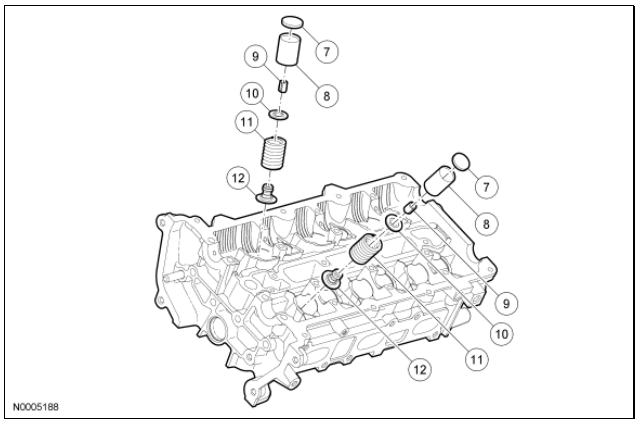
NOTE: LH shown, RH similar.



Item	Part Number	Description
1	W705391	Camshaft journal thrust cap bolts (4 required)
2	6B280	Camshaft journal thrust caps (2 required)
3	W705391	Camshaft journal bolts (12 required)
4	6B281	Camshaft journal caps (6 required)
5	6A269	Intake camshaft
6	6A267	Exhaust camshaft

Valve Springs, Retainers, Seals and Tappets

NOTE: LH shown, RH similar.



Item	Part Number	Description
7	6K514	Shim (6 required)
8	6500	Tappet (6 required)

9	6518	Valve spring retainer key (6 required)
10	6514	Valve spring retainer (6 required)
11	6513	Valve spring (6 required)
12	6A517	Valve stem seal (6 required)

1. For additional information, refer to the procedures in this section.

Camshafts

Printable View (87 KB)

Material

Item	Specification
SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP	WSS-M2C930-A

Removal

1. Remove the timing drive components. For additional information, refer to Timing Drive Components in this section.
2. **⚠ CAUTION: Remove the camshaft journal thrust caps prior to loosening the other camshaft journal cap bolts. Damage to the camshaft journal thrust caps can occur if not removed first.**

   ⚠ CAUTION: Cylinder head camshaft journal caps and cylinder heads are numbered to be sure they are assembled in their original positions. Keep camshaft journal caps with the cylinder head from which they were removed. Do not mix with camshaft journal caps from another cylinder head.

   Remove the 16 camshaft journal cap bolts.
3. **NOTE:** The camshaft journal thrust caps have alignment dowels.

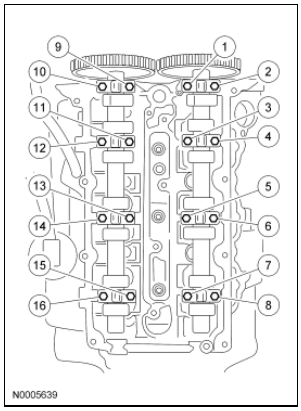
   Using a soft-faced mallet, gently loosen and remove the 2 camshaft journal thrust caps.
4. Using a soft-faced mallet, gently loosen and remove the 8 remaining camshaft journal caps.
5. **NOTE:** Use care when lifting out the camshafts.

   Remove the intake and exhaust camshafts.

Installation

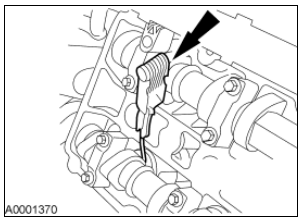
1. Lubricate camshafts with clean engine oil and carefully position the camshafts into the cylinder head.
2. **⚠ CAUTION: Do not install the camshaft journal thrust caps until all of the camshaft bearing caps have been installed, or damage to the thrust caps can occur.**

   Lubricate the bearing surfaces of the camshaft bearing caps with clean engine oil, install the 6 bearing caps and loosely install the 12 bolts.
3. Lubricate the bearing surfaces of the camshaft journal thrust caps with clean engine oil, install the 2 thrust caps and loosely install the 4 bolts.
4. Tighten the 16 bolts in the sequence shown to 10 Nm (89 lb-in).



5. **⚠ CAUTION: If any components are installed new, the engine must be reshimmed or engine damage can occur.**

   Using a feeler gauge, confirm that the tappet and shim clearances are within specification. For additional information, refer to Valve Clearance Check in this section.



6. If tappet and shim clearances are not within specifications, adjust the clearance. For additional information, refer to Valve Clearance Adjustment in this section.

⚠ CAUTION: Verify that the crankshaft is in the 9 o'clock position before rotating the camshafts, or damage to the valve train can result.

7. Rotate the camshafts to be sure they are not binding. If binding occurs, check to make sure that all bearing caps are in the original positions. Loosen all bearing cap bolts in reverse order and then tighten again.

8. Install the timing drive components. For additional information, refer to Timing Drive Components in this section.

Valve Spring, Retainer and Seal

Printable View (107 KB)

Special Tool(s)

ST2489-A	Compressor, Valve Spring 303-648

Material

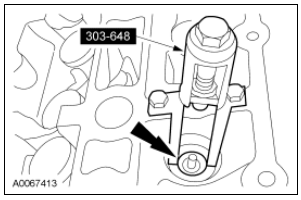
Item	Specification
SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP	WSS-M2C930-A

Removal

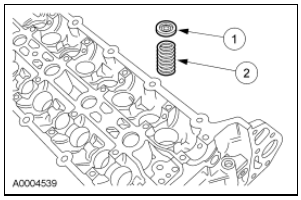
1. Remove the camshafts. For additional information, refer to Valve Train Components - Exploded View and Camshafts in this section.
2. **CAUTION: If the camshafts and valve tappets are to be reused, mark the location of the valve tappets to make sure they are assembled in their original positions.**

   NOTE: The number on the valve tappets only reflects the digits that follow the decimal. For example, a tappet with the number 0.650 has the thickness of 3.650 mm.

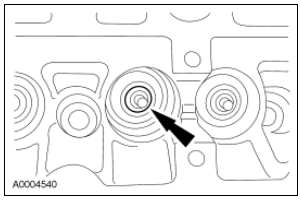
   Remove and inspect the valve tappets. For additional information, refer to Section 303-00 .
3. Remove the spark plug for the cylinder being serviced.
4. Position the piston for the cylinder being serviced at the top of its stroke and pressurize the cylinder with compressed air.
5. Using the special tool, compress the valve spring and remove the retainer keys.



6. Remove the valve spring.
   1. Remove the retainer.
   2. Remove the valve spring.

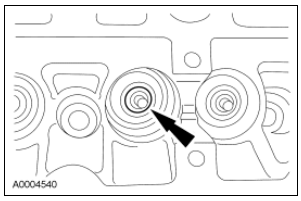


7. Remove the valve stem seal.



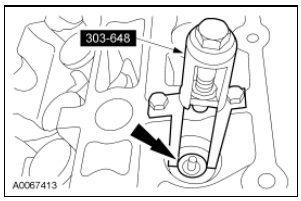
Installation

1. Install the valve stem seal.



2. Install the valve spring and retainer.

3. Using the special tool, compress the valve spring and install the retainer keys.



4. Release the compressed air used to hold the valves closed.

5. Install the spark plug for the cylinder being serviced. Do not tighten at this time.

6. Repeat the appropriate removal and installation steps for all of the other cylinders.

7. Tighten the spark plug(s) to 15 Nm (11 lb-ft).

8. Coat the valve tappets with clean engine oil and insert them.

9. Install the camshafts. For additional information, refer to Valve Train Components Exploded View and Camshafts in this section.

Valve Tappet

Printable View (10 KB)

Material

Item	Specification
SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP	WSS-M2C930-A

Removal and Installation

1. Remove the camshafts. For additional information, refer to Valve Train Components - Exploded View and Camshafts in this section.

2. **CAUTION: Do not use any means of marking the shims other than a permanent-type marker. Any scratches or paint on the shims can result in incorrect lash adjustments and severe engine damage.**

   CAUTION: Record the shim and bucket tappet location. The shim and bucket tappet are positional and if installed in the incorrect location, engine damage can occur.

   NOTE: The number on the valve tappets only reflects the digits that follow the decimal. For example, a tappet with the number 0.650 has the thickness of 3.650 mm.

   Remove and inspect the valve tappets and shims. For additional information, refer to Section 303-00 .

3. **NOTE:** Coat the valve tappets and shims with clean engine oil.

   To install, reverse the removal procedure.

Cylinder Head LH

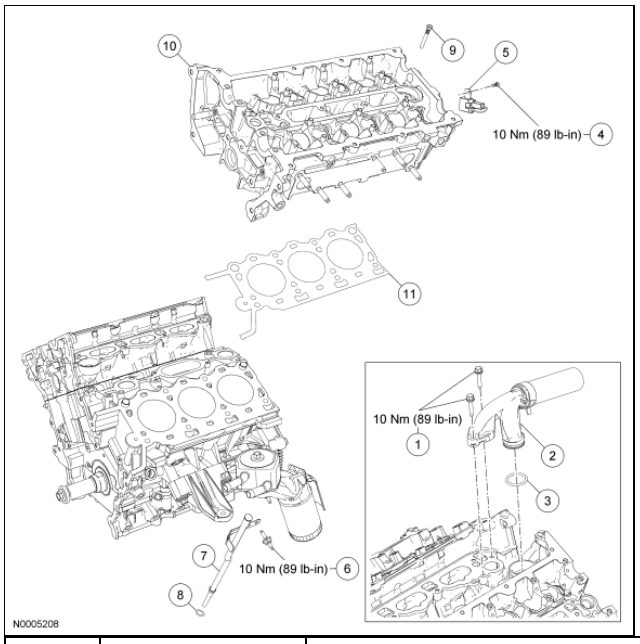
Printable View (321 KB)

Special Tool(s)

 ST2425-A	Three-Bar Engine Support Kit 303-F072

Material

Item	Specification
Silicone Gasket Remover ZC-30	
Metal Surface Prep ZC-31	
SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP	WSS-M2C930-A



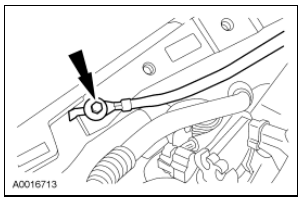
Item	Part Number	Description
1	W701669	Coolant outlet pipe mounting bolts (2 required)
2	8548	Coolant outlet pipe
3		Coolant outlet pipe O-ring seal
4	W500213	Radio ignition interference capacitor bolt
5	18801	Radio ignition interference capacitor
6	W701822	Oil level indicator tube mounting stud
7	6754	Oil level indicator tube
8		Oil level indicator tube O-ring seal

9	6065	Cylinder head bolts (8 required)
10	6050	Cylinder head
11	6083	Cylinder head gasket

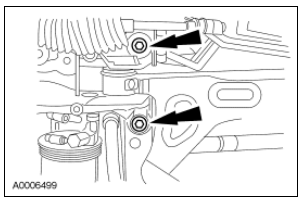
Removal

⚠ **CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.**

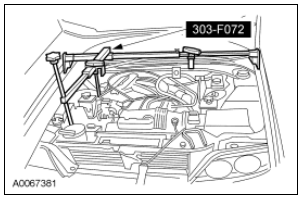
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the LH camshafts. For additional information, refer to Valve Train Components Exploded View and Camshafts in this section.
3. Remove the LH exhaust manifold. For additional information, refer to Exhaust Manifold LH in this section.
4. Remove the lower intake manifold. For additional information, refer to Lower Intake Manifold in this section.
5. Remove the 2 bolts and the coolant outlet pipe.
6. Remove the bolt and the radio interference capacitor.
7. Remove the stud bolt and the oil level indicator and tube.
8. Remove the bolt and the ground strap.



9. Install the 4 crossmember bolts.
   - Tighten to 104 Nm (77 lb-ft).



10. Remove the special tool.



11. Remove the 8 bolts and the cylinder head.

- Remove and discard the cylinder head gasket.
- Discard the cylinder head bolts.

12. **NOTE:** The straightedge used must be flat within 0.0051 mm (0.0002 in) per foot of tool length.

    Support the cylinder head on a bench with the head gasket side up. Inspect all areas of the deck face with a straightedge and feeler gauge. The cylinder head must not have depressions deeper than 0.0254 mm (0.001 in) across a 38.1 mm (1.5 in) square area, or scratches more than 0.0254 mm (0.001 in) deep.

Installation

1. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges which make leak paths.**

   Use a plastic scraping tool to remove all traces of the head gasket.

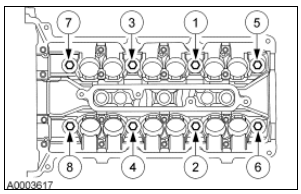
   - Clean all surfaces with silicone gasket remover and metal surface prep.

2. ⚠ **CAUTION: New cylinder head bolts must be installed. They are tighten-to-yield designed and cannot be reused.**

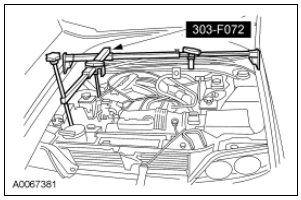
   NOTE: LH and RH cylinder head gaskets are not interchangeable.

   Using a new cylinder head gasket and bolts, position the LH cylinder head and loosely install the bolts.

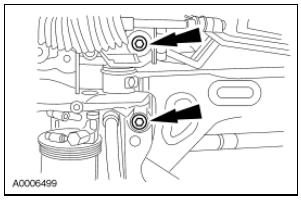
3. Tighten the bolts in 6 stages in the sequence shown.
   - Stage 1: Tighten to 30 Nm (22 lb-ft).
   - Stage 2: Rotate 90 degrees.
   - Stage 3: Back out a minimum of one full turn (360 degrees).
   - Stage 4: Tighten to 30 Nm (22 lb-ft).
   - Stage 5: Rotate 90 degrees.
   - Stage 6: Rotate all bolts an additional 90 degrees.



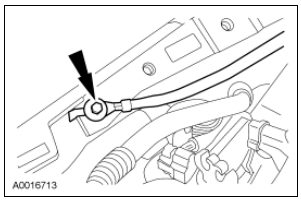
4. Install the special tool.



5. Remove the 4 crossmember bolts.



6. Position the ground strap and install the bolt.
    - Tighten to 10 Nm (89 lb-in).



7. **NOTE:** Lubricate the oil level indicator tube O-ring seal with clean engine oil.

   Position the oil level indicator and tube and install the stud bolt.

    - Tighten to 10 Nm (89 lb-in).

8. Position the radio interference capacitor and install the bolt.
    - Tighten to 10 Nm (89 lb-in).

9. **NOTE:** Inspect and install a new coolant outlet tube O-ring seal as necessary.

   Install the coolant outlet tube and the 2 bolts.

    - Tighten to 10 Nm (89 lb-in).

10. Install the lower intake manifold. For additional information, refer to Lower Intake Manifold in this section.

11. Install the LH exhaust manifold. For additional information, refer to Exhaust Manifold - LH in this section.

12. Install the LH camshafts. For additional information, refer to Valve Train Components - Exploded View and Camshafts in this section.

    - Discard the cylinder head bolts.
11. **NOTE:** The straightedge used must be flat within 0.0051 mm (0.0002 in) per foot of tool length.

Support the cylinder head on a bench with the head gasket side up. Inspect all areas of the deck face with a straightedge and feeler gauge. The cylinder head must not have depressions deeper than 0.0254 mm (0.001 in) across a 38.1 mm (1.5 in) square area, or scratches more than 0.0254 mm (0.001 in) deep.

Installation

1. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges which make leak paths.**

   Use a plastic scraping tool to remove all traces of the head gasket.

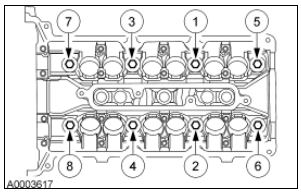
   - Clean all surfaces with silicone gasket remover and metal surface prep.

2. ⚠ **CAUTION: New cylinder head bolts must be installed. They are tighten-to-yield designed and cannot be reused.**

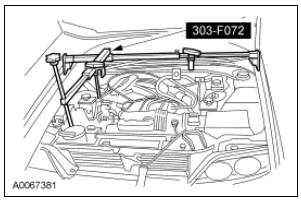
   NOTE: LH and RH cylinder head gaskets are not interchangeable.

   Using a new cylinder head gasket and bolts, position the LH cylinder head and loosely install the bolts.

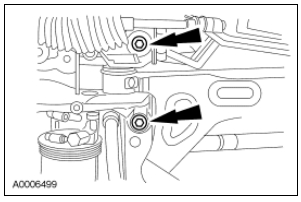
3. Tighten the bolts in 6 stages in the sequence shown.
   - Stage 1: Tighten to 30 Nm (22 lb-ft).
   - Stage 2: Rotate 90 degrees.
   - Stage 3: Back out a minimum of one full turn (360 degrees).
   - Stage 4: Tighten to 30 Nm (22 lb-ft).
   - Stage 5: Rotate 90 degrees.
   - Stage 6: Rotate all bolts an additional 90 degrees.



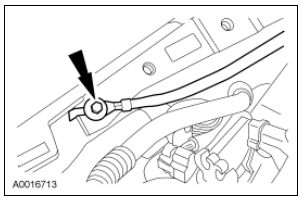
4. Install the special tool.



5. Remove the 4 crossmember bolts.



6. Position the ground strap and install the bolt.
    - Tighten to 10 Nm (89 lb-in).



7. Position the radio interference capacitor and install the bolt.
    - Tighten to 10 Nm (89 lb-in).

8. **NOTE:** Inspect and install a new coolant outlet tube O-ring seal as necessary.

   Install the coolant outlet tube and the 2 bolts.

    - Tighten to 10 Nm (89 lb-in).

9. Install the lower intake manifold. For additional information, refer to Lower Intake Manifold in this section.

10. Install the RH exhaust manifold. For additional information, refer to Exhaust Manifold - LH in this section.

11. Install the RH camshafts. For additional information, refer to Valve Train Components - Exploded View and Camshafts in this section.

Oil Pan

Printable View (261 KB)

Special Tool(s)

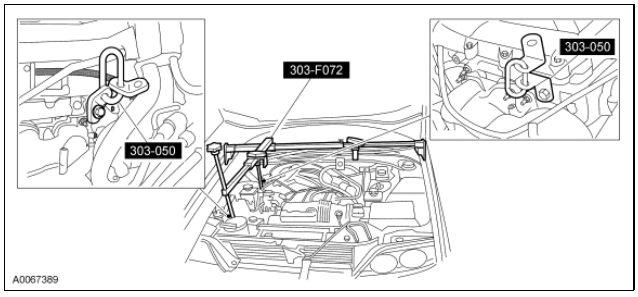
 ST2425-A	Three-Bar Engine Support Kit 303-F072
 ST1595-A	Lifting Brackets, Engine 303-050 (T70P-6000)

Material

Item	Specification
SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP	WSS-M2C930-A
Silicone Gasket and Sealant TA-30 or equivalent	WSE-M4G323-A4
Metal Surface Cleaner ZC-21 or equivalent	WSE-M5B392-A

Removal

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the radiator upper sight shield.
3. Remove the air cleaner assembly. For additional information, refer to Section 303-12 .
4. Install the special tools.

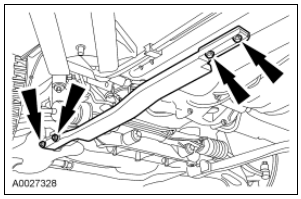


5. Remove the steering gear. For additional information, refer to Section 211-02 .
6. Remove the RH front splash shield, the LH front splash shield and the front center splash shield.
7. Remove the generator. For additional information, refer to Section 414-02 .

8. Remove the A/C compressor. For additional information, refer to Section 412-01 .

9. Remove the oil pan drain plug and drain the engine oil.
   - Install the drain plug and tighten to 23 Nm (17 lb-ft).

10. Remove the 8 bolts and the 2 suspension crossmember I-braces.



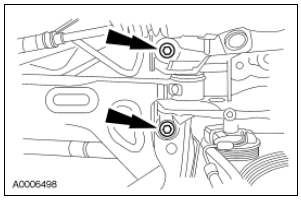
11. Remove the LH lower control arm through-bolt.

12. Remove the RH lower control arm through-bolt.

13. Remove the LH and RH engine mount-to-suspension crossmember nuts.

14. **NOTE:** LH shown, RH similar.

    Remove the 4 suspension crossmember bolts.



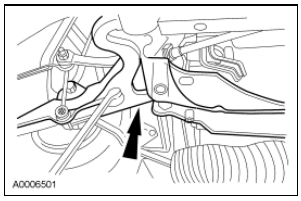
15. Remove the transmission cooler tube bracket nut and position the bracket aside.

16. Remove the nut and detach the power steering pressure (PSP) tube bracket from the oil pan stud bolt.

17. Remove the 4 transmission-to-oil pan bolts.

18. Remove the 13 oil pan bolts and the 2 oil pan stud bolts.

19. Gently pry the crossmember down and remove the oil pan.
    - Remove and discard the oil pan gasket.



Installation

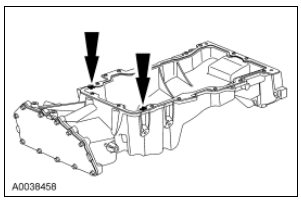
1. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges which make leak paths.**

   Use a plastic scraping tool to remove all traces of the oil pan gasket.

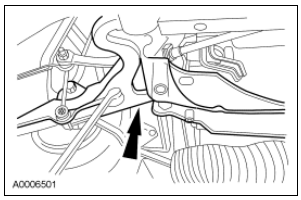
- Clean all surfaces with metal surface cleaner.

2. ⚠ **CAUTION: The oil pan must be installed and the bolts tightened within 4 minutes of the sealant application.**

   Apply a 10-mm (0.40-in) dot of silicone gasket and sealant to the oil pan gasket in the indicated positions.



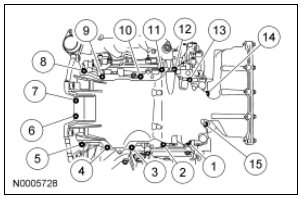
3. Gently pry the crossmember down and position the oil pan.



4. **NOTE:** Fastener No. 4 is a stud bolt.

   Install the 13 oil pan bolts and the oil pan stud bolt.

   - Tighten in the sequence shown to 25 Nm (18 lb-ft).



5. Install the 4 transmission-to-oil pan bolts.
   - Tighten to 45 Nm (33 lb-ft).

6. Attach PSP tube bracket to the oil pan stud bolt and install the nut.
   - Tighten to 8 Nm (71 lb-in).

7. Position the transmission cooler tube bracket and install the nut.
   - Tighten to 10 Nm (89 lb-in).

8. Install the 4 crossmember bolts.
   - Tighten to 104 Nm (77 lb-ft).

9. Install the LH and RH engine mount-to-suspension crossmember nuts.
   - Tighten to 63 Nm (46 lb-ft).

10. Install the RH lower control arm through-bolt.
    - Tighten to 175 Nm (129 lb-ft).

11. Install the LH lower control arm through-bolt.

- Tighten to 175 Nm (129 lb-ft).

12. Position the 2 suspension crossmember I-braces and install the 8 bolts.
    - Tighten to 55 Nm (41 lb-ft).
13. Install the A/C compressor. For additional information, refer to Section 412-01 .
14. Install the generator. For additional information, refer to Section 414-02 .
15. Install the RH front splash shield, the LH front splash shield, and the front center splash shield.
16. Install the steering gear. For additional information, refer to Section 211-02 .
17. Install the air cleaner assembly. For additional information, refer to Section 303-12 .
18. Install the radiator upper sight shield.
19. Fill the engine with clean engine oil.

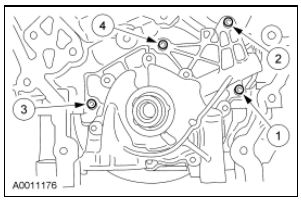
Oil Pump

Printable View (80 KB)

Removal

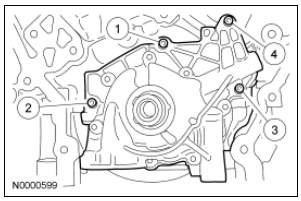
⚠ CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the timing drive components. For additional information, refer to Timing Drive Components in this section.
3. Remove the 2 bolts and the oil pump screen and pickup tube.
4. Remove the 4 oil pump bolts in the sequence shown.



Installation

1. Position the oil pump and install the bolts.
   - Tighten in the sequence shown to 10 Nm (89 lb-in).



2. **NOTE:** Inspect and install a new oil pump screen and pickup tube O-ring seal as necessary.

   NOTE: Lubricate the oil pump screen and pickup tube O-ring seal with clean engine oil.

   Position the oil pump screen and pickup tube and install the bolts.

   - Tighten to 10 Nm (89 lb-in).

3. Install the timing drive components. For additional information, refer to Timing Drive Components in this section.

Oil Pump Screen and Pickup Tube

Printable View (10 KB)

Material

Item	Specification
SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP	WSS-M2C930-A

Removal and Installation

⚠ CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Remove the oil pan. For additional information, refer to Engine Lubrication Components Exploded View, Oil Pan, Oil Pump, Oil Pump Screen and Pickup Tube and Oil Pan in this section.

3. Remove the 2 bolts and the oil pump screen and pickup tube.
   - To install, tighten to 10 Nm (89 lb-in).
   - Remove and discard the O-ring seal.

4. **NOTE:** Lubricate the new O-ring seal with clean engine oil.

   To install, reverse the removal procedure.

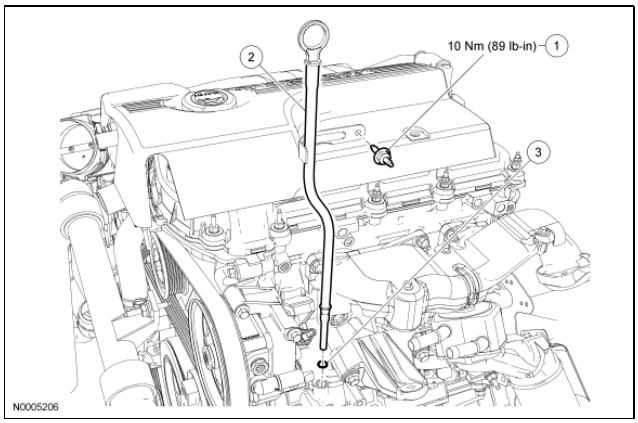
Oil Level Indicator and Tube

Printable View (174 KB)

Material

Item	Specification
SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP or equivalent	WSS-M2C930-A

Oil Level Indicator and Tube



Item	Part Number	Description
1		Oil level indicator tube stud
2	6754	Oil level indicator tube
3		O-ring seal

Removal and Installation

1. Remove the oil level indicator.

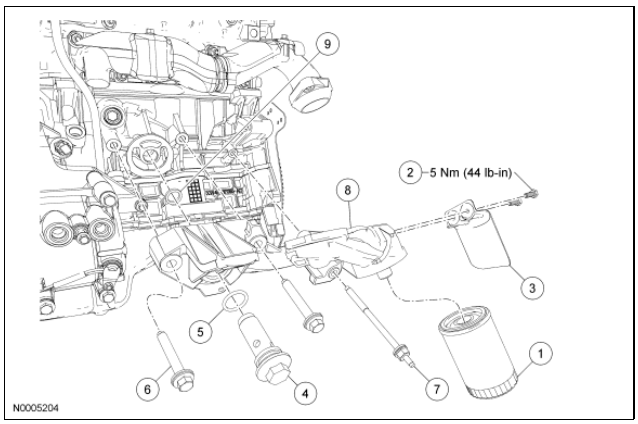
2. Remove the stud bolt and the oil level indicator tube.
   - Remove and discard the O-ring seal.
   - To install, tighten to 10 Nm (89 lb-in).

3. **NOTE:** Install a new O-ring seal and lubricate with clean engine oil.

   To install, reverse the removal procedure.

Oil Filter Adapter

Printable View (132 KB)



Item	Part Number	Description
1	6731	Oil filter
2	W500213	Oil filter shield bolt (2 required)
3	6N634	Oil filter shield
4	6894	Oil filter adapter banjo bolt
5	6L709	O-ring seal
6	W704882	Oil filter adapter bolts (2 required)
7	W705811	Oil filter adapter stud bolt
8	6881A/B	Oil filter adapter (oil cooler equipped/not equipped)
9	6840	O-ring seal

Removal

1. Remove the LH engine mount. For additional information, refer to Engine Mount - LH in this section.

2. If equipped, remove the oil cooler. For additional information, refer to Oil Cooler in this section.

3. Remove the oil pan drain plug and drain the engine oil.
   - Install the drain plug and tighten to 23 Nm (17 lb-ft).

4. Remove the 2 oil filter shield bolts and the oil filter shield.

5. Remove and discard the oil filter.

6. Remove the oil filter adapter banjo bolt.
   - Remove and discard the O-ring seal.

7. Remove the 2 bolts, the stud bolt and the oil filter adapter.
   - Remove and discard the O-ring seal.

Installation

1. **NOTE:** Install the O-ring seal on the banjo bolt and lubricate with clean engine oil.

Position the oil filter adapter and loosely install the banjo bolt, bolts, and the stud bolt. Tighten the fasteners in 6 stages.

- Stage 1: Tighten the banjo bolt to 30 Nm (22 lb-ft).
- Stage 2: Tighten the bolts to 26 Nm (19 lb-ft).
- Stage 3: Tighten the studbolt to 25 Nm (18 lb-ft).
- Stage 4: Tighten the banjo bolt to 155 Nm (114 lb-ft).
- Stage 5: Tighten the bolts to 40 Nm (30 lb-ft).
- Stage 6: Tighten the bolts an additional 90 degrees.

2. Using an oil filter strap wrench, install the oil filter until the seal makes contact. Tighten an additional 270 degrees.

3. Position the oil filter shield and install the 2 bolts.
   - Tighten to 5 Nm (44 lb-in).

4. If equipped, install the oil cooler. For additional information, refer to Oil Cooler in this section.

5. Install the LH engine mount. For additional information, refer to Engine Mount - LH in this section.

6. Fill the engine with clean engine oil.

Oil Cooler

Printable View (202 KB)

Item	Part Number	Description
1	8286	Oil cooler coolant hoses (2 required)
2		Oil cooler bolt (part of 6A642)
3	6A642	Oil cooler

Removal

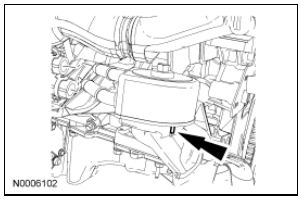
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Drain the cooling system. For additional information, refer to Section 303-03 .
3. Remove the LH exhaust manifold. For additional information, refer to Exhaust Manifold - LH in this section.
4. Disconnect the 2 coolant hoses.
5. ⚠ **CAUTION: If metal or aluminum foreign material is present in the oil cooler, mechanical concerns exist. To diagnose mechanical concerns, refer to Section 303-00 .**

   Remove the bolt and the oil cooler.

   - Inspect the oil cooler.

Installation

1. Position the oil cooler and loosely install the bolt . Rotate the oil cooler clockwise until the locating pin hits the stop.
   - Tighten to 57 Nm (42 lb-ft).



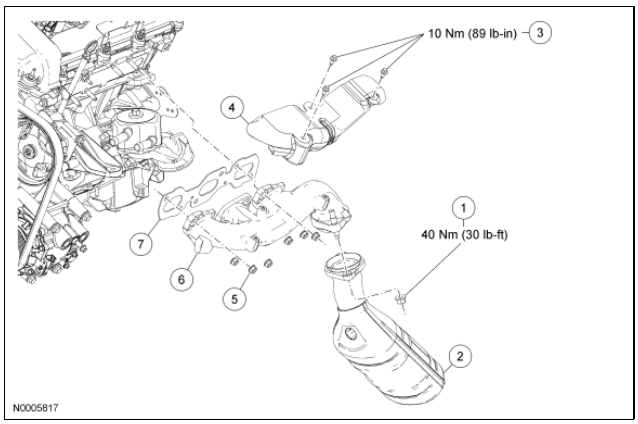
2. Connect the 2 coolant hoses.

3. Install the LH exhaust manifold. For additional information, refer to Exhaust Manifold LH in this section.

4. Fill and bleed the cooling system. For additional information, refer to Section 303-03 .

Exhaust Manifold LH

Printable View (129 KB)



Item	Part Number	Description
1	W705443	Catalytic converter-to-exhaust manifold nuts (2 required)
2	5E212B	Catalytic converter
3	W500211	LH heat shield bolts (3 required)
4	9A462B	LH heat shield
5	W701706	Exhaust manifold nuts (6 required)
6	9430B	LH exhaust manifold
7	9448	LH exhaust manifold gasket

Removal

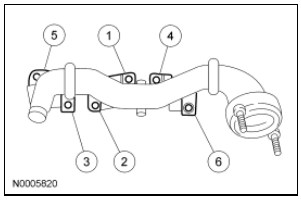
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the LH lower splash shield.
3. Remove the 2 catalytic converter-to-exhaust manifold nuts and position the catalytic converter aside.
4. Remove the 3 bolts and the exhaust manifold heat shield.
5. Remove the 6 nuts and the exhaust manifold.
   - Remove and discard the gasket.

Installation

1. **NOTE:** To make sure of a seal, the manifold bolts must be tightened to the same specification 2 times.

   Position a new gasket and the exhaust manifold. Install the nuts and tighten in the sequence shown in 2 stages.

   - Stage 1: Tighten to 20 Nm (15 lb-ft).
   - Stage 2: Tighten to 20 Nm (15 lb-ft).



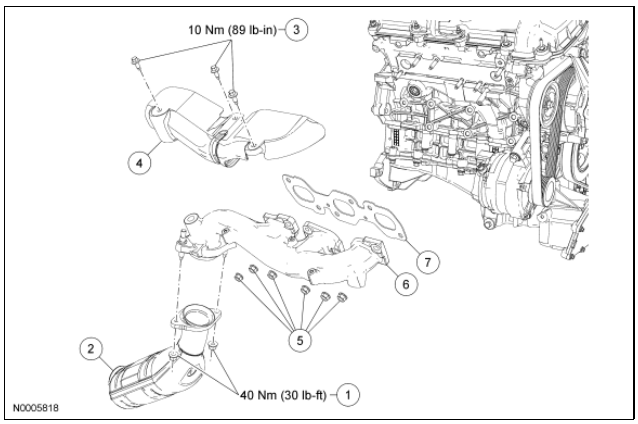
2. Position the exhaust manifold heat shield and install the 3 bolts.
    - Tighten to 10 Nm (89 lb-in).

3. Position the catalytic converter and install the 2 catalytic converter-to-exhaust manifold nuts.
    - Tighten to 40 Nm (30 lb-ft).

4. Install the LH lower splash shield.

Exhaust Manifold RH

Printable View (144 KB)



Item	Part Number	Description
1	W705443	Catalytic converter-to-exhaust manifold nuts (2 required)
2	5E212A	Catalytic converter
3	W500211	RH heat shield bolts (3 required)
4	9A462A	RH heat shield
5	W701706	Exhaust manifold nuts (6 required)
6	9430A	RH exhaust manifold
7	9448	RH exhaust manifold gasket

Removal

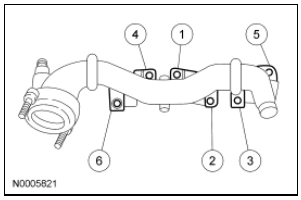
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the RH lower splash shield.
3. Remove the 2 catalytic converter-to-exhaust manifold nuts and position the catalytic converter aside.
4. Remove the 3 bolts and the exhaust manifold heat shield.
5. Remove the 6 nuts and the exhaust manifold.
   - Remove and discard the gasket.

Installation

1. **NOTE:** To make sure of a seal, the manifold bolts must be tightened to the same specification 2 times.

   Position a new gasket and the exhaust manifold. Install the nuts and tighten in the sequence shown in 2 stages.

   - Stage 1: Tighten to 20 Nm (15 lb-ft).
   - Stage 2: Tighten to 20 Nm (15 lb-ft).



2. Position the exhaust manifold heat shield and install the 3 bolts.
    - Tighten to 10 Nm (89 lb-in).

3. Position the catalytic converter and install the 2 catalytic converter-to-exhaust manifold nuts.
    - Tighten to 40 Nm (30 lb-ft).

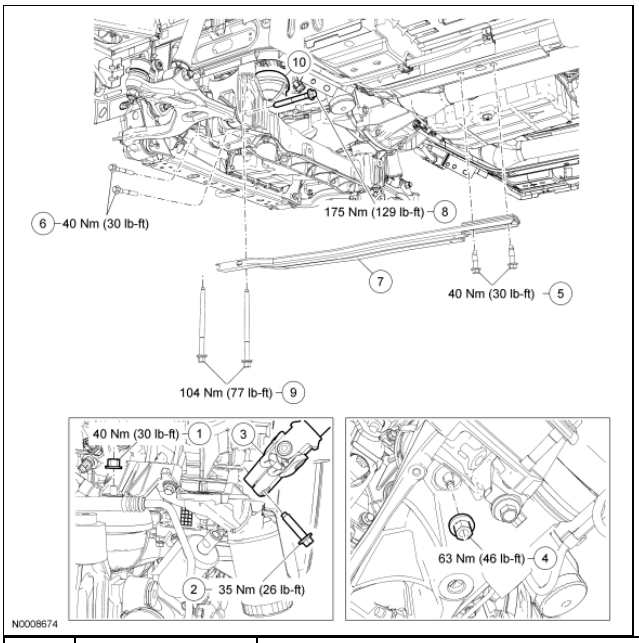
4. Install the RH lower splash shield.

Engine Mount LH

Printable View (370 KB)

Special Tool(s)

 ST2425-A	Three-Bar Engine Support Kit 303-F072
ST1595-A	Lifting Brackets, Engine 303-050 (T70P-6000)

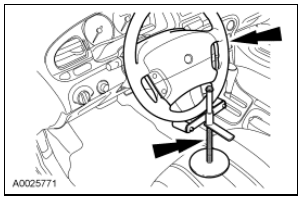


Item	Part Number	Description
1	N621942	LH engine mount upper nut
2	W705133	Intermediate shaft pinch bolt
3	3C662	Intermediate shaft
4	N621942	LH engine mount lower nut
5	W707186	Center crossmember I-brace bolts (rear) (4 required)
6	N804518	Center crossmember I-brace bolts (front) (4 required)
7	5A099	Center crossmember I-brace (2 required)
8	W706933	Lower control arm rearward through-bolt
9	W706239	Suspension crossmember bolts (4 required)
10	6A003	LH engine mount

Removal and Installation

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

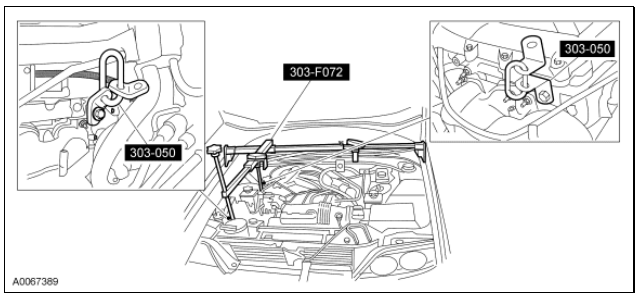
2. Hold the steering wheel in the straight-ahead position using a suitable holding device.



3. Remove the intake manifold tuning valves. For additional information, refer to Section 303-14 .

4. Remove the fresh air inlet duct housing. For additional information, refer to Section 412-01 .

5. Install the special tools.



6. Remove the LH engine mount upper nut.
   - To install, tighten to 40 Nm (30 lb-ft).

7. ⚠ **CAUTION: Do not allow the steering wheel to rotate while the steering column intermediate shaft is disconnected or damage to the clockspring can result. If there is evidence that the wheel has rotated, the clockspring must be removed and recentered. For additional information, refer to Section 501-20B .**

   Remove the steering column intermediate shaft pinch bolt and detach the intermediate shaft from the steering gear.

8. Remove the LH engine mount lower nut.
   - To install, tighten to 63 Nm (46 lb-ft).

9. Remove the 8 bolts and the RH and LH suspension crossmember I-braces.
   - To install, tighten to 40 Nm (30 lb-ft).

10. Remove the 2 lower control arm rearward through-bolts.
    - To install, tighten to 175 Nm (129 lb-ft).

11. Loosen the 4 center crossmember bolts.
    - To install, tighten to 104 Nm (77 lb-ft).

12. Using the special tools, raise the engine and remove the LH engine mount.

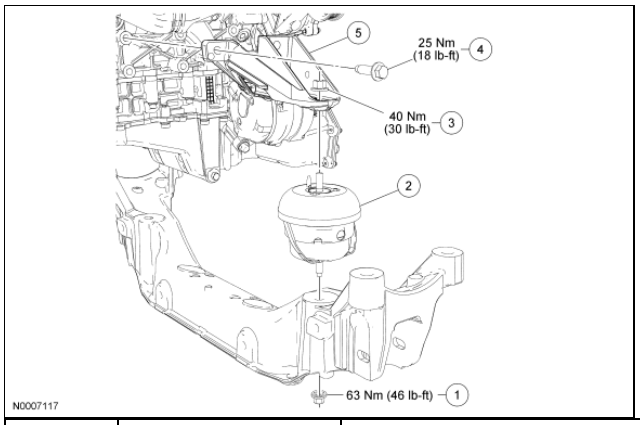
13. To install, reverse the removal procedure.

Engine Mount RH

Printable View (190 KB)

Special Tool(s)

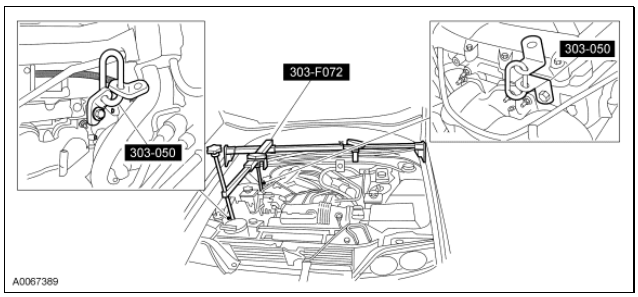
 ST1595-A	Lifting Bracket, Engine 303-050 (T70P-6000)
 ST2425-A	Three-Bar Engine Support Kit 303-F072



Item	Part Number	Description
1	N621942	RH engine mount lower nut
2	6A003	RH engine mount
3	N621942	RH engine mount upper nut
4	W500234	RH engine mount bracket bolt (3 required)
5	6037	RH engine mount bracket

Removal and Installation

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the upper radiator sight shield.
3. Install the special tools and support the engine.



4. Remove the RH lower splash shield.

5. Remove the RH engine mount upper nut.
    - To install, tighten to 40 Nm (30 lb-ft).

6. Remove the 3 RH engine mount bracket bolts and detach the wiring retainer.
    - To install, tighten to 25 Nm (18 lb-ft).

7. Using the special tools, raise the engine and remove the RH engine mount bracket.

8. Remove the lower nut and the RH engine mount.
    - To install, tighten to 63 Nm (46 lb-ft).

9. To install, reverse the removal procedure.

Engine

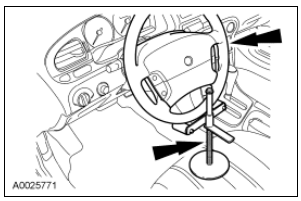
Printable View (2157 KB)

Special Tool(s)

ST1293-A	Powertrain Lift With Tilting Plate 014-00765
 ST1702-A	Transmission Support Bracket 014-00341
ST1595-A	Engine Lifting Brackets 303-050
ST1602-A	Spreader Bar 303-D089 (D93P-6001-A3)

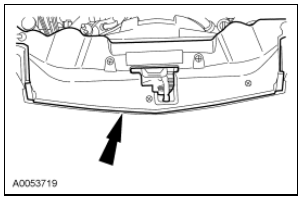
Removal

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02
2. Hold the steering wheel in the straight-forward position using a suitable holding device.



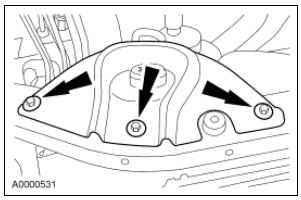
A0025771

3. Release the fuel system pressure. For additional information, refer to Section 310-00 .
4. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .
5. Remove the air cleaner outlet pipe and the air cleaner. For additional information, refer to Section 303-12 .
6. Evacuate the A/C system. For additional information, refer to Section 412-00 .
7. Remove the fresh air inlet duct. For additional information, refer to Section 412-01 .
8. Disconnect the fuel tube. For additional information, refer to Section 310-00 .
9. Drain the cooling system. For additional information, refer to Section 303-03 .
10. Remove the upper radiator sight shield.

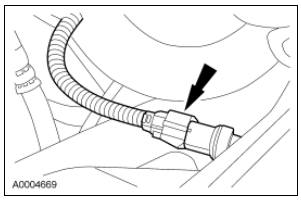


11. **NOTE:** RH shown, LH similar.

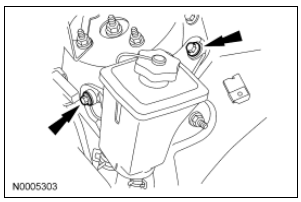
    Remove the 6 bolts and the 2 upper radiator support brackets.



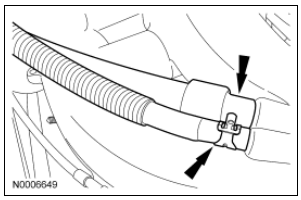
12. Disconnect the A/C pressure switch electrical connector.



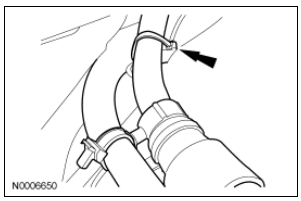
13. Remove the 2 power steering fluid reservoir bolts and secure the power steering fluid reservoir to the engine.



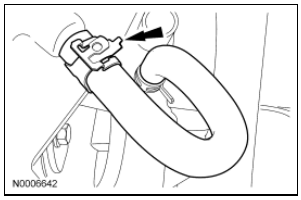
14. Disconnect the degas bottle coolant hose and the positive crankcase ventilation (PCV) tube from the upper intake manifold.



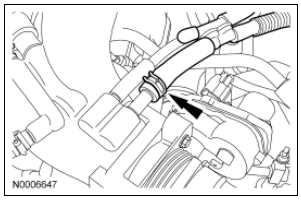
15. Detach the retainer from the upper intake manifold and position the PCV tube and degas bottle coolant hose aside.



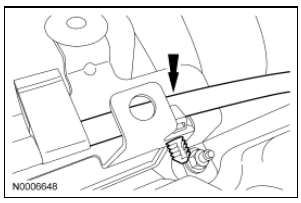
16. Disconnect the coolant hose from the upper intake manifold.



17. Disconnect the brake booster vacuum hose from the upper intake manifold.

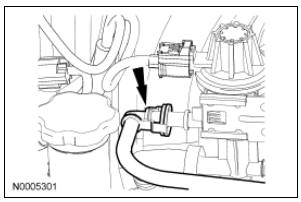


18. Detach the retainers and position the brake booster vacuum hose aside.

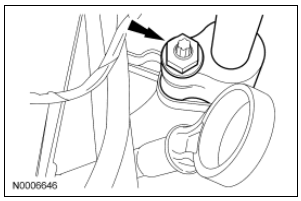


19. ⚠ **CAUTION: To disconnect the quick release coupling, squeeze the tabs and pull straight out or damage to the coupling can occur.**

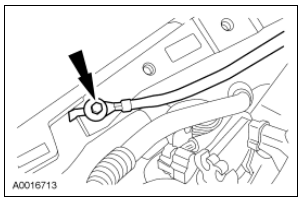
    Disconnect the evaporative emissions (EVAP) hose from the EVAP canister purge valve.



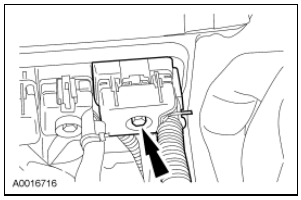
20. Remove the nut and disconnect the A/C manifold tube.



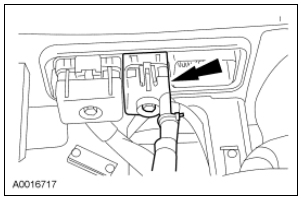
21. Remove the ground strap bolt.



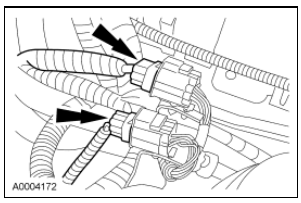
22. Loosen the bolt and disconnect the main engine wiring harness connector.



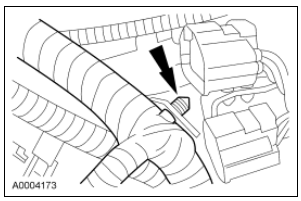
23. Loosen the bolt and disconnect the main transmission wiring harness connector.



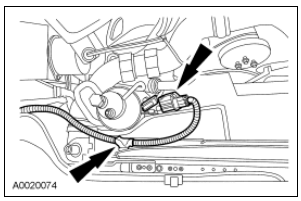
24. Disconnect the 2 engine wiring harness connectors.



25. Detach the wiring harness retainer from the bracket.

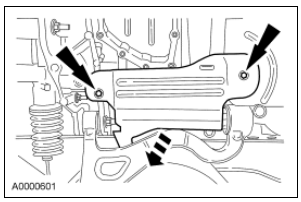


26. Disconnect the coolant valve electrical connector and detach the wiring retainer.

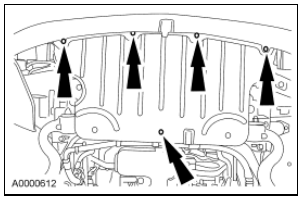


27. **NOTE:** LH shown, RH similar.

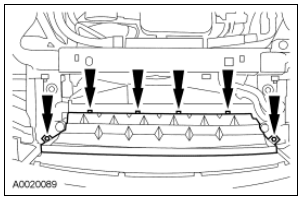
Remove the LH and the RH splash shields.



28. Remove the center splash shield.



29. Remove the inner air deflector.

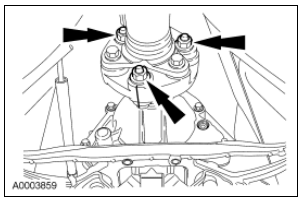


30. Remove the catalytic converters. For additional information, refer to Section 309-00 .

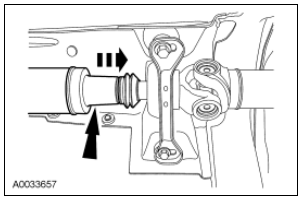
31. ⚠ **CAUTION: Index-mark (color paint) the bolts, washers, nuts and the flex coupling to the transmission flange to make sure they are installed in the same location. Components that are not assembled in their original locations can cause driveshaft imbalance.**

    ⚠ **CAUTION: Do not remove the bolts retaining the flex coupling to the driveshaft.**

    Index-mark the front driveshaft pinion flange. Remove the 3 nuts, washers and bolts.



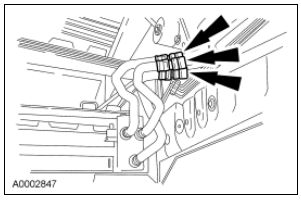
32. Slide the front shaft assembly rearward and support.



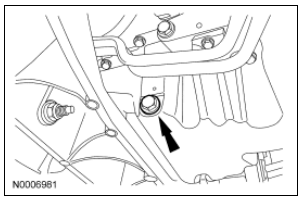
33. **NOTE:** The top heater hose has a green identifying mark to match the hose on the dual coolant flow valve. If the mark is not visible, identify the hoses for location. This will aid in the correct installation of the hose assemblies.

    NOTE: Hose assemblies shown with components removed for clarity.

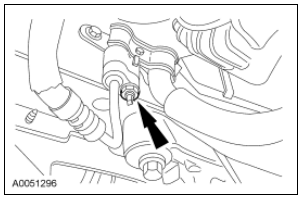
    Disconnect the 3 quick-disconnect couplings from the coolant control valve hoses. For additional information, refer to Section 412-00 .



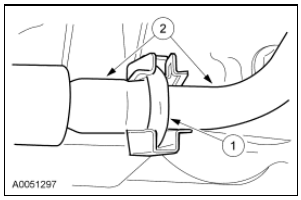
34. Remove the oil pan drain plug and drain the engine oil.
    - Install the drain plug and tighten to 26 Nm (19 lb-ft).



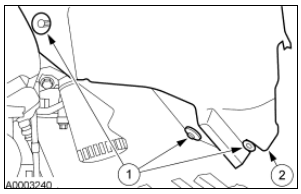
35. Remove the nut and disconnect the A/C high-pressure tube at the right frame rail.



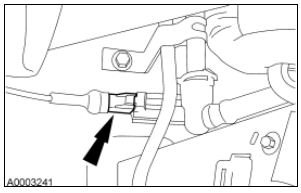
36. Disconnect the A/C suction tube.
    1. Remove the safety clip.
    2. Disconnect the A/C tube.



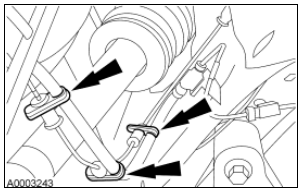
37. Position the RH and LH inner fender splash shields aside.
    1. Remove the 3 pin-type retainers.
    2. Position the inner splash shields aside.



38. Disconnect the 2 anti-lock brake sensor electrical connectors.



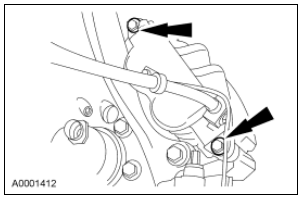
39. Detach the RH and LH anti-lock brake sensor harnesses from the brake hose clips.



40. ⚠ **CAUTION: Do not allow the brake caliper to hang from the brake hose or damage to the brake hose can occur.**

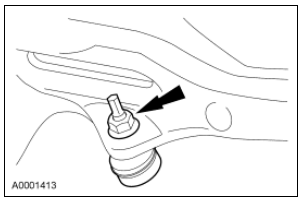
    Remove the 4 bolts and position the front brake calipers aside.

    - Support the calipers using mechanic's wire.



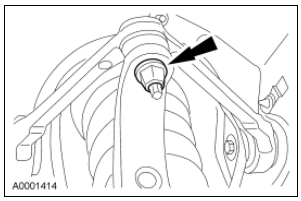
41. **NOTE:** To remove the nut, first loosen the nut, then use the hex-holding feature to prevent the stabilizer bar link ball joint from turning while removing the nut.

    Remove the 2 nuts and disconnect the stabilizer bar links from the lower control arms.

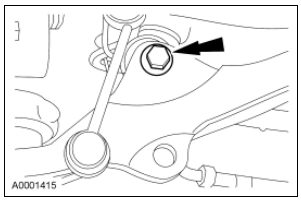


42. **NOTE:** To remove the nut, first loosen the nut, then use the hex-holding feature to prevent the upper ball joint stud from turning while removing the nut.

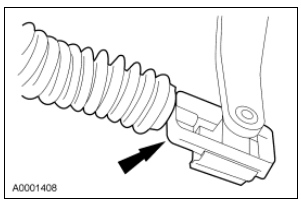
    Remove the 2 nuts and disconnect the upper ball joints from the wheel knuckles.



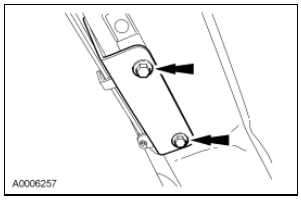
43. Remove the 2 strut-to-control arm bolts and nuts.



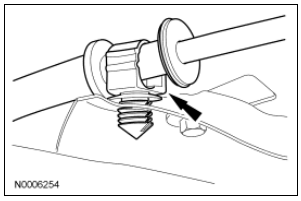
44. Disconnect the shift cable from the shifter.



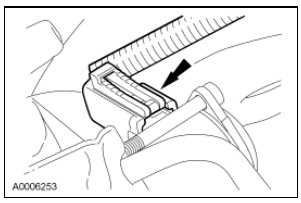
45. Remove the 2 shift cable bracket-to-body bolts.



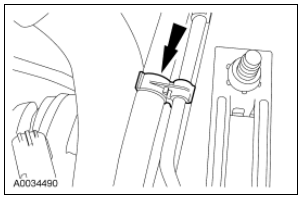
46. Detach the shift cable pin-type retainer from the exhaust heat shield.



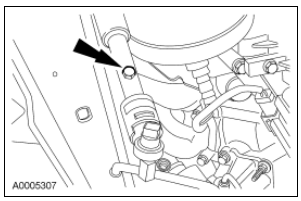
47. Disconnect the variable assist power steering (VAPS) actuator electrical connector.



48. Detach the power steering return tube from the power steering pressure (PSP) tube clip.

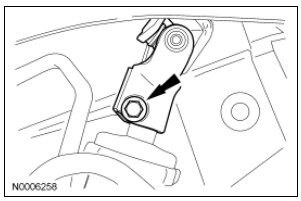


49. Remove the steering intermediate shaft bolt.

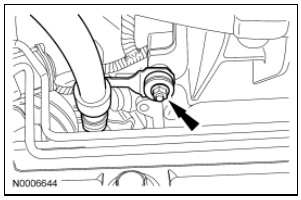


50. **⚠ CAUTION: Do not allow the steering wheel to rotate while the steering column intermediate shaft is disconnected or damage to the clockspring can result. If there is evidence that the wheel has rotated, the clockspring must be removed and recentered. For additional information, refer to Section 501-20B .**

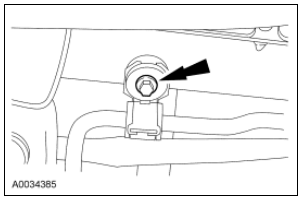
    Remove the bolt and detach the steering column intermediate shaft from the steering gear.



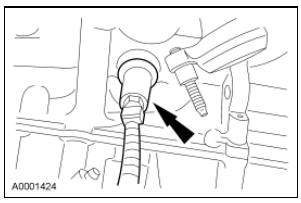
51. Remove the nut and detach the PSP tube bracket from the oil pan stud bolt.



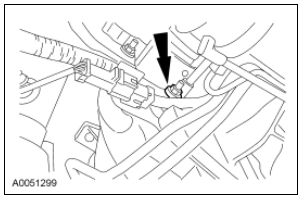
52. Remove the bolt and detach the PSP tube bracket from the LH frame rail.



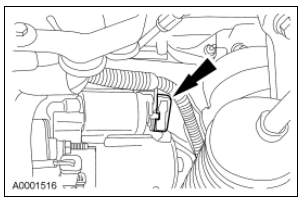
53. If equipped, disconnect the block heater electrical connector.



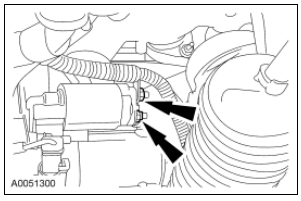
54. Remove the nut and detach the ground strap.



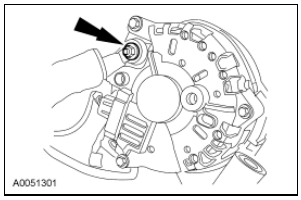
55. Remove the starter motor terminal cover.



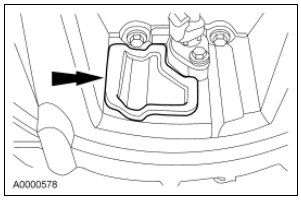
56. Remove the nuts and position the starter motor cables aside.



57. Remove the nut and disconnect the B+ terminal from the generator.

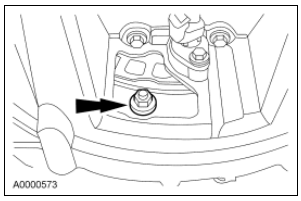


58. Remove the torque converter access cover.

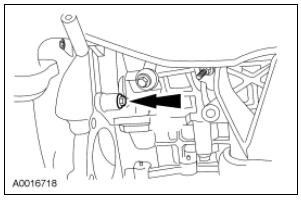


59. **NOTE:** Mark one stud and the flexplate for assembly reference.

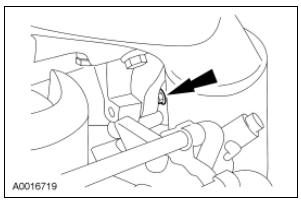
    Remove the 4 torque converter nuts.



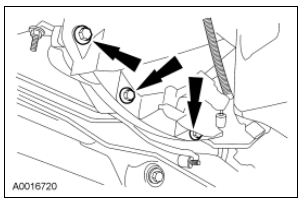
60. Remove the engine-to-transmission bolt.



61. Remove the engine-to-transmission bolt.

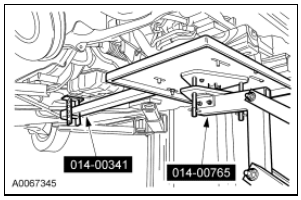


62. Remove the 4 lower engine-to-transmission bolts.

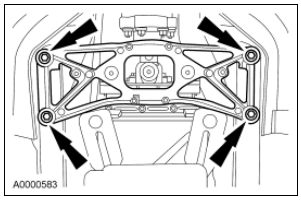


63. Support the rear of the vehicle with suitable safety stands.

64. Using the special tools, support the engine, transmission, front and center crossmembers and the cooling system.



65. Remove the 5 transmission crossmember bolts.

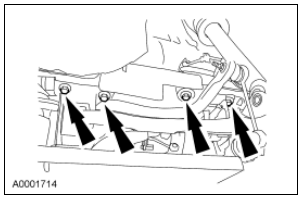


66. **NOTE:** RH shown, LH similar.

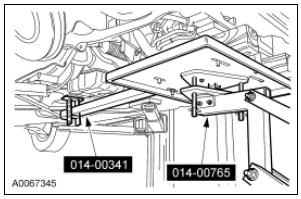
    Remove the 4 center crossmember I brace bolts.

67. **NOTE:** LH shown, RH similar

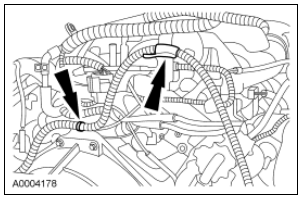
    Remove the 8 front and center crossmember bolts.



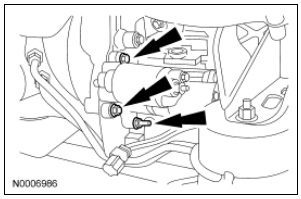
68. Using the special tools, carefully lower the entire assembly from the vehicle.



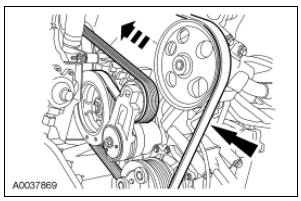
69. Detach the 2 wire harness retainers and position the harness aside.



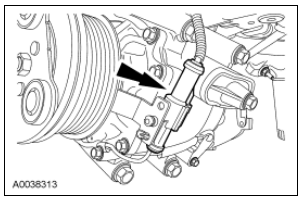
70. Remove the 2 bolts, the stud bolt and the starter motor.



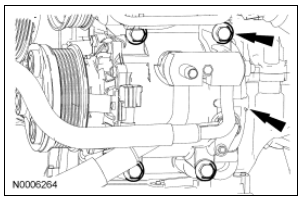
71. Rotate the accessory drive belt tensioner counterclockwise and remove the accessory drive belt.



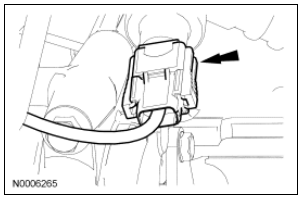
72. Disconnect the A/C compressor electrical connector.



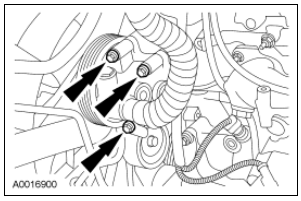
73. Remove the 4 bolts and position the A/C compressor and manifold assembly aside.



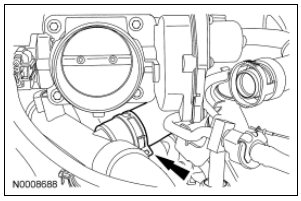
74. Disconnect the power steering pressure (PSP) switch electrical connector.



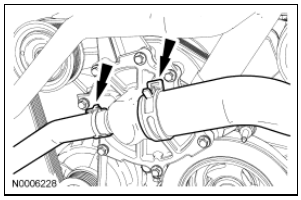
75. Remove the 3 bolts and position the power steering pump and reservoir aside.



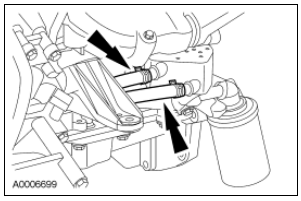
76. Disconnect the coolant inlet hose.



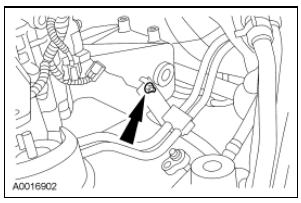
77. Disconnect the heater hose and the lower radiator hose from the coolant pump.



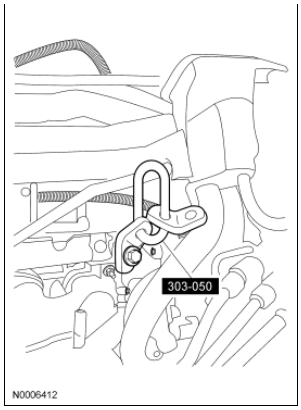
78. If equipped, disconnect the oil cooler hoses.



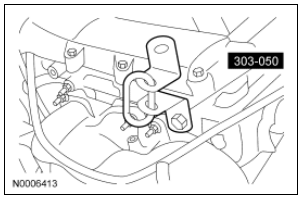
79. Remove the nut and detach the transmission cooler tube bracket from the oil pan.



80. Install the special tool.

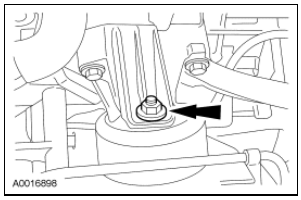


81. Install the special tool.

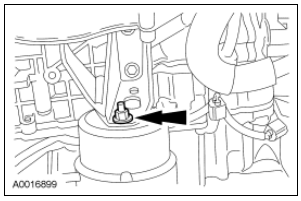


82. Using an engine crane support the engine and transmission.

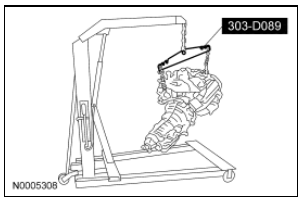
83. Remove the LH engine mount nut.



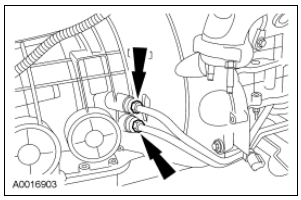
84. Remove the RH engine mount nut.



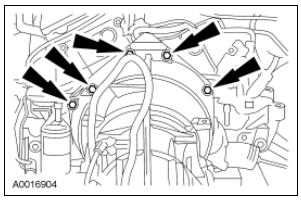
85. Remove the engine and transmission from the crossmember and cooling system assembly. Rest on the floor or on a bench.



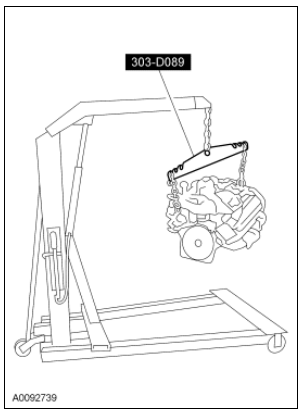
86. Disconnect the transmission oil cooler tubes and plug the openings.



87. Remove the 5 transmission-to-engine bolts.



88. Using the special tools and a suitable engine crane, separate the engine from the transmission.



Engine

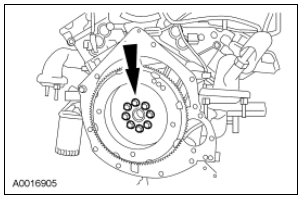
Special Tool(s)

ST1184-A	3-Jaw Puller 303-D121
ST1438-A	Strap Wrench 303-D055 (D85L-6000-A)
ST1385-A	Remover, Oil Seal 303-409 (T92C-6700-CH)
ST1187-A	Slide Hammer 307-005 (T59L-100-B)
 ST1382-A	Remover, Crankshaft Rear Oil Seal 303-519 (T95P-6701-EH)

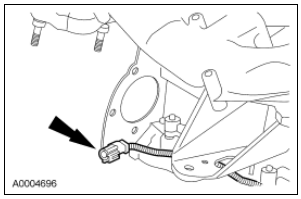
1. For additional information, refer to the exploded views under the engine assembly procedure in this section.

2. Remove the 8 bolts and the flexplate.



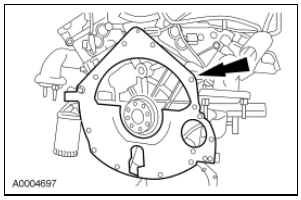
A0016905

3. Detach the RH heated oxygen sensor (HO2S) wiring harness retainers from the spacer plate and the oil pan.

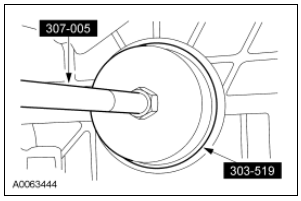


A0004696

4. Remove the spacer plate.

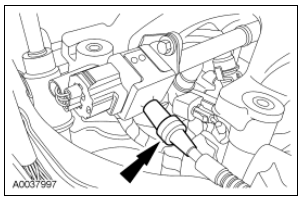


5. Using the special tools, remove the crankshaft rear seal.

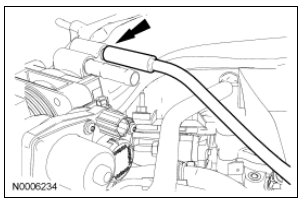


6. Mount the engine on an engine stand.

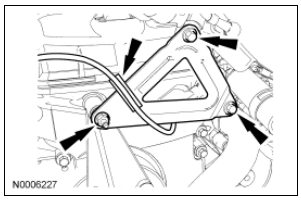
7. Disconnect the main engine vacuum harness from the fuel pressure sensor.



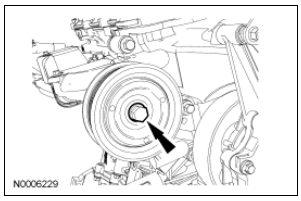
8. Disconnect the fuel vapor tube from the upper intake manifold, detach the retainer and remove the tube.



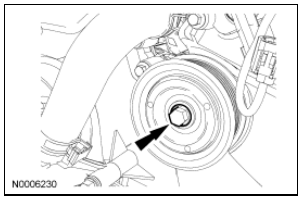
9. Remove the 2 bolts, the nut and the upper intake manifold support bracket.
    - Detach the wiring harness retainer from the bracket.



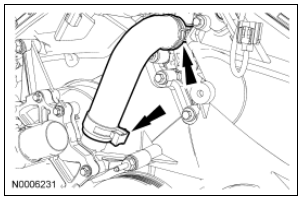
10. Remove the bolt and the RH accessory drive belt idler pulley.



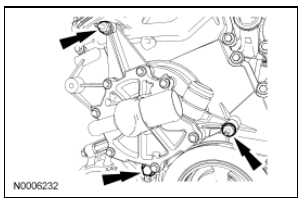
11. Remove the bolt and the LH accessory drive belt idler pulley.



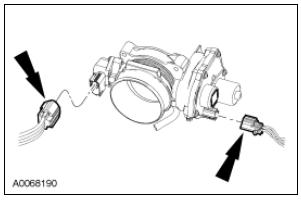
12. Remove the coolant bypass hose.



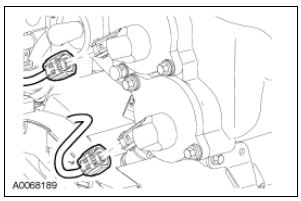
13. Remove the 2 stud bolts, the bolt and the coolant pump.



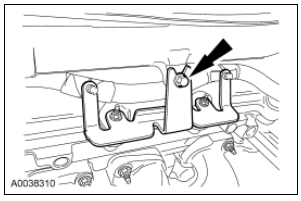
14. Disconnect the 2 throttle body electrical connectors.



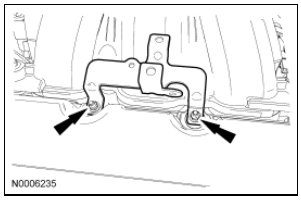
15. Disconnect the 2 intake manifold tuning (IMT) valve electrical connectors.



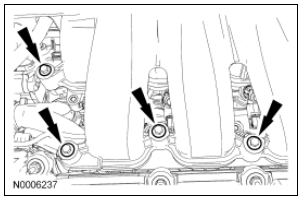
16. Remove the RH upper intake manifold support bracket bolt.



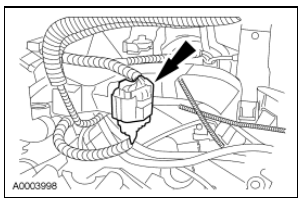
17. Remove the 2 nuts and the LH engine appearance cover bracket.



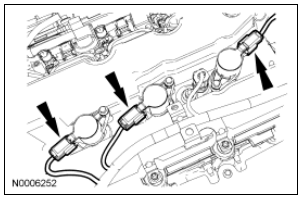
18. Remove the 6 bolts and the upper intake manifold.



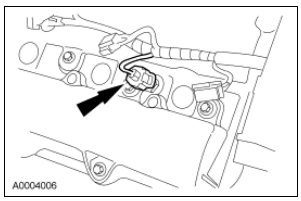
19. Disconnect the fuel charging wiring harness connector.



20. Disconnect the 6 ignition coil electrical connectors.

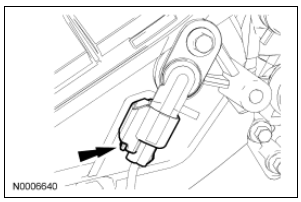


21. Disconnect the cylinder head temperature (CHT) sensor electrical connector.

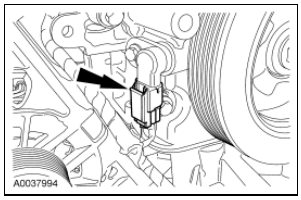


22. **NOTE:** LH is shown, RH is similar.

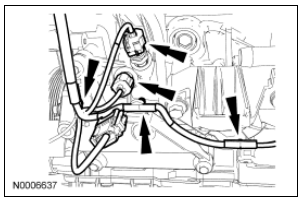
    Disconnect the LH and RH camshaft position (CMP) sensor electrical connectors.



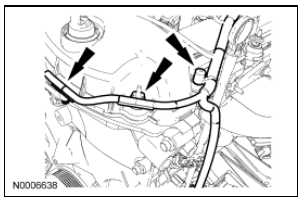
23. Disconnect the crankshaft position (CKP) sensor electrical connector.



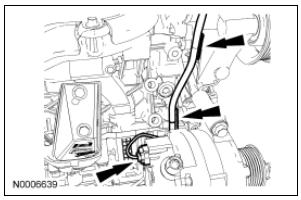
24. Disconnect the oil pressure switch and oil temperature sensor electrical connectors.
    - Detach the 3 wiring harness retainers.



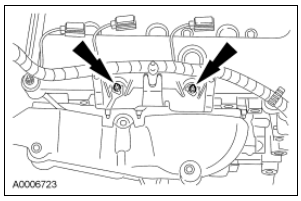
25. Detach the 3 wiring harness retainers from the LH valve cover stud bolts.



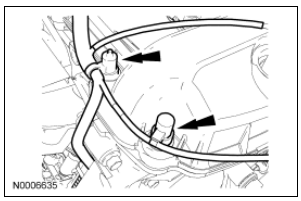
26. Disconnect the generator electrical connector and detach the 2 wiring harness retainers.



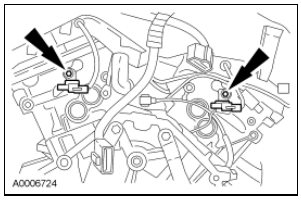
27. Detach the wiring harness retainers from the RH upper intake manifold support bracket.



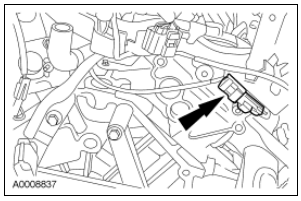
28. Detach the 2 wiring harness retainers from the RH valve cover stud bolts.



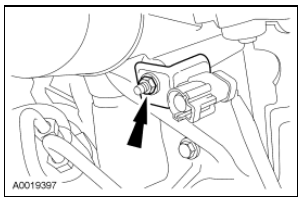
29. Remove the 2 bolts and detach the radio ignition interference capacitors.



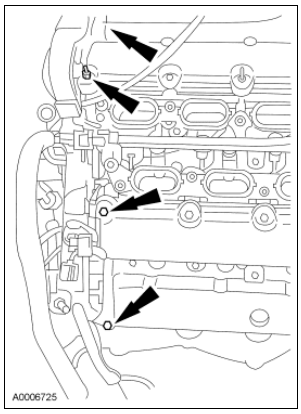
30. Disconnect the knock sensor (KS) electrical connector and detach the retainer.



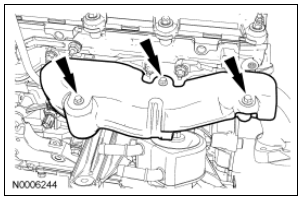
31. Remove the nut and detach the LH HO2S bracket.
    - Detach the wiring retainer from the LH engine mount bracket.



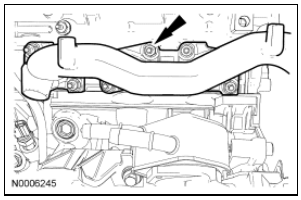
32. Remove the 4 wiring conduit nuts and the main engine wiring harness.



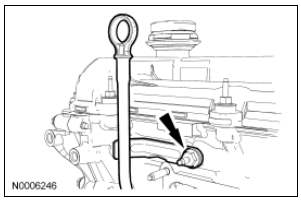
33. Remove the 3 bolts and the LH exhaust manifold heat shield.



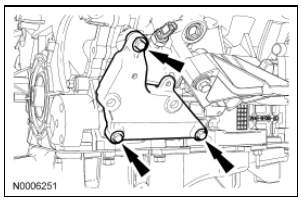
34. Remove the 6 nuts and the LH exhaust manifold.
    - Remove and discard the gasket.



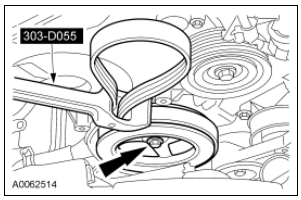
35. Remove the stud bolt and the oil level indicator and tube.
    - Remove and discard the O-ring seal.



36. Remove the 3 bolts and the A/C compressor bracket.

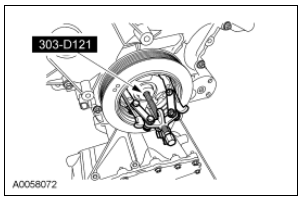


37. Using the special tool to hold the crankshaft pulley, remove and discard the bolt and washer.



38. ⚠ **CAUTION: The special tool must grab the inside of the damper or damage to the damper can occur.**

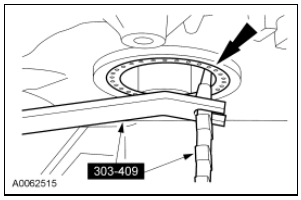
    Using the special tool, remove the crankshaft pulley.



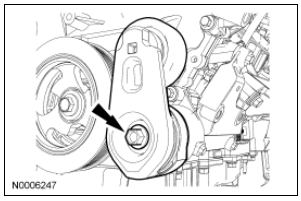
39. ⚠ **CAUTION: Use care not to scratch the crankshaft surface while removing the seal.**

    Using the special tool, remove the crankshaft front seal.

    - Discard the crankshaft front seal.



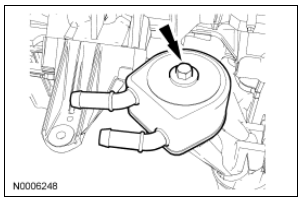
40. Remove the bolt and the accessory drive belt tensioner.



41. ⚠ **CAUTION: A new oil cooler must be installed or severe damage to the engine can occur.**

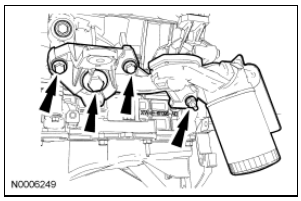
    If equipped, remove the bolt and the oil cooler.

    - Discard the oil cooler and gasket.

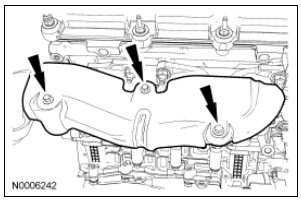


42. Remove and discard the oil filter.

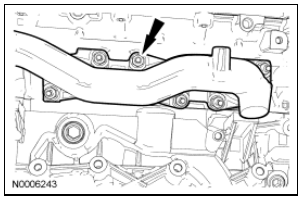
43. Remove the 2 bolts, the stud bolt, the banjo bolt and the oil filter adapter.
    - Remove and discard the banjo bolt O-ring seal.



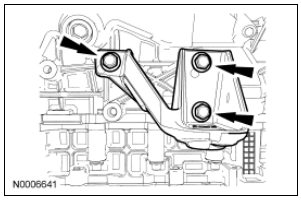
44. Remove the 3 bolts and the RH exhaust manifold heat shield.



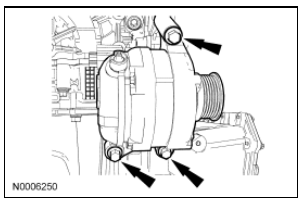
45. Remove the 6 nuts and the RH exhaust manifold.
    - Remove and discard the gasket.



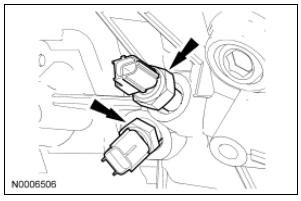
46. Remove the 3 bolts and the RH engine mount bracket.



47. Remove the 3 bolts and the generator.



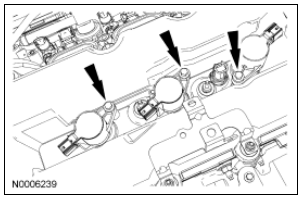
48. Remove the oil pressure switch and oil temperature sensor.



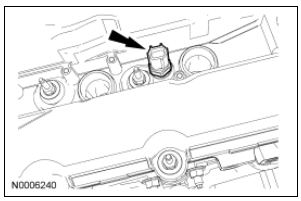
49. **NOTE:** RH shown, LH similar.

    NOTE: When removing the ignition coils, a slight twisting motion will break the seal and ease removal.

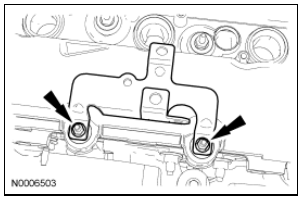
    Remove the 6 ignition coil bolts and 6 ignition coils.



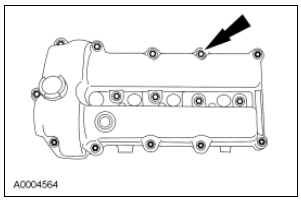
50. Remove and discard the CHT sensor.



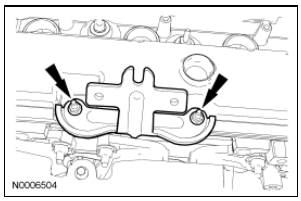
51. Remove the 2 nuts and the engine appearance cover bracket.



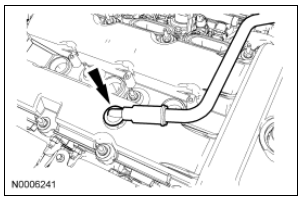
52. Remove the 12 stud bolts and the LH valve cover.
    - Remove and discard the gaskets.



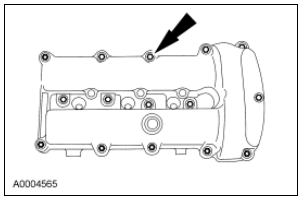
53. Remove the 2 nuts and the upper intake manifold support bracket.



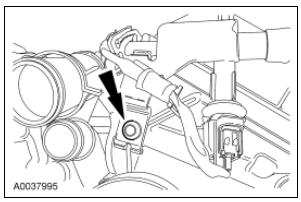
54. Disconnect the crankcase vent tube from the RH valve cover and remove the tube.



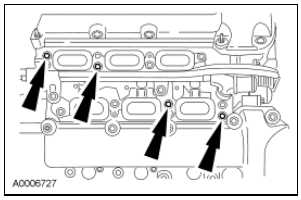
55. Remove the 12 stud bolts and the RH valve cover.
    - Remove and discard the gaskets.



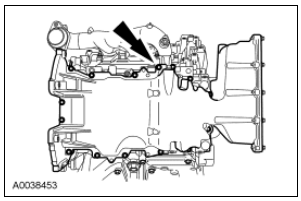
56. Remove the fuel tube bracket bolt.



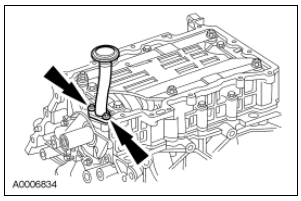
57. Remove the bolts and the lower intake manifold.



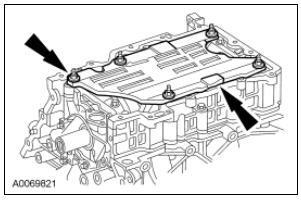
58. Remove the 14 bolts, the stud bolt and the oil pan.
    - Remove and discard the gasket.



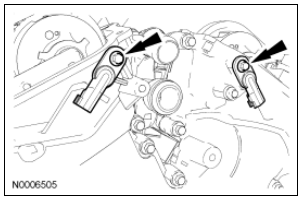
59. Remove the 2 bolts and the oil pump screen pickup tube.
    - Remove and discard the O-ring seal.



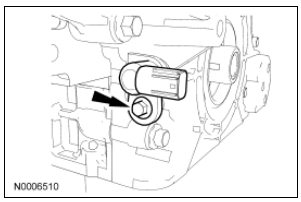
60. Remove the 5 nuts and the oil pan baffle.



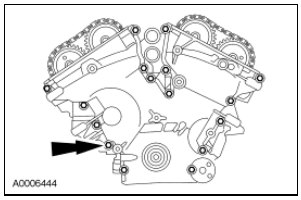
61. Remove the 2 bolts and the RH and LH CMP sensors.



62. Remove the bolt and the CKP sensor.

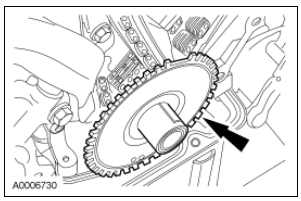


63. Remove the 15 bolts and the engine front cover.
    - Remove and discard the gaskets.

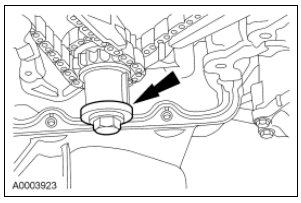


⚠ CAUTION: This pulse wheel is used with several different engines. Install the pulse wheel with the keyway in the slot stamped "20-25-30 DAMB 30 RFF" only. This slot is also marked with an orange paint mark and aligns with the missing tooth in the trigger wheel.

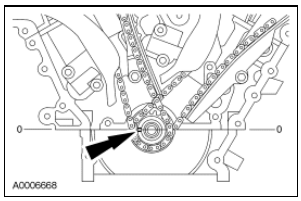
64. Remove the ignition pulse wheel.



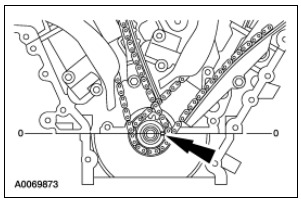
65. Install the crankshaft damper bolt and washer.



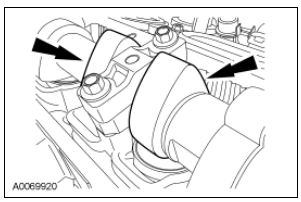
66. Rotate the crankshaft clockwise to position the crankshaft keyway to the 9 o'clock position.



67. Rotate the crankshaft clockwise to position the crankshaft keyway to the 3 o'clock position.

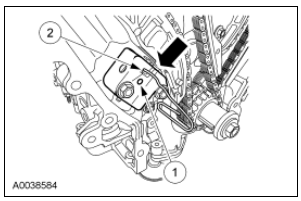


68. Verify that the front 2 intake camshaft lobes are pointing up.

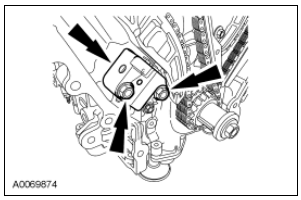


69. Compress the timing chain tensioner.
    1. Release the racheting pawl.

2. Compress the timing chain tensioner and install a stiff wire or paper clip.

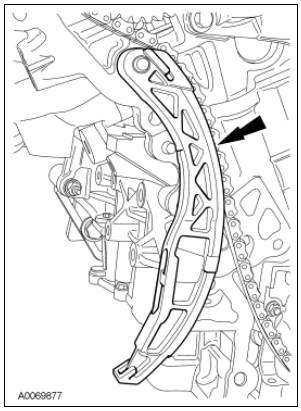


70. Remove the bolts and the RH timing chain tensioner.

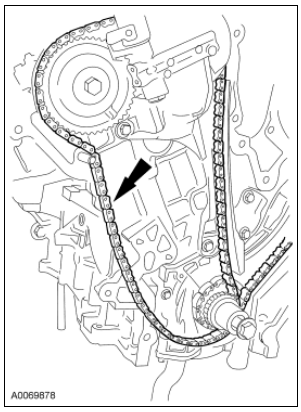


71. ⚠ **CAUTION: If the RH timing chain tensioner arm is to be reused, mark the position to make sure that it is installed on the correct side when reassembled.**

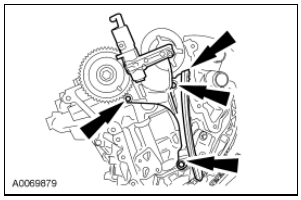
    Remove the RH timing chain tensioner arm.



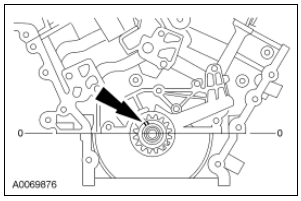
72. Remove the RH timing chain.



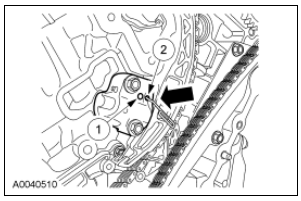
73. Remove the bolts and the RH variable camshaft timing (VCT) solenoid housing assembly.



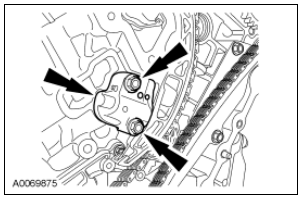
74. Rotate the crankshaft counterclockwise to position the crankshaft keyway to the 11 o'clock position.



75. Compress the timing chain tensioner.
    1. Release the racheting pawl.
    2. Compress the timing chain tensioner and install a stiff wire or paper clip.

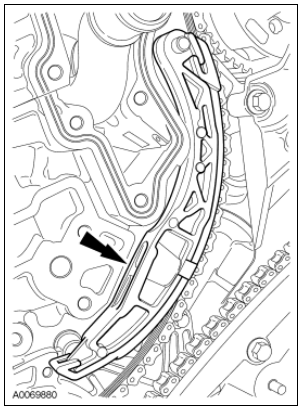


76. Remove the bolts and the LH timing chain tensioner.

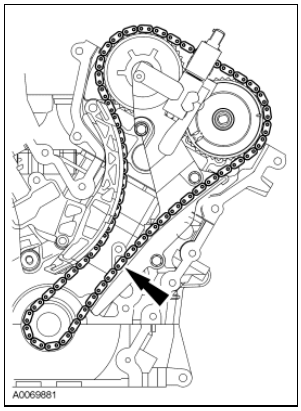


77. ⚠ **CAUTION: If the LH timing chain tensioner arm is to be reused, mark the position to make sure that it is installed on the correct side when reassembled.**

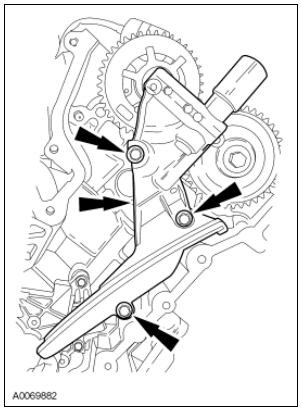
    Remove the LH timing chain tensioner arm.



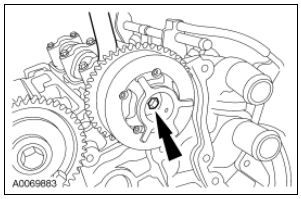
78. Remove the LH timing chain.



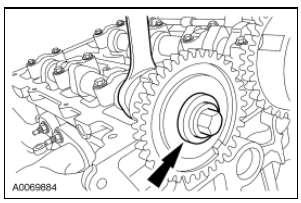
79. Remove the LH VCT solenoid housing assembly.



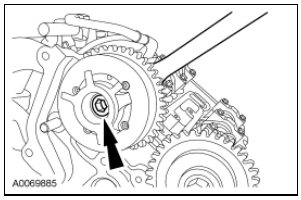
80. Using a wrench on the flats of the camshaft, hold the camshaft in position and remove the bolt and the RH VCT actuator.
    - Discard the bolt.



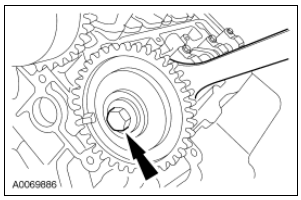
81. Using a wrench on the flats of the camshaft, hold the camshaft in position and remove the bolt and the RH exhaust camshaft sprocket.
    - Discard the bolt.



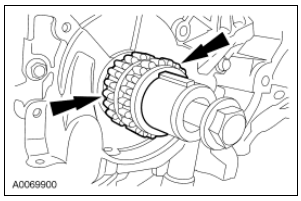
82. Using a wrench on the flats of the camshaft, hold the camshaft in position and remove the bolt and the LH VCT actuator.
    - Discard the bolt.



83. Using a wrench on the flats of the camshaft, hold the camshaft in position and remove the bolt and the LH exhaust camshaft sprocket.
    - Discard the bolt.



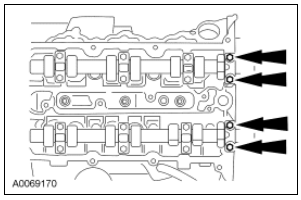
84. Remove the crankshaft sprockets.



85. ⚠ **CAUTION: Remove the camshaft journal thrust caps prior to loosening other camshaft journal cap bolts. Damage to the camshaft journal thrust cap can occur if not removed first.**

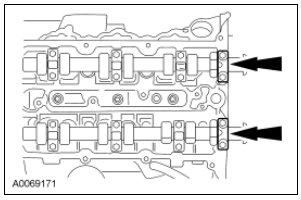
    ⚠ **CAUTION: Cylinder head camshaft journal caps and cylinder heads are numbered for assembly in their original positions. Keep camshaft journal caps with the cylinder head from which they were removed. Do not mix with camshaft journal caps from another cylinder head.**

    Remove the bolts.

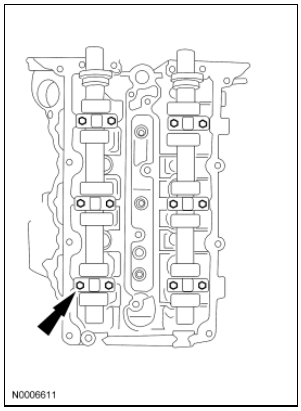


86. **NOTE:** The camshaft journal thrust caps have alignment dowels.

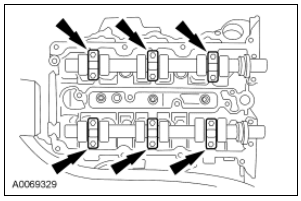
    Using a soft-faced mallet, gently loosen and remove the camshaft journal thrust caps.



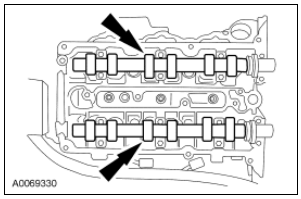
87. Remove the remaining camshaft journal cap bolts.



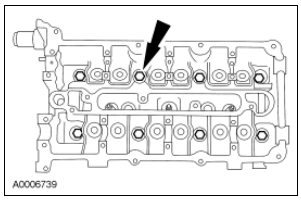
88. Using a soft-faced mallet, gently loosen and remove the remaining camshaft journal caps.



89. Carefully lift out the camshafts.



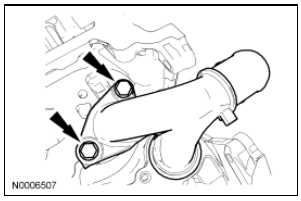
90. Remove the 16 bolts and the RH and LH cylinder heads.
    - Discard the bolts and the gaskets.



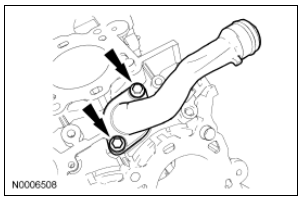
91. **NOTE:** The straightedge used must be flat within 0.0051 mm (0.0002 in) per foot of tool length.

    Inspect all areas of the deck face with a straightedge and feeler gauge. The cylinder head must not have depressions deeper than 0.0254 mm (0.0001 in) across a 38.1 mm (1.5 in) square area, or scratches more than 0.0254 mm (0.0001 in).

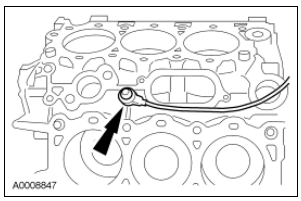
92. Remove the 2 bolts and the coolant bypass tube.
    - Discard the O-ring seal.



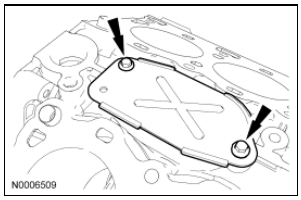
93. Remove the 2 bolts and the coolant inlet tube.
    - Discard the O-ring seal.



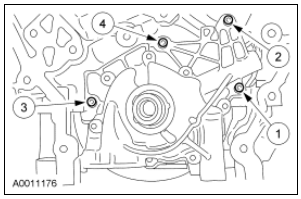
94. Remove the bolt and the KS.
    - Detach the wiring retainer from the oil separator cover.



95. Remove the 2 bolts and the oil separator cover.
    - Discard the gasket.



96. Remove the 4 oil pump bolts in the sequence shown.
    - Remove the oil pump.



Cylinder Head

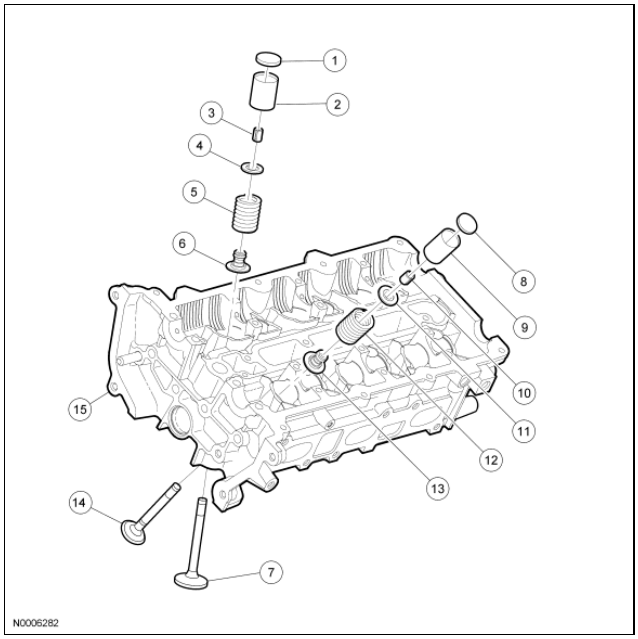
Special Tool(s)

ST2489-A	Compressor, Valve Spring 303-648

Material

Item	Specification
SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP or equivalent	WSS-M2C930-A

Disassembly and Assembly



Item	Part Number	Description
1	6A536	Tappet shim (6 required)
2	6505	Tappet (6 required)
3	6518	Intake valve spring retainer keys (6 required)
4	2762	Intake valve spring retainers (6 required)
5	6513	Intake valve springs (6 required)
6	6A536	Intake valve stem seals (6 required)
7	6507	Intake valve (6 required)
8	6A536	Tappet shim (6 required)
9	6505	Tappet (6 required)
10	6518	Exhaust valve spring retainer keys (6 required)

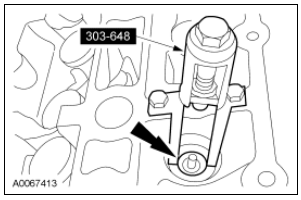
11	2762	Exhaust valve spring retainers (6 required)
12	6513	Exhaust valve springs (6 required)
13	6A536	Exhaust valve stem seals (6 required)
14	6505	Exhaust valve (6 required)
15	6507	Cylinder head

1. **⚠ CAUTION: Do not use any means of marking the shims other than a permanent-type marker. Any scratches or paint on the shims may result in incorrect lash adjustment and severe engine damage.**

   ⚠ CAUTION: The tappets and shims must be installed in their original position to make sure of correct valve lash settings.

   Remove the tappet and shim.

2. Using the special tool, compress the valve spring and remove the retainer keys.



3. Remove the valve spring retainer and valve spring.
   - For component tests of the valve spring retainer, refer to Section 303-00 .

4. Remove the valve.
   - For component tests of the valve, refer to Section 303-00 .

5. Remove the valve stem seal.

6. Repeat the procedure until all of the valves are removed.

7. **NOTE:** Lubricate the valve stem and the valve stem seal with clean engine oil prior to installation.

   To assemble, reverse the disassembly procedure

8. For component tests of the cylinder head, refer to Section 303-00 .

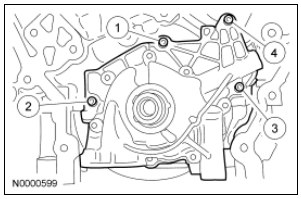
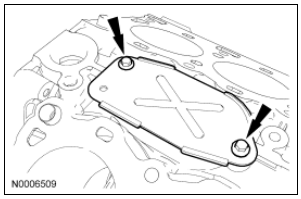
10	6K817	Positive crankcase ventilation (PCV) tube
11	6B890	PCV valve
12	12A366	Ignition coil (6 required)
13	9J444	Engine appearance cover bracket

14	6B280	Camshaft bearing cap
15	6A258	Camshaft journal cap
16	6A267	LH intake camshaft
17	6C524	LH variable camshaft timing (VCT) actuator
18	6256	LH exhaust camshaft sprocket
19	6A269	LH exhaust camshaft
20	6750	Oil level indicator
21	6754	Oil level indicator tube
22	9Y427	LH exhaust manifold heat shield
23	9431	LH exhaust manifold
24	9448	LH exhaust manifold gasket
25	6G017	Camshaft oil plug
26	12405	Spark plug (6 required)
27	6050	LH cylinder head
28	6083	LH cylinder head gasket
29	8548	Coolant bypass tube
30	6049	RH cylinder head
31	18801	Radio ignition interference capacitor (2 required)
32	6049	RH cylinder head gasket
33	9430	RH exhaust manifold
34	9448	RH exhaust manifold gasket
35	6256	RH exhaust camshaft sprocket
36	6A268	RH exhaust camshaft
37	6C254	RH VCT actuator
38	6A266	RH intake camshaft
39	6582	RH valve cover
40	6758	Crankshaft vent tube

1. Position the oil pump and install the 4 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

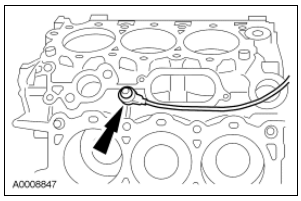


2. Install the oil separator cover, a new gasket and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).



3. Position the knock sensor (KS) and install the bolt.

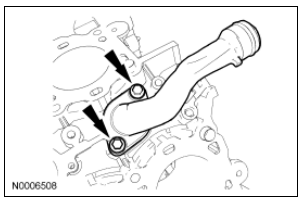
- Tighten to 25 Nm (18 lb-ft).
- Attach the wiring retainer to the oil separator cover.



4. **NOTE:** Lubricate the O-ring seal with clean engine coolant.

   Install the coolant inlet tube, a new O-ring seal and the 2 bolts.

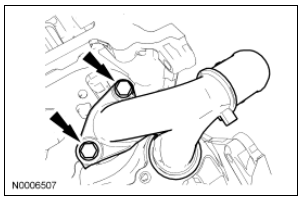
   - Tighten to 25 Nm (18 lb-ft).



5. **NOTE:** Lubricate the O-ring seal with clean engine coolant.

   Install the coolant bypass tube, a new O-ring seal and the 2 bolts.

   - Tighten to 25 Nm (18 lb-ft).



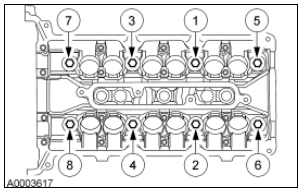
6. **⚠ CAUTION: The cylinder head gasket surfaces are ground to a precision finish. Do not rest cylinder heads on gasket surfaces. Do not use any abrasive materials during cleaning of the surfaces. Hairline scratches, small burrs or dirt can provide a leak path for a cylinder head gasket. If gasket material remains on the sealing surface, use only a plastic-tipped scraper to remove the material. Do not attempt to reuse the head gaskets.**

   ⚠ CAUTION: Cylinder head bolts are torque-to-yield and cannot be reused.

   NOTE: The LH and RH cylinder head gaskets are not interchangeable.

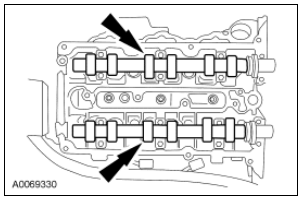
   Position the new gaskets and the RH and LH cylinder heads. Install new bolts and tighten in the sequence shown in 6 stages.

   - Stage 1: Tighten to 30 Nm (22 lb-ft).
   - Stage 2: Tighten an additional 90 degrees.
   - Stage 3: Back out a minimum of one full turn (360 degrees).
   - Stage 4: Tighten to 30 Nm (22 lb-ft).
   - Stage 5: Tighten an additional 90 degrees.
   - Stage 6: Tighten an additional 90 degrees.



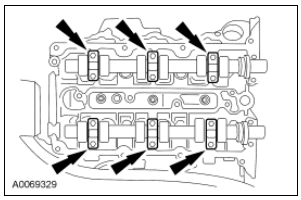
7. **NOTE:** Be sure camshaft bearing caps are installed in their original positions.

   Lubricate camshafts with clean engine oil and carefully position the camshafts into the cylinder head.

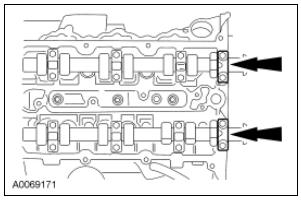


8. **⚠ CAUTION: Do not install the camshaft journal thrust caps until all of the camshaft bearing caps have been installed, or damage to the thrust caps can occur.**

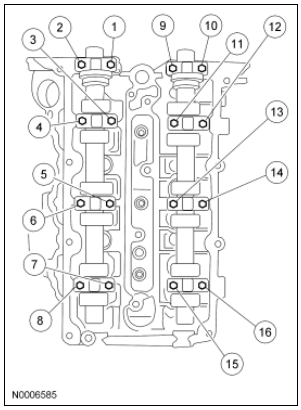
   Lubricate the bearing surfaces of the camshaft bearing caps with clean engine oil, install the bearing caps and loosely install the bolts.



9. Lubricate the bearing surfaces of the camshaft bearing thrust caps with clean engine oil, install the thrust caps and loosely install the bolts.



10. Tighten the bolts in the sequence shown.

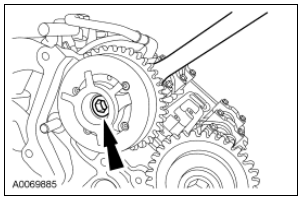


11. **NOTE:** If new camshafts were installed, refer to Valve Clearance Adjustment in this section.

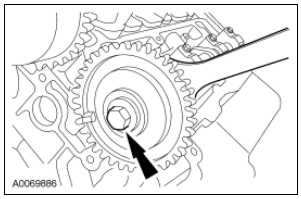
Lubricate the tappet shims and camshaft lobes with clean engine oil.

12. Rotate the camshafts to make sure they are not binding. If binding occurs, check to make sure that all bearing caps are in their original positions. Loosen all bearing cap bolts in reverse order and retighten.

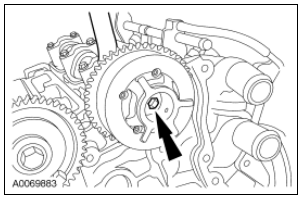
13. Install the LH variable camshaft timing (VCT) actuator and install a new bolt hand-tight. Use a wrench on the flats of the camshaft to hold it in position and tighten the bolt in 2 stages.
    - Stage 1: Tighten the VCT actuator bolt to 20 Nm (15 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.



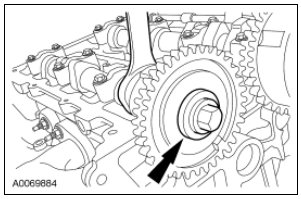
14. Install the LH exhaust camshaft sprocket and install a new bolt hand-tight. Using a wrench on the flats of the camshaft, hold the camshaft in position and tighten the bolt in 2 stages.
    - Stage 1: Tighten the exhaust camshaft sprocket bolt to 20 Nm (15 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.



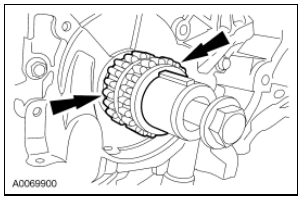
15. Install the RH variable camshaft timing (VCT) actuator and install a new bolt hand-tight. Using a wrench on the flats of the camshaft, hold the camshaft in position and tighten the bolt in 2 stages.
    - Stage 1: Tighten the VCT actuator bolt to 20 Nm (15 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.



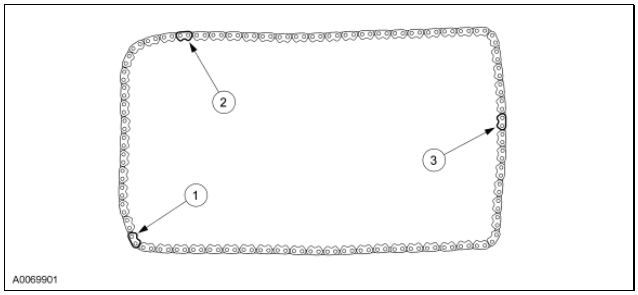
16. Install the RH exhaust camshaft sprocket and install a new bolt hand-tight. Using a wrench on the flats of the camshaft, hold the camshaft in position and tighten the bolt in 2 stages.
    - Stage 1: Tighten the exhaust camshaft sprocket bolt to 20 Nm (15 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.



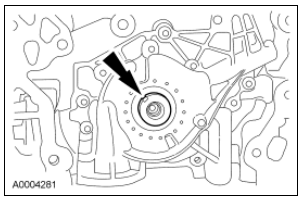
17. With the 2 keyways facing forward, install the crankshaft sprockets.



18. If the timing marks in the timing chains are not evident, use a permanent-type marker to mark the crankshaft and camshaft timing marks on the LH and RH timing chains.
    1. Mark any link to use as the exhaust camshaft timing mark.
    2. Starting with the exhaust camshaft timing mark, count 16 links and mark the link as the intake camshaft sprocket timing mark.
    3. Starting with the intake camshaft timing mark, count 25 links and mark the link as the crankshaft sprocket timing mark.

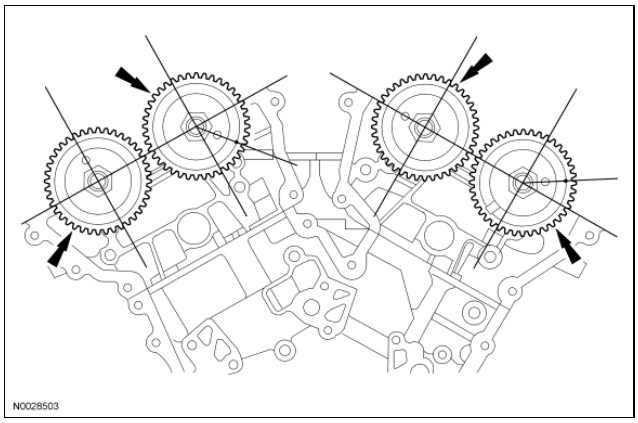


19. Verify that the crankshaft keyway is in the 11 o'clock position.



20. ⚠ **CAUTION: The crankshaft keyway must remain in the 11 o'clock position until the cams are located in the NEUTRAL position, or damage to the valves can occur.**

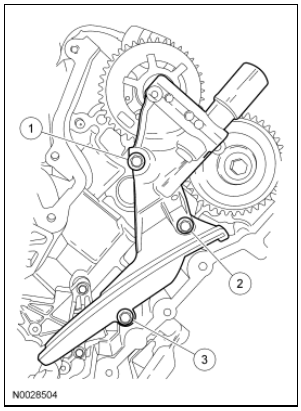
    Rotate the LH and RH intake and exhaust camshafts to locate them in their NEUTRAL positions.



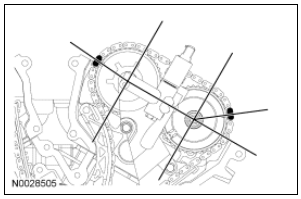
21. **NOTE:** The gold-colored bolt (No. 2 location) must be installed in its original location.

    Install the LH VCT solenoid housing assembly and hand-tighten the bolts.

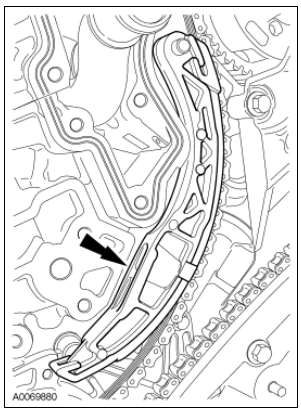
    - Tighten in the sequence shown to 25 Nm (18 lb-ft).



22. Install the LH timing chain, aligning the copper (or marked) link with the marks on the camshaft and crankshaft sprockets.

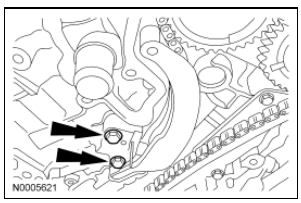


23. Install the LH timing chain tensioner arm.

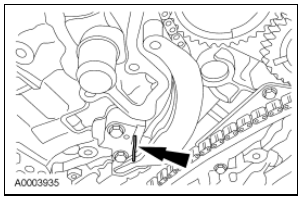


24. **NOTE:** Be sure to position the tensioner so that the tensioner piston is fully engaged in the tensioner arm.

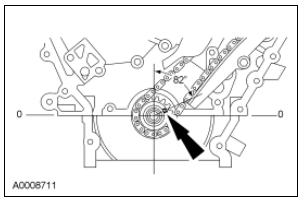
    Install the LH timing chain tensioner and bolts.



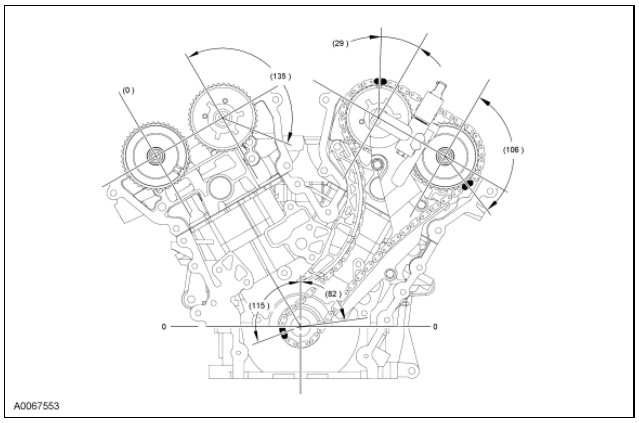
25. Remove the wire or paper clip from the tensioner.



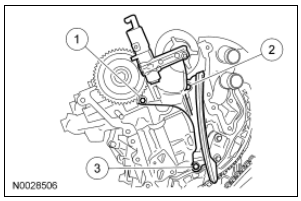
26. Rotate the crankshaft clockwise and position the keyway at the 3 o'clock position for RH timing chain installation.



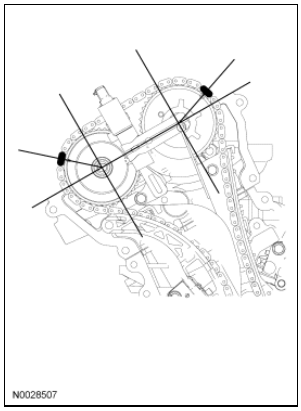
27. Verify that the copper (or marked) links on the LH timing chain are in alignment with the timing marks on the camshaft and crankshaft sprockets.



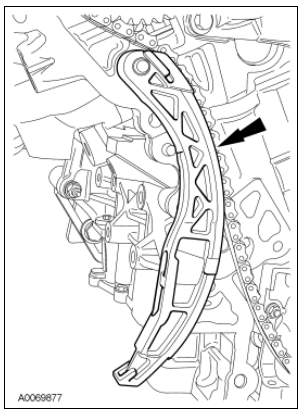
28. Install the RH VCT solenoid housing assembly and hand-tighten bolts.
    - Tighten in the sequence shown to 25 Nm (18 lb-ft).



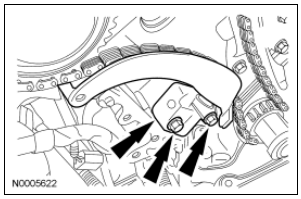
29. Install the RH timing chain, aligning the copper or (marked) links with the marks on the camshaft and crankshaft sprockets.



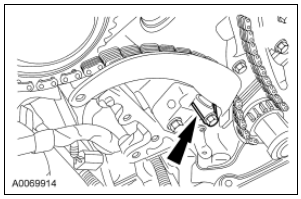
30. Install the RH timing chain tensioner arm.



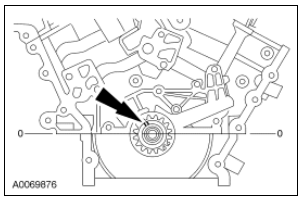
31. Install the RH timing chain tensioner and bolts.



32. Remove the wire or paper clip from the RH timing chain tensioner.



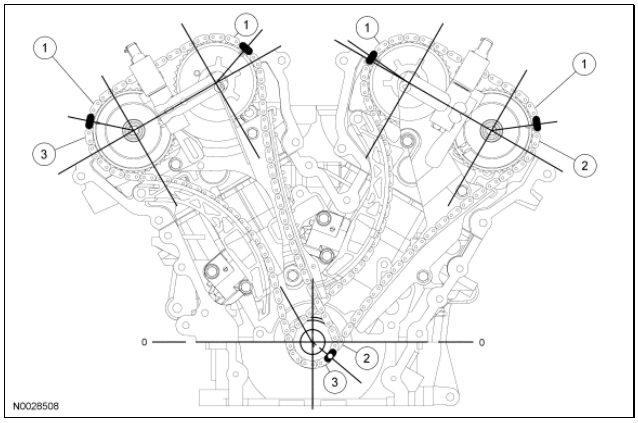
33. Rotate the crankshaft counterclockwise to position the crankshaft keyway to the 11 o'clock position.



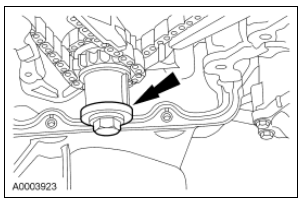
34. ⚠ **CAUTION: Failure to verify correct timing drive component alignment will result in severe engine damage.**

Verify that the timing component alignment is correct.

1. There should be 14 chain links between the exhaust and intake camshaft timing marks.
2. There should be 23 chain links between the camshaft and crankshaft timing marks.
3. There should be 28 chain links between the camshaft and crankshaft timing marks.

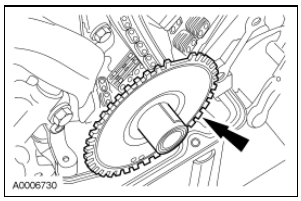


35. Remove the crankshaft damper bolt and washer.



36. ⚠ **CAUTION: This pulse wheel is used with several different engines. Install the pulse wheel with the keyway in the slot stamped "20-25-30 DAMB 30 RFF" only. This slot is also marked with an orange paint mark and aligns with the missing tooth in the trigger wheel.**

    Install the ignition pulse wheel using the orange marked keyway slot and the teeth facing forward.

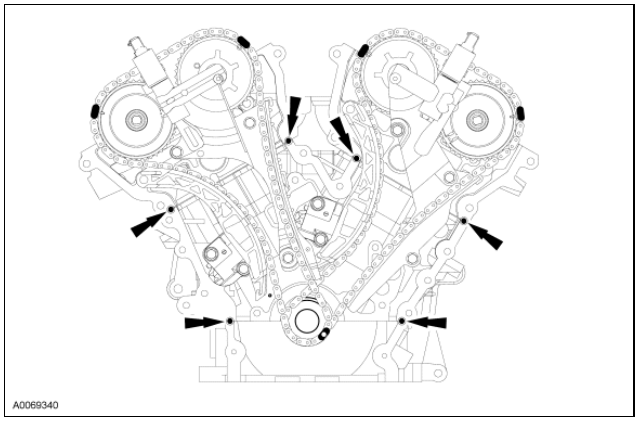


37. Install new gaskets on the engine front cover.

38. **NOTE:** Clean the sealing surfaces with silicone gasket remover and metal surface prep before applying gasket and sealant.

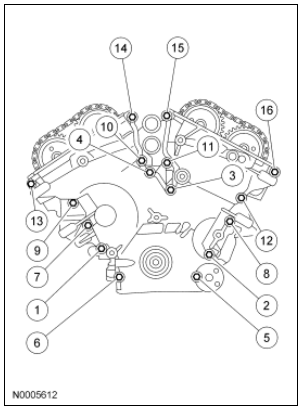
    NOTE: The front cover must be installed and the bolts tightened within 4 minutes of sealant application.

    Apply a 6-mm (0.24-in) dot of silicone gasket and sealant to the cylinder block to lower cylinder block and cylinder head mating surfaces.

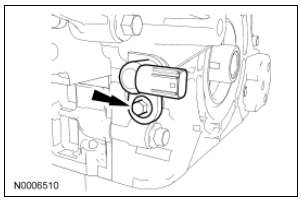


39. Install new gaskets on the engine front cover.

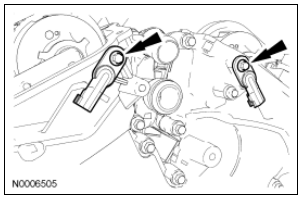
40. Install the engine front cover and the 15 bolts.
    - Tighten the bolts in the sequence shown to 25 Nm (18 lb-ft).



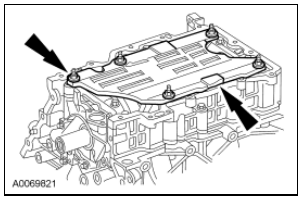
41. Install the crankshaft position (CKP) sensor and the bolt.
    - Tighten to 10 Nm (89 lb-in).



42. Install the RH and LH camshaft position (CMP) sensors and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).



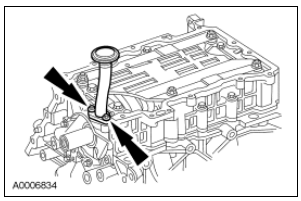
43. Install the oil pan baffle and the 5 nuts.
    - Tighten to 20 Nm (15 lb-ft) and then rotate 45 degrees.



44. **NOTE:** Lubricate the new oil pump screen and pickup tube O-ring seal with clean engine oil.

    Position the oil pump screen and pickup tube and install the 2 bolts.

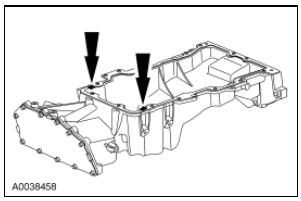
    - Tighten to 10 Nm (89 lb-in).



45. **NOTE:** Clean the sealing surfaces with silicone gasket remover and metal surface prep before applying gasket and sealant.

    NOTE: The oil pan must be installed and the bolts tightened within 4 minutes of sealant application.

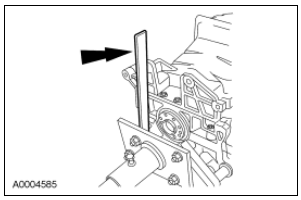
    Apply a 10-mm (0.4-in) dot of silicone gasket and sealant onto the top of the new oil pan gasket at the 2 locations shown.



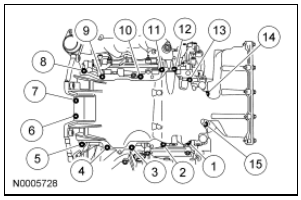
46. **NOTE:** The oil pan rear face must be installed flush to the cylinder block rear face to within ± 0.10 mm (0.0039 in). Failure to maintain this specification will require the oil pan to be removed and installed again.

    Install a new gasket and the oil pan.

    - Using a straightedge, align the rear face of the oil pan with the rear face of the cylinder block.



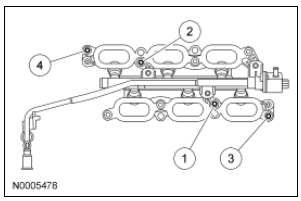
47. Tighten the oil pan bolts in the sequence shown.



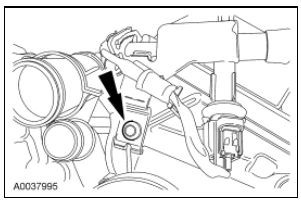
48. **NOTE:** Clean and inspect all sealing surfaces. Inspect and install new gaskets as necessary.

    Position the lower intake manifold and install the bolts.

    - Tighten to 10 Nm (89 lb-in).



49. Install the fuel tube bracket bolt.
    - Tighten to 10 Nm (89 lb-in).

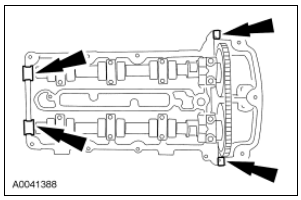


50. Install new gaskets in the RH valve cover.

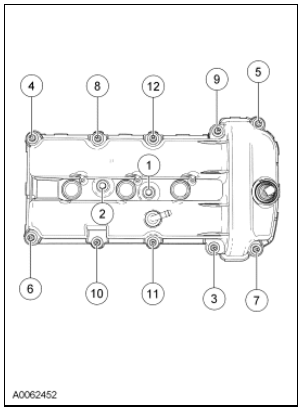
51. **NOTE:** Clean the RH valve cover sealing surfaces with silicone gasket remover and metal surface prep before applying gasket and sealant.

    NOTE: The valve cover must be installed and the bolts tightened within 4 minutes of sealant application.

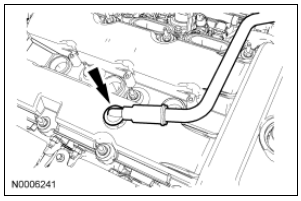
    Apply an 8-mm (0.32-in) bead of silicone gasket and sealant to the cylinder half round surface and to the front cover gasket intersection places.



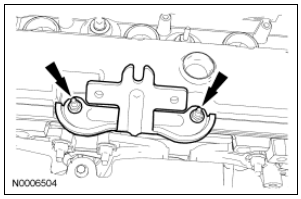
52. Position the RH valve cover and install the 12 stud bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).



53. Connect the crankcase vent tube to the RH valve cover.



54. Install the upper intake manifold support bracket and the 2 nuts.
    - Tighten to 6 Nm (53 lb-in).

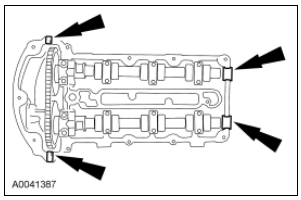


55. Install new gaskets in the LH valve cover.

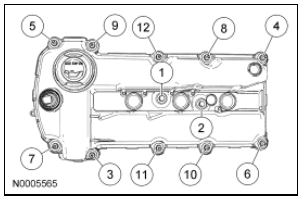
56. **NOTE:** Clean the LH valve cover sealing surfaces with silicone gasket remover and metal surface prep before applying gasket and sealant.

    NOTE: The valve cover must be installed and the bolts tightened within 4 minutes of sealant application.

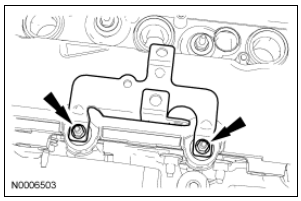
    Apply an 8-mm (0.32-in) bead of silicone gasket and sealant to the cylinder half round surface and to the front cover gasket intersection places.



57. Position the LH valve cover and install the bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).



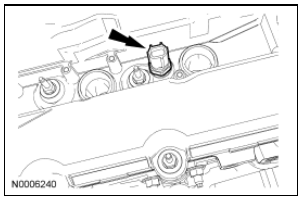
58. Install the engine appearance cover bracket and the 2 nuts.
    - Tighten to 6 Nm (53 lb-in).



59. **NOTE:** The cylinder head temperature (CHT) sensor can not be reused. a new CHT must be installed

    Install a new CHT.

    - Tighten to 15 Nm (11 lb-ft).

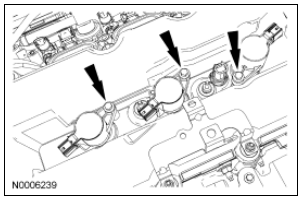


60. **NOTE:** RH shown, LH similar.

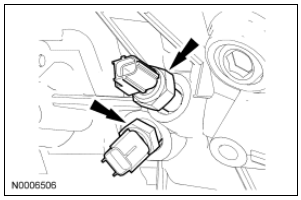
    NOTE: Apply a light film of silicone brake caliper grease and dielectric compound to the inside of the coil boots before installation.

    Install the 6 ignition coils the 6 bolts.

    - Tighten to 7 Nm (62 lb-in).

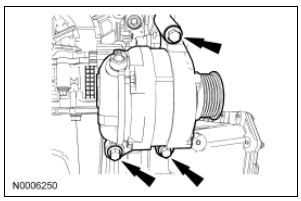


61. Install the oil pressure switch and oil temperature sensor.
    - Tighten to 14 Nm (10 lb-ft).

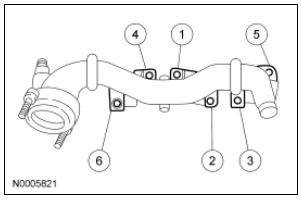


62. Position the generator and install the 3 bolts.

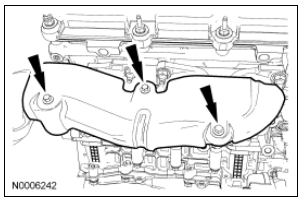
- Tighten to 48 Nm (35 lb-ft).



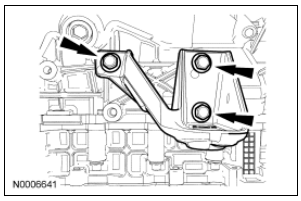
63. Position a new gasket and the RH exhaust manifold. Install the 6 nuts.
    - Tighten in the sequence shown to 20 Nm (15 lb-ft).



64. Position the RH exhaust manifold heat shield and install the 3 bolts.
    - Tighten to 10 Nm (89 lb-in).



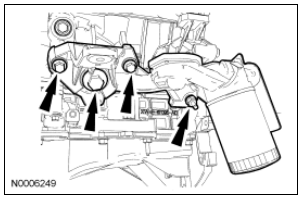
65. Install the RH engine mount bracket and the 3 bolts.
    - Tighten to 25 Nm (18 lb-ft).



66. **NOTE:** Install a new O-ring seal on the banjo bolt and lubricate the seal with clean engine oil.

    Position the oil filter adapter and loosely install the 2 bolts, the stud bolt and the banjo bolt. Tighten the bolts in 5 stages.

    - Stage 1: Tighten the banjo bolt to 30 Nm (22 lb-ft).
    - Stage 2: Tighten the 2 M10 bolts to 26 Nm (19 lb-ft).
    - Stage 3: Tighten the stud bolt to 25 Nm (18 lb-ft).
    - Stage 4: Tighten the banjo bolt to 155 Nm (114 lb-ft).
    - Stage 5: Tighten the 2 M10 bolts to 40 Nm (30 lb-ft) and the rotate 90 degrees.

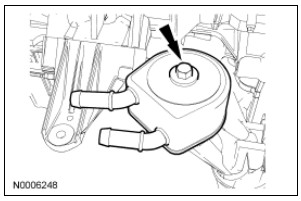


67. Install the oil filter until the seal makes contact. Tighten an additional 270 degrees.

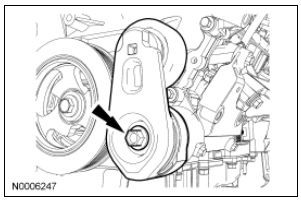
68. ⚠ **CAUTION: A new oil cooler must be installed or severe damage to the engine can occur.**

    If equipped, position the oil cooler and loosely install the bolt. Rotate the oil cooler clockwise until the locating pin hits the stop.

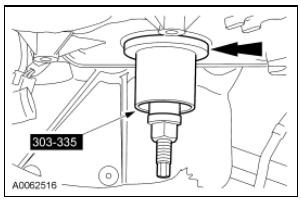
    - Tighten to 57 Nm (42 lb-ft).



69. Install the accessory drive belt tensioner and the bolt.
    - Tighten to 48 Nm (35 lb-ft).

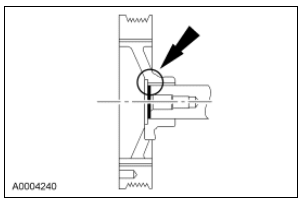


70. Using the special tool, install the crankshaft front oil seal.

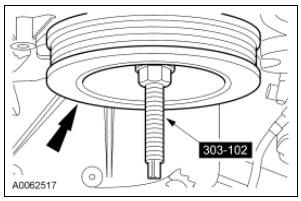


71. **NOTE:** Install the crankshaft damper no more than 4 minutes after applying the sealer.

    Apply a dot of silicone gasket and sealant to the crankshaft damper keyway slot.

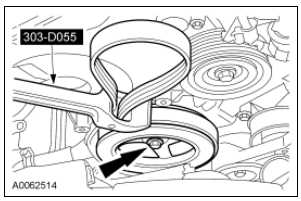


72. Using the special tool, install the crankshaft damper.

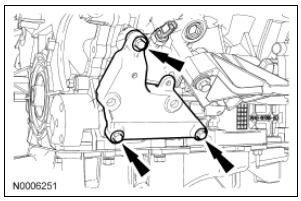


73. Using the special tool, install the washer and a new bolt. Tighten the bolt in 4 stages:
    - Stage 1: Tighten to 120 Nm (89 lb-ft).

- Stage 2: Back out a minimum of one full turn (360 degrees).
- Stage 3: Tighten to 50 Nm (37 lb-ft).
- Stage 4: Tighten an additional 90 degrees.



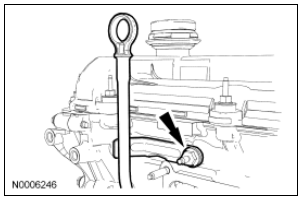
74. Position the A/C compressor bracket and install the 3 bolts.
    - Tighten to 25 Nm (18 lb-ft).



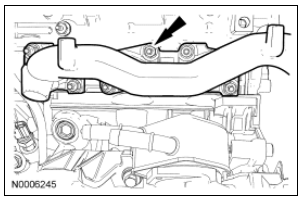
75. **NOTE:** Install a new O-ring seal on the oil level indicator tube and lubricate with clean engine oil.

    Install the oil level indicator tube and the stud bolt.

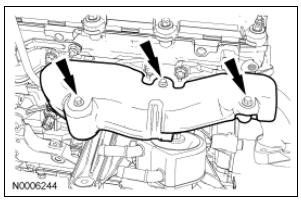
    - Tighten to 10 Nm (89 lb-in).



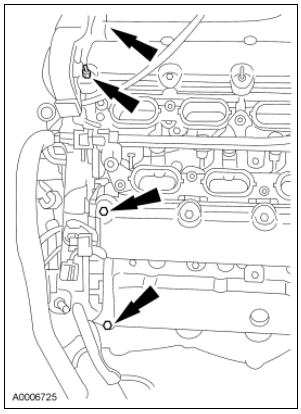
76. Position a new gasket and the LH exhaust manifold. Install the 6 nuts.
    - Tighten in the sequence shown to 20 Nm (15 lb-ft).



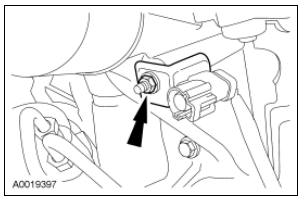
77. Position the LH exhaust manifold heat shield and install the 3 bolts.
    - Tighten to 10 Nm (89 lb-in).



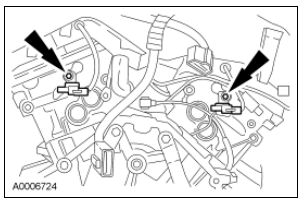
78. Position the main engine wiring harness and install the 4 wiring conduit nuts.
    - Tighten to 6 Nm (53 lb-in).



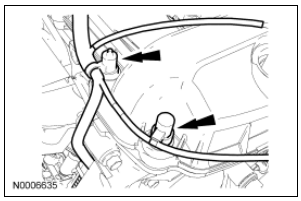
79. Position the LH HO2S bracket and install the nut.
    - Attach the wiring retainer to the LH engine mount bracket.
    - Tighten to 6 Nm (53 lb-in).



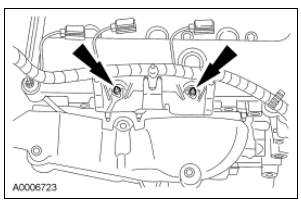
80. Position the radio ignition interference capacitors and install the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).



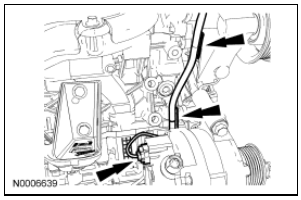
81. Attach the 2 wiring harness retainers to the RH valve cover stud bolts.



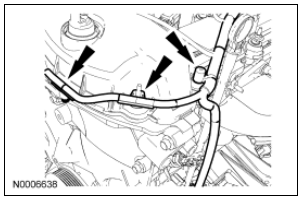
82. Attach the wiring harness retainers to the RH upper intake manifold support bracket.



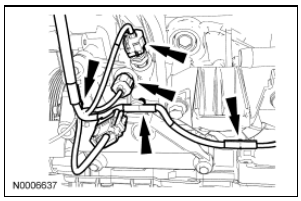
83. Connect the generator electrical connector and attach the 2 wiring harness retainers.



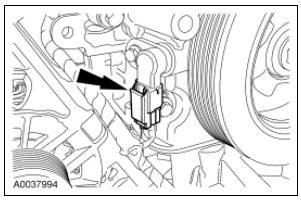
84. Attach the 3 wiring harness retainers to the LH valve cover stud bolts.



85. Connect the oil pressure switch and oil temperature sensor electrical connectors.
    - Attach the 3 wiring harness retainers.

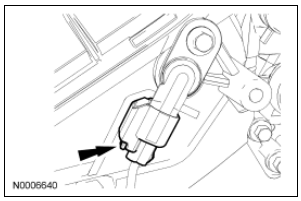


86. Connect the CKP sensor electrical connector.

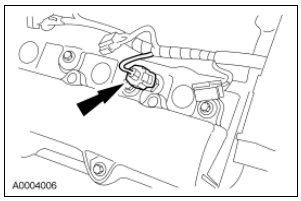


87. **NOTE:** LH is shown, RH is similar.

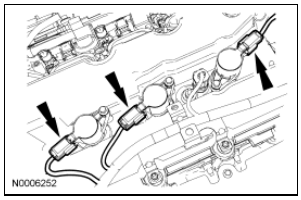
    Connect the LH and RH CMP sensor electrical connectors.



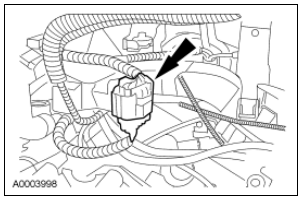
88. Connect the CHT sensor electrical connector.



89. Connect the 6 ignition coil electrical connectors.

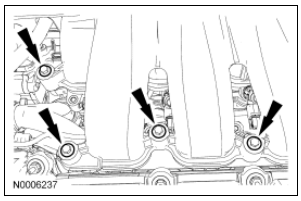


90. Connect the fuel charging wiring harness connector.

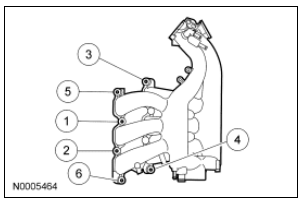


91. **NOTE:** Inspect and install new gaskets as necessary.

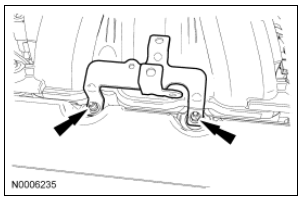
    Position the upper intake manifold and loosely install the 6 bolts.



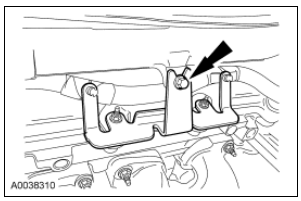
92. Tighten the 6 upper intake manifold bolts in the sequence shown to 10 Nm (89 lb-in).
    - Tighten the remaining 2 fuel pressure sensor shield bolts to 6 Nm (53 lb-in).



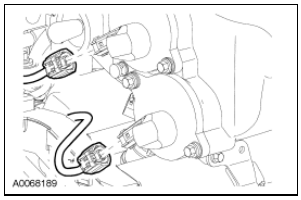
93. Position the LH engine appearance cover bracket and install the 2 nuts.
    - Tighten to 6 Nm (53 lb-in).



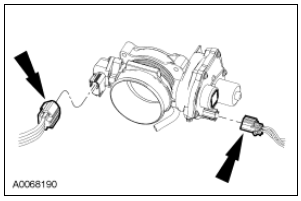
94. Install the RH upper intake manifold support bracket bolt.
    - Tighten to 10 Nm (89 lb-in).



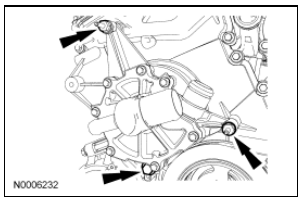
95. Connect the 2 intake manifold tuning (IMT) valve electrical connectors.



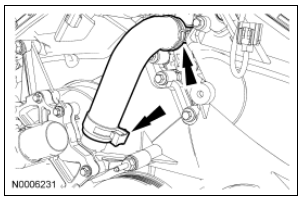
96. Connect the 2 throttle body electrical connectors.



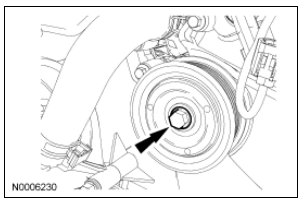
97. Position the coolant pump and install the 2 stud bolts and the bolt.
    - Tighten to 25 Nm (18 lb-ft).



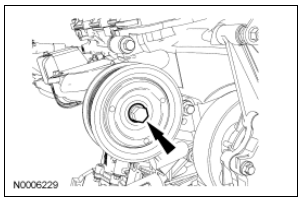
98. Install the coolant inlet hose.



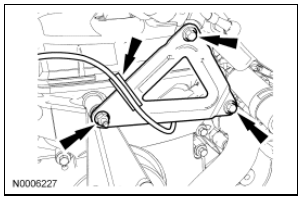
99. Install the LH accessory drive belt idler pulley and the bolt.
    - Tighten to 25 Nm (18 lb-ft).



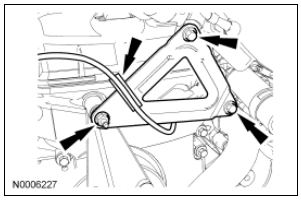
100. Install the RH accessory drive belt idler pulley and the bolt.
    - Tighten to 25 Nm (18 lb-ft).



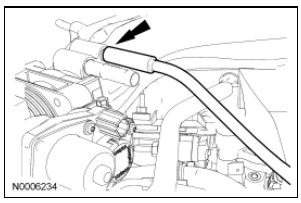
101. Position the upper intake manifold support bracket and install the 2 bolts and the nut.
    - Tighten to 10 Nm (89 lb-in).
    - Attach the wiring harness retainer to the bracket.



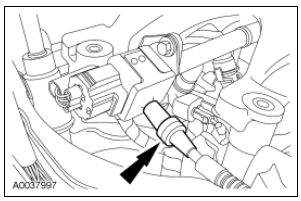
102. Remove the 2 bolts, the nut and the upper intake manifold support bracket.



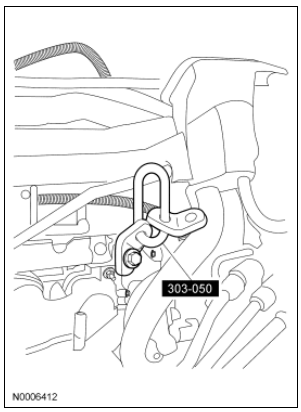
103. Connect the fuel vapor tube to the upper intake manifold and attach the retainer.



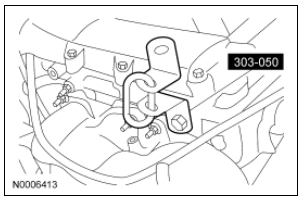
104. Connect the main engine vacuum harness to the fuel pressure sensor.



105. Install the special tool onto the engine as shown.

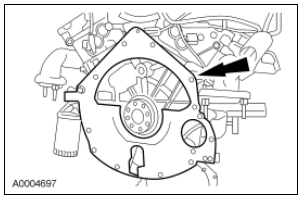


106. Install the special tool onto the engine as shown.

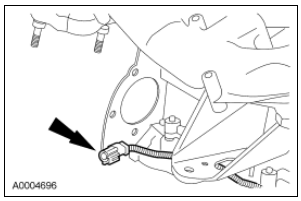


107. Using the special tools and an engine crane, transfer the engine from the stand to the floor or a bench.

108. Install the spacer plate.



109. Attach the RH heated oxygen sensor (HO2S) wiring harness retainers to the spacer plate and the oil pan.



110. Install the flywheel and the bolts.
    - Tighten to 80 Nm (59 lb-ft).

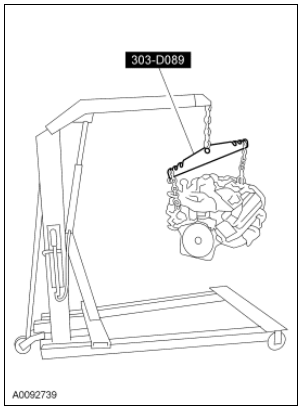
ST1595-A	Engine Lifting Brackets 303-050

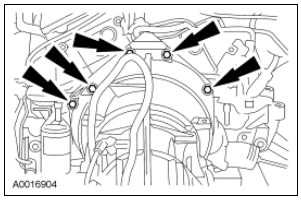
Material

Item	Specification
5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP	WSS-M2C930-A

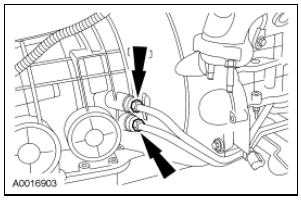
1. Using the special tools and a suitable engine crane, align the engine with the transmission.



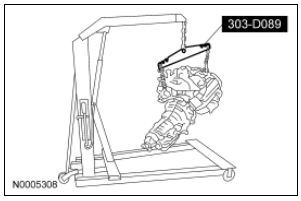
2. Install the 5 transmission-to-engine bolts.
   - Tighten to 45 Nm (33 lb-ft).



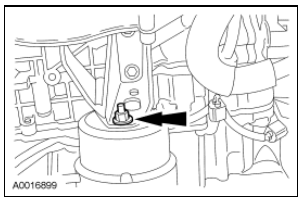
3. Connect the transmission oil cooler tubes and tighten the fittings.
   - Tighten to 20 Nm (15 lb-ft).



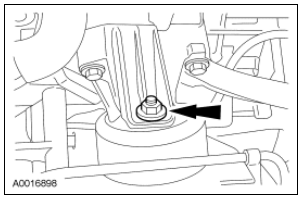
4. Position the engine and transmission on the crossmember and cooling system assembly.



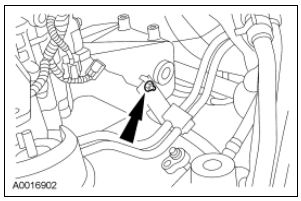
5. Install the RH engine mount nut.
   - Tighten to 63 Nm (46 lb-ft).



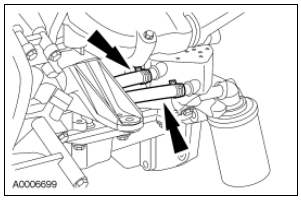
6. Remove the LH engine mount nut.
   - Tighten to 63 Nm (46 lb-ft).



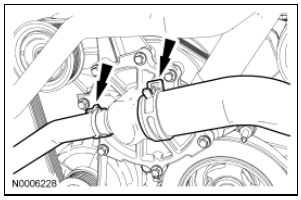
7. Attach the transmission cooler tube bracket to the oil pan and install the nut.
   - Tighten to 10 Nm (89 lb-in).



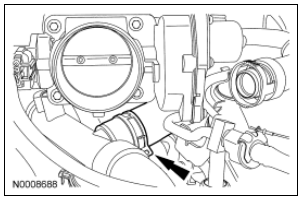
8. If equipped, connect the oil cooler hoses.



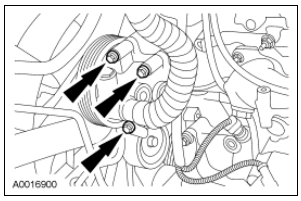
9. Connect the heater hose and the lower radiator hose to the coolant pump.



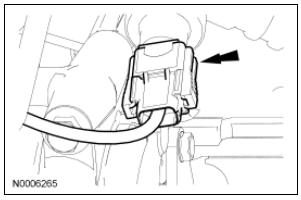
10. Connect the coolant inlet hose.



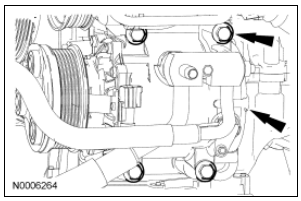
11. Position the power steering pump and install the 3 bolts.
    - Tighten to 25 Nm (18 lb-ft).
    - Secure the power steering fluid reservoir to the engine.



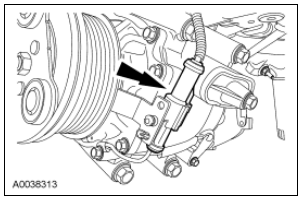
12. Connect the power steering pressure (PSP) switch electrical connector.



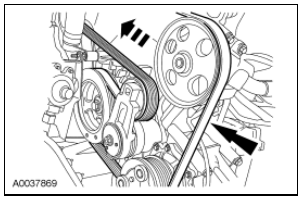
13. Position the A/C compressor and manifold assembly. Install the 4 bolts.
    - Tighten to 25 Nm (18 lb-ft).



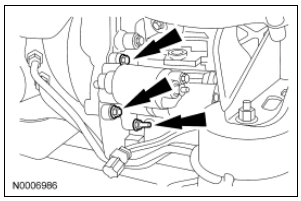
14. Connect the A/C compressor electrical connector.



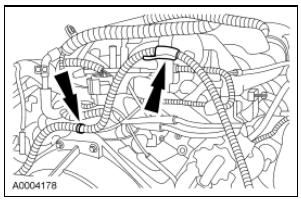
15. Rotate the accessory drive belt tensioner counterclockwise and install the accessory drive belt.



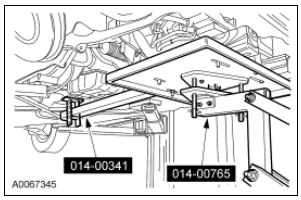
16. Position the starter motor and install the 2 bolts and the stud bolt.
    - Tighten to 25 Nm (18 lb-ft).



17. Position the wiring harness and attach the 2 retainers.



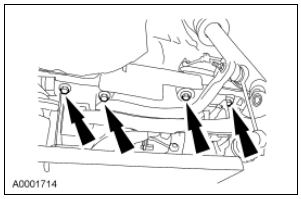
18. Using the special tools, carefully position the entire assembly into the vehicle.



19. **NOTE:** LH shown, RH similar

    Install the 8 front and center crossmember bolts.

    - Tighten to 103 Nm (76 lb-ft).

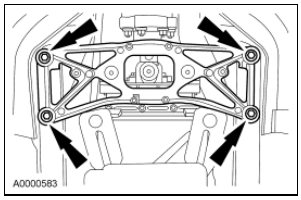


20. **NOTE:** RH shown, LH similar.

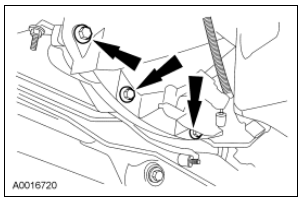
    Install the 4 center crossmember I brace bolts.

    - Tighten to 103 Nm (76 lb-ft).

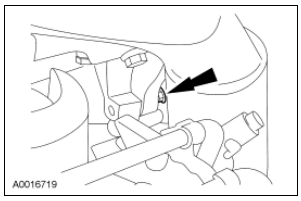
21. Install the 4 transmission crossmember bolts.
    - Tighten to 55 Nm (41 lb-ft).



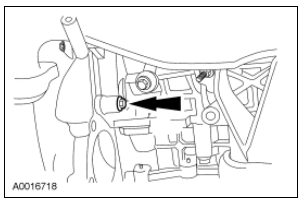
22. Install the 4 lower engine-to-transmission bolts.
    - Tighten to 45 Nm (33 lb-ft).



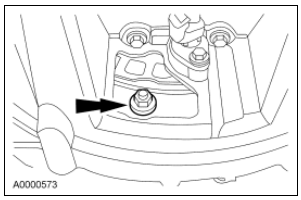
23. Install the engine-to-transmission bolt.
    - Tighten to 45 Nm (33 lb-ft).



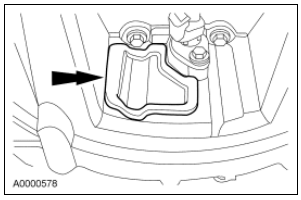
24. Install the engine-to-transmission bolt.
    - Tighten to 45 Nm (33 lb-ft).



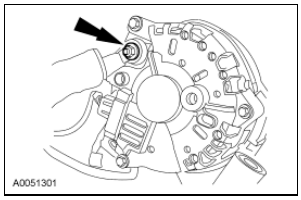
25. Install the 4 torque converter nuts.
    - Tighten to 38 Nm (28 lb-ft).



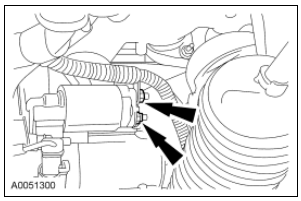
26. Install the torque converter access cover.



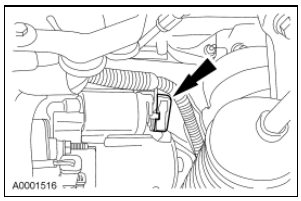
27. Connect the B+ terminal to the generator and install the nut.
    - Tighten to 10 Nm (89 lb-in).



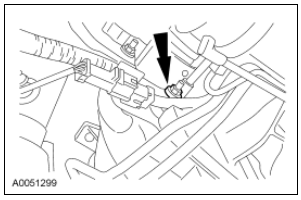
28. Position the starter motor cables and install the nuts.
    - Tighten to 10 Nm (89 lb-in).



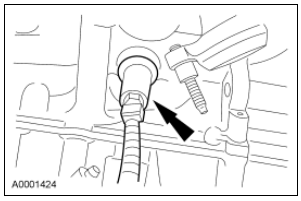
29. Install the starter motor terminal cover.



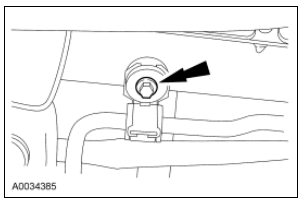
30. Position the ground strap and install the nut.
    - Tighten to 10 Nm (89 lb-in).



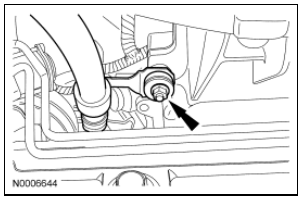
31. If equipped, connect the block heater electrical connector.



32. Position the PSP tube bracket and install the bolt.



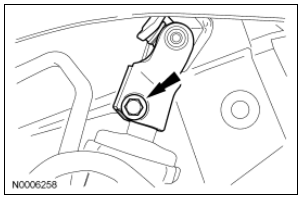
33. Attach the PSP tube bracket to the oil pan stud bolt and install the nut.
    - Tighten to 8 Nm (71 lb-in).



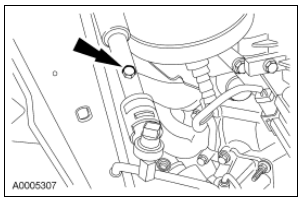
34. **⚠ CAUTION: Do not allow the steering wheel to rotate while the steering column intermediate shaft is disconnected or damage to the clockspring can result. If there is evidence that the wheel has rotated, the clockspring must be removed and recentered. For additional information, refer to Section 501-20B .**

    Attach the steering column intermediate shaft to the steering gear and install the bolt.

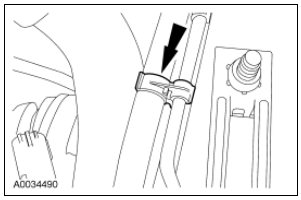
    - Tighten to 35 Nm (26 lb-ft).



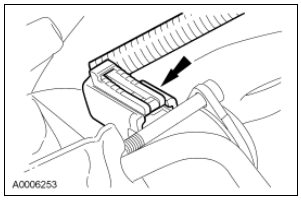
35. Install the steering intermediate shaft bolt.
    - Tighten to 30 Nm (22 lb-ft).



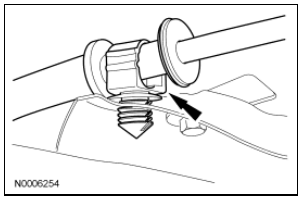
36. Attach the power steering return tube to the PSP tube clip.



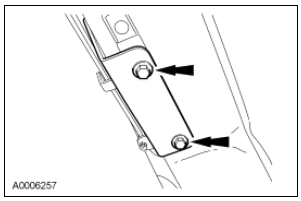
37. Connect the variable assist power steering (VAPS) actuator electrical connector.



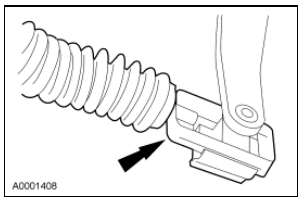
38. Attach the shift cable pin-type retainer to the exhaust heat shield.



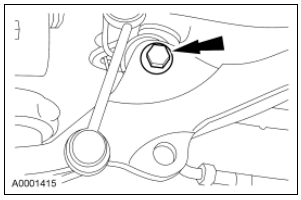
39. Position shift cable bracket and install the bolts.
    - Tighten to 10 Nm (89 lb-in).



40. Connect the shift cable from the shifter.



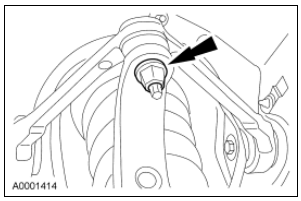
41. Install the 2 strut-to-control arm bolts and nuts.
    - Tighten to 175 Nm (129 lb-ft).



42. **NOTE:** To install the nut, first loosen the nut, then use the hex-holding feature to prevent the upper ball joint stud from turning while tightening the nut.

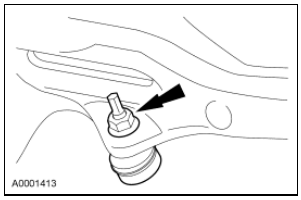
    Connect the upper ball joints to the wheel knuckles and install the 2 nuts.

    - Tighten to 90 Nm (66 lb-ft).



43. **NOTE:** To install the nut, first loosen the nut, then use the hex-holding feature to prevent the stabilizer bar link ball joint from turning while tightening the nut.

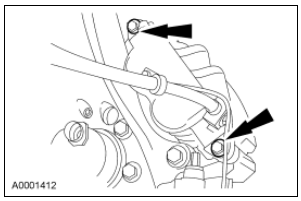
    Connect the stabilizer bar links to the lower control arms and install the 2 nuts.



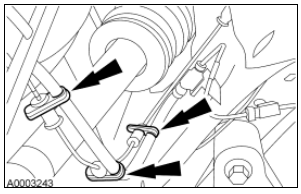
44. ⚠ **CAUTION: Do not allow the brake caliper to hang from the brake hose or damage to the brake hose can occur.**

    Position the front brake calipers and install the 4 bolts.

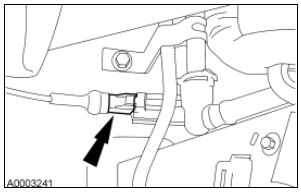
    - Tighten to 103 Nm (76 lb-ft).



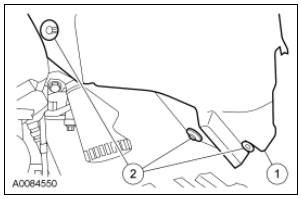
45. Attach the RH and LH anti-lock brake sensor harnesses to the brake hose clips.



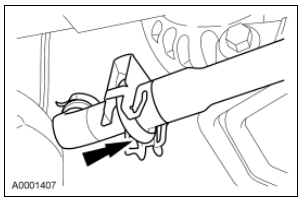
46. Connect the 2 anti-lock brake sensor electrical connectors.



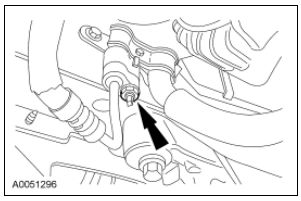
47. Position the RH and LH inner fender splash shields aside.
    1. Position the inner splash shields.
    2. Install the 3 pin-type retainers.



48. Connect the A/C low pressure hose and install the safety clip.



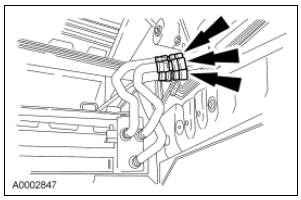
49. Connect the A/C high-pressure tube at the right frame rail and install the nut.
    - Tighten to 8 Nm (71 lb-in).



50. **NOTE:** Install the hoses to the marks made during the removal procedure.

    NOTE: Hose assemblies shown with components removed for clarity.

    Connect the 3 quick-disconnect couplings to the coolant control valve hoses. For additional information, refer to Section 412-00 .

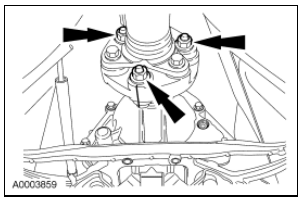


51. ⚠ **CAUTION: Install the bolts, washers and nuts in their original positions or driveshaft NVH can occur. Install the driveshaft flex coupling bolts with the head of the bolt seated against the flange and the nuts seated against the flex coupling.**

    NOTE: The bolt heads are serrated. Hold the bolt and tighten the nut.

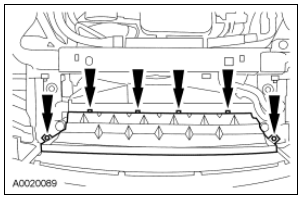
    Install the bolts, washers and nuts.

    - Coat the nut and bolt threads with sealer.
    - Tighten to 81 Nm (60 lb-ft).

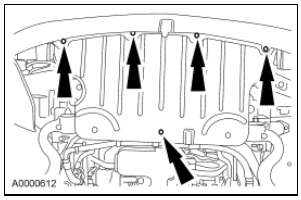


52. Install the catalytic converters. For additional information, refer to Section 309-00 .

53. Install the inner air deflector.

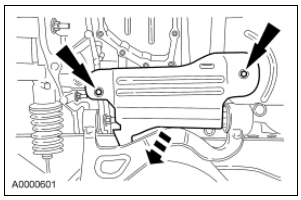


54. Install the center splash shield.

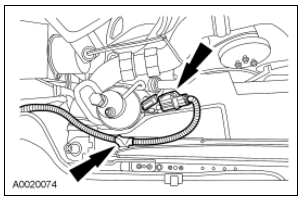


55. **NOTE:** LH shown, RH similar.

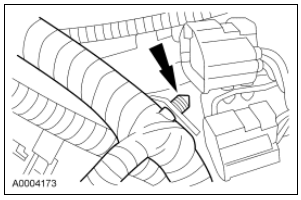
    Install the LH and the RH splash shields.



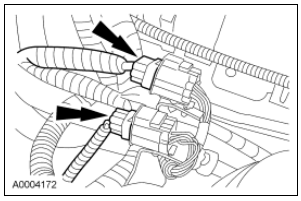
56. Connect the coolant valve electrical connector and attach the wiring retainer.



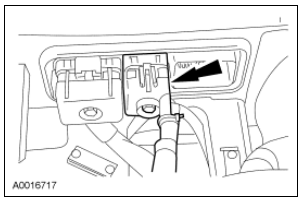
57. Attach the wiring harness retainer to the bracket.



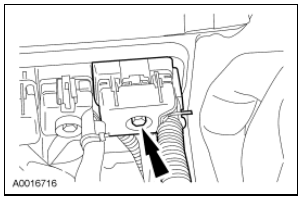
58. Connect the 2 engine wiring harness connectors.



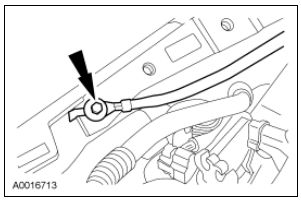
59. Position the main transmission wiring harness connector and tighten the bolt.
    - Tighten to 6 Nm (53 lb-in).



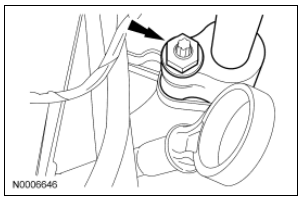
60. Position the main engine wiring harness connector and tighten the bolt.
    - Tighten to 6 Nm (53 lb-in).



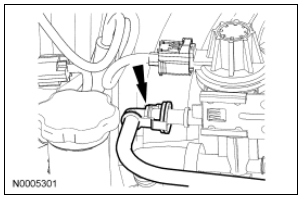
61. Position the ground strap and install the bolt.
    - Tighten to 10 Nm (89 lb-in).



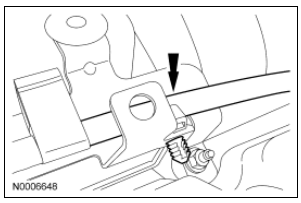
62. Position the A/C manifold tube and install the nut.
    - Tighten to 8 Nm (71 lb-in).



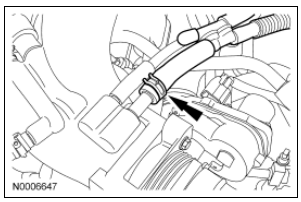
63. Connect the evaporative emissions (EVAP) hose to the EVAP canister purge valve.



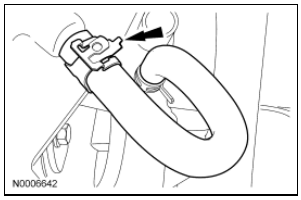
64. Position the brake booster vacuum hose and attach the retainers.



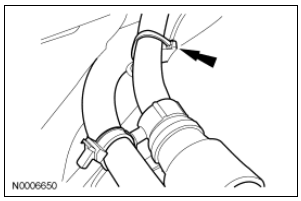
65. Connect the brake booster vacuum hose to the upper intake manifold.



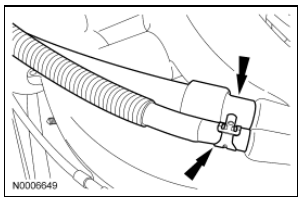
66. Connect the coolant hose from the upper intake manifold.



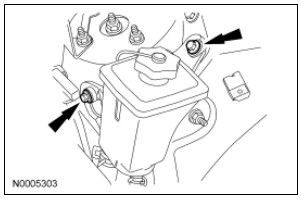
67. Position the positive crankcase ventilation (PCV) tube and degas bottle coolant hose. Attach the retainer to the upper intake manifold.



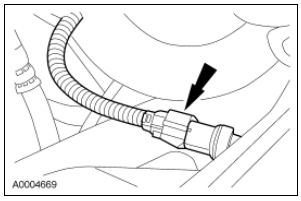
68. Connect the degas bottle coolant hose and the PCV tube to the upper intake manifold.



69. Position power steering fluid reservoir and install the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).

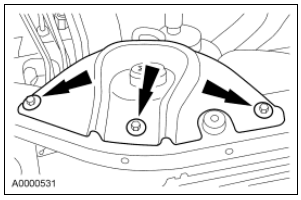


70. Connect the A/C pressure switch electrical connector.

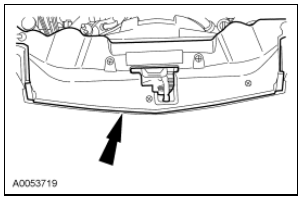


71. **NOTE:** RH shown, LH similar.

    Install the 2 upper radiator support brackets and the 6 bolts.



72. Install the upper radiator sight shield.



73. Fill the engine with clean oil

74. Connect the fuel tube. For additional information, refer to Section 310-00 .

75. Install the clean air inlet duct. For additional information, refer to Section 412-01 .

76. Install the air cleaner assembly. For additional information, refer to Section 303-04A .

77. Install the air cleaner outlet pipe and the air cleaner. For additional information, refer to Section 303-12 .

78. Charge the A/C system. For additional information, refer to Section 412-00 .

79. Fill and bleed the cooling system. For additional information, refer to Section 303-03 .

80. Connect the battery ground cable. For additional information, refer to Section 414-01 .

Printable View (20 KB)

General Specifications

Item	Specification
Lubricants and Sealants	
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (in Canada Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12) or equivalent	WSS-M2C930-A
Motorcraft Metal Surface Cleaner ZC-21	WSE-M5B392-A
Silicone Gasket Remover ZC-30	
Motorcraft Metal Surface Prep ZC-31	
Silicone Gasket and Sealant TA-30	WSE-M4G323-A4
Engine	
Displacement	3.9L (238 CID)
Number of cylinders	8
Bore	86 mm (3.386 in)
Stroke	85 mm (3.346 in)
Firing order	1-5-4-2-6-3-7-8
Oil pressure minimum at 400 rpm (engine at normal operating temperature)	413-482 kPa (61-73 psi)
Engine oil capacity (with filter change)	6.5 liters (6.9 quarts)
Cylinder Head and Valve Train	
Cylinder head gasket surface flatness	0.08 mm (0.003 in) total
Combustion chamber volume	48.73 ± 2.068-2.018 cc
Valve stem diameter intake	4.9763-4.978 mm (0.196-0.197 in)
Valve stem diameter exhaust	4.955-4.970 mm (0.195-0.196 in)
Valve stem-to-guide clearance intake	0.022 mm (0.001 in)
Valve stem-to-guide clearance exhaust	0.030 mm (0.001 in)
Valve head diameter intake	34.9 mm (1.728 in)
Valve head diameter exhaust	30.9 mm (1.216 in)
Valve face runout	0.04 mm (0.002 in)
Valve face angle	45 degrees
Valve seat width intake	1 mm (0.0393 in)
Valve seat width exhaust	2 mm (0.0787 in)
Valve seat angle intake	14 degrees
Valve seat angle exhaust	13 degrees
Camshaft	
Lobe lift intake	9 mm (0.354 in)
Lobe lift exhaust	8.4 mm (0.330 in)
End play	0.100-0.125 mm (0.0003-0.007 in)

Accessory Drive Belt	
Drive belt	6 ribs

Torque Specifications

Description	Nm	lb-ft	lb-in

Lower radiator hose bracket nut	10		89
Secondary timing chain tensioner bolts	11	8	
Timing chain guide bolts	11	8	
Timing chain tensioner arm bolts	11	8	
Exhaust camshaft sprocket bolts [a]			
Variable cam timing (VCT) unit bolts [a]			
Primary timing chain tensioner bolts	11	8	
VCT bush carrier bolts	20	15	
VCT bush carrier nuts	10		89
Crankshaft position (CKP) sensor bolt	10		89
Camshaft bearing cap bolts [a]			
Spark plugs	27	20	
Oil pan drain plug	23	17	
Oil pan bolts [a]			
Oil pump bolts [a]			
Oil pump screen and pickup tube bolts	12	9	
Oil cooler assembly	60	44	
Oil filter [b]			
Oil level indicator tube nut	6		53
Oil filter adapter bolts [a]			
Exhaust manifold bolts [a]			
Exhaust manifold heat shield bolts	3		27

Exhaust manifold heat shield stud bolts	50	37	
Exhaust gas recirculation (EGR) tube flange nuts	20	15	
Engine mount-to-frame nuts	50	37	
Engine mount-to-bracket nuts	50	37	
Engine mount bracket-to-cylinder block bolts	46	34	
Engine mount bracket-to-cylinder block stud bolts	46	34	
Transmission cooling tube bracket nut	10		89
Power steering tube bracket nut	10		89
Cylinder block drain plug	50	37	
Cylinder head bolts [a]			
Throttle body adapter bolts	10		89
EGR system module bolts	25	18	
EGR system module tube fitting nut	40	30	
Ignition coil bolts	5		44
Ignition coil cover bolts	10		89
Accessory drive belt idler pulley bolt	25	18	
Accessory drive belt tensioner bolt	25	18	
Engine-to-transmission bolts	47	35	
Transmission cooler tube nuts	35	26	
A/C compressor bolts	25	18	
Crossmember bolts	103	76	
Crossmember I-brace bolts	103	76	
Transmission support bolts	40	30	
Torque converter nuts	38	28	
Starter motor wiring (large nut)	12	9	
Starter motor wiring (small nut)	6		53
Starter motor ground cable	25	18	
Steering coupling bolt	35	26	
Steering shaft bolt	30	22	
Shift cable bracket bolts	10		89
Lower strut mount bolts	175	129	
Upper ball joint nuts	90	66	
Stabilizer bar link nuts	55	41	
Front brake caliper bolts	35	26	
A/C high pressure hose	8		71
Driveshaft bolts	81	60	
Bulkhead electrical connectors	6		53
Ground strap bolt	10		89
Radiator support bracket bolts	10		89
Knock sensor (KS) bolts	20	15	
Oil sump bolts [a]			
Coolant pump bolts [a]			
Starter motor bolts [a]			
Coolant inlet housing bolts	10		89

Generator bracket bolts	42	31	
Generator bolts and nut	40	30	
Coolant pump pulley bolts	10		89
Camshaft position (CMP) sensor bolt	10		89
Cylinder head temperature (CHT) sensor	22	16	

[a] Refer to procedure for staged torque.

[b] Install oil filter until seal makes contact. Tighten an additional 270 degrees.

Engine

Printable View (18 KB)

⚠ WARNING: Do not operate the engine with the hood open until the fan blade has been first examined for possible cracks and separation.

The 3.9L (238 CID) is a V-8 engine with the following features:

- Dual overhead camshafts
- 4 valves per cylinder
- Sequential multiport fuel injection (SFI)
- Aluminum cylinder heads
- Cast aluminum, 90-degree V-cylinder block
- Individually chain-driven camshafts with a hydraulic timing chain tensioner on each timing chain
- Electronic ignition system with 8 ignition coils

Identification

For quick identification refer to the safety certification decal.

- The decal is located on the LH front door lock face panel.
- Find the engine code (letter or number) on the decal, then refer to the Engine Identification Chart to determine engine type and size. For additional information, refer to Section 100-02 .
- The symbol code on the identification tag identifies each engine for determining parts usage; for example, engine displacement in liters or cubic inch displacement and model year.

Engine Code Information

The engine code information label is located on the valve cover. The label contains, among other information:

- the engine calibration number.
- the engine build date.
- the engine plant code.
- the engine code.

Emission Calibration Label

NOTE: The engine codes and the calibration numbers must be used when making inquiries or ordering parts.

The emission calibration number label is located on the LH side door or LH door post pillar. It identifies:

- the engine calibration number.
- the engine code number.
- the revision level.

These numbers are used to determine if parts are unique to specific engines.

Exhaust Emission Control System

Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Induction System

The air/fuel mixture is provided by the multiport fuel injection (MFI) system. Refer to Section 303-04B for additional information.

Fuel is:

- supplied from the fuel tank by the fuel pump.
- regulated by the fuel pressure sensor.
- delivered to the injector supply manifold.

A dual damper has been added to reduce pressure fluctuations caused by the fuel injectors.

Crankshaft

The crankshaft is supported on the bottom of the cylinder block by 5 steel-backed, over-plated, aluminum crankshaft main bearings.

To provide smooth engine operation, the piston crank pins are positioned to provide a power impulse every 90 degrees of crankshaft rotation. The spacing provides smooth and quiet operation.

Camshafts

The camshafts:

- are arranged in pairs, one each (intake and exhaust) on each cylinder head.
- are synchronized through a secondary timing chain.
- depress the direct acting mechanical tappets to actuate the valves.

Valve Train

The valves are actuated by a direct acting mechanical bucket and shim. The direct acting mechanical tappets and shims:

- provide lash adjustment through a shim selected by thickness.
- ride on the camshaft lobes.

Crankcase Ventilation System

The engine is equipped with a closed-type crankcase ventilation system which recycles the crankcase vapors to the throttle body.

Engine Lubrication System

The engine lubrication system is of the force-feed type in which oil is supplied under full pressure to the:

- crankshaft main bearings.
- crankshaft thrust main bearing.
- connecting rod bearings.
- oil galleys.

Oil Pump

The rotary spur oil pump develops the oil pressure.

- The oil pump is bolted to the front of the cylinder block.

- The oil pump is rotated by the crankshaft.
- A full flow oil filter is externally mounted on the upper sump.

If the filter element becomes blocked, a spring-loaded bypass valve opens to allow uninterrupted flow of oil to the engine.

Engine Cooling System

The engine is liquid-cooled:

- by a centrifugal coolant pump driven by the drive belt.
- a thermostat is used to restrict coolant flow until the engine reaches normal operating temperature.

Drive Belt System

Accessories mounted on the front of the engine are belt-driven by the crankshaft and an automatically tensioned serpentine drive belt is routed over the following components:

- Coolant pump
- A/C compressor
- Generator
- Drive belt tensioner
- Drive belt idler pulley
- Crankshaft pulley
- Power steering pump

Engine

Printable View (7 KB)

Refer to Section 303-00 for basic mechanical concerns.

Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for driveability concerns.

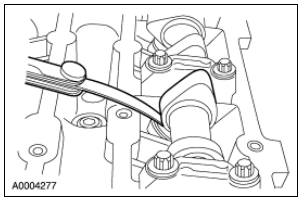
Valve Clearance Check

Printable View (34 KB)

1. Remove the valve covers. For additional information, refer to Valve Cover LH or Valve Cover RH in this section.
2. Remove the spark plugs.
3. **NOTE:** The engine will have to be rotated with the crankshaft pulley bolt to bring each valve to base circle.

   NOTE: The valve clearance must be measured with the camshaft at base circle.

   Measure and record all valve clearances.



4. If the valve clearances are out of specification, refer to Valve Clearance Adjustment in this section.
5. To assemble, reverse the inspection procedure.

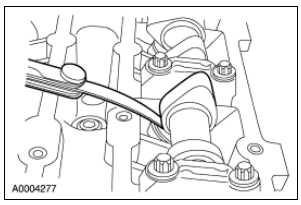
Valve Clearance Adjustment

Printable View (43 KB)

1. Remove the timing chains. For additional information, refer to Timing Drive Components in this section.

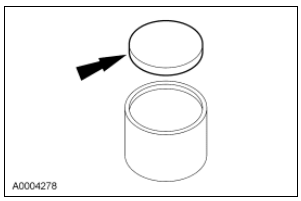
2. **NOTE:** Measure each valve clearance at base circle before removing the camshafts. The shims are not repairable with the camshafts in place. Failure to measure all clearances prior to removing the camshafts will cause unnecessary repetition of the procedure.

   Use a feeler gauge to measure each valve clearance and record its location.



3. Remove the camshafts. For additional information, refer to Valve Train Components Exploded View and Camshafts in this section.

4. Remove the shims.



5. **NOTE:** The shims are marked for thickness; example: 2.22 mm = 222 on shim.

   NOTE: The corrected shims allow the following valve clearances.

   - Intake valve clearance: 0.18-0.22 mm (0.00709-0.00866 in)
   - Exhaust valve clearance: 0.33-0.38 mm (0.0128-0.0148 in)

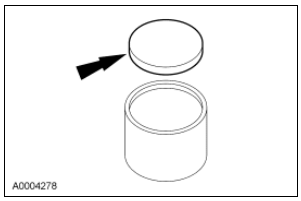
   NOTE: A midrange clearance is the most desirable:

   - Intake: 0.20 mm (0.00787 in)
   - Exhaust: 0.35 mm (0.014 in)

   NOTE: Select shims using this formula: required shim thickness = measured clearance plus the base shim thickness minus most desirable clearance.

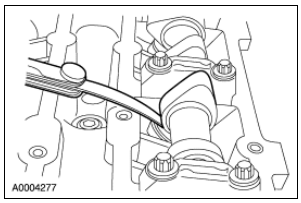
   Select shims and mark the installation location.

6. Install new shims.



7. Install the camshafts. For additional information, refer to Valve Train Components - Exploded View and Camshafts in this section.

8. Measure the new valve clearances.



9. Install the timing chains. For additional information, refer to Timing Drive Components in this section.

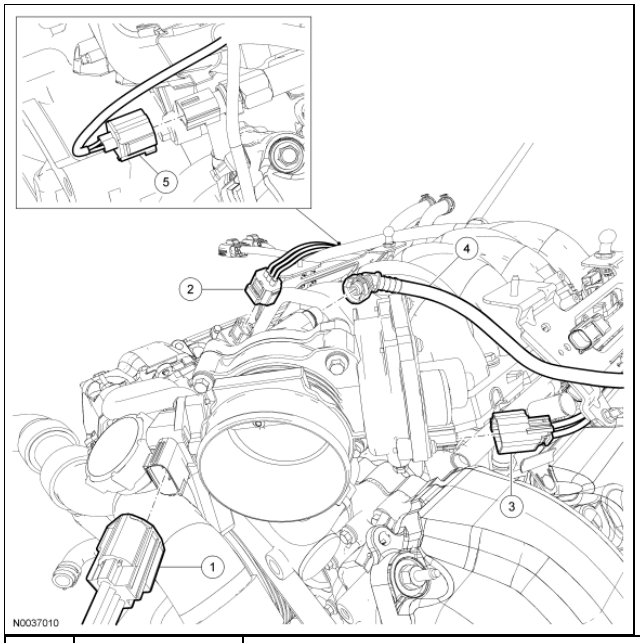
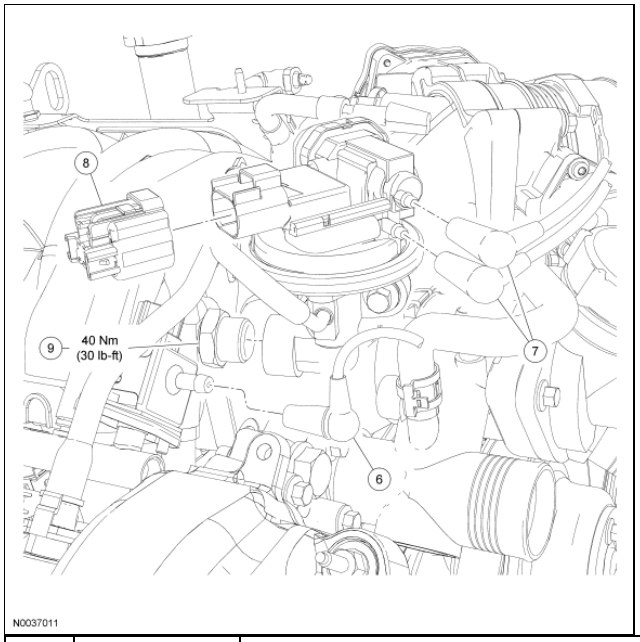
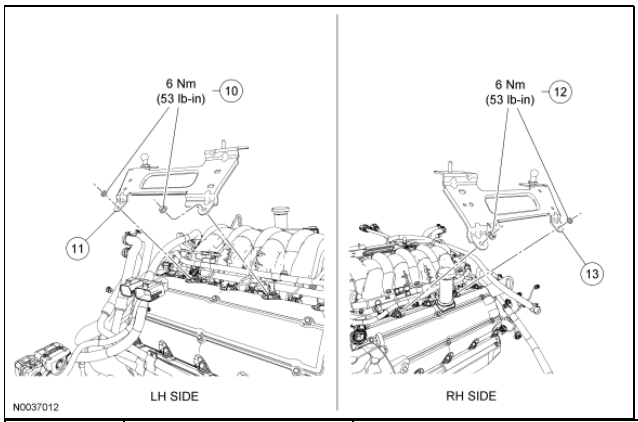
Item	Specification
Motorcraft Metal Surface Cleaner ZC-21	WSE-M5B392-A



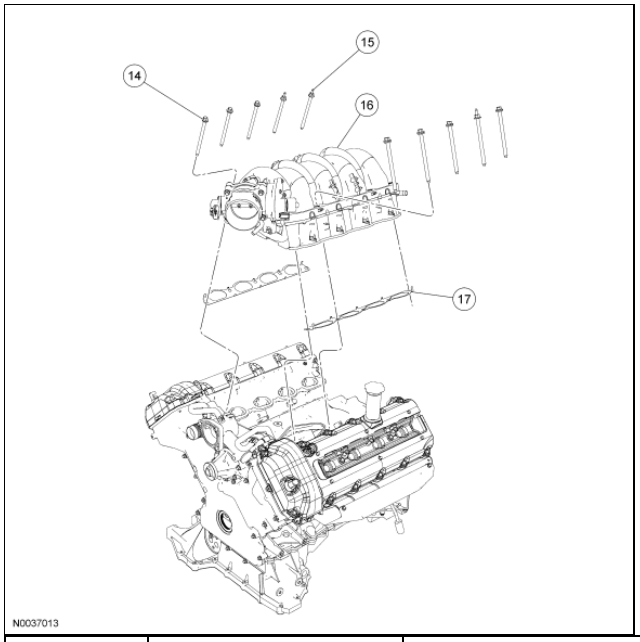
Item	Part Number	Description
1	14A464	Throttle position (TP) sensor electrical connector (part of 12B637)
2	14A464	Fuel pressure sensor electrical connector (part of 12B637)
3	14A464	Throttle body electrical connector (part of 12B637)
4	9D289	Evaporative emissions (EVAP) hose
5	14A464	Fuel rail temperature sensor electrical connector (part of 12B637)



Item	Part Number	Description
6	9E499	Fuel pressure sensor vacuum connector
7	9E498	Exhaust gas recirculation (EGR) system module vacuum connectors
8	14A464	EGR system module electrical connector (part of 12B637)
9	9D477	EGR system module-to-exhaust manifold tube fitting



Item	Part Number	Description
10	W520411	RH engine appearance cover bracket nuts (2 required)
11	129723	RH engine appearance cover bracket
12	W520411	LH engine appearance cover bracket nuts (2 required)
13	129723	LH engine appearance cover bracket



Item	Part Number	Description
14	W704916	Intake manifold bolt (7 required)
15	W708238	Intake manifold stud (3 required)
16	9424	Intake manifold
17	9439	Intake manifold gasket (2 required)

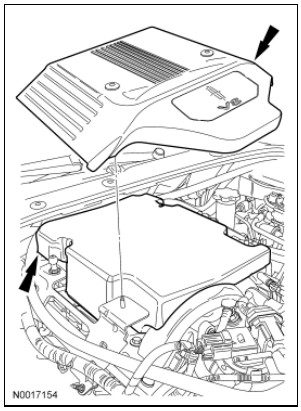
Removal

⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited, resulting in possible personal injury. Failure to follow these instructions may result in personal injury.

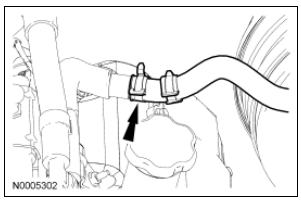
⚠ WARNING: Fuel in the fuel system remains under high pressure even when the engine is not running. Before repairing or disconnecting any of the fuel system components, the fuel system pressure must be relieved to prevent accidental spraying of fuel, causing personal injury or a fire hazard. Failure to follow these instructions may result in personal injury.

1. Release the fuel system pressure. For additional information, refer to Section 310-00 .
2. Drain the cooling system. For additional information, refer to Section 303-03 .
3. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .
4. **⚠ CAUTION: The engine appearance cover is equipped with a noise suppressor. If the noise suppressor becomes separated from the engine appearance cover it must be positioned on the intake manifold prior to installing the engine appearance cover.**

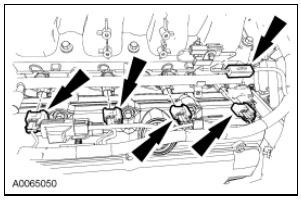
   Remove the engine appearance cover and the noise suppressor (if detached).



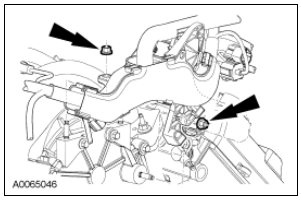
5. Remove the air cleaner outlet pipe. For additional information, refer to Section 303-12 .
6. Remove the cowl panel grille. For additional information, refer to Section 501-02 .
7. Disconnect the fuel supply tube spring lock coupling from the fuel rail. For additional information, refer to Section 310-00 .
8. Remove the 6 bolts and the cross-vehicle brace.
9. Disconnect the throttle position (TP) sensor electrical connector.
10. Disconnect the fuel pressure sensor electrical connector and vacuum hose.
11. Disconnect the throttle body electrical connector.
12. Disconnect the evaporative emissions (EVAP) hose from the intake manifold.
13. Disconnect the fuel rail temperature sensor electrical connector.
14. Disconnect the exhaust gas recirculation (EGR) system module electrical connector and the vacuum harness from the EGR system module.
15. Disconnect the EGR system module-to-exhaust manifold tube from the EGR system module.
16. Remove the crankcase ventilation tube.
17. Disconnect the vacuum supply tube.



18. Detach the vacuum harness retainers from the LH engine appearance cover bracket.
19. Detach the engine wiring harness from the engine appearance cover brackets.
20. Remove the 4 nuts and the 2 engine appearance cover brackets.
21. Disconnect the 8 fuel injectors and the radio interference ignition capacitor electrical connectors.



22. Remove the 2 nuts and the engine wiring harness retainer.

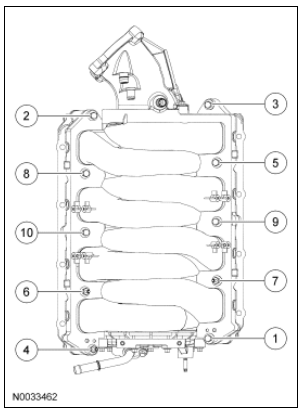


23. Remove the nut and the radio interference ignition capacitor.

24. Disconnect the 2 throttle body coolant tubes.

25. **NOTE:** The throttle body and adapter are shown removed for clarity. It is not necessary to remove the throttle body and adapter to remove the intake manifold.

    Remove the 7 bolts and 3 studs in the sequence shown.



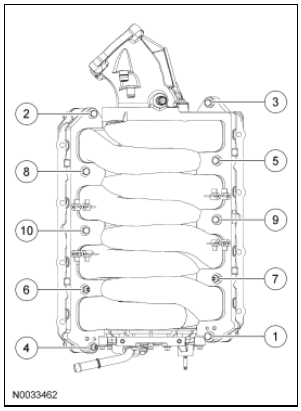
26. Remove the intake manifold and discard the gaskets.

Installation

1. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to clean the surfaces.**

   Clean the gasket sealing surfaces.

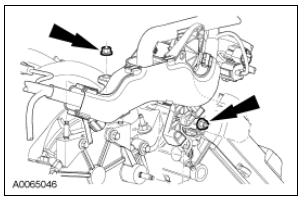
2. Install new gaskets, the intake manifold, the 7 bolts and the 3 studs in the sequence shown.
   - Tighten to 20 Nm (15 lb-ft).



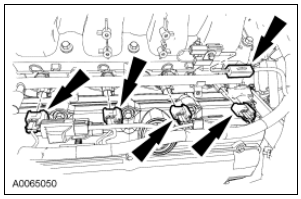
3. Connect the 2 throttle body coolant tubes.

4. Install the radio interference ignition capacitors and nuts.
   - Tighten to 10 Nm (89 lb-in).

5. Install the engine wiring harness retainer and the 2 nuts.
   - Tighten to 10 Nm (89 lb-in).



6. Connect the 8 fuel injectors and the radio interference ignition capacitor electrical connectors.

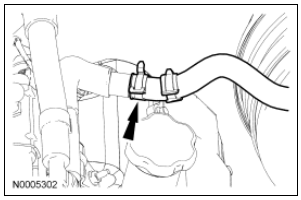


7. Install the 2 engine appearance cover brackets and the 4 nuts.
   - Tighten to 6 Nm (53 lb-in).

8. Attach the engine wiring harness to the engine appearance cover brackets.

9. Attach the vacuum harness retainers to the LH engine appearance cover bracket.

10. Connect the vacuum supply tube.



11. Install the crankcase ventilation tube.

12. Connect the EGR system module-to-exhaust manifold tube to the EGR system module.
   - Tighten to 40 Nm (30 lb-ft).

13. Connect the EGR system module electrical connector and the vacuum harness to the EGR system module.

14. Connect the fuel rail temperature sensor electrical connector.

15. Connect the EVAP hose to the intake manifold.

16. Connect the throttle body electrical connector.

17. Connect the fuel pressure sensor electrical connector and vacuum hose.

18. Connect the TP sensor electrical connector.

19. Install the 6 bolts and the cross-vehicle brace.
    - Tighten to 20 Nm (15 lb-ft).

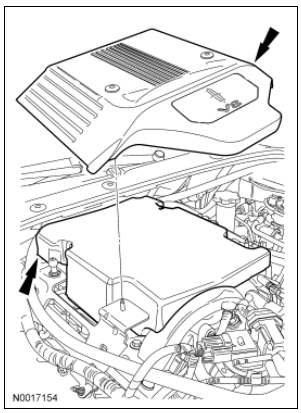
20. Connect the fuel supply tube spring lock coupling to the fuel rail. For additional information, refer to Section 310-00 .

21. Install the cowl panel grille. For additional information, refer to Section 501-02 .

22. Install the air cleaner outlet pipe. For additional information, refer to Section 303-12 .

23. ⚠ **CAUTION: The engine appearance cover is equipped with a noise suppressor. If the noise suppressor becomes separated from the engine appearance cover it must be positioned on the intake manifold prior to installing the engine appearance cover.**

    Install the noise suppressor (if detached) and the engine appearance cover.



24. Connect the battery ground cable. For additional information, refer to Section 414-01 .

25. Fill and bleed the cooling system. For additional information, refer to Section 303-03 .

Valve Cover LH

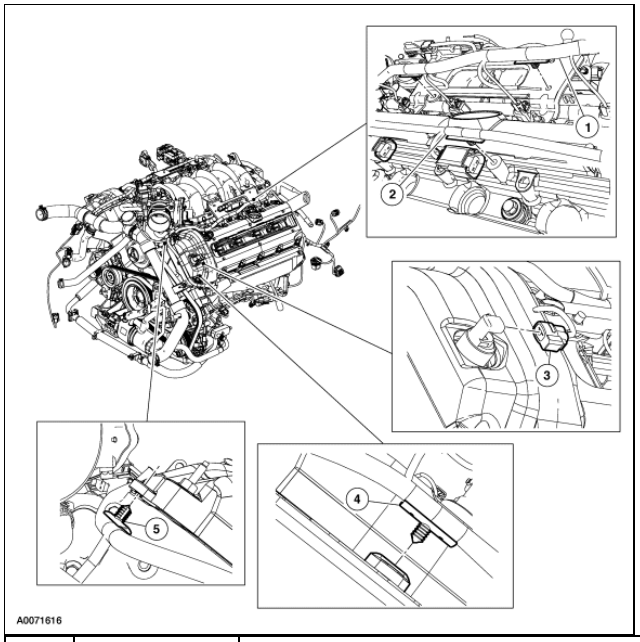
Special Tool(s)

ST1146-A	Disconnect Tool, Spring Lock Coupling (3/8 inch) 310-D004 (D87L-9280-A) or equivalent

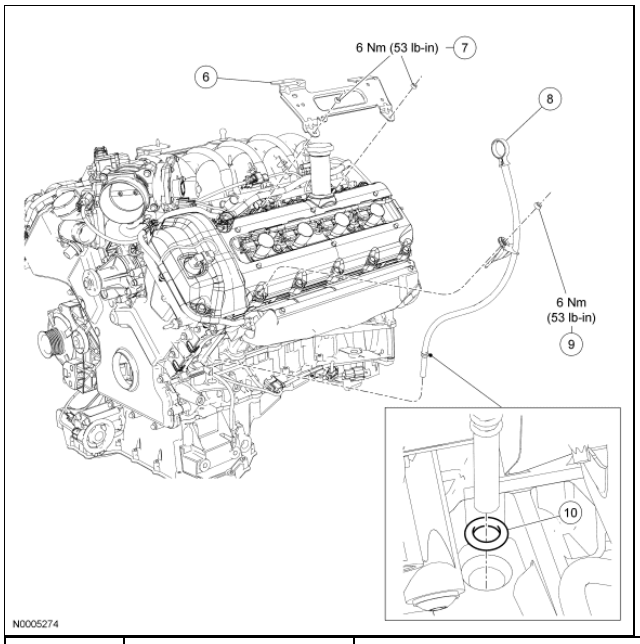
Material

Item	Specification
Silicone Gasket Remover ZC-30	
Motorcraft Metal Surface Prep ZC-31	
Silicone Gasket and Sealant TA-30	WSE-M4G323-A4
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (in Canada Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12) or equivalent	WSS-M2C930-A

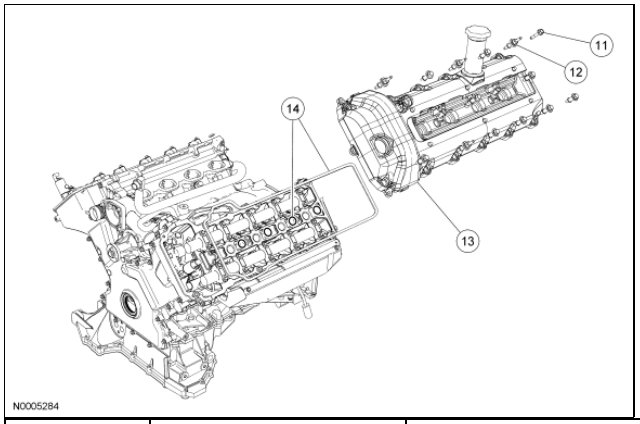


Item	Part Number	Description
1	6A005	Engine wiring harness retainer (part of 12B637)
2	6A005	Engine wiring harness retainer (part of 12B637)
3	14A464	

		Variable cam timing (VCT) sensor electrical connector (part of 12B637)
4	6A005	Engine wiring harness retainer (part of 12B637)
5	6A005	Engine wiring harness retainer (part of 12B637)



Item	Part Number	Description
6	129723	LH engine appearance cover bracket
7	W520411	LH engine appearance cover bracket nuts (2 required)
8	W520411	Oil level indicator and tube
9	6754	Oil level indicator nut
10	6B033	O-ring seal



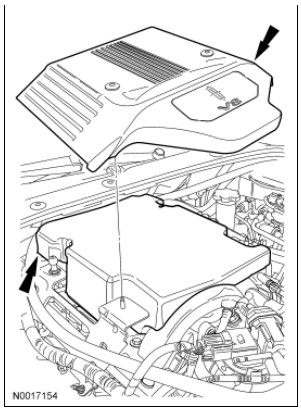
Item	Part Number	Description
11	6050	LH valve cover bolts (10 required)
12	6083	LH valve cover studs (4 required)
13	6582	LH valve cover
14	6083	LH valve cover gaskets

Removal

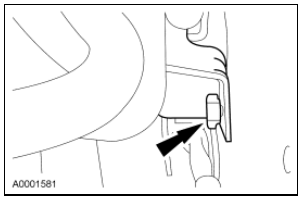
⚠ CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

1. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .
2. **⚠ CAUTION: The engine appearance cover is equipped with a noise suppressor. If the noise suppressor becomes separated from the engine appearance cover it must be positioned on the intake manifold prior to installing the engine appearance cover.**

   Remove the engine appearance cover and the noise suppressor (if detached).



3. Remove the air cleaner. For additional information, refer to Section 303-12 .
4. Remove the LH ignition coil-on-plugs. For additional information, refer to Section 303-07B .
5. Release the fuel system pressure. For additional information, refer to Section 310-00 .
6. Disconnect the fuel tube spring lock coupling at the fuel rail. For additional information, refer to Section 310-00 .
7. Disconnect the variable cam timing (VCT) solenoid electrical connector.
8. Detach the vacuum harness retainers from the LH engine appearance cover bracket.
9. Detach the 4 wiring harness retainers and position the wiring harness aside.
10. Remove the 2 nuts and the LH engine appearance cover bracket.
11. Disconnect the crankcase ventilation tube from the valve cover.
12. Disconnect the evaporative emissions (EVAP) hose from the intake manifold.
13. Remove the bolt and the oil level indicator tube.
    - Discard the O-ring seal.
14. Remove the fuel hose bracket bolt from the LH shock tower.

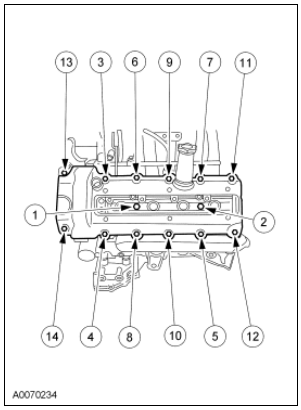


15. Loosen the bolts and position the power steering pump reservoir aside.

16. **NOTE:** The valve cover bolts are not to be removed from the valve cover.

    Loosen the bolts in the sequence shown.

    - Remove the LH valve cover.
    - Discard the gaskets.

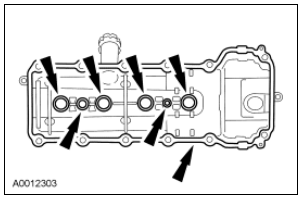


Installation

1. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to remove all traces of sealant.**

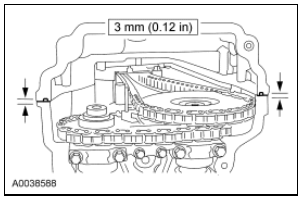
   Clean the valve cover, cylinder head and front cover sealing surfaces with silicone gasket remover and metal surface prep.

2. Install new gaskets.

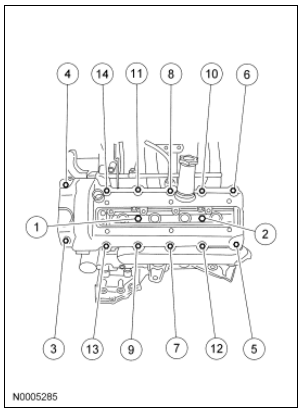


3. **NOTE:** The valve cover must be installed and the bolts and stud bolts tightened within 4 minutes of sealant application.

   Apply a 3-mm (0.12-in) dot of silicone gasket sealant to the front cover-to-cylinder head joints.

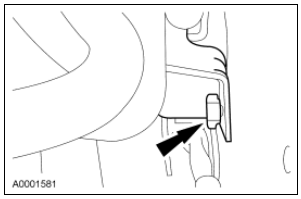


4. Install the LH valve cover.
    - Tighten the bolts in the sequence shown to 10 Nm (89 lb-in).



5. Install the power steering pump reservoir.
    - Tighten upper bolt to 6 Nm (53 lb-in).
    - Tighten lower bolt to 12 Nm (9 lb-ft).

6. Install the fuel hose bracket bolt to the LH shock tower.
    - Tighten to 11 Nm (8 lb-ft).



7. **⚠ CAUTION: Failure to lubricate the O-ring seal and the oil level indicator tube-to-engine block mating surface with clean engine oil can result in engine oil leaks.**

    ⚠ CAUTION: Make sure the O-ring seal remains in position and does not roll up the indicator tube during installation.

    Install a new O-ring seal, the oil level indicator tube and bolt.

    - Lubricate the new O-ring seal and engine mating surface with clean engine oil.
    - Tighten the bolt to 6 Nm (53 lb-in).

8. Connect the EVAP hose to the intake manifold.

9. Connect the crankcase ventilation tube to the valve cover.

10. Install LH engine appearance cover bracket and the 2 nuts.
    - Tighten to 6 Nm (53 lb-in).

11. Position the wiring harness and attach the 4 wiring harness retainers.

12. Attach the vacuum harness retainers to the LH engine appearance cover bracket.

13. Connect the VCT solenoid electrical connector.

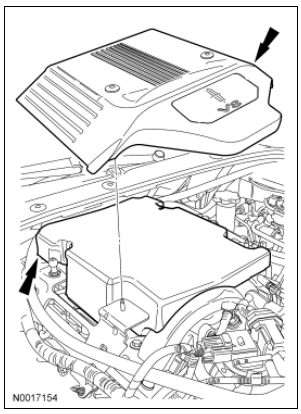
14. Install the LH ignition coil-on-plugs. For additional information, refer to Section 303-07B .

15. Connect the fuel tube spring lock coupling. For additional information, refer to Section 310-00 .

16. Install the air cleaner. For additional information, refer to Section 303-12 .

17. **⚠ CAUTION: The engine appearance cover is equipped with a noise suppressor. If the noise suppressor becomes separated from the engine appearance cover it must be positioned on the intake manifold prior to installing the engine appearance cover.**

    Install the noise suppressor (if detached) and the engine appearance cover.



18. Connect the battery ground cable. For additional information, refer to Section 414-01 .

Valve Cover RH

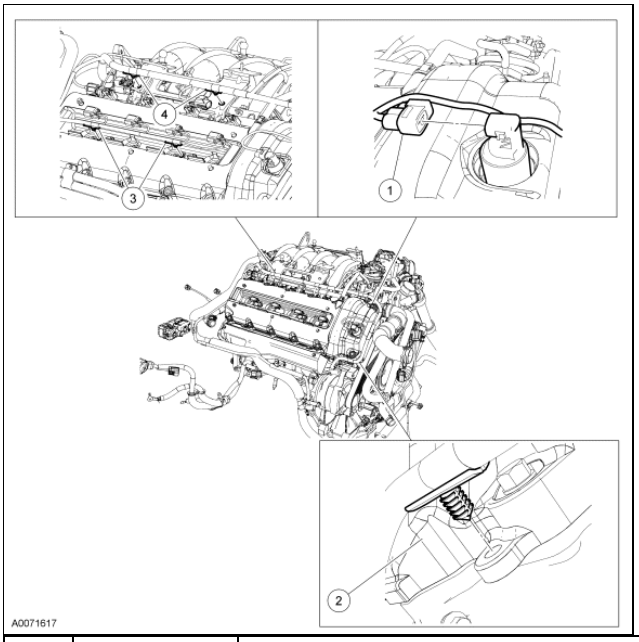
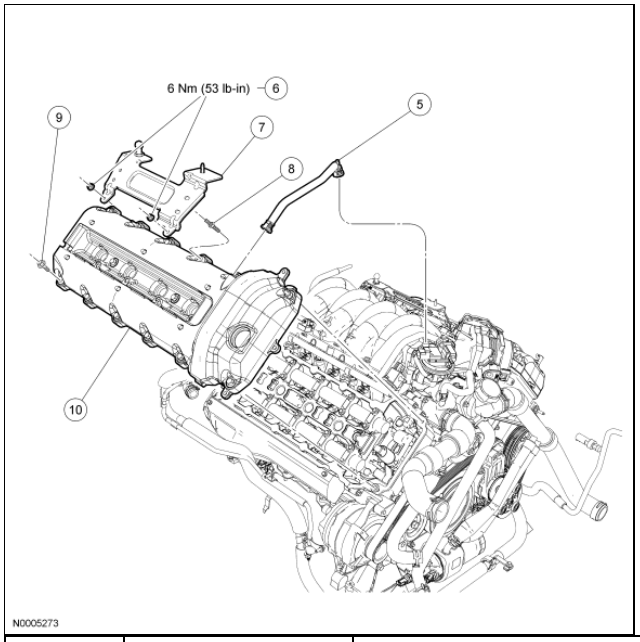
Item	Specification
Silicone Gasket Remover ZC-30	
Metal Surface Prep ZC-31	
Silicone Gasket and Sealant TA-30 or equivalent	WSE-M4G323-A4



Item	Part Number	Description
1	14A464	Variable cam timing (VCT) sensor electrical connector (part of 12B637)
2	6A005	Engine wiring harness retainer (part of 12B637)
3	6A005	Engine wiring harness retainer (part of 12B637)
4	6A005	Engine wiring harness retainer (part of 12B637)



Item	Part Number	Description
5	6C342	Crankcase ventilation tube
6	W520411	RH engine appearance cover bracket nuts (2 required)
7	129723	RH engine appearance cover bracket
8	6083	RH valve cover studs (3 required)
9	6050	RH valve cover bolts (11 required)
10	6582	RH valve cover

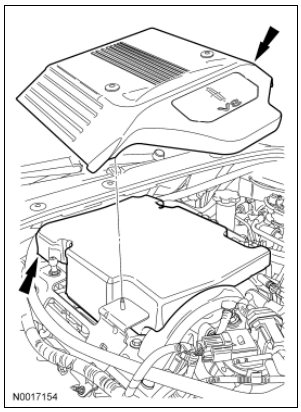
Removal

⚠ CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

1. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .

2. **⚠ CAUTION: The engine appearance cover is equipped with a noise suppressor. If the noise suppressor becomes separated from the engine appearance cover it must be positioned on the intake manifold prior to installing the engine appearance cover.**

   Remove the engine appearance cover and the noise suppressor (if detached).



3. Remove the air cleaner outlet pipe. For additional information, refer to Section 303-12 .

4. Remove the RH ignition coil-on-plugs. For additional information, refer to Section 303-07B .

5. Disconnect the VCT solenoid electrical connector.

6. Detach the 3 wiring harness retainers and position the wiring harness aside.

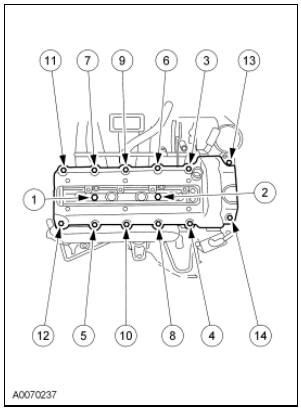
7. Remove the crankcase ventilation tube.

8. Remove the 2 nuts and the RH engine appearance cover bracket.

9. **NOTE:** The valve cover bolts are not to be removed from the valve cover.

   Loosen the bolts in the sequence shown.

   - Remove the RH valve cover.
   - Discard the gaskets.

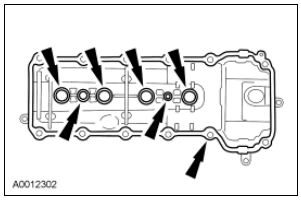


Installation

1. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to remove all traces of sealant.**

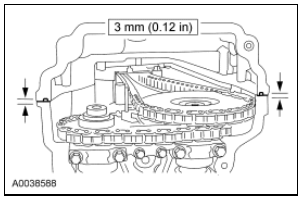
   Clean the valve cover, cylinder head and front cover sealing surfaces with silicone gasket remover and metal surface prep.

2. Install new gaskets.

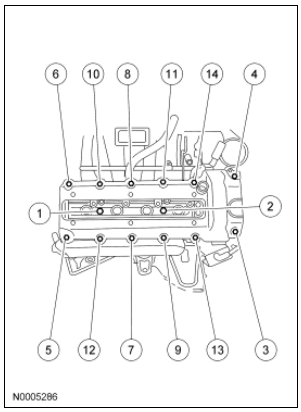


3. **NOTE:** The valve cover must be installed and the bolts and stud bolts tightened within 4 minutes of sealant application.

   Apply a 3-mm (0.12-in) dot of silicone gasket sealant to the front cover-to-cylinder head joints.



4. Install the RH valve cover.
    - Tighten the bolts in the sequence shown to 10 Nm (89 lb-in).



5. Install RH engine appearance cover bracket and the 2 nuts.
    - Tighten to 6 Nm (53 lb-in).

6. Install the crankcase ventilation tube.

7. Position the wiring harness and attach the 3 wiring harness retainers.

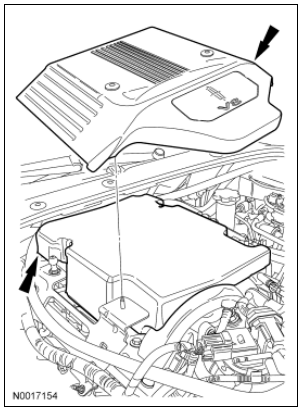
8. Connect the VCT solenoid electrical connector.

9. Install the LH ignition coil-on-plugs. For additional information, refer to Section 303-07B .

10. Install the air cleaner outlet pipe. For additional information, refer to Section 303-12 .

11. **⚠ CAUTION: The engine appearance cover is equipped with a noise suppressor. If the noise suppressor becomes separated from the engine appearance cover it must be positioned on the intake manifold prior to installing the engine appearance cover.**

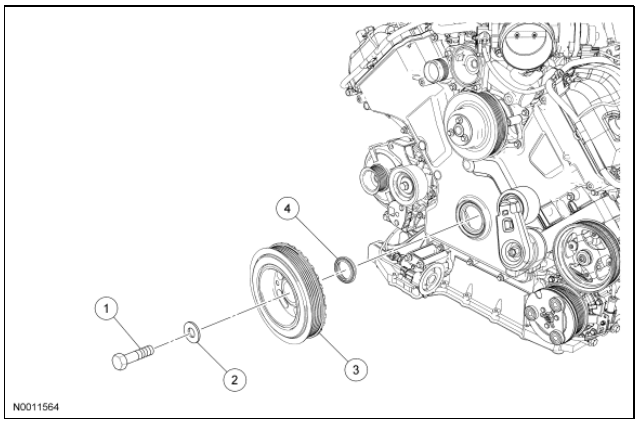
    Install the noise suppressor (if detached) and the engine appearance cover.



12. Connect the battery ground cable. For additional information, refer to Section 414-01 .

Lower End Components Exploded View, Crankshaft Pulley and Crankshaft Front Oil Seal

Printable View (144 KB)



Item	Part Number	Description
1	W705542	Crankshaft pulley bolt
2	W704965	Crankshaft pulley bolt washer
3	6316	Crankshaft pulley
4	6278	Crankshaft front seal

1. For additional information, refer to the procedures in this section.

Crankshaft Pulley

Printable View (218 KB)

Special Tool(s)

ST1286-A	Remover, Crankshaft Vibration Damper 303-009 (T58P-6316-D)
ST1287-A	Installer, Crankshaft Vibration Damper 303-102 (T74P-6316-B)
ST1438-A	Strap Wrench 303-D055

Material

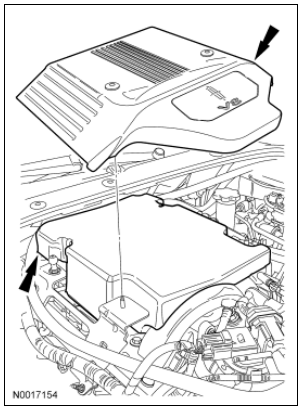
Item	Specification
Silicone Gasket and Sealant TA-30 or equivalent	WSE-M4G323-A4

Removal

⚠ CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .
3. **⚠ CAUTION: The engine appearance cover is equipped with a noise suppressor. If the noise suppressor becomes separated from the engine appearance cover it must be positioned on the intake manifold prior to installing the engine appearance cover.**

   Remove the engine appearance cover and the noise suppressor (if detached).



N0017154

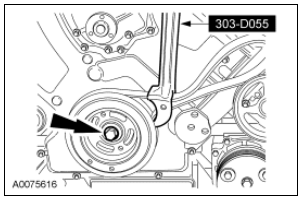
4. Remove the cooling fan assembly. For additional information, refer to Section 303-03 .

5. Remove the accessory drive belt. For additional information, refer to Section 303-05 .

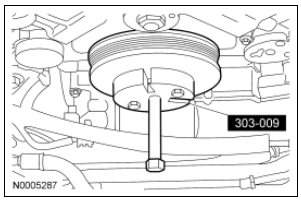
6. Remove the oil cooler. For additional information, refer to Oil Cooler in this section.

7. **NOTE:** Hold the crankshaft pulley with the special tool while removing the bolt and washer.

   Remove and discard the bolt and washer.



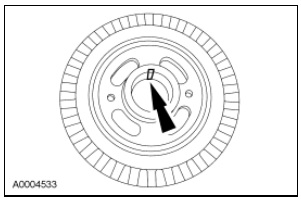
8. Using the special tool, remove the crankshaft damper.



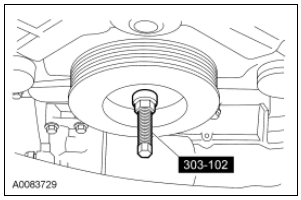
Installation

1. **NOTE:** If crankshaft pulley is not secured within 4 minutes of sealant application the sealant must be removed and the sealing area cleaned with metal surface cleaner. Allow to dry until there is no sign of wetness, or 4 minutes, whichever is longer. Failure to follow this procedure can cause future oil leakage.

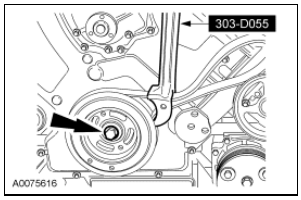
   Apply a bead of silicone gasket and sealant to the keyway.



2. Using the special tool, install the crankshaft pulley.



3. Install a new bolt and tighten in 4 stages.
   - Stage 1: Tighten to 80 Nm (59 lb-ft).
   - Stage 2: Loosen the bolt 2 complete turns.
   - Stage 3: Tighten to 50 Nm (37 lb-ft).
   - Stage 4: Tighten an additional 90 degrees.



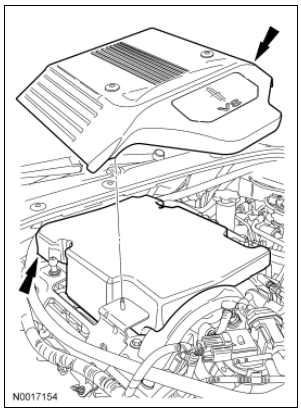
4. Install the oil cooler. For additional information, refer to Oil Cooler in this section.

5. Install the accessory drive belt. For additional information, refer to Section 303-05 .

6. Install the cooling fan assembly. For additional information, refer to Section 303-03 .

7. **⚠ CAUTION: The engine appearance cover is equipped with a noise suppressor. If the noise suppressor becomes separated from the engine appearance cover it must be positioned on the intake manifold prior to installing the engine appearance cover.**

   Install the noise suppressor (if detached) and the engine appearance cover.



8. Connect the battery ground cable. For additional information, refer to Section 414-01 .

Crankshaft Front Seal

Printable View (63 KB)

Special Tool(s)

ST1385-A	Remover, Oil Seal 303-409 (T92C-6700-CH)
ST2423-A	Installer, Crankshaft Front Oil Seal 303-646

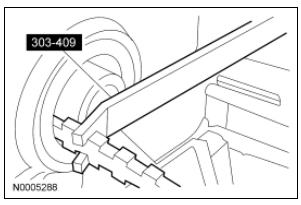
Material

Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (in Canada Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12) or equivalent	WSS-M2C930-A

Removal

⚠ **CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces, that enters the oil passages, coolant passages or the oil pan can cause engine failure.**

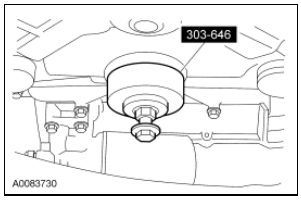
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .
3. Remove the crankshaft pulley. For additional information, refer to Crankshaft Pulley in this section.
4. Using the special tool, remove and discard the crankshaft front seal.



Installation

1. **NOTE:** Lubricate the crankshaft front oil seal and the engine front cover mating surface with clean engine oil.

   Using the special tool, install a new crankshaft front seal.

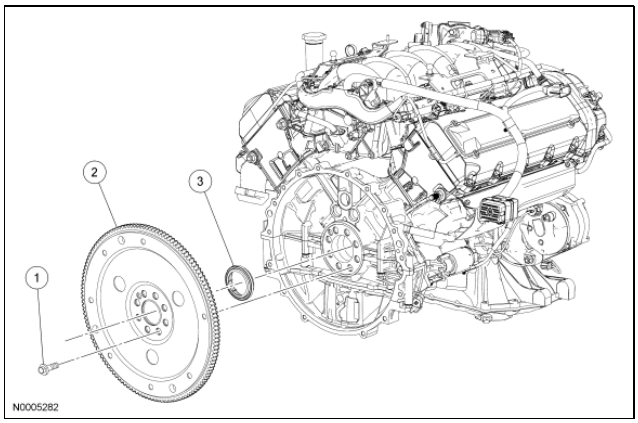


2. Install the crankshaft pulley. For additional information, refer to Crankshaft Pulley in this section.

3. Connect the battery ground cable. For additional information, refer to Section 414-01 .

Lower End Components Exploded View, Flexplate and Crankshaft Rear Oil Seal

Printable View (170 KB)



Item	Part Number	Description
1	W704862	Flexplate bolt (8 required)
2	6K375	Flexplate
3	6701	Crankshaft rear seal

1. For additional information, refer to the procedures in this section.

Flexplate

Printable View (75 KB)

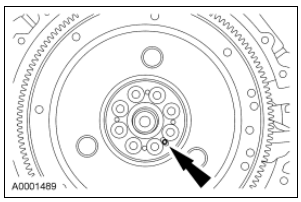
Removal

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the transmission. For additional information, refer to Section 307-01 .
3. Remove the 8 bolts and the flexplate.

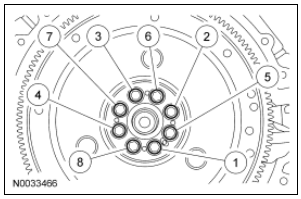
Installation

1. **NOTE:** The crankshaft dowel must be positioned below the outer face of the flexplate.

   Install the flexplate with the elongated hole over the crankshaft dowel.



2. Install the 8 flexplate bolts and tighten in 2 stages in the sequence shown.
   - Stage 1: Tighten to 15 Nm (11 lb-ft).
   - Stage 2: Tighten to 110 Nm (81 lb-ft).



3. Install the transmission. For additional information, refer to Section 307-01 .

Crankshaft Rear Seal

Printable View (127 KB)

Special Tool(s)

 ST2495-B	Remover/Installer, Crankshaft Rear Oil Seal 303-647
ST2441-A	Adapter for 204-185 204-208 (T95T-5310-AR2)

Material

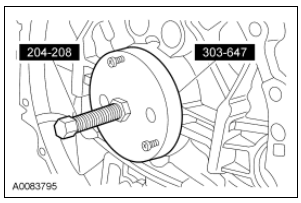
Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (in Canada Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12) or equivalent	WSS-M2C930-A

Removal

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Remove the flexplate. For additional information, refer to Flexplate in this section.

3. Using the special tools, remove the crankshaft rear seal.
   - Discard the seal.

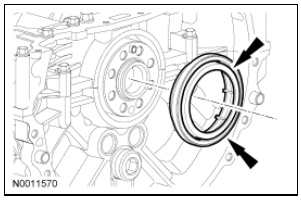


Installation

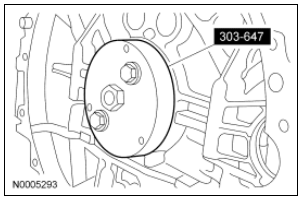
1. ⚠ **CAUTION: The plastic sleeve that comes with the new crankshaft rear oil seal protects the seal while in transit and is also used as an installation tool to prevent lip seal roll when carrying out the repair. The sleeve must be used to prevent future seal concerns.**

   NOTE: Lubricate the cylinder block bore and the crankshaft with clean engine oil before installing the seal.

   Position the crankshaft rear seal with the protective installer onto the end of the crankshaft.



2. Using the special tool, install a new crankshaft rear seal.



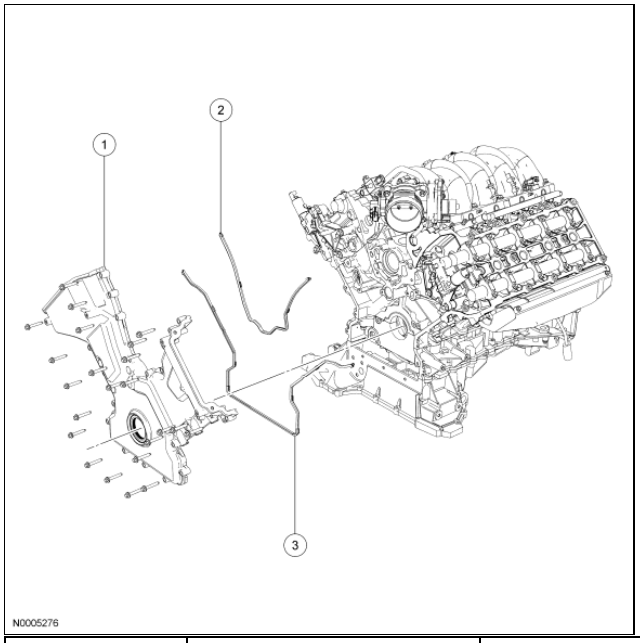
3. Install the flexplate. For additional information, refer to Flexplate in this section.

Engine Front Cover

Printable View (613 KB)

Material

Item	Specification
Metal Surface Cleaner ZC-21	WSE-M5B392-A
Silicone Gasket and Sealant TA-30 or equivalent	WSE-M4G323-A4
SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP	WSS-M2C930-A



Item	Part Number	Description
1	6059	Engine front cover
2	6020	Engine front cover gasket
3	6020	Engine front cover gasket

Removal

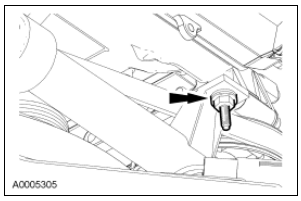
⚠ CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

1. **⚠ CAUTION: The cooling system filling and bleeding procedure must be followed exactly or damage to the engine can occur.**

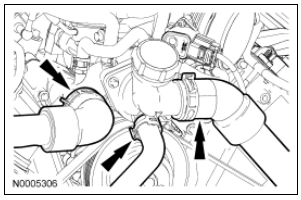
   Drain the engine cooling system. For additional information, refer to Section 303-03 .

2. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .

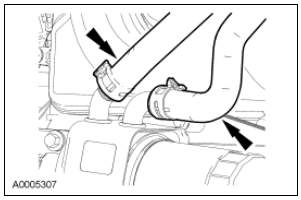
3. Drain the engine oil.
4. Remove the LH valve cover. For additional information, refer to Valve Cover - LH in this section.
5. Remove the RH valve cover. For additional information, refer to Valve Cover - RH in this section.
6. Remove the engine cooling fan assembly. For additional information, refer to Section 303-03 .
7. Remove the accessory drive belt idler pulley. For additional information, refer to Section 303-05 .
8. Remove the crankshaft front seal. For additional information, refer to Lower End Components - Exploded View, Crankshaft Pulley and Crankshaft Front Oil Seal and Crankshaft Front Seal in this section.
9. Remove the A/C compressor. For additional information, refer to Section 412-03 .
10. Remove the lower radiator hose bracket nut.



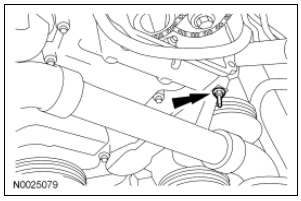
11. Disconnect the lower radiator, upper radiator and heater hose.



12. Disconnect the 2 oil cooler hoses, if equipped.



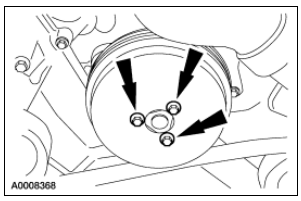
13. Remove the stud bolt.



14. **NOTE:** One bolt is blocked by the power steering pressure hose and must be removed with the power steering pump.

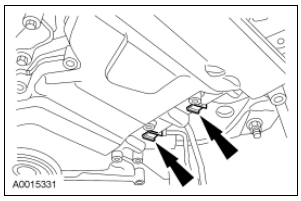
    Remove the 4 bolts and position the power steering pump aside.

15. Remove the coolant pump pulley bolts and the pulley.

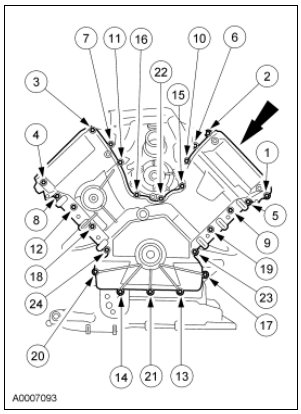


16. Remove the 5 bolts and the power steering pump bracket.

17. Detach the wiring harness clips.



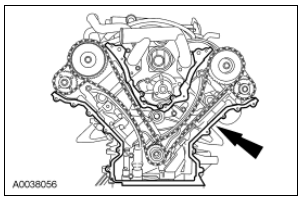
18. Remove the engine front cover bolts in the sequence shown.
    - Remove the engine front cover.



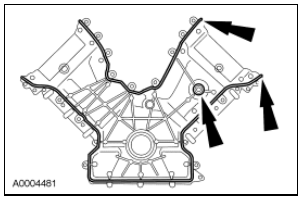
Installation

1. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to remove all traces of sealant.**

   Clean the sealing surfaces with metal surface cleaner.

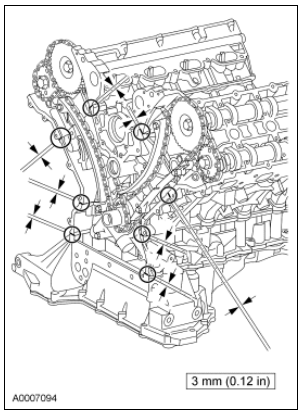


2. Install new gaskets.

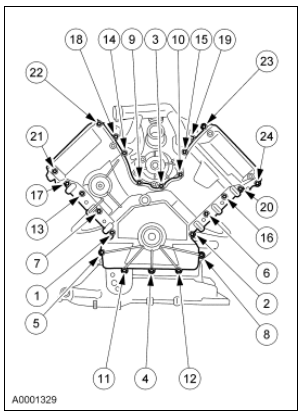


3. **NOTE:** If the front cover is not secured within 4 minutes of sealant application, the sealant must be removed and the sealing area cleaned with metal surface cleaner. Allow to dry until there is no sign of wetness, or 4 minutes, whichever is longer. Failure to follow this procedure can cause future oil leakage.

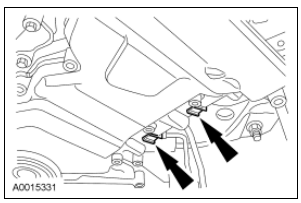
   Apply silicone gasket and sealant in the 8 places shown.



4. Install the engine front cover.
   - Position the engine front cover on the cylinder block.
   - Loosely install the bolts.
   - Tighten the bolts in 2 stages in the sequence shown.
     - Stage 1: Tighten to 5 Nm (44 lb-in).
     - Stage 2: Tighten to 10 Nm (89 lb-in).



5. Attach the wiring harness clips.



6. **NOTE:** The wiring harness is positioned behind the bracket.

Install the power steering pump bracket and the 5 bolts.

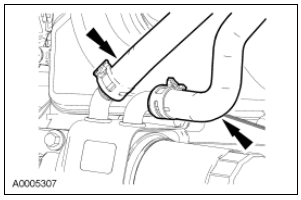
- Tighten to 25 Nm (18 lb-ft).

7. **NOTE:** One bolt is blocked by the power steering pressure line and must be installed with the power steering pump.

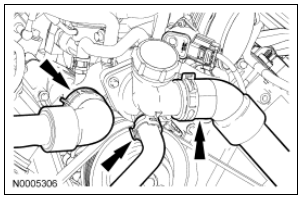
   Position the power steering pump and install the 4 bolts.

   - Tighten to 25 Nm (18 lb-ft).

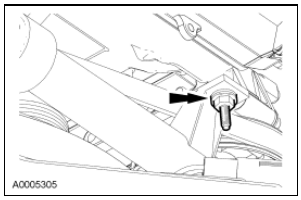
8. Connect the 2 oil cooler hoses, if equipped.



9. Connect the lower radiator, upper radiator and heater hose.



10. Install the lower radiator hose bracket nut.
    - Tighten to 10 Nm (89 lb-in).



11. Install the A/C compressor. For additional information, refer to Section 412-03 .

12. Install the crankshaft front seal. For additional information, refer to Lower End Components Exploded View, Crankshaft Pulley and Crankshaft Front Oil Seal and Crankshaft Front Seal in this section.

13. Install the accessory drive belt idler pulley. For additional information, refer to Section 303-05 .

14. Install the engine cooling fan assembly. For additional information, refer to Section 303-03 .

15. Install the RH valve cover. For additional information, refer to Valve Cover RH in this section.

16. Install the LH valve cover. For additional information, refer to Valve Cover LH in this section.

17. Fill the engine with clean engine oil.

18. Connect the battery ground cable. For additional information, refer to Section 414-01 .

19. Fill and bleed the power steering system. For additional information, refer to Section 211-00

20. ⚠ **CAUTION: The cooling system filling and bleeding procedure must be followed exactly or damage to the engine can occur.**

    Fill and bleed the engine cooling system. For additional information, refer to Section 303-03 .

21. Evacuate and recharge the A/C system. For additional information, refer to Section 412-00 .

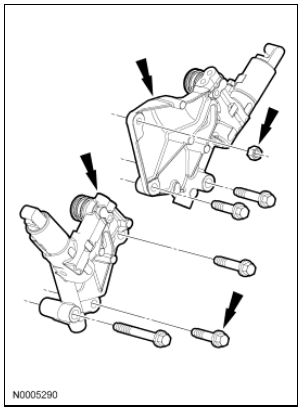
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (in Canada Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12) or equivalent	WSS-M2C930-A

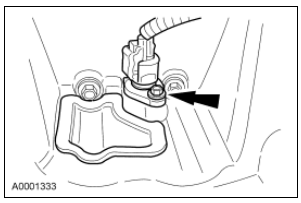
Removal

⚠ **CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces, that enters the oil passages, coolant passages or the oil pan can cause engine failure.**

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .
3. Remove the engine front cover. For additional information, refer to Engine Front Cover in this section.
4. Remove the RH and LH variable cam timing (VCT) bush carriers.



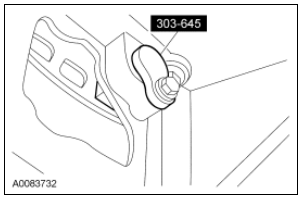
5. Remove the crankshaft position (CKP) sensor and the torque converter cover.



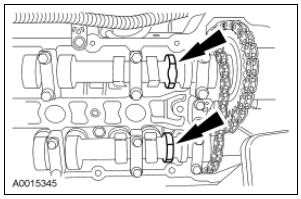
6. **NOTE:** There is one window on the ignition pulse wheel that is unique to accept the special tool.

   Install the special tool.

   - Turn the crankshaft to 45 degrees ATDC. The crankshaft keyway will be in the 6 o'clock position.
   - Install the special tool.

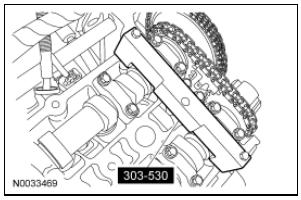


7. Make sure the flats of the camshaft are facing upward. If not, repeat Step 5.



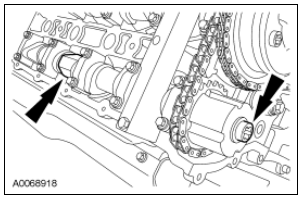
8. ⚠ **CAUTION: The flats on the camshaft must completely contact the special service tool or damage to the camshafts can occur. Slowly draw the special tool down evenly until it is fully seated on the camshaft flats.**

   Install the special tool on the RH cylinder head.



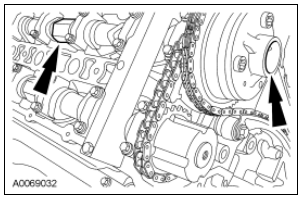
9. ⚠ **CAUTION: An open-end wrench must be used on the flats of the camshaft or damage to the camshaft will occur.**

   Remove and discard the RH exhaust camshaft sprocket bolt.

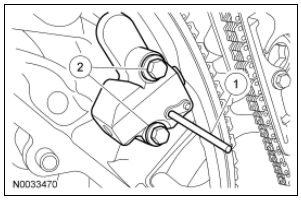


10. ⚠ **CAUTION: An open-end wrench must be used on the flats of the camshaft or damage to the camshaft will occur.**

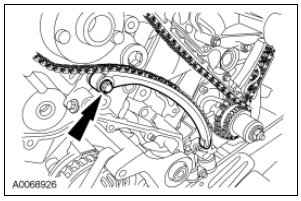
    Remove and discard the RH VCT unit bolt.



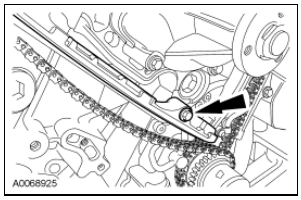
11. Remove the RH timing chain tensioner.
    1. Push the lever down and install a drill rod to lock the piston.
    2. Remove the 2 bolts and the tensioner.



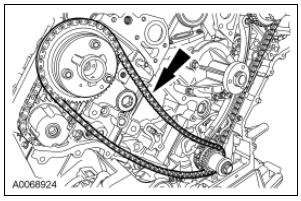
12. Remove the bolt and the RH tensioner arm.



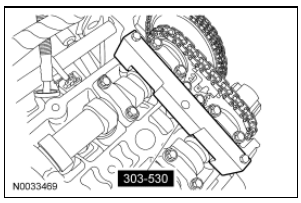
13. Remove the bolt and the RH timing chain guide.



14. Remove the RH primary timing chain.

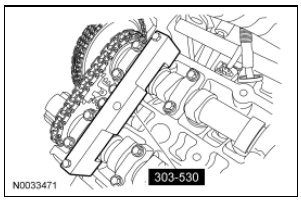


15. Remove the special tool from the RH cylinder head.



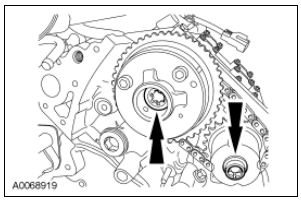
16. ⚠ **CAUTION: The flats on the camshaft must completely contact the special service tool or damage to the camshafts can occur. Slowly draw the special tool down evenly until it is fully seated on the camshaft flats.**

    Install the special tool on the LH head.

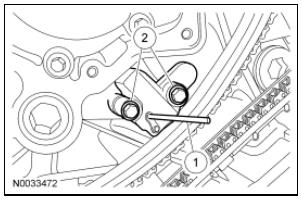


17. ⚠ **CAUTION: An open-end wrench must be used on the flats of the camshaft or damage to the camshaft can occur.**

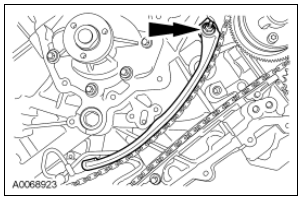
    Remove and discard the LH VCT unit bolt and the exhaust camshaft sprocket bolt.



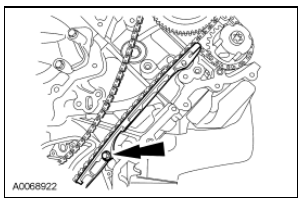
18. Remove the LH timing chain tensioner.
    1. Push the lever down and install a drill rod to lock the piston.
    2. Remove the 2 bolts and the tensioner.



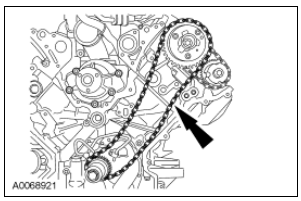
19. Remove the nut and the LH tensioner arm.



20. Remove the bolt and the LH timing chain guide.

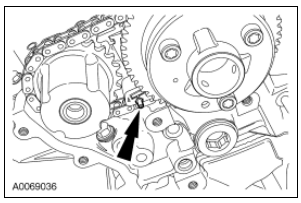


21. Remove the LH primary timing chain.

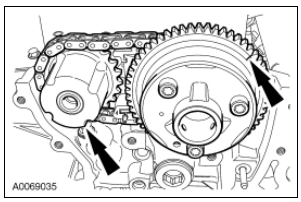


22. Remove the crankshaft sprocket.

23. Collapse the RH secondary timing chain tensioner and install a pin to lock the piston.

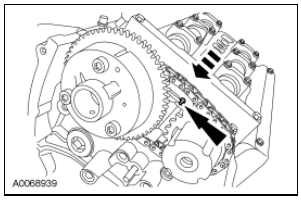


24. Remove the RH VCT unit, exhaust camshaft sprocket and timing chain as an assembly.

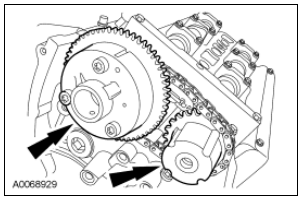


25. Remove the 2 bolts and the RH secondary timing chain tensioner.

26. Collapse the LH secondary timing chain tensioner and install a pin to lock the piston.



27. Remove the LH VCT unit, exhaust camshaft sprocket and timing chain as an assembly.

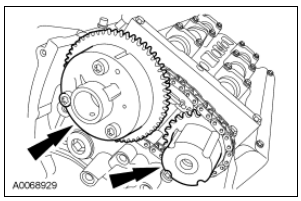


28. Remove the 2 bolts and the LH secondary timing chain tensioner.

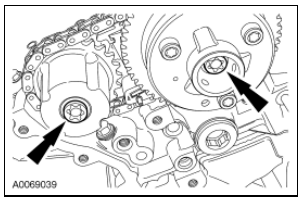
Installation

1. Install the LH secondary timing chain tensioner and 2 bolts.
   - Tighten to 11 Nm (8 lb-ft).

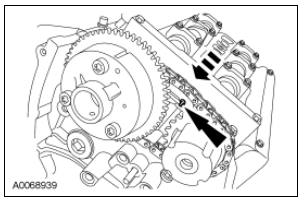
2. Install the LH VCT unit, exhaust camshaft sprocket and timing chain as an assembly.



3. Using new bolts, install the LH VCT unit and exhaust camshaft sprocket bolts finger-tight.

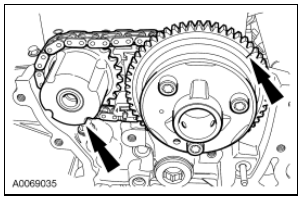


4. Remove the locking pin from the LH secondary timing chain tensioner.

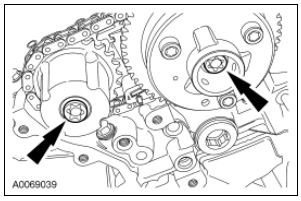


5. Install the RH secondary timing chain tensioner and 2 bolts.
   - Tighten to 11 Nm (8 lb-ft).

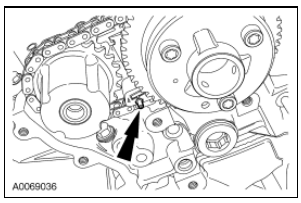
6. Install the RH VCT unit, exhaust camshaft sprocket and timing chain as an assembly.



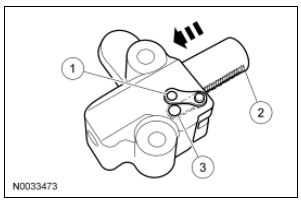
7. Using new bolts, install the RH VCT unit and exhaust camshaft sprocket bolts finger-tight.



8. Remove the locking pin from the RH secondary timing chain tensioner.



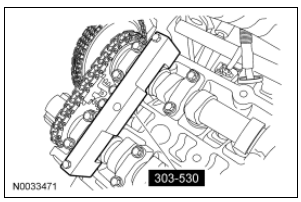
9. Reset the timing chain tensioners.
    1. Hold the lever toward the tensioner piston.
    2. Using finger pressure, compress the tensioner until it is completely collapsed.
    3. Push the lever down and install a drill rod to lock the piston.



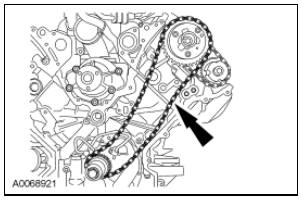
10. **⚠ CAUTION: The camshaft holding tool should still be installed on the LH cylinder head. If the special tool was removed during camshaft removal, it must be reinstalled at this time.**

    ⚠ CAUTION: The flats on the camshaft must completely contact the special service tool or damage to the camshafts can occur. Slowly draw the special tool down evenly until it is fully seated on the camshaft flats.

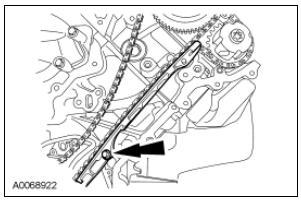
    Install the special tool on the LH cylinder head.



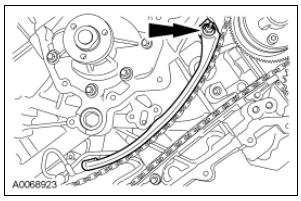
11. Position the LH timing chain and crankshaft gear.
    - Position the timing chain over the LH intake camshaft sprocket.
    - Position the crankshaft gear in the timing chain.



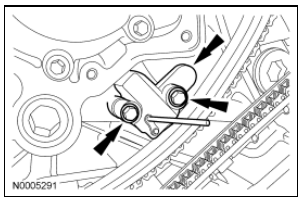
12. Install the LH timing chain guide and bolt.
    - Tighten to 11 Nm (8 lb-ft).



13. Install the LH timing chain tensioner arm and nut.
    - Tighten to 11 Nm (8 lb-ft).



14. Install the LH timing chain tensioner and 2 bolts.
    - Tighten to 11 Nm (8 lb-ft).
    - Remove the drill rod.

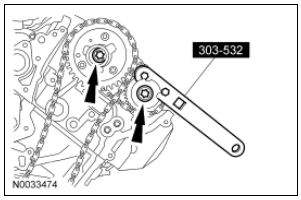


15. **⚠ CAUTION: The exhaust camshaft sprocket bolt must be fully tightened before tightening the intake camshaft sprocket bolt.**

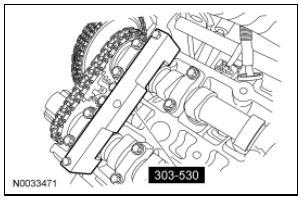
    ⚠ CAUTION: Using the special tool, apply 10 Nm (89 lb-in) counterclockwise to the LH exhaust camshaft sprocket.

    Tighten the LH exhaust camshaft sprocket and VCT unit bolts in 2 stages:

    - Stage 1: Tighten to 35 Nm (26 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.

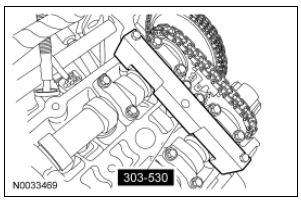


16. Remove the special tool.

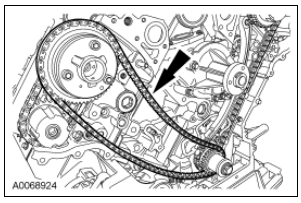


17. ⚠ **CAUTION: The flats on the camshaft must completely contact the special service tool or damage to the camshafts can occur. Slowly draw the special tool down evenly until it is fully seated on the camshaft flats.**

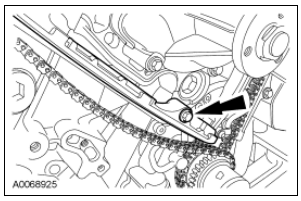
    Install the special tool on the RH cylinder head.



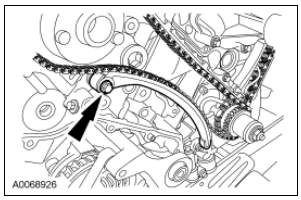
18. Position the RH timing chain over the RH intake camshaft sprocket and over the crankshaft gear.



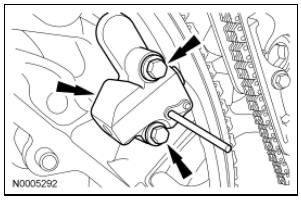
19. Install the RH timing chain guide and bolt.
    - Tighten to 11 Nm (8 lb-ft).



20. Install the RH timing chain tensioner arm.
    - Tighten to 11 Nm (8 lb-ft).



21. Install the RH timing chain tensioner and 2 bolts.
    - Tighten to 11 Nm (8 lb-ft).
    - Remove the drill rod.

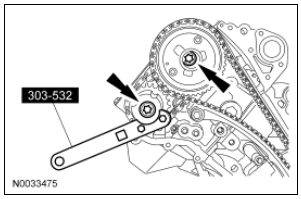


22. ⚠ **CAUTION: The exhaust camshaft sprocket bolt must be fully tightened before tightening the intake camshaft sprocket bolt.**

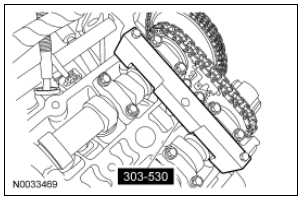
    ⚠ **CAUTION: Using the special tool, apply 10 Nm (89 lb-in) counterclockwise to the RH exhaust camshaft sprocket.**

    Tighten the RH exhaust camshaft sprocket and VCT unit bolts in 2 stages:

    - Stage 1: Tighten to 35 Nm (26 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.



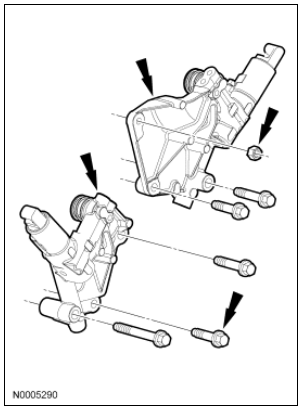
23. Remove the special tool.



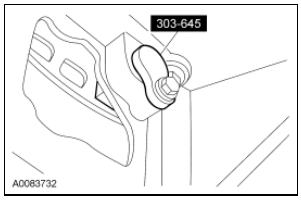
24. **NOTE:** Lubricate the VCT bush carrier seals with clean engine oil.

    Carefully insert the bush carrier into the VCT unit, compress ring seals with fingers as required. Fully seat the bush carrier by hand before fitting the bolts and nut.

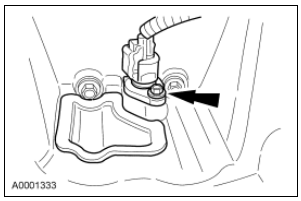
    - Tighten the bolts to 20 Nm (15 lb-ft).
    - Tighten the nut to 10 Nm (89 lb-in).



25. Remove the special tool.



26. Install the CKP sensor and the torque converter cover.
    - Tighten to 10 Nm (89 lb-in).



27. Install the engine front cover. For additional information, refer to Engine Front Cover in this section.

28. Connect the battery ground cable. For additional information, refer to Section 414-01 .

1. For additional information, refer to the procedures in this section.

Camshafts

Printable View (407 KB)

Special Tool(s)

 ST2396-B	Aligner, Camshaft 303-530

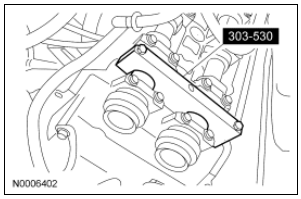
Material

Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (in Canada Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12) or equivalent	WSS-M2C930-A

Removal

1. Remove the timing drive components. For additional information, refer to Timing Drive Components in this section.

2. Remove the special tool.



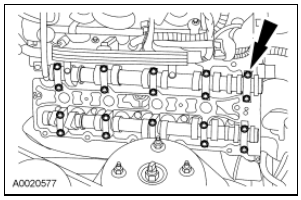
3. **⚠ CAUTION: Record the camshaft bearing cap locations. The camshaft bearing caps are positional and must be installed in their original locations and orientation or engine damage can occur.**

   ⚠ CAUTION: Do not use any means of marking the shims other than a permanent-type marker. Any scratches or paint on the shims can result in incorrect lash adjustments and severe engine damage.

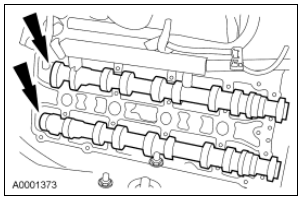
   ⚠ CAUTION: Record the shim and bucket tappet location. The shim and bucket tappet are positional and if installed in the incorrect location, engine damage can occur.

   Remove the RH camshaft bearing caps.

   - Remove the bolts.
   - Remove the RH camshaft bearing caps.



4. Remove the RH camshafts.



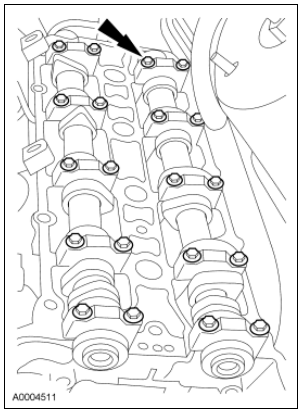
5. **⚠ CAUTION: Record the camshaft bearing cap locations. The camshaft bearing caps are positional and must be installed in their original locations and orientation or engine damage can occur.**

   ⚠ CAUTION: Do not use any means of marking the shims other than a permanent-type marker. Any scratches or paint on the shims can result in incorrect lash adjustments and severe engine damage.

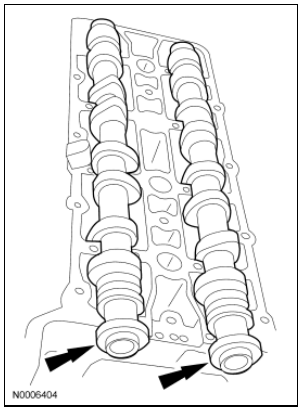
   ⚠ CAUTION: Record the location of the shims and bucket tappets. The bucket tappets and shims are positional and if installed in the incorrect location, engine damage can occur.

   Remove the LH camshaft bearing caps.

   - Remove the bolts.
   - Remove the LH camshaft bearing caps.



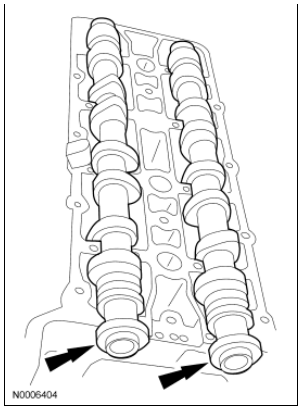
6. Remove the LH camshafts.



Installation

1. **NOTE:** Apply clean engine oil to the camshaft journals, the camshaft caps and the camshaft lobes prior to installing the camshafts.

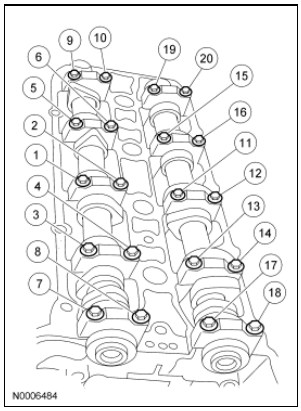
   Position the LH camshafts on the camshaft journals.



2. ⚠ **CAUTION: Install the camshaft bearing caps. The camshaft bearing caps are positional and must be installed in their original locations and orientation or engine damage can occur.**

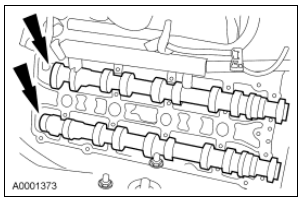
   Install the LH camshaft bearing caps.

   - Position the bearing caps.
   - Install the bearing cap bolts. Tighten the bolts in 3 stages in the sequence shown.
     - ♦ Stage 1: Hand-tighten.
     - ♦ Stage 2: Tighten to 6 Nm (53 lb-in).
     - ♦ Stage 3: Tighten an additional 90 degrees.



3. **NOTE:** Apply clean engine oil to the camshaft journals, the camshaft caps and the camshaft lobes prior to installing the camshafts.

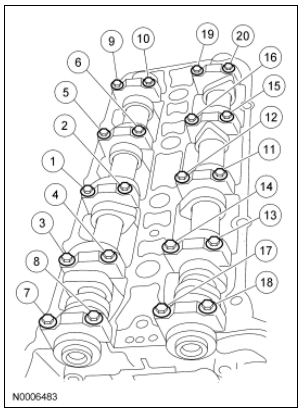
   Install the RH camshafts.



4. ⚠ **CAUTION: Install the camshaft bearing caps. The camshaft bearing caps are positional and must be installed in their original locations and orientation or engine damage can occur.**

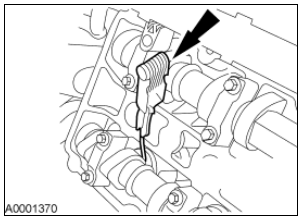
   Install the RH camshaft bearing caps.

   - Position the bearing caps.
   - Install the bolts. Tighten the bolts in 3 stages in the sequence shown.
     - ♦ Stage 1: Hand-tighten.
     - ♦ Stage 2: Tighten to 6 Nm (53 lb-in).
     - ♦ Stage 3: Tighten an additional 90 degrees.



5. ⚠ **CAUTION: If any components are installed new, the engine must be reshimmed or engine damage can occur.**

   Using a feeler gauge, confirm that the tappet and shim clearances are within specification. For additional information, refer to Valve Clearance Check in this section.



6. If tappet and shim clearances are not within specification, adjust the clearance. For additional information, refer to Valve Clearance Adjustment in this section.

7. Install the timing drive components. For additional information, refer to Timing Drive Components in this section.

Valve Tappet

Printable View (32 KB)

Material

Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (in Canada Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12) or equivalent	WSS-M2C930-A

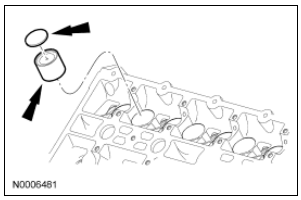
Removal and Installation

1. Remove the camshafts. For additional information, refer to Valve Train Components Exploded View and Camshafts in this section.

2. **CAUTION: Do not use any means of marking the shims other than a permanent-type marker. Any scratches or paint on the shims can result in incorrect lash adjustments and severe engine damage.**

   CAUTION: Record the shim and bucket tappet location. The shim and bucket tappet are positional and if installed in the incorrect location, engine damage can occur.

   Remove the valve tappets and shims.



3. To install, reverse the removal procedure.
   - Coat the valve tappets with clean engine oil prior to installing.

Valve Spring, Retainer and Seal

Printable View (105 KB)

Special Tool(s)

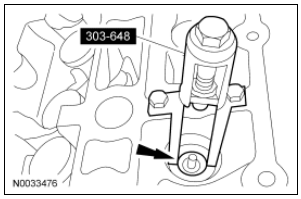
ST2489-A	Compressor, Valve Spring 303-648

Material

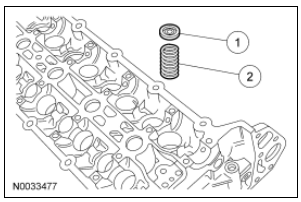
Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (in Canada Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12) or equivalent	WSS-M2C930-A

Removal

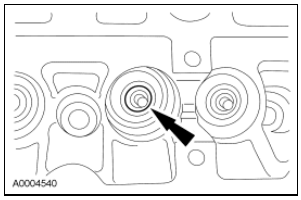
1. Remove the valve tappets. For additional information, refer to Valve Train Components Exploded View and Valve Tappet in this section.
2. Remove the spark plug for the cylinder being serviced.
3. Position the piston for the cylinder being serviced at the top of its stroke and pressurize the cylinder with compressed air.
4. Using the special tool, compress the valve spring and remove the retainer keys.



5. Remove the valve spring.
    1. Remove the retainer.
    2. Remove the valve spring.



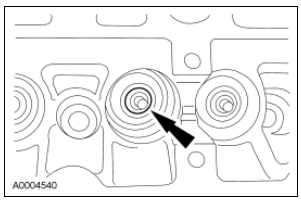
6. Remove and discard the valve stem seal.



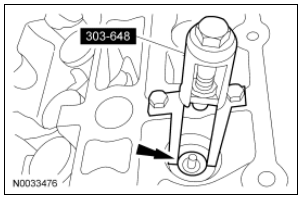
Installation

1. **NOTE:** Lubricate the valve stem seal with clean engine oil.

   Install the valve stem seal.



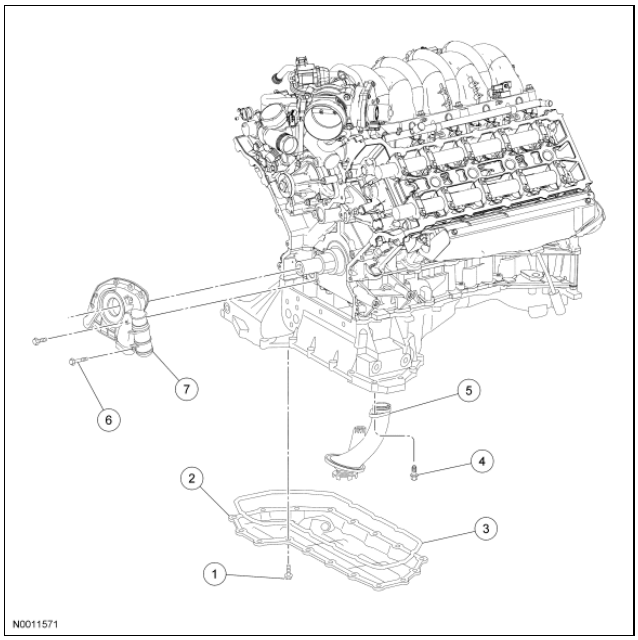
2. Install the valve spring and retainer.
3. Using the special tool, compress the valve spring and install the retainer keys.



4. Release the compressed air used to hold the valves closed.
5. Install the spark plug for the cylinder being serviced. Do not tighten at this time.
6. Repeat the appropriate removal and installation steps for all of the other cylinders.
7. Tighten the spark plug(s) to 27 Nm (20 lb-ft).
8. Install the valve tappets. For additional information, refer to Valve Train Components Exploded View and Valve Tappet in this section.

Engine Lubrication Components Exploded View, Oil Pan, Oil Pump, Oil Pump Screen and Pickup Tube

Printable View (169 KB)



Item	Part Number	Description
1	W701504	Oil pan bolt (17 required)
2	6695	Oil pan
3	6710	Oil pan gasket
4	W500214	Oil pump screen and pickup tube bolt (2 required)
5	6617	Oil pump screen and pickup tube
6	W701544	Oil pump bolt (2 required)
7	6600	Oil pump

1. For additional information, refer to the procedures in this section.

Oil Pan

Printable View (29 KB)

Material

Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (in Canada Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12) or equivalent	WSS-M2C930-A

Removal

⚠ CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces, that enters the oil passages, coolant passages or the oil pan can cause engine failure.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .
3. Drain the engine oil.
4. Remove the 17 bolts and the oil pan.
   - Discard the gasket.

Installation

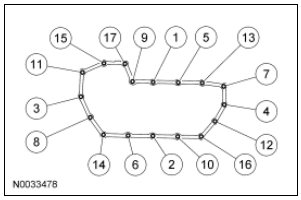
1. **⚠ CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leaks paths. Use a plastic scraping tool to remove all traces of sealant.**

   Clean the gasket sealing surfaces.

2. **NOTE:** Make sure all gasket sealing surfaces are clean and dry.

   Install a new oil pan gasket, oil pan and 17 bolts.

   - Tighten the bolts in the sequence shown in 2 stages.
     - ♦ Stage 1: Tighten to 5 Nm (44 lb-in).
     - ♦ Stage 2: Tighten to 12 Nm (9 lb-ft).



3. Fill the engine with clean engine oil.

4. Connect the battery ground cable. For additional information, refer to Section 414-01 .

Oil Pump

Printable View (41 KB)

Removal

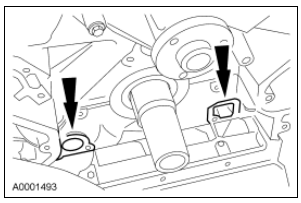
⚠ CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .
3. Remove the oil pump screen and pickup tube. For additional information, refer to Engine Lubrication Components - Exploded View, Oil Pan, Oil Pump, Oil Pump Screen and Pickup Tube and Oil Pump Screen and Pickup Tube in this section.
4. Remove the timing drive components. For additional information, refer to Timing Drive Components in this section.
5. Remove the bolts and the oil pump.

Installation

1. **⚠ CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leaks paths. Use a plastic scraping tool to remove all traces of sealant.**

   Clean the sealing surfaces.



2. Install the oil pump and tighten the bolts in 2 stages.
   - Stage 1: Tighten to 6 Nm (53 lb-in).
   - Stage 2: Tighten an additional 90 degrees.
3. Install the timing drive components. For additional information, refer to Timing Drive Components in this section.
4. Install the oil pump screen and pickup tube. For additional information, refer to Engine Lubrication Components - Exploded View, Oil Pan, Oil Pump, Oil Pump Screen and Pickup Tube and Oil Pump Screen and Pickup Tube in this section.
5. Connect the battery ground cable. For additional information, refer to Section 414-01 .

Oil Pump Screen and Pickup Tube

Printable View (11 KB)

Material

Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (in Canada Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12) or equivalent	WSS-M2C930-A

Removal and Installation

⚠ CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .

3. Remove the oil pan. For additional information, refer to Engine Lubrication Components Exploded View, Oil Pan, Oil Pump, Oil Pump Screen and Pickup Tube and Oil Pan in this section.

4. **⚠ CAUTION: Only use hand tools to remove the oil pump screen and pickup tube.**

   Remove the bolts and the oil pump screen and pickup tube.

   - To install, tighten to 12 Nm (9 lb-ft).

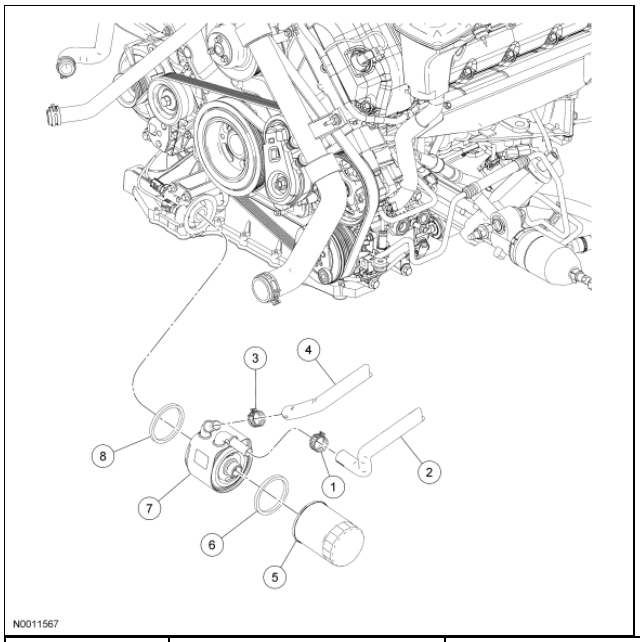
5. To install, reverse the removal procedure.
   - Inspect the O-ring seal and install a new one if necessary.
   - Lubricate the O-ring seal with clean engine oil.

Oil Cooler

Printable View (200 KB)

Material

Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (in Canada Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12) or equivalent	WSS-M2C930-A



Item	Part Number	Description
1	8A593	Oil cooler coolant hose clamp
2	8286	Oil cooler coolant hose
3	8A593	Oil cooler coolant hose clamp
4	8286	Oil cooler coolant hose
5	6714	Oil filter
6		Oil filter seal (part of 6714)
7	6A642	Oil cooler
8	6A636	Oil cooler gasket

Removal

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .

3. ⚠ **CAUTION: The cooling system filling and bleeding procedure must be followed exactly or damage to the engine can occur.**

   Drain the engine cooling system. For additional information, refer to Section 303-03 .

4. Drain the engine oil.

5. Disconnect the 2 coolant hoses from the oil cooler.

6. Remove and discard the oil filter and gasket.

7. ⚠ **CAUTION: If metal or aluminum material is present in the oil cooler, mechanical concerns exist. To diagnose mechanical concerns, refer to Section 303-00 .**

   Remove the bolt and the oil cooler.

   - Discard the gasket.
   - Inspect the oil cooler.

Installation

1. **NOTE:** Inspect the gasket and surfaces for contamination prior to installation. Lubricate the gasket with clean engine oil.

   Position the oil cooler and a new gasket and install the bolt.

   - Rotate the cooler clockwise until the locating pin hits the stop.
   - Tighten the bolt to 60 Nm (44 lb-ft).

2. **NOTE:** Lubricate the gasket with clean engine oil.

   Install a new oil filter and gasket until the seal makes contact.

   - Using an oil filter strap wrench, tighten the filter an additional 270 degrees.

3. Connect the 2 coolant hoses to the oil cooler.

4. Fill the engine with clean engine oil.

5. Connect the battery ground cable. For additional information, refer to Section 414-01 .

6. ⚠ **CAUTION: The cooling system filling and bleeding procedure must be followed exactly or damage to the engine can occur.**

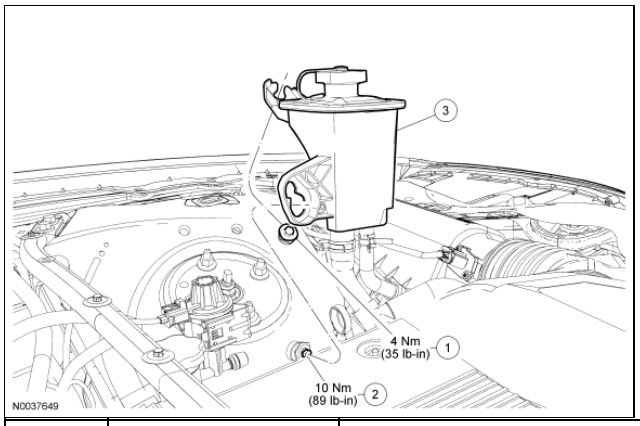
   Fill and bleed the engine cooling system. For additional information, refer to Section 303-03 .

Oil Level Indicator and Tube

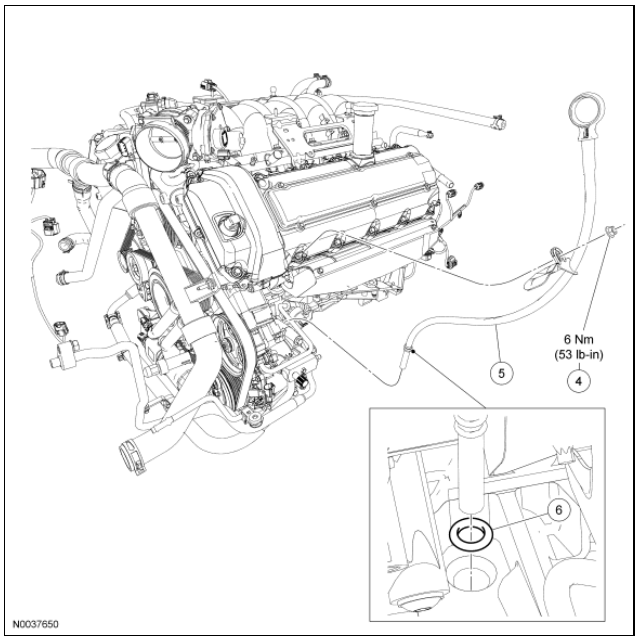
Printable View (313 KB)

Material

Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (in Canada Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12) or equivalent	WSS-M2C930-A



Item	Part Number	Description
1	N803882	Upper power steering reservoir isolator bolt
2	W705012-S306	Lower power steering reservoir isolator bolt
3	3E764	Power steering fluid reservoir



Item	Part Number	Description
4	W520411	Oil level indicator tube nut
5	6754	Oil level indicator tube
6	6754-B	O-ring seal

Removal and Installation

1. Loosen the upper power steering fluid reservoir isolator bolt.
   - To install, tighten to 4 Nm (35 lb-in).

2. Loosen the lower power steering fluid reservoir isolator bolt.
   - To install, tighten to 10 Nm (89 lb-in).

3. Lift the power steering fluid reservoir upward off of the isolators and position aside.

4. Remove the nut and the oil level indicator tube.
   - Discard the O-ring seal.
   - To install, tighten to 6 Nm (53 lb-in).

5. **⚠ CAUTION: Failure to lubricate the O-ring seal and the oil level indicator tube-to-engine block mating surface with clean engine oil can result in engine oil leaks.**

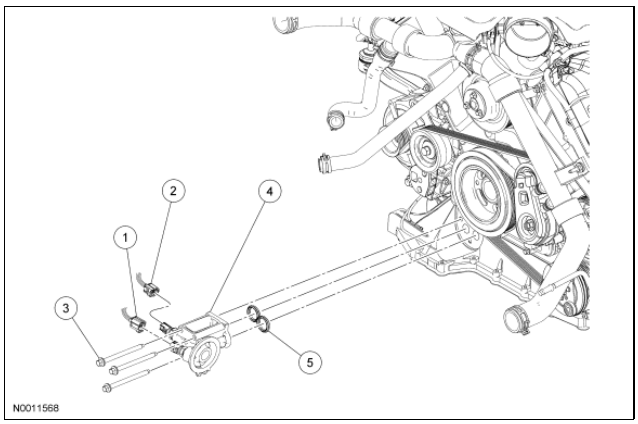
   ⚠ CAUTION: Make sure the O-ring seal remains in position and does not roll up the indicator tube during installation.

   To install, reverse the removal procedure.

   - Lubricate the new O-ring seal and engine mating surface with clean engine oil.

Oil Filter Adapter

Printable View (123 KB)



Item	Part Number	Description
1	12B637	Oil temperature sensor electrical connector (part of 12B637)
2	12B637	Oil pressure sensor electrical connector (part of 12B637)
3	W70709	Oil filter adapter bolt (3 required)
4	6A643	Oil filter adapter
5	6A636	Oil filter adapter O-ring seal (2 required)

Removal

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .
3. Remove the engine oil cooler. For additional information, refer to Oil Cooler in this section.
4. Remove the lower splash shield.
5. Disconnect the oil temperature sensor electrical connector.
6. Disconnect the oil pressure sensor electrical connector.
7. Remove the 3 bolts and the oil filter adapter.
   - Discard the seals.

Installation

1. **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges which make leak paths. Use a plastic scraping tool.**

   Clean the sealing surfaces.

2. Install the oil filter adapter, a new seal and 3 bolts.
    - Tighten in 2 stages.
        - ♦ Stage 1: Tighten to 13 Nm (10 lb-ft).
        - ♦ Stage 2: Tighten an additional 90 degrees.

3. Connect the oil pressure sensor electrical connector.

4. Connect the oil temperature sensor electrical connector.

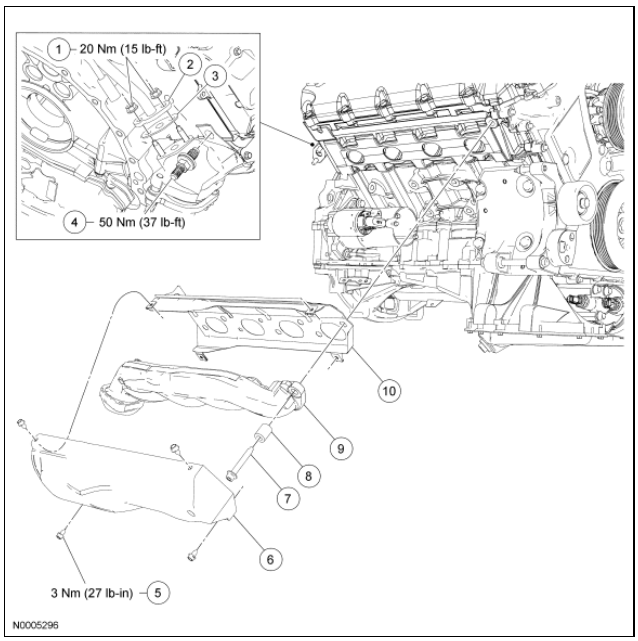
5. Install the lower splash shield.

6. Install the engine oil cooler. For additional information, refer to Oil Cooler in this section.

7. Connect the battery ground cable. For additional information, refer to Section 414-01 .

Exhaust Manifold RH

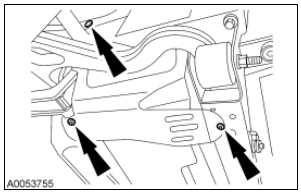
Printable View (226 KB)



Item	Part Number	Description
1	W520413	Exhaust gas recirculation (EGR) tube flange nuts (2 required)
2	7D477	EGR tube
3	9C435	EGR tube gasket
4	W708246	Stud
5	W504081	Heat shield bolt (4 required)
6	9A462	Heat shield
7	W701706	Exhaust manifold bolt (8 required)
8		Spacer (8 required)
9	9430	Exhaust manifold
10	9448	Exhaust manifold gasket

Removal

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the catalytic converters. For additional information, refer to Section 309-00 .
3. Remove the starter motor. For additional information, refer to Section 303-06 .
4. Remove the screws and the lower RH splash shield.



5. Remove the 2 EGR tube flange nuts.

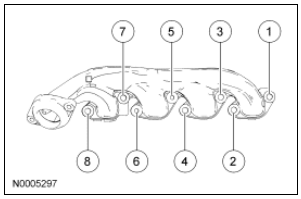
6. Remove the heat shield stud bolt.

7. Remove the 4 bolts and the heat shield.

8. Remove the 8 bolts, 8 spacers and the exhaust manifold.
    - Discard the exhaust manifold and EGR tube gaskets.

Installation

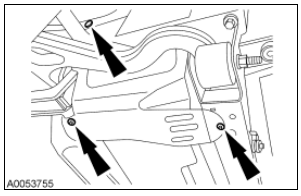
1. Position the new exhaust manifold gasket, the new EGR tube gasket and the exhaust manifold.
    - Install the 8 spacers and 8 exhaust manifold bolts hand-tight.
    - Install the EGR tube nuts and tighten to 20 Nm (15 lb-ft).
    - Tighten the 8 bolts to 25 Nm (18 lb-ft) in the sequence shown.



2. Install the heat shield and 4 bolts.
    - Tighten to 3 Nm (27 lb-in).

3. Install the heat shield stud bolt.
    - Tighten to 50 Nm (37 lb-ft).

4. Install the lower RH splash shield and screws.

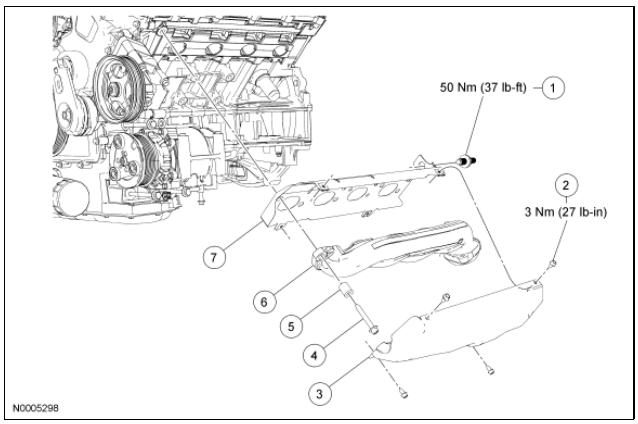


5. Install the starter motor. For additional information, refer to Section 303-06 .

6. Install the catalytic converters. For additional information, refer to Section 309-00 .

Exhaust Manifold LH

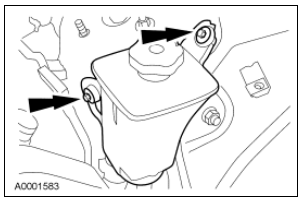
Printable View (160 KB)



Item	Part Number	Description
1	W708246	Heat shield stud bolt
2	W504081	Heat shield bolt (4 required)
3	9Y427	Heat shield
4	W701706	Exhaust manifold bolt (8 required)
5		Spacer (8 required)
6	9431	Exhaust manifold
7	9A457	Exhaust manifold gasket

Removal

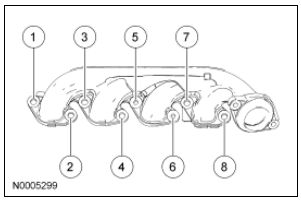
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the catalytic converters. For additional information, refer to Section 309-00 .
3. Remove the oil level indicator tube. For additional information, refer to Oil Level Indicator and Tube in this section.
4. Remove the bolts and position the power steering reservoir aside.



5. Remove the screws and the lower LH splash shield.
6. Remove the heat shield stud bolt.
7. Remove the 4 bolts and the heat shield.
8. Remove the 8 bolts, 8 spacers and the exhaust manifold.
   - Discard the exhaust manifold gasket.

Installation

1. Install the new exhaust manifold gasket, exhaust manifold, 8 spacers and 8 bolts.
    - Tighten to 25 Nm (18 lb-ft) in the sequence shown.

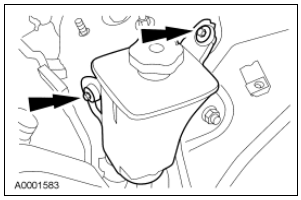


2. Install the heat shield and 4 bolts.
    - Tighten to 3 Nm (27 lb-in).

3. Install the heat shield stud bolt.
    - Tighten to 50 Nm (37 lb-ft).

4. Install the lower LH splash shield and screws.

5. Position the power steering reservoir and install the bolts.
    - Tighten the upper bolt to 6 Nm (53 lb-in).
    - Tighten the lower bolt to 12 Nm (9 lb-ft).



6. Install the oil level indicator tube. For additional information, refer to Oil Level Indicator and Tube in this section.

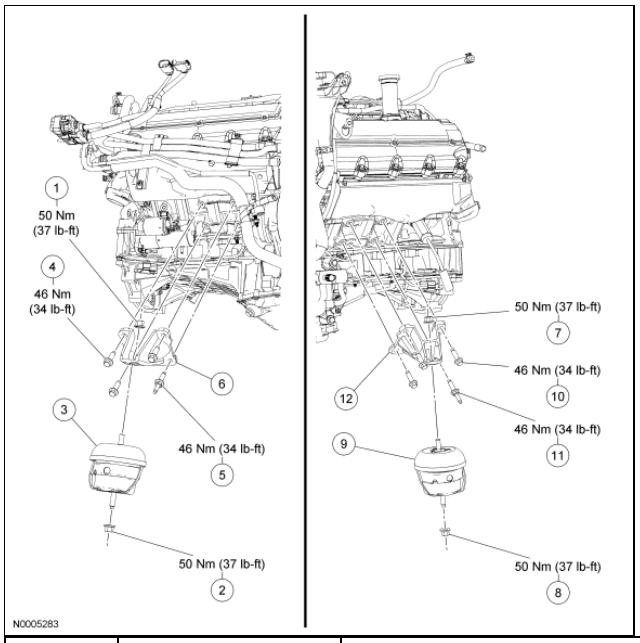
7. Install the catalytic converters. For additional information, refer to Section 309-00 .

Engine Mount

Printable View (378 KB)

Special Tool(s)

 ST1595-A	Lifting Bracket, Engine 303-050 (T70P-6000)
 ST2425-A	Three-Bar Engine Support Kit 303-F072



Item	Part Number	Description
1	6A005	RH engine mount upper nut
2	6754	RH engine mount lower nut
3	6754B	RH engine mount
4	W500234	RH engine mount bracket bolt (3 required)
5	W705399	RH engine mount bracket stud bolt
6	6061	RH engine mount bracket
7	6A005	LH engine mount upper nut
8	6754	LH engine mount lower nut
9	6754B	LH engine mount
10	W500234	LH engine mount bracket bolt (3 required)
11	W705399	LH engine mount bracket stud bolt
12	6057	LH engine mount bracket

Removal and Installation

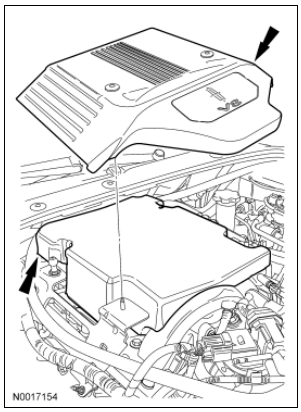
Both sides

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .

3. ⚠ **CAUTION: The engine appearance cover is equipped with a noise suppressor. If the noise suppressor becomes separated from the engine appearance cover it must be positioned on the intake manifold prior to installing the engine appearance cover.**

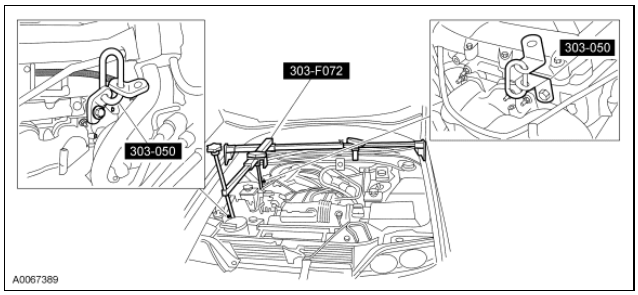
   Remove the engine appearance cover and the noise suppressor (if detached).



4. Remove the air cleaner outlet pipe. For additional information, refer to Section 303-12 .

5. Remove the upper radiator sight shield.

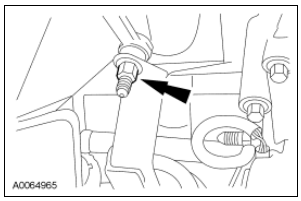
6. Install the special tools and support the engine.



RH side

7. Remove the RH lower splash shield.

8. Remove the nut and disconnect the transmission cooling tube support bracket from the engine mount bracket.
   - To install, tighten to 10 Nm (89 lb-in).



9. Remove the RH engine mount upper nut.
   - To install, tighten to 50 Nm (37 lb-ft).

10. Remove the 3 bolts, the stud bolt and the RH engine mount bracket.
    - To install, tighten to 46 Nm (34 lb-ft).

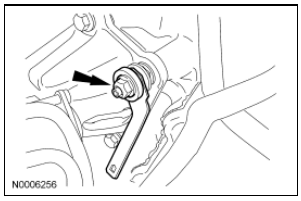
11. Remove the lower nut and the RH engine mount.
    - To install, tighten to 50 Nm (37 lb-ft).

LH side

12. Remove the LH lower splash shield.

13. Remove the LH engine mount upper nut.
    - To install, tighten to 50 Nm (37 lb-ft).

14. Remove the nut and the power steering tube support bracket.
    - To install, tighten to 10 Nm (89 lb-in).



15. Remove the 3 bolts, stud bolt and LH engine mount bracket.
    - To install, tighten to 46 Nm (34 lb-ft).

16. Remove the lower nut and the LH engine mount.
    - To install, tighten to 50 Nm (37 lb-ft).

Both sides

17. To install, reverse the removal procedure.

Cylinder Heads

Printable View (3256 KB)

Special Tool(s)

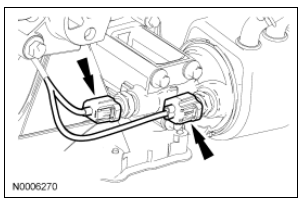
ST1438-A	Strap Wrench 303-D055
ST1286-A	Remover, Crankshaft Vibration Damper 303-009 (T58P-6316-D)
ST1385-A	Remover, Oil Seal 303-409 (T92C-6700-CH)
 ST2401-A	Alignment Gauge, Crankshaft 303-645
ST2398-B	Aligner, Camshaft 303-530

Material

Item	Specification
Silicone Gasket Remover ZC-30	
Motorcraft Metal Surface Prep ZC-31	

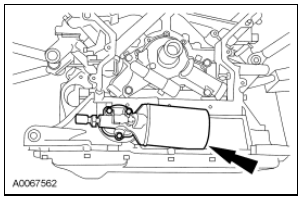
Both sides

1. Remove the engine. For additional information, refer to Engine in this section.
2. Install the engine on a suitable engine stand.
3. Remove the engine block plug to drain the engine coolant.
4. Disconnect the oil pressure and oil temperature sensor electrical connectors.



N0006270

5. Remove and discard the oil filter.

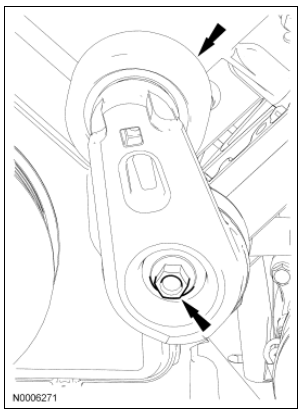


6. ⚠ **CAUTION: A new oil cooler must be installed or severe damage to the engine can occur.**

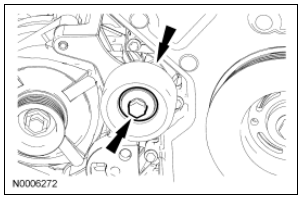
   Remove the bolt and oil cooler.

   - Discard the oil cooler and gasket.

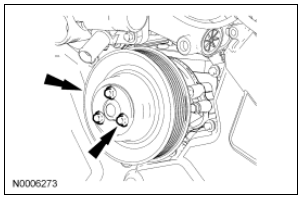
7. Remove the bolt and the accessory drive belt tensioner.



8. Remove the bolt and the accessory drive belt idler pulley.

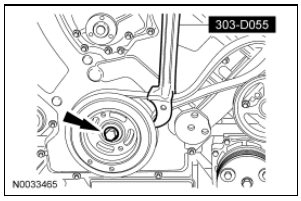


9. Remove the 3 bolts and the coolant pump pulley.

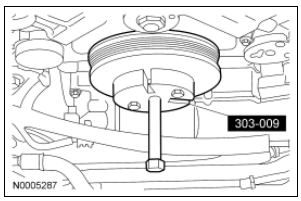


10. **NOTE:** Hold the crankshaft pulley with the special tool while removing the bolt and washer.

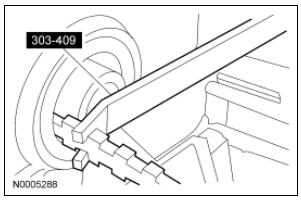
    Remove and discard the bolt and washer.



11. Using the special tool, remove the crankshaft damper.



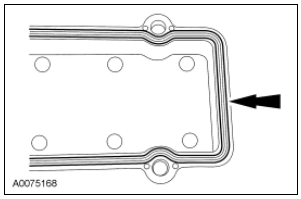
12. Using the special tool, remove and discard the front crankshaft seal.



13. **NOTE:** LH shown, RH similar.

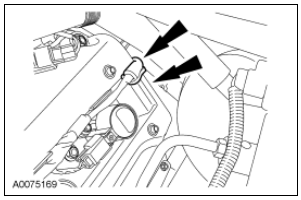
    Remove the LH and RH ignition coil covers.

14. Remove all silicone sealer and residue from the ignition coil covers.

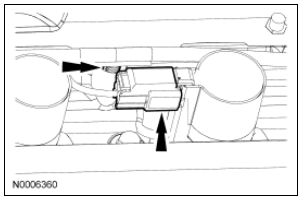


15. **NOTE:** LH shown, RH similar.

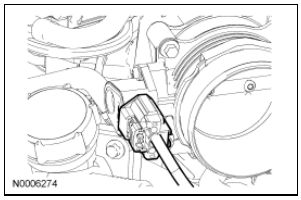
    Remove all silicone sealer and residue from the valve cover surface and ignition coil wiring harness.



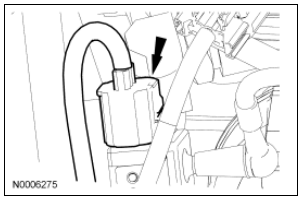
16. Disconnect the 8 ignition coil electrical connectors.



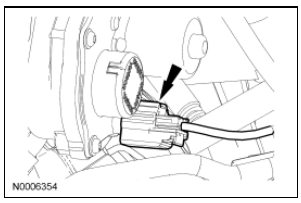
17. Disconnect the throttle position (TP) sensor electrical connector.



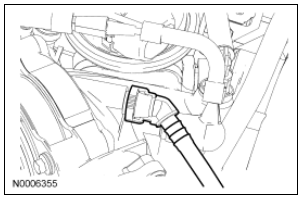
18. Disconnect the fuel pressure sensor electrical connector.



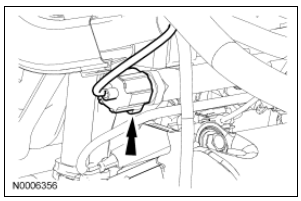
19. Disconnect the electronic throttle body electrical connector.



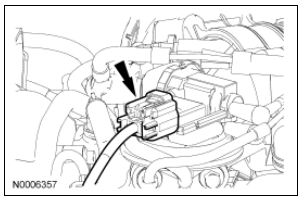
20. Disconnect the evaporative emissions (EVAP) tube.



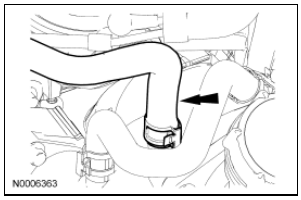
21. Disconnect the fuel rail temperature sensor electrical connector.



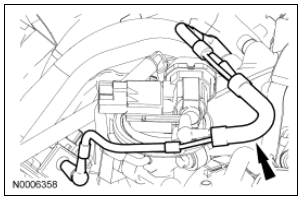
22. Disconnect the exhaust gas recirculation (EGR) system module electrical connector.



23. Disconnect the coolant vent hose from the coolant outlet.
    - Remove the coolant vent hose.

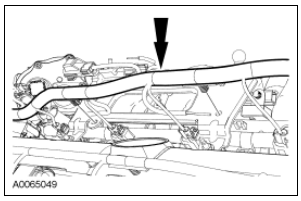


24. Remove the vacuum harness.

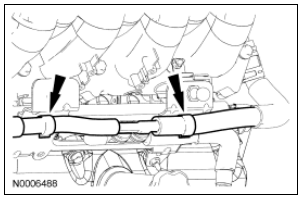


25. **NOTE:** LH shown, RH similar.

Disconnect the engine wiring harness retainers from the engine appearance cover support brackets.

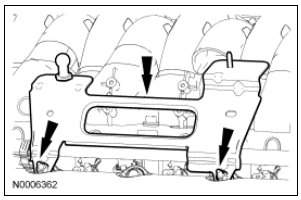


26. Detach the vacuum hose retainers from the LH engine appearance cover support bracket.



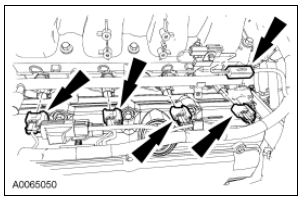
27. **NOTE:** RH shown, LH similar.

Remove the 4 nuts and the 2 engine appearance cover brackets.

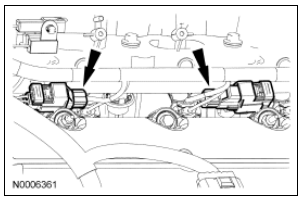


28. **NOTE:** LH shown, RH similar.

Disconnect the 8 fuel injector and the 2 radio interference capacitor electrical connectors.

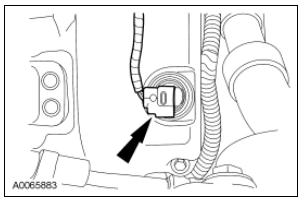


29. Disconnect the knock sensor (KS) and camshaft position (CMP) senor electrical connectors.
    - Detach the pin-type retainers.

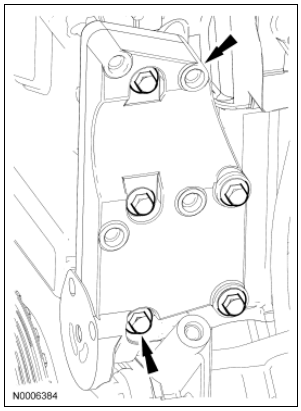


30. **NOTE:** RH shown, LH similar.

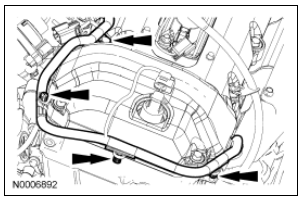
    Disconnect the 2 variable cam timing (VCT) sensor electrical connectors.



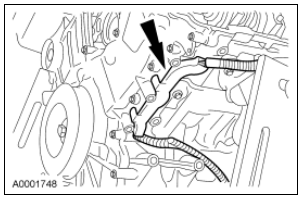
31. Remove the 5 bolts and the power steering bracket.



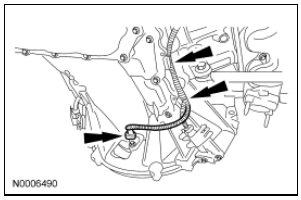
32. Disconnect the wiring harness retainers from the LH valve cover.



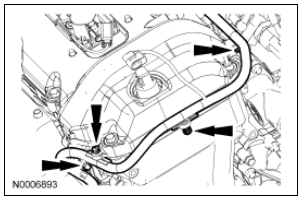
33. Detach the wiring harness from the engine front cover.



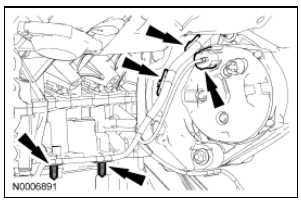
34. Disconnect the crankshaft position (CKP) sensor electrical connector and wiring harness retainers.



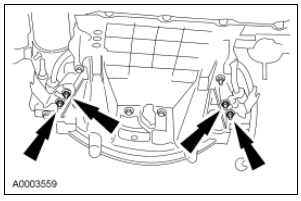
35. Disconnect the wiring harness retainers from the RH valve cover.



36. Disconnect the generator electrical connector and wiring harness retainers.

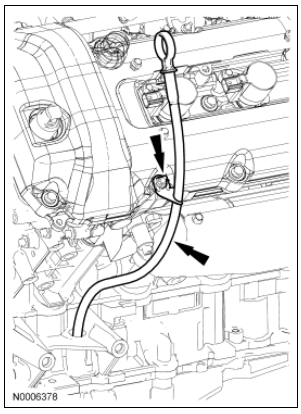


37. Remove the heated oxygen sensor (HO2S) electrical connectors from the brackets.

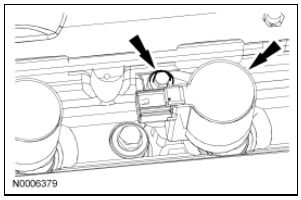


38. Remove the engine wiring harness from the engine.

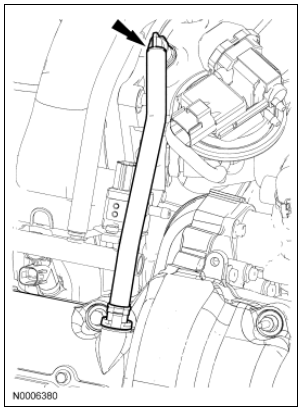
39. Remove the nut and the oil level indicator tube.
    - Discard the O-ring seal.



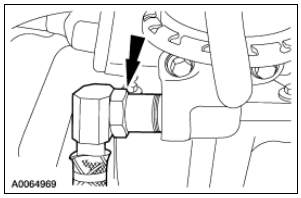
40. Remove the 8 bolts and the 8 ignition coils.



41. Remove the crankcase vent tube.

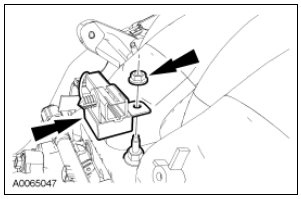


42. Disconnect the exhaust manifold tube at the EGR system module.

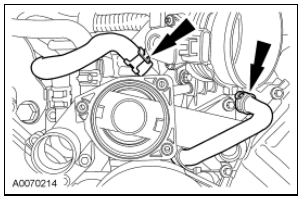


43. **NOTE:** RH shown, LH similar.

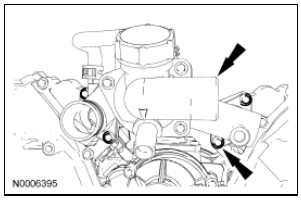
    Remove the 2 nuts and the radio interference capacitors.



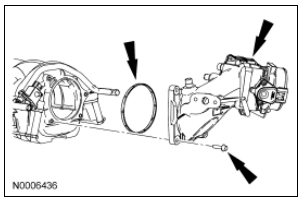
44. Disconnect the throttle body heater hoses.



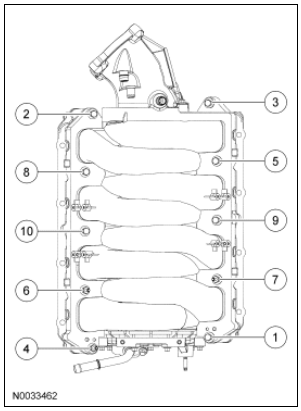
45. Remove the 4 bolts and the coolant bypass housing.
    - Discard the O-ring seals.



46. Remove the 4 bolts and the throttle body adapter.
    - Discard the gasket.

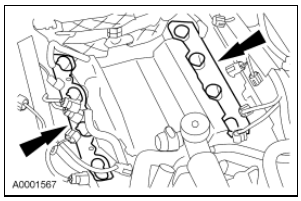


47. Remove the 7 bolts and 3 studs in the sequence shown.
    - Remove the intake manifold.
    - Discard the gaskets.

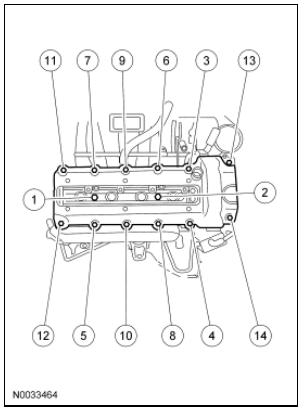


48. **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to clean the surfaces.**

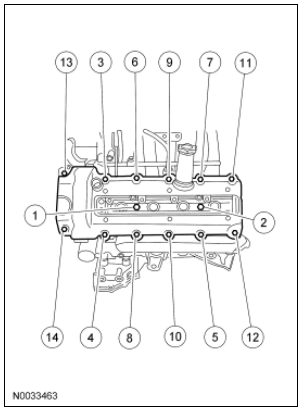
    Clean the sealing surfaces.



49. Remove the bolts in the sequence shown and remove the RH valve cover.
    - Discard the gasket.

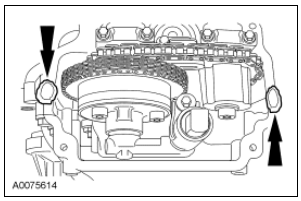


50. Remove the bolts in the sequence shown and remove the LH valve cover.



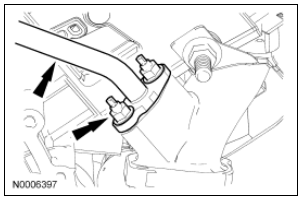
51. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to clean the surfaces.**

    Remove the gaskets and all silicone sealer. Clean the mating surfaces with silicone gasket remover.

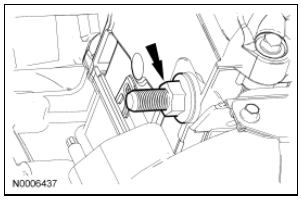


RH side

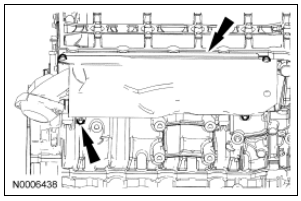
52. Remove the 2 nuts and the EGR tube.
    - Discard the gasket.



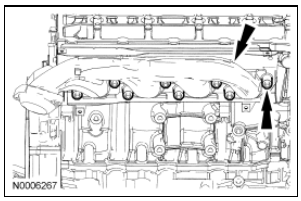
53. Remove the RH exhaust manifold heat shield stud bolt.



54. Remove the 4 bolts and the RH exhaust manifold heat shield.

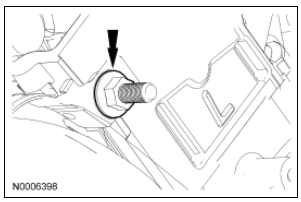


55. Remove the bolts, the spacers and the RH exhaust manifold.
    - Discard the gasket.

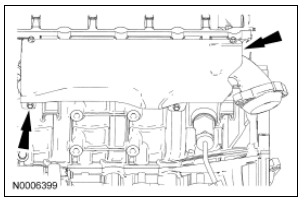


LH side

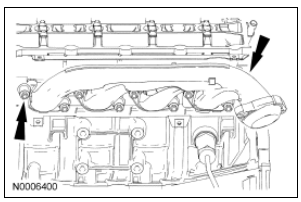
56. Remove the LH exhaust manifold heat shield stud bolt.



57. Remove the 4 bolts and the LH exhaust manifold heat shield.

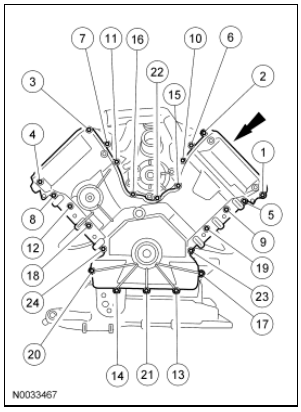


58. Remove the bolts, the spacers and the LH exhaust manifold.
    - Discard the gasket.



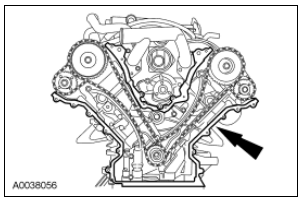
Both sides

59. Remove the engine front cover bolts in the sequence shown.
    - Remove the engine front cover.
    - Discard the gaskets.

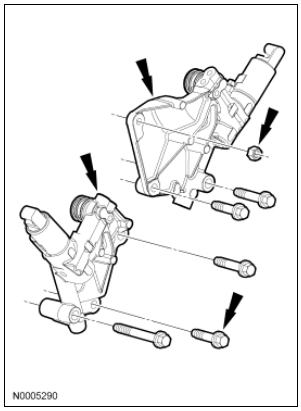


60. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to remove all traces of sealant.**

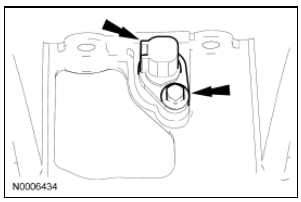
    Clean the sealing surfaces.



61. Remove the RH and LH variable cam timing (VCT) bush carriers.



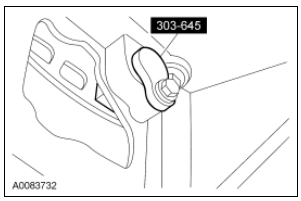
62. Remove the bolt and the CKP sensor.



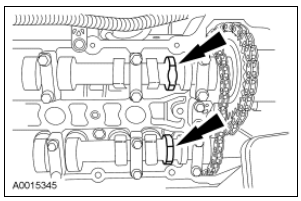
63. **NOTE:** There is one window on the ignition pulse wheel that is unique to accept the special tool.

    Install the special tool.

- Turn the crankshaft to 45 degrees ATDC. The crankshaft keyway will be in the 6 o'clock position.
- Install the special tool.

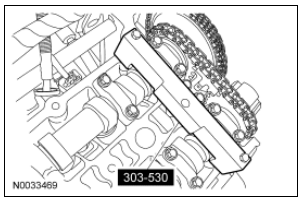


64. Make sure the flats of the camshaft are facing upward. If not, repeat the previous step.



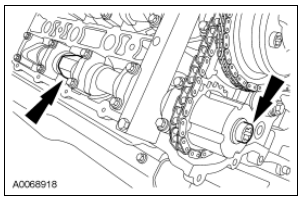
65. ⚠ **CAUTION: The flats on the camshaft must completely contact the special service tool or damage to the camshafts can occur. Slowly draw the special tool down evenly until it is fully seated on the camshaft flats.**

    Install the special tool on the RH cylinder head.



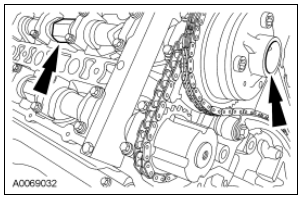
66. ⚠ **CAUTION: An open-end wrench must be used on the hex area of the camshaft or damage to the head will occur.**

    Remove and discard the exhaust camshaft sprocket bolt.

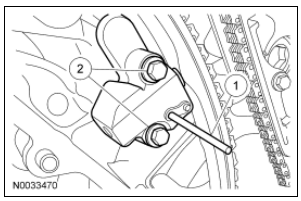


67. ⚠ **CAUTION: An open-end wrench must be used on the hex area of the camshaft or damage to the head will occur.**

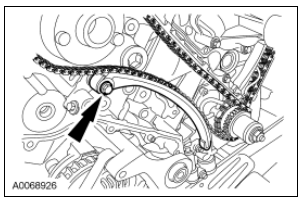
    Remove and discard the VCT unit bolt.



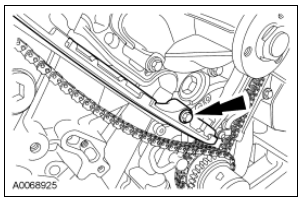
68. Remove the RH timing chain tensioner.
    1. Push the lever down and install a drill rod to lock the piston.
    2. Remove the 2 bolts and the tensioner.



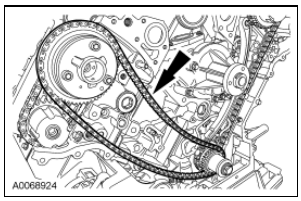
69. Remove the bolt and the RH tensioner arm.



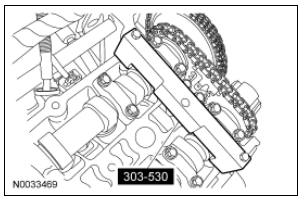
70. Remove the bolt and the RH timing chain guide.



71. Remove the RH primary timing chain.

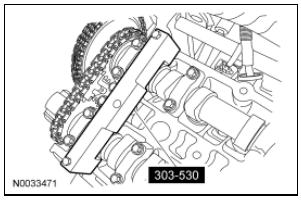


72. Remove the special tool from the RH cylinder head.



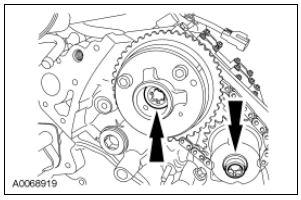
73. ⚠ **CAUTION: The flats on the camshaft must completely contact the special service tool or damage to the camshafts can occur. Slowly draw the special tool down evenly until it is fully seated on the camshaft flats.**

    Install the special tool on the LH cylinder head.

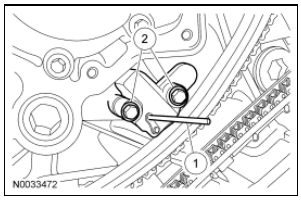


74. ⚠ **CAUTION: An open-end wrench must be used on the hex area of the camshaft or damage to the cylinder head will occur.**

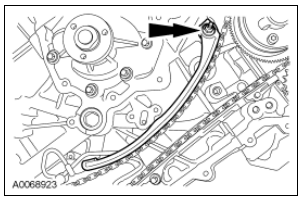
    Remove and discard the LH VCT unit bolt and the exhaust camshaft sprocket bolt.



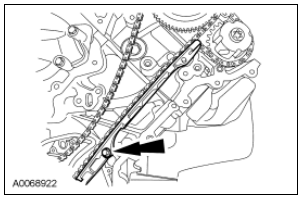
75. Remove the LH timing chain tensioner.
    1. Push the lever down and install a drill rod to lock the piston.
    2. Remove the 2 bolts and the tensioner.



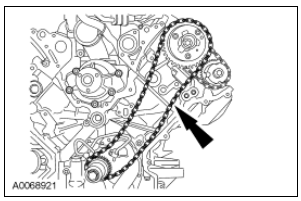
76. Remove the nut and the LH tensioner arm.



77. Remove the bolt and the LH timing chain guide.

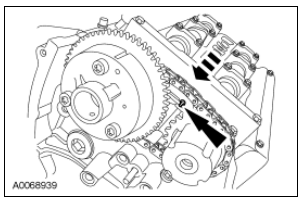


78. Remove the LH primary timing chain.

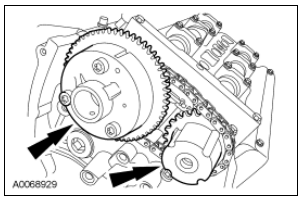


79. Remove the crankshaft sprocket.

80. Collapse the LH secondary timing chain tensioner and install a pin to lock the piston.

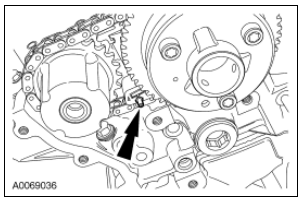


81. Remove the LH VCT unit, exhaust camshaft sprocket and timing chain as an assembly.

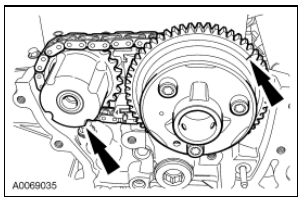


82. Remove the 2 bolts and the LH secondary timing chain tensioner.

83. Collapse the RH secondary timing chain tensioner and install a pin to lock the piston.

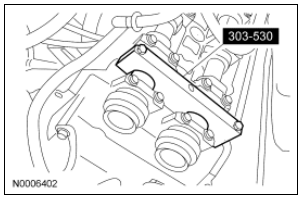


84. Remove the RH VCT unit, exhaust camshaft sprocket and timing chain as an assembly.



85. Remove the 2 bolts and the RH secondary timing chain tensioner.

86. Remove the special tool.

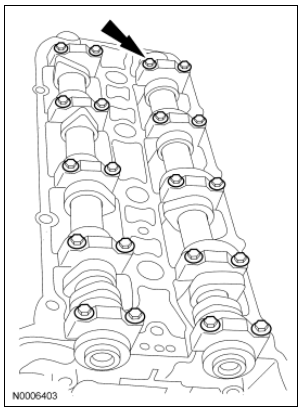


LH side

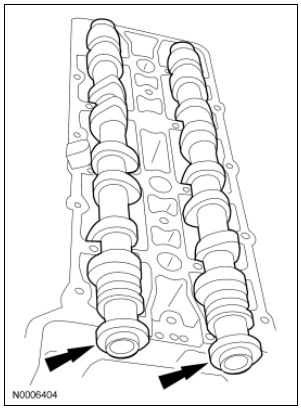
87. ⚠ **CAUTION: Record the camshaft bearing cap locations. The camshaft bearing caps are positional and must be installed in their original locations and orientation or engine damage can occur.**

    Remove the LH camshaft bearing caps.

- Remove the bolts.
- Remove the LH camshaft bearing caps.



88. Remove the LH camshafts.



89. **⚠ CAUTION: Do not use any means of marking the shims other than a permanent-type marker. Any scratches or paint on the shims can result in incorrect lash adjustments and severe engine damage.**

    ⚠ CAUTION: Record the shim and bucket tappet location. The shim and bucket tappet are positional and if installed in the incorrect location, engine damage can occur.

    Record the location of the valve tappets.

    - Remove the valve tappets.

90. **⚠ CAUTION: The cylinder head must be cool before removing it from the engine. Cylinder head warpage can result if a warm or hot cylinder head is removed.**

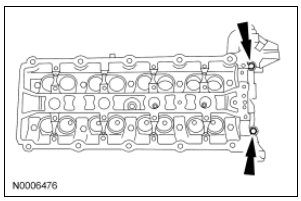
    ⚠ CAUTION: Place clean shop towels over exposed engine cavities. Carefully remove the towels so foreign material is not dropped into the engine.

    ⚠ CAUTION: The cylinder head bolts must be discarded and new bolts installed. They are tighten-to-yield designed and cannot be reused.

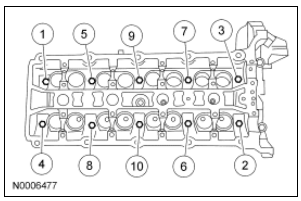
    ⚠ CAUTION: Aluminum surfaces are soft and can be scratched easily. Never place the cylinder head gasket surface, unprotected, on a bench surface.

    Remove the LH cylinder head end bolts.

- Discard the bolts.



91. Remove and discard the bolts from LH cylinder head in the sequence shown.
    - Remove the cylinder head.
    - Discard the gasket.

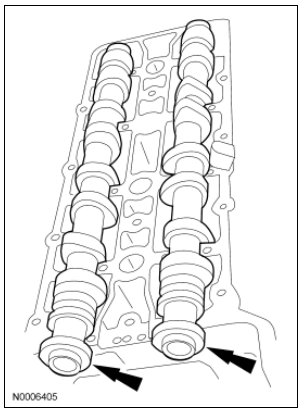


RH side

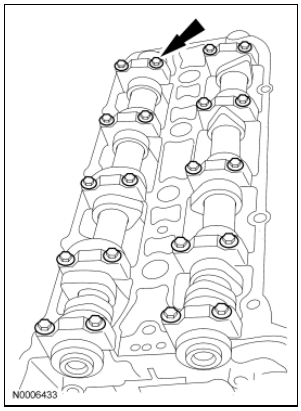
92. **⚠ CAUTION: Record the camshaft bearing cap locations. The camshaft bearing caps are positional and must be installed in their original locations and orientation or engine damage can occur.**

    Remove the RH camshaft bearing caps.

    - Remove the bolts.
    - Remove the RH camshaft bearing caps.



93. Remove the RH camshafts.



94. **⚠ CAUTION: Do not use any means of marking the shims other than a permanent-type marker. Any scratches or paint on the shims can result in incorrect lash adjustments and severe engine damage.**

    ⚠ CAUTION: Record the shim and bucket tappet location. The shim and bucket tappet are positional and if installed in the incorrect location, engine damage can occur.

    Record the location of the valve tappets.

    - Remove the valve tappets.

95. **⚠ CAUTION: The cylinder head must be cool before removing it from the engine. Cylinder head warpage can result if a warm or hot cylinder head is removed.**

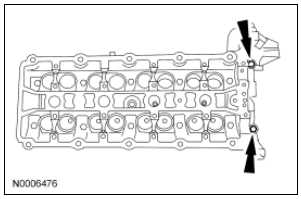
    ⚠ CAUTION: Place clean shop towels over exposed engine cavities. Carefully remove the towels so foreign material is not dropped into the engine.

    ⚠ CAUTION: The cylinder head bolts must be discarded and new bolts installed. They are tighten-to-yield designed and cannot be reused.

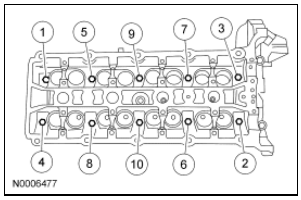
    ⚠ CAUTION: Aluminum surfaces are soft and can be scratched easily. Never place the cylinder head gasket surface, unprotected, on a bench surface.

    Remove the RH cylinder head end bolts.

    - Discard the bolts.



96. Remove and discard the bolts from the RH cylinder head in the sequence shown.
    - Remove the cylinder head.
    - Discard the gasket.



Both sides

97. **⚠ CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to remove all traces of sealant.**

    ⚠ CAUTION: Observe all warnings or cautions and follow all application directions contained on the packaging of the silicone gasket remover and the metal surface prep.

    NOTE: If there is no residual gasket material present, metal surface prep can be used to clean and prepare the surfaces.

    Clean the cylinder head-to-cylinder block mating surfaces of both the cylinder heads and the cylinder block.

    1. Remove any large deposits of silicone or gasket material with a plastic scraper.
    2. Apply silicone gasket remover, following package directions, and allow to set for several minutes.
    3. Remove the silicone gasket remover with a plastic scraper. A second application of silicone gasket remover may be required if residual traces of silicone or gasket material remain.
    4. Apply metal surface prep, following package directions, to remove any remaining traces of oil or coolant, and to prepare the surfaces to bond with the new gasket. Do not attempt to make the metal shiny. Some staining of the metal surfaces is normal.

98. **NOTE:** The straightedge used must be flat within 0.0051 mm (0.0002 in) per foot of tool length.

    Support the cylinder heads on a bench with the head gasket side up. Inspect all areas of the deck face with a straightedge, paying particular attention to the oil pressure feed area. The cylinder heads must not have depressions deeper than 0.0254 mm (0.001 in) across a 38.1 mm (1.5 in) square area, or scratches more than 0.0254 mm (0.001 in).

Engine

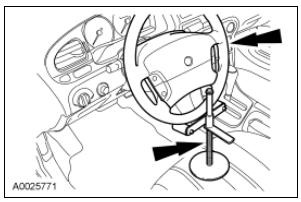
Special Tool(s)

 ST1595-A	Lifting Brackets, Engine 303-050 (T70P-6000)
ST1602-A	Spreader Bar 303-D089 (D93P-6001-A3)
ST1293-A	Powertrain Lift With Tilting Plate 014-00765
 ST1702-A	Transmission Support Bracket 014-00341

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Hold the steering wheel in the straight ahead position using a suitable holding device.



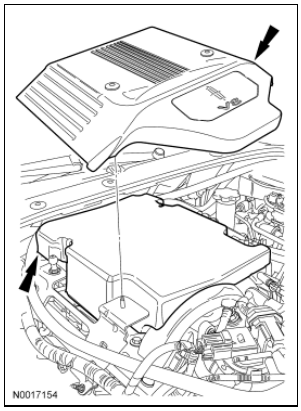
A0025771

3. Release the fuel system pressure. For additional information, refer to Section 310-00 .

4. Disconnect the battery ground cable. For additional information, refer to Section 414-01 .

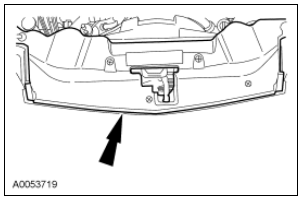
5. ⚠ **CAUTION: The engine appearance cover is equipped with a noise suppressor. If the noise suppressor becomes separated from the engine appearance cover it must be positioned on the intake manifold prior to installing the engine appearance cover.**

   Remove the engine appearance cover and the noise suppressor (if detached).



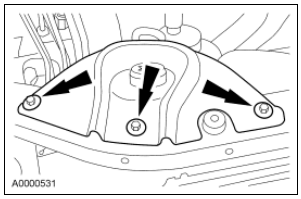
6. Remove the air cleaner assembly and outlet pipe. For additional information, refer to Section 303-12 .
7. **⚠ CAUTION: The coolant drain procedure must be followed exactly or damage to the engine can occur.**

   Drain the engine cooling system. For additional information, refer to Section 303-03 .
8. Discharge the A/C system. For additional information, refer to Section 412-00 .
9. Remove the fresh air inlet duct. For additional information, refer to Section 412-01 .
10. Disconnect the fuel supply tube. For additional information, refer to Section 310-00 .
11. Remove the upper radiator sight shield.



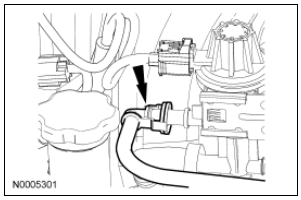
12. **NOTE:** RH shown, LH similar.

    Remove the 6 bolts and the 2 upper radiator support brackets.

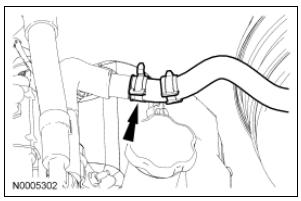


13. **⚠ CAUTION: To disconnect the quick release coupling, squeeze the tabs and pull straight out or damage to the coupling can occur.**

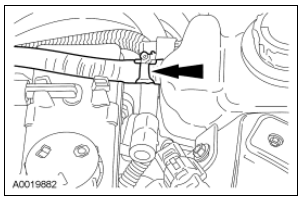
    Disconnect the evaporative emissions (EVAP) hose from the EVAP canister purge valve.



14. Disconnect the vacuum hose.



15. Disconnect the degas bottle hose.



16. Remove the 2 power steering reservoir bolts.
